It is true that it is not known where some of those men belonged-where their lodge was. Take Andrew Jackson, for instance. He was, at one time, the Most Worshipful Grand Master of the Masonic Lodges of Tennessee, yet it is not on any record that has been found where he became a Mason. However, we know that he was made a Mason in due form.

The names of Masons who signed the Declaration of Independence and the Constitution will be given, but there is a strong belief that some not listed as Masons were members of the order. Quoting from a memorandum of the Masonic lodge, it might be stated as follows: "It must be remembered that 18th century records of Masonic membership bear no resemblance to the complete records maintained by the fraternity today. In the Colonial period many lodges worked for a short time only. During the Revolutionary War there were numerous so-called Army lodges which conferred degrees, but purposely kept no records or destroyed their records for lack of a safe place to keep them."

Fifty-six Members of the Continental Congress signed the Declaration of Independence. Some of the signers were not Members of the Congress on July 4, 1776, when it was adopted, but were Members in the following September when it was engrossed for signature. Charles Carroll, of Carrolton was

one of them. Strictly speaking, he had no right to sign. But here is the list of the signers who were Masons:

Lyman Hall and George Walton, Georgia; William Hooper, North Carolina; James Hewes, North Carolina; John Penn, North Carolina; John Hancock, Massachusetts; Richard Henry Lee, Virginia; Thomas Jeffer-son, Virginia; Thomas Nelson, Jr., Virginia; Francis Lightfoot Lee, Virginia; Robert Morris, Pennsylvania; Benjamin Rush, Pennsylvania; Benjamin Franklin, Pennsylvania; George Read, Delaware; Thomas McKean, Delaware; Philip Livingston, New York; Francis Lewis, New York; Richard Stockton, New Jersey; John Witherspoon, New Jersey; Josiah Bartlett, New Hampshire; William Whipple, New Hampshire; Samuel Adams, Massachusetts: Robert Treat Paine, Massachusetts; Elbridge Gerry, Massachusetts; William Eliery, Rhode Island; Roger Sher-man, Connecticut; Samuel Huntington, Connecticut; Oliver Wolcott, Connecticut; Matthew Thornton, New Hampshire. Of those signers the following were born in foreign countries: Francis Lewis, Wales; Robert Morris, England; and John Witherspoon, Scotland.

I now list those who were signers and some of whom may have been Masons, but it is not definitely known that they were members: Button Gwinnett, Edward Rutledge, Thomas Heyward, Thomas Lynch, Jr., Arthur Middleton, Samuel Chase, William Paca, Thomas Stone, Charles Carroll, George Wythe, Benjamin Harrison, Carter Braxton, John Morton, George Clymer, James Smith, George Taylor, James Wilson, George Ross, Caesar Rodney, William Floyd, Lewis Morris, Francis Hopkinson, John Hart, Abraham Clark, John Adams, Stephen Hopkins, and William Williams.

Seventy-four men were elected as dele-gates from 12 States to help frame a constitution. Rhode Island sent no delegates. Several of the appointed delegates never attended a day and I give here the entire list and the States from which they came: Patrick Henry, Richard Henry Lee, and Thomas Nelson of Virginia; Abraham Clark and John Neilson, New Jersey; Richard Caswell and Willie Jones, North Carolina; George Walton and Nathaniel Pendleton, Georgia; Henry Laurens, South Carolina; Francis Dana, Massachusetts; Erastus Walcott, Connecticut; John Pickering, and Benjamin West, New Hampshire. But Maryland has the record on elected delegates who did not attend this great convention: Charles Carroll of Carrollton, Gabriel Duvall, Robert H. Harrison, Thomas Sim Lee, and Thomas Stone.

There was another group of delegates who took the oath of office, but who did not remain until the convention adjourned on September 17, 1787. There were 13 of them, as follows: James McClurg and George Wythe, Virginia; William Houston, New Jersey; Alexander Martin and William R. Davis. North Carolina; William Pierce and William Houston, Georgia; Robert Yates and John Lansing, New York; Caleb Strong, Massa-chusetts; Oliver Ellsworth, Connecticut; John T. Mercer, and Luther Martin, Mary-

The following remained in the convention until its final adjournment, but they refused to sign: Edmund Randolph and George Mason, of Virginia, and Elbridge Gerry, Massachusetts. It is well to speculate on what the descendants of the nonattenders and the nonsigners think of them. The members of the Daughters of the American Revolution and the Sons of the Revolution have pardonable pride in the loyalty and bravery of their ancestors who fought for our independence, and well they may.

Wherever masonry is free, religion is free. Wherever one is restricted, the other is out-Wherever religion is controlled or directed by the state, there freedom is unknown.

A dictator knows no law. His will is the law, and he who refuses to submit to the orders of the dictator is foully and ruth-

lessly murdered.

The very fact that Washington, Franklin, and scores of other Revolutionary heroes were members of the Masonic Lodge is enough to recommend it to all intelligent people who want a stable government. You can control a man's body, but you cannot control his mind or his conscience. Masonry means freedom of religion, freedom of the courts, a clean conscience, loyalty to the flag of America, and the supporter and the defender of our public schools, America's safeguard.

Every Mason can truthfully and conscientiously repeat the pledge to the flag: I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation, under God, indivisible,

with liberty and justice for all."

Difficult To Understand General Vogel's Position

EXTENSION OF REMARKS OF .

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks I wish to include the following editorial which appeared in a recent issue of the Florence Times, one of Alabama's outstanding daily newspapers:

DIFFICULT TO UNDERSTAND GENERAL VOCEL'S POSITION

We have never had the opportunity of meeting Brig. Gen. Herbert D. Vogel, the new Chairman of the Tennessee Valley Authority, but we have come to the conclusion that he must be a rather difficult man to understand.

During the past 6 months of his chairmanship, we have attempted to follow his statements and lines of reasoning regarding a number of things affecting TVA and the people it seeks to serve, and, we admit, some of his statements have left us suspended in mental midair. We just don't know exactly what he means.

Now, he has come forward, in a copyrighted interview with the Knoxville News-Sentinel, a Scripps-Howard newspaper that is friendly toward TVA, suggesting that he would be willing to resign his chairmanship in favor of appointment of a large board of directors, presumably dollar-a-year men, to

run the Authority.

* I can see considerable merit in the idea of a large board such as that which heads up the New York Port Authority and most large corporations," he said. members of such a board could be selected from among topflight citizens of the Nation and could be expected to work without salary, being paid only for attendance at monthly meetings and in reimbursement of expenses. Speaking solely for myself, I would be happy to resign in favor of such a group.

It is difficult for us to believe that any improvement would be wrought in TVA principles and policies, insofar as they affect either the valley or the Nation, by turning the vast regional agency over to

body of dollar-a-year men.

The first question that arises is who would

these men be?

No doubt, in line with thinking of the present Eisenhower administration, those to be named to any board would be big-business men thoroughly acquainted with the power business and possibly actually engaged in it all over the country. We can well imagine what such a board would do to TVA if they ever got their hands on it. These kind of businessmen have always fought TVA and the TVA principle and, in our opinion, this time the "Little Red Riding Hood" of TVA would surely be gobbled up by the private utilities who would play the role of "Grandma."

To further complicate our effort to understand General Vogel, we find him saying in the same interview that "TVA is, of course, responsible for a large share of the development which has taken place within it (the valley) during the last 20 years, but I cm inclined to think that too many people give too small a share of the credit to the folks of the valley. I have never met more industrious, independent, friendly, and sound-thinking people anywhere. They ask odds of no one, and stand ready to help others when and wherever possible. I cannot see them standing still under any condition."

In the face of this statement from the TVA Chairman, it is veritably impossible for us to understand his approval of the Dixon-Yates contract. The sound-thinking people of the valley, to whom he refers, have almost unanimously expressed their opposition to any such contract as Dixon-Yates.

It certainly seems strange to us that one who credits the valley's people with such sound thinking would so lightly cast aside their opposition to Dixon-Yates.

Or is General Vogel just "soft soaping" us?

The Nixons in Puerto Rico

EXTENSION OF REMARKS

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. CURTIS of Massachusetts. Mr. Speaker, a letter to the editor of the Christian Science Monitor, published in Boston on Friday, March 11, 1955, has expressed in a few words the significance of the recent visit of the Vice President and Mrs. Nixon to the Caribbean area. Because of the importance of this journey to the citizens of this country and our southern neighbors, I would like to bring this letter to the attention of the Members of Congress:

The Honorable Richard M. Nixon did a remarkable thing here in Puerto Rico, an act of great credit to him, to his Nation, as well as to the people of Puerto Rico.

Twice in a day Mr. Nixon stepped off his car and walked freely among the people of San Juan. We say this is a brave act because it is hardly possible that all the terrorists of the Island are in jail. The overwhelming majority of the people of Puerto Rico reject terror as an instrument of political action, but it has never been possible to lock up for good all those who would bring discredit and disaster to the people of this island, and insanely at that.

Mr. Nixon took the problem into his own hands; he just mingled freely with the street spectators of San Juan. He showed remarkable courage in doing that, and nothing is as admirable as a courageous action. His gesture implied likewise a confidence in the good sense and patriotism of the people of Puerto Rico.

Mrs. Nixon on her part went all over the island, graciously saluting the children and parents of Puerto Rico. We appreciate all of this; we admire it greatly. We appreciate the just confidence Mr. and Mrs. Nixon showed in us, and we want all the people of the United States to know that their Vice President and his gracious lady have contributed immensely to the respect and affection we have for the best in the United States.

JOSEPH I. PUENTE, Rio Piedras, P. R.

United Labor Council of Blair County, Pa., Endorses H. R. 4943, Amending the Natural Gas Act

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. VAN ZANDT. Mr. Speaker, on March 23, 1955, at Altoona, Pa., there was held a field and transportation conference during which time the plight of coal, railroad, and other industries in the central Pennsylvania area was considered. In attendance at this conference were representatives of the fuel and transportation industries, as well as spokesmen for labor organizations whose membership depends upon these industries for employment.

Among the resolutions approved at the conference is the following, which I received in the form of a telegram from Mr. C. B. Crumm, chairman of the United Labor Council, Altoona, Pa., which comprises affiliates of the A. F. of L., CIO, and the Brotherhood of Railroad Trainmen.

The telegram referred to is as follows: MARCH 23, 1955.

Congressman Van Zandt, House Office Building,

Washington, D. C.:

From the United Labor Council of Blair County, AFL, CIO, and Brotherhood of Railroad Trainmen:

The interested labor councils at the fuel and transportation conferences are very much concerned with the outcome of proposed natural-gas bill, H. R. 4943, and similar bills; also any proposed bills on the residual oil which concerns our membership from Pittsburgh, to Harrisburg, and from Clearfield to Bedford, Pa.

In conjunction with the petitions of signatures presented on behalf of our unemployed members, group 4 distressed areas, to Dr. A. S. Flemming, Director of Defense Mobilization, we concur wholeheartedly with resolutions passed at the conference meeting in Altoona, Pa., on March 23, 1955.

RESOLUTION

Whereas bills have been introduced in the Congress of the United States for the purpose of amending the Natural Gas Act; and

Whereas one of such bills is H. R. 4943, originally introduced by Congressman Stagers, of West Virginia, with similar bills proposed by Congressman Saylor (H. R. 4959), Carricg (H. R. 4981), Kelly (H. R. 5034), Morgan (H. R. 5035, Van Zandt (H. R. 5068); and

Whereas H. R. 4943 would amend the Natural Gas Act in such manner as to further protect the Nations' fuel-consuming public from depletion of an essential and highly valuable fuel source, result in equal-

izing distribution of natural gas transmission costs, and assure the Nation's economy in time of war or defense of stable and readily available sources of energy to power our industrial machines; and

Whereas the provisions of H. R. 4943 and similar bills are in keeping with suggestions for changes in the Natural Gas Act contained in the Cabinet committee on energy supplies and resources policy, issued by the White House, and in the annual reports of the Federal Power Commission: Therefore be it

Resolved, That the Pennsylvania Fuel and Transportation Conference in meeting at Altoona, Pa. on March 23, 1955 by this formal resolution, unanimously adopted, approves and supports the Natural Gas Act amendments as contained in H. R. 4943 and similar bills; be it further Resolved, That the chairman of the con-

Resolved, That the chairman of the conference be instructed to bring this action to the attention of the Commonwealth of Pennsylvania's congressional delegation in House and Senate; be it further

Resolved, That copies of this resolution be sent to the Chairman and Members of the House and Senate Committees on Interstate and Foreign Commerce and to the governor of the Commonwealth of Pennsylvania and both houses of the Commonwealth's legislature; be it further

Resolved, That appropriate notice of action of the conference be given the press wire services, the press of the Commonwealth of Pennsylvania, the trade and organizational publications serving groups represented in the conference, all associations of the coal industry, the United Mine Workers of America, the Association of American Railroads, the presidents of the interested railroads, and the headquarters of all railroad brotherhoods and other employee groups.

We will appreciate anything that can be

done on the above matter. Sincerely yours,

C. B. CRUMM.
Chairman,
JOHN HORON,
Vice Chairman.
L. J. HANELLY.
Secretary.

Thirty-seventh Anniversary of the Declaration of Independence of the Byelorussian National Republic

EXTENSION OF REMARKS

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. BOSCH. Mr. Speaker, tomorrow, March 25, 1955, is the 37th anniversary of the Declaration of Independence of the Byelorussian National Republic. At the request of the Byelorussian-American Association, Inc., 33 Norfolk Street, New York City, I include an article commemorating this anniversary:

COMMEMORATING THE 37TH ANNIVERSARY OF THE DECLARATION OF INDEPENDENCE OF BYE-LORUSSIAN NATIONAL REPUBLIC

Each year on March 25 the Byelorussians all over the world commemorate the anniversary of the short-lived independent Byelorussian National Republic.

The whole story of the perennial fight of the Byelorussian people for their independence is a tragic one. However, their unshaken belief in justice and their great desire for the blessings of freedom encourage them to continue the struggle.

In the past Byelorussians enjoyed their own indepndent statehood for centuries. Already in the 9th century the most powerful of the Byelorussian-Slavonic tribes, the Krivichi, formed several extension states, such as Polotsk and Smolensk princedoms, which embraced almost the whole of today's Byelorussia. In the 13th century, urged by the growing strength of the German Teutonic order in the west, and the menace of Mon-gols in the east, Byelorussians created the great Lithuanian princedom, in original-Litva, which in the 15th century stretched from the Baltic to the Black Sea. Byelorussians never succumbed to the Mongolian yoke, as Moskovites did. Litva successfully resisted the onslaught of Mongols on Europe and finally arrested their progress toward the west. In Litva Byelorussians were in great majority even after the annexation of the devasted southern princedoms (Ukraine). Byelorussian was both the state language and the language of the educated and ruling classes. The first Byelorussian (White Ruthenian) printed book, a translation of the Bible by Dr. Francis Skaryna was published in 1517. Vilna, the capital of Litva, got its first printing press in 1525, some 80 years earlier than Moscow. The most noteworthy of the Byelorussian printed books of that time was the Litouski Statut, 1. e., the code of the princedom's laws. Thus Byelo-russians of today justifiably consider the Great Lithuanian princedom (Litva) a truly Byelorussian state.

Since 1385, under the pressure of external enemies from east and west, Litva entered into an unstable personal union with Poland. In 1569, the union was strengthened and the Pollsh-Litva Commonwealth was created, but actually each state retained much of its political, economic, and military independence. Byelorussian state lasted in this manner till the end of the 18th century. At the partition of the commonwealth (1793-97), the Russians overran it against the will of its people, in the same way as Russia has devoured hundreds of other peoples of quite different races both in Europe and Asia.

Ever since, the Russians have tried to eradicate all traces of the Byelorussian national life and political traditions. The language was continually suppressed and finally prohibited in press and court (1867); schools and churches were under strict Russian control, and there was a continuous stream of forced exiles to Siberia. But the czars never did succeed in extinguishing the spirit of the Byelorussian nation. With the collapse of the czarist empire following World War I, the Byelorussian people roused to fight for their independent state following the principle, put forth by President Wilson, of the right of every nation to self-government.

In December 1917 the first Byelorussian Congress assembled in Minsk, the capital of Byelorussia; 1,872 duly elected representatives from the entire country participated. With an overwhelming majority, the Congress accepted a resolution calling for the creation of the Independent Byelorussian Democratic Republic

Using their customary methods, the Russian Bolsheviks dispersed the session of the congress by force of arms. However, the delegates succeeded in electing the RADA (National Council) of 71 members and to Brant it full powers to proceed with the establishment of the free Byelorussian National Republic.

On March 25, 1918, the RADA announced to the whole world the birth of the independent Byelorussian National Republic. Turkey, Germany, Czechoslovakia, Austria, Lithuania, Latvia, Estonia, Ukraine, Finland, and two Republics of Caucasus—Georgia and Armenia—recognized the Byelorussian state de jure, while many of the governments of the world recognized it de facto.

The Byelorussian people, having restored their own state on the ruins of the despotic tzarist empire, were forced to defend the young republic exclusively by their own forces, which by far proved insufficient to counteract the new form of Russian imperialism, that of bolshevism. The West turned deaf ear to repeated appeals for help. this very time Poland decided to attack Byelorussia from the west. So, by 1921, through the interference of Byelorussia's neighbors the new formed republic was again devoured. By the peace treaty of Riga in 1921, the living body of Byelorussia was dismembered-Poland got about one-third, the rest remained under the Russian occupation. The demo-cratic Byelorussian government, along with the majority of the members of the Rada of Byelorussian National Republic (BNR), were forced to go into exile. After 33 years, both the government and the Rada still exist and continue to operate under difficult circumstances of exile.

The so-called Byelorussian Soviet Socialist Republic (B. S. S. R.) of today occupies only three-fifths of the Byelorussian territory with about 10 million inhabitants. eastern part of Byelorussia with about 7 million inhabitants is still within the boundaries of Russian Federal Soviet Socialist Republic. The Byelorussian S. S. R., proclaimed in Smolensk on January 1, 1919, is a creation of Bolsheviks, primarily aimed at counterbalancing and substituting the Byelorussian National Republic (BNR). It was established by the Sixth Northwestern Regional Conference of the Russian Communist Party. According to its written constitution, B. S. S. R. is an independent state which can even make separate treaties with other governments, and retains the right to sever its connections with Moscow. In actual fact, the B. S. S. R. government is a puppet of Moscow, deprived of all major attributes of sovereign government. The present chief delegate to the U. N. O. from Byelorussia S. S. R., Kusma V. Kisjelov, is a born Mosco-

Thirty-three years of Communist terror in Byelorussia have caused the country greater losses than the most keen war could have About 3 million of Byelorussian people were executed or starved to death in various concentration camps throughout the worker's paradise, many of them were leading personalities of Byelorussian culture, science, and literature. At present, Byelo-russians are suffering the worst national persecution, economic exploitation, sovietization, and russification their history has ever known. The people are continually kept at the subsistence level. Russians, not Byelorussians, occupy all positions of trust and importance. Byelorussians are reduced to a second-class people. Freedom is unknown; neither freedom of speech or freedom of the press. No one is master of himself in any sense, for everyone is under constant fear of arrest and prosecution.

Yet, all indications unmistakably prove that the ultimate aim of Moscow has not been achieved. On the contrary, it flared up with an unexpected and flerce revival. On his native soil, in the Soviet labor camps and prisons, in the underground movement, and in exile, everywhere the Byelorussian continue to oppose the Kremlin regime with mounting rigidity. Deliberate genocide, deportations and russification—nothing can shake his firm conviction that the only way to secure freedom and justice for himself

is through self-government and independence.

In this unequal struggle for freedom and national independence the Byelorussian people sincerely hope for the moral acknowledgment and support on the part of the free world, the United States in particular. The world cannot achieve a lasting peace without a firm adherence to the principles of justice and morality by which freemen and free nations, large or small, must always be governed.

We, Byelorussians, living in the United States, sincerely believe in the very fundamental-principle upon which the United States has been founded, namely, that governments derive their just powers from the consent of the governed.

Also, we believe in the pledge of President Eisenhower who affirmed in his inaugural speech his dedication to peaceful liberation of the nations oppressed by Russian communism. We hope that through the Voice of America and through the efforts of voluntary organizations, which try to penetrate the Iron Curtain, this good news will reach the Byelorussian people and strengthen their hope for freedom. With this hope they will stand firm like a thorn in the sick body of Soviet Russia, thus contributing to the internal weakness of the Soviet colossus and to the eventual downfall of the Communist tyranny.

The Tariff on Swiss Watches

EXTENSION OF REMARKS

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES
Thursday, March 24, 1955

Mr. BEALL. Mr. President, at times there seems to be a great lack of cohesion in our interdepartmental functions. As my record will show, I was opposed to a tariff increase on Swiss watches, due to the fact that it would adversely affect the sale of Maryland tobacco in European countries. Now it seems the increase was hardly necessary from the standpoint of national defense, even though some proponents claimed it was needed for national-defense reasons.

To illustrate this lack of cohesion, I ask unanimous consent to have printed in the Appendix of today's Record the text of an article which appeared in the March 24 issue of the Baltimore Sun.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONAL SECURITY, SWISS WATCHES, ETC.
National security, in today's immensely complicated world, is difficult to define. It is not simple. Its ramifications are all but infinite. Nevertheless, an effort should be made not to speak too loosely of the national security.

The effort is not being made with sufficient thought and determination.

Early last week we were told by a spokesman for the Department of State that to publish the Yalta papers now would be contrary to the interests of our national security.

The public assumed from that statement that the Department of State had made a careful appraisal of the question and had reached a decision based on the country's

¹There is a definite need for the important precaution: Historical Lithuania (Litva) and Lithuania of today (Letuva) are two different things which have solely that much in common that the latter was an insignificant small part of the former, and at that time had the separate name of its own, namely that of Samogitia. The present confusion of names is truly misleading.

security. What else should the public have assumed?

Yet the papers were released almost immediately, for reasons unclear, unless they were political.

Let us go back 8 months and think about Swiss watches. Last July, following a recommendation of the Tariff Commission, President Eisenhower increased the tariff on Swiss watches. The action caused widespread doubts abroad as to our sincerity on "trade not aid." One argument for the higher tariff was that the Nation needed the American watchmakers' skills, and a White House statement spoke of an important collateral effect of the tariff boost on the national defense.

The public assumed that the Department of Defense had thought the matter over and decided that it needed protection for American watchmakers. What else should the public have assumed?

Now it turns out that the Department of Defense did, indeed, think the matter over, and that it decided that the watch industry needed no special or preferential treatment, from the standpoint of defense needs. Its report, written in April of last year, has just been made available.

Incidents like these are damaging to the national security. They tend to make the public skeptical of the very phrase. At a time when we are engaged in one of history's great struggles, it is more important than ever that language be used with some precision, and that the broad general concepts within which we perforce think as a community be not irresponsibly debased.

President Syngman Rhee

EXTENSION OF REMARKS

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. OSTERTAG. Mr. Speaker, on Saturday of this week, Syngman Rhee, the President of Korea, will celebrate his 80th birthday. Americans everywhere will wish him many happy returns.

Like America's Patrick Henry, President Rhee has had one dedicated objective in his long life—namely, to free his country from the yoke of foreign oppression, and plant the love of freedom—and the determination to fight for it—in the hearts of his countrymen. Among all the questions and doubts enshrouding the future of Asia, Syngman Rhee stands today, as he has throughout his long life, a man of no compromise where freedom is concerned.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD an editorial from the April issue of Korean Survey, which pays a highly deserved tribute to President Rhee on the occasion of his 80th birthday. As it well says:

Americans hall President Rhee because his achievements have been not alone for Korea but for global freedom as well.

The editorial follows:

PRESIDENT SYNGMAN RHEE: HIS 80TH BIRTHDAY

On March 26 nationwide celebrations will be held in Korea (extending surreptitiously, we hay be sure, behind the Communist front in North Korea) honoring the 80th birthday of President Syngman Rhee—who is the father not alone of Korea's independence but of its modernity and democracy as well.

Syngman Rhee merits the admiration and has won the gratitude of the entire free world. On June 25, 1950, he led his nation into a war of resistance against the overwhelming surprise attack launched by the Communist Empire and thereby made possible effective action by the United States and other Allies to save the United Nations from the danger of dissolution and to prevent the rapid spread of Communist imperialism through all Asia.

The first President of the Republic of Korea, elected on July 19, 1948, and reelected in July 1952. Dr. Rhee was also unanimously elected President of the revolutionary Provisional Republic of Korea established in exile in April 1919. From his youth as a leader in the movement to reform Korea's ancient monarchy (as a consequence of which he was imprisoned from 1897 to 1904), Syngman Rhee has devoted his entire life to the liberation, democratic advancement, and reunification of his nation. As a prophet warning against the imperial ambitions of Japan in the 1930's and of Russia in subsequent years, he has rendered tremendous services to the free world. Under the inspiration of his leadership, the people of Korea have served as an impregnable bastion of democracy in north Asia.

Born March 26, 1875, Dr. Rhee was educated soundly in the ancient culture of the Far East, then studied English and democracy in the Pai Jai Mission School in Seoul. In 1904 he came to the United States to earn his A. B. degree at George Washington University, his M. A. at Harvard and his Ph.D. at Princeton. Specializing in international relations, and writing his doctoral dissertation on American Policies of Neutrality in the Far East, Dr. Rhee developed an unusually sound background for clear-visioned statesmanship in dealing with the problems that have beset his people and the democratic world.

In a book entitled "The Spirit of Independence," which he wrote in prison in 1904, he set forth his basic creed as follows: "If your own heart is without patriotism, your heart is your enemy. * * Do not wait for others to lead or to do what must be done, but arouse yourself. If you do not do it, it never will be done."

With the advent of self-government for south Korea in 1948, President Rhee led in the accomplishment of a remarkable program of democratic reforms,

Suffrage and full equality were granted to women as well as men. Universal education was encouraged and assisted. A land reform system practically wiping out farm tenantry was enacted. Freedom of speech was encouraged and over 90 newspapers of divergent editorial policies were established. A multiparty political situation has gradually evolved into a strong two-party system. Independence of the judiciary and of the legislature has been balanced by popularly supported executive leadership. Among all his great achievements, President Rhee will be remembered for his success in firmly emplanting the roots of genuine democracy on the continent of Asia.

Americans hall President Rhee because his achievements have been not alone for Korea but for global freedom as well. In the world struggle between the democracles and the totalitarian Communists, his people have been the severest sufferers and his courageous leadership has been a rallying point for the Allies. It is the deep hope of countless millions that his long life will be climaxed by seeing his country reunited and his people secure and prosperous in their independent democracy.

Some of the Tourist Attractions of the Seventh Congressional District of Alabama

EXTENSION OF REMARKS

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. ELLIOTT. Mr. Speaker, the Seventh Congressional District of Alabama is coming to realize and to develop its scenic and tourist attractions with each passing year. The miracles that will soon be wrought on the Warrior River, and particularly in its headwaters, will, in time, provide a natural playground which should attract tourists, as well as the people who live in the area itself.

The New Hope Dam, designed to be approximately 300 feet high, will be the second highest dam east of the Missis-

sippi River.

The large steam, electric-generating plants at Gorgas, Ala., along with the adjacent mines, and together with the world-famous experiment in underground coal gasification are beginning to attract large numbers of visitors.

While these attractions are classified as being partially man-made, the natural wonders of that area of Alabama are most absorbing. Some that come quickly to mind are the Natural Bridge of Alabama, located in Winston County, 10 miles south of Haleyville on State Highway 195; the Cheatham Road-State Highway 36-Natural Bridge with a 70-foot span in the William B. Bankhead National Forest in Winston County; and the 80-foot Sandstone Natural Bridge, located 10 miles east of Phil Campbell in Franklin County, Ala. Others are the Underground Lake at Belgreen, and the Dismal Falls in Franklin County.

The Ave Maria Grotto in Cullman County is nationally known.

Very little has been written about these scenic attractions of this area of Alabama. There are many more than 1 have named.

My neighbor, Mr. W. M. Massey, of Jasper, Ala., published a story, entitled "Bridges What Come Naturally," dealing with the natural bridges of the Seventh Congressional District of Alabama, plus one in Tennessee. The article was published in the March 1955 issue of Ford Times.

The article follows:

BRIDGES WHAT COME NATURALLY (By W. M. Massey)

In northwestern Alabama, a farmer likes to build his home on a ridge. It tickles his fancy to think that water falling on one side of his roof will reach the Gulf of Mexico via the Tennessee, Ohio and Mississippi Rivers, while raindrops sliding down the other side will travel via the Sipsey, Warrior, and Tombigbee.

The varied topography that allows this indulgence is also responsible for some very satisfactory scenery that is not widely known. The hinterland of the Muscle Shoals area, where thousands of vacationers an-

nually enjoy the man-made dams and lakes of the Tennessee Valley system, is replete with cliffs, gorges, waterfalls and an assortment of natural bridges.

About 50 miles north is the Natural Bridge of Tennessee, on U. S. 64 near Waynesboro. Here twin arches of limestone are set at right angles and joined on both ends by a semicircular bluff, on the Buffalo River. Terraces in the eroded rock form a natural amphitheatre in which, for some 40 years before the Civil War, the courts of Stone and Hardin Countles held sessions. A sign announces that David Crockett was a magistrate here in 1812. This is a resort area, with an admission fee.

The traveler southbound from Muscle Shoals may be startled to encounter the sign, "You are now entering the Free State of Winston * * *" It is a matter of much local pride that this county refused to se-cede from the Union in the War Between the States. It set up its own government, issued its own currency, and raised 5 companies of infantry for the Union Army. Its scenery is further cause for pride. A report by the Geological Survey of Alabama described it in these considered terms: "The topographical features are varied, grand, wild, and picturesque. It has abrupt chasms 200 to 300 feet below the general level of the county. These have perpendicular and overhanging rock cliffs 75 to 100 feet high *

One of those "abrupt chasms" is traversed by the Natural Bridge of Alabama, claimed to be the longest rock span in the East. It is 10 miles south of Haleyville, on State 195. Fifty years ago excursion trains brought city folk from Birmingham and Sheffield to marvel at this natural wonder and to picnic in its shadow. People are still coming—but in automobiles. The bridge is privately owned and admission is charged.

There are 2 other natural bridges nearby. One is an 80-foot sandstone arch hidden in a heavily wooded area of Franklin County, 10 miles east of the town of Phil Campbell. The other is in the national forest, on Cheatham Road (State highway 36). This 70-foot span is suspended half-way up nearly-vertical canyon walls.

To the dyed-in-the-wool nature lover, Bee Branch Scenic Area is the top attraction of the forest and the entire region. This deep box cayon, with vertical sandstone walls 60 to 125 feet high, shelters one of the last stands of virgin hardwood in Alabama. giant tulip trees, hemlocks and pines have been untouched by man or fire. The largest is a tulip tree 80 inches in diameter and 150 feet high. Roads and trails in the area are meager—by design. This 1,140-acre plot is to be preserved to show future generations a bit of genuine wilderness. The public is welcome but, as the local ranger puts it wryly, "Nothing is done to make access easy"

"Bowing to Red Gangsters"-Editorial From the Manchester Union-Leader

EXTENSION OF REMARKS OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Thursday, March 24, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Bowing to Red Gangsters," Which was published in the Manchester (N. H.) Union-Leader on March 21.

There being no objection, the editorial was ordered to be printed in the REC-ORD, as follows:

BOWING TO RED GANGSTERS

It is distinctly baffling to see the British and fellow-traveling Americans talking about the rights of the Red government in China and urging that Chiang Kai-shek should be eliminated.

The Red government in China is not a representative of the Chinese people but only a bunch of freebooters. The Yalta papers which took Soviet Russia into the Far Easttern war less than a week before it ended, enabled the Soviets to rush into Manchuria where a heavy supply of Japanese arms and ammunition was surrendered to them.

These military supplies were then turned over to the Chinese Communists, who used them in their war against National China. Meanwhile, the Nationalists were crippled by the withholding of American military supplies, after nearly 15 years of struggle against the Japanese invaders.

This gave the Reds the advantage and Chiang Kai-shek was driven out of China to Formosa, where he was able to establish his The Chinese people were turned defenses. over to a band of gangsters which has kept its foot on their neck since then. There has been no election to test the peoples' reaction to the Red government. Fifteen million have died from Red persecution, it is estimated.

Are these gangsters going to be accepted now as the legitimate rulers of China and received into the fellowship of free peoples? Surely such a proposal is absolutely crazy. Meanwhile Chiang Kai-shek is the man who unified China-the man who led the defense of China against Japanese aggression. He is the true representative of the Chinese people. In Formosa he has established a democratic system that has won wide approbation. Now he awaits the opportunity to restore freedom

For nations that claim to be defenders of freedom to turn Chiang Kai-shek down and talk about receiving the Red Chinese gangsters into their fellowship is not only an insult to justice, but it is a deliberate outrage against the Chinese people, whose dream of freedom is being destroyed. It is time the American people awakened to the seriousness of this situation. Surely we don't want a repetition of Yalta in China today.

Look Before Leaping

EXTENSION OF REMARKS OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. LAIRD. Mr. Speaker, I would like to call to the attention of my colleagues here in Congress an editorial which appeared in the Washington Post under date of Wednesday, March 23, 1955, entitled "Look Before Leaping." recommend for your consideration this editorial which follows:

LOOK BEFORE LEAPING

The revolt in the House against the 7.5 percent average-pay raise for postal em-ployees recommended by the Post Office and Civil Service Committee was another manifestation of that body's reluctance to face fiscal realities when it considers pay bills and taxes. The House voted 302 to 120 against taking up the bill under a rule forbidding amendments only because it was not considered generous enough. A majori-

ty appears to favor 10 percent increases even though a bill carrying that figure is likely to encounter a Presidential veto. The result might be no increase at all for postal work-

Postal workers and other Government employees are undoubtedly entitled to higher pay. The question is how much should be granted. So far as postal workers are con-cerned, Congress could deal with the problem more realistically if it had increased postal rates to cover the wage and salary boost. The administration has sent its recommendations to Capitol Hill, and they have been embodied in the Murray bill to adjust postal rates temporarily and create a commission on postal rates. But no hearings have yet been scheduled on the bill. If the new rates favored by the Post Office Department are approved, they will bring in an additional \$342 million. But if Congress should add more than \$200 million to the Department's paryroll and then decline to increase rates, much of the progress that has been made toward reducing the postal deficit would be wiped out.

It is necessary to bear in mind also that incentive pay raises ought to be voted for the Armed Forces and that more than a million classified Federal employees are entitled to an increase. With Congress driving hard for tax reduction-a demand that will be repeatedly pressed during the next year and a half—legislators should take time to see where they are heading. No one needs to be a financier or a budget expert to see that pay increases must be kept moderate if spending in excess of income is not to be substantially increased at a time when the country ought to be paying its own way.

One Hundred and Thirty-fourth Anniversary of Greek Independence

EXTENSION OF REMARKS

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. HOLTZMAN. Mr. Speaker, March 25 will mark the 134th anniversary of Greek independence.

Over a century ago the Greek people recovered their freedom and emerged once again an independent nation.

We here in America are happy to pay tribute to this great country and to her courageous people. Ancient Greece was the cradle of democracy and her culture formed the cornerstone of our western civilization. We know from history of the past glories and achievements of Greece; and we are forever indebted to her for the heritage she has handed down to us-love of liberty and concern for our fellowmen.

Since her reestablishment among the community of free nations, Greece has been beset by many enemies. In spite of those difficulties she has contributed far more than her share to the cause of world peace by her magnificent participation in World War II and in the recent Korean conflict.

Her determined opposition to nazism and communism, despite the sufferings and persecution of her people, has demonstrated to all how much freedom means to her. We have been proud to have the Greeks as our allies in the past,

and we shall consider it an honor and a privilege to continue our associations with her in the future as guardians of democracy.

Chief Judge Albert Conway

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. MULTER. Mr. Speaker, on February 17, 1955, the Brooklyn Lawyers Club of the Federation of Jewish Philanthropies honored one of Brooklyn'sno-one of New York's greatest citizens, the Honorable Albert Conway. My first contact with the distinguished gentleman was when I sat at his feet as a student in classes taught by him at the Brooklyn Law School. I soon learned to respect and admire him as a fine teacher. an excellent lawyer, a truly high minded public servant, but most of all as a real friend.

He has served with distinction as a district attorney, State superintendent of insurance, county court judge, supreme court justice, associate judge of the court of appeals, and now as chief judge of that court, the highest in the State of New York.

Despite the heavy demands upon his time by official duties, he has always found time to devote to every worthwhile civic and charitable endeavor of our community.

Little wonder then, that among the many fine tributes to him that night were the following communications from the highest and most respected of our public officials:

THE WHITE HOUSE. Washington, D. C.

DONALD FREUND.

President, Brooklyn Lawyers Club:

Please convey my congratulations to the Honorable Albert Conway on the honor which the Brooklyn Lawyers Club extends to him on February 17. To all his friends who thus join in tribute to an eminent jurist, I send best wishes.

DWIGHT D. EISENHOWER.

WASHINGTON, D. C.

DONALD FREUND.

26 Court Street:

May I tell you again how deeply sorry I am that official engagements of long-standing have made it impossible for me to attend the dinner in honor of Judge Conway at Union Temple. It would have given me the keenest pleasure to have joined his many other friends in this well-deserved tribute to Judge Conway, for whom I have great admiration and affection. I have known Albert Conway for more than a quarter century, and had the great privilege of appointing him to the court of appeals in 1940. He has made a wonderful record and I rejoice that he is now serving as chief judge, the highest judicial post in the State of New York. Will you please give Albert my congratulations and my affectionate regards? HERBERT H. LEHMAN.

UNITED STATES SENATE, Washington, D. C., January 26, 1955.

Donald Freund, Esq.,

President of Brooklyn Lawyers Club,

Brooklyn, N. Y.

Dear President Freund: I greatly appreciate your thought of me in connection with the testimonial dinner, which is being given in honor of Judge Albert Conway, on evening of Thursday, February 17, at Union Temple. Because of my great admiration and high regard for the guest of honor, I should like very much to be present and thus to pay tribute to him in person. Unfortunately for me a long-standing engagement for that same evening, which I shall be obliged to keep if possible, is going to prevent me from being in New York at that

Please convey to Judge Conway my deep regret that I cannot be on hand. His has been an unusual, long, and distinguished career in his noble profession and in public service. No one more than he deserves the tribute being paid to him by the Brooklyn Lawyers Club. Please express to him my hearty congratulations upon a tribute so richly deserved and my every good wish for all that is best in health, happiness, and success in the years ahead.

Again thanking you for inviting me to be present, I am

Sincerely yours,

IRVING M. IVES.

ALBANY, N. Y.

Donald Freund, Esq.,

President, Brooklyn Lawyers Club:

My warmest greetings to the Brooklyn Lawyers Club and to the renowned jurist, Albert Conway, whom you are honoring this evening. I deeply regret my inability to join personally in the tributes being paid to Chief Judge Conway, for his many years of service to the State and his contributions in the field of jurisprudence. All good wishes for the continuing and increasing vigor of the charitable, communal and civil activities of the Brooklyn Lawyers Club.

AVERELL HARRIMAN.

Judge Conway's remarks that evening have important significance and though addressed to a lawyers group, would be as apropos if delivered to a group of legislators. I, therefore, commend them to the attention of our colleagues.

They follow:

THE OBLIGATION OF THE LAWYER

(Address by Hon. Albert Conway, Chief Judge of the New York Court of Appeals on February 17, 1955, before the Brooklyn Lawyers

I must tell you, first and foremost, how much I appreciate the thoughtfulness and kindness of the Brooklyn Lawyers Club of the Jewish Federation of Philanthropies in tendering this dinner in my honor as chief judge. I appreciate that you are honoring both the office and me but I, as a Brooklynite, shall treasure the memory of it. I have lived here in Brooklyn all my life and practiced law here all of my life as a lawyer. believe that it is much easier to be wellliked and acclaimed in cities away from one's neighbors and so I have always wished to be liked in my borough among the people with whom I have grown up and with whom I have lived. Thus, I especially appreciate this dinner and thank you for it.

I should like to leave one thought with you this evening. I shall take as my text words of wisdom uttered by Mr. Bernard Baruch last year at a dedication ceremony:

"Government is only an instrument for regulating society. A limited democracy—the political form we live under—is bound to have its faults since none of us who make up this democracy is perfect. But this democracy has given each of us the opportunity to better his own condition by his own striving—and more than that no government can give us. * * *

"We in this country have succeeded be-cause we have made Americanization synonymous with expanded opportunity. have sought our goal of equality for all not by pulling everyone down to the same level, as has happened elsewhere, but by giving everyone the opportunity to rise."

In a measure, lawyers are set apart as members of a learned profession. I have always looked upon them as trustees of the rights of the residents of their communities. Those rights are life, liberty, the pursuit of happiness and the opportunity to rise commensurate with one's capacity and capability as received from his Creator. correlative duties of such residents are to be good citizens, to see that justice under prevails, and to support all worthwhile projects contributing to the good of their communities. Lawyers are thus as a group set apart. There is no other group which is the trustee of our community rights and must step forward to protect those rights when to fail to do so would be injurious. The people look to us in addition for leader-If you will consider for a moment you will realize that the people continually display not only their acceptance of the fact that we supply the leadership but also their expectation that we will live up to our heritage in that respect for in this country we have supplied the leadership since the days of the Founding Fathers. That entails more obligations than those of any other profession. A profession, as we know, is not a business. It is only for high minded individuals of character who work assiduously, not only in their preparation for a degree and for a license to practice but also for their clients during the balance of their lives as practicing lawyers. The old adage tells us that the law is a jealous mistress. Indeed, the practice of the law takes precedence even over family obligations if the rights of a client hang in the balance.

Again, if you will consider, you will realize that there is no other profession where the people in every community, whenever any worthwhile endeavor is to be initiated, require that there be a member of our profession on the executive board, by whatever name it may be called. We are the un-common men from whom those in our community demand service, far and beyond that which they require of business men or of men in any other profession except that of religion. When I speak of the uncommon men I refer to those men to whom much knowledge and ability has been granted and, therefore, men from whom much is to be expected and by whom much must be returned to their neighbors. It is not enough, however, that we as lawyers be trustees of the rights of our neighbors and that we as organized groups, such as this, are ready to spring to our neighbor's aid when his rights are in danger. Take freedom, for in-stance, freedom is the most important of our possessions and one easily lost. The Chinese have a proverb to the effect that when a man losses his freedom he has nothing else to lose. Mr. John Lord O'Brian, of Washington, a distinguished lawyer, speaking in December last put it clearly when he said:
"All of us agree that freedom for the in-

dividual is the most important and precious of our possessions. What we often forget, however, is that freedom cannot be created by law. All that the law can accomplish is to protect the rights of the individual from interference either by other individuals or by government. As Justice Brandels once observed, the American Constitution 'conferred, as against the government, the right to be let alone—the most comprehensive of rights and the one most valued by civilized man.' In America we constantly advocate respect for the dignity of man and the sanctity of the individual. But dignity cannot be conferred upon the citizen by law. The qualities that give dignity to the individual and sanctity to his personal beliefs are qualities that must be developed within the inner life of the individual himself."

While then we are trustees of the rights of those who reside in our respective communities, we can accomplish little unless those residents fully understand the fact that our government is unique in the history of mankind. The great contribution of America has been to make law the sovereign by means of a written constitution binding equally the government and the governed. Also, we can make little progress if it be not understood that freedom is not created by Laws are not self-executing. The public opinion which is the great law enforcer can come only from those who understand the problems which the specific law, whether common law or statute law, was meant and intended to solve. Education then in the philosophical theory of and basis for our government and education is the meaning of freedom under law, since freedom presupposes law, must also come from the organized bar, whether it by the Lawyers' Club, such as this, or a bar association. have a double duty, but it should not be too difficult if you teach it at your community level and thus make it leaven. It seems to me to be your duty as lawyers and mine as a judge to endeavor to do this to the best of our ability and thus to justify the confidence which has been reposed in you and me by our respective communities.

Repeat Performance

EXTENSION OF REMARKS

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. CEDERBERG. Mr. Speaker, a few days ago I voted to suspend the rules of the House to permit consideration of H. R. 4644, the postal pay bill. In the last Congress I voted for the only postal pay bill which had a possibility of becoming law.

I voted to suspend the rules for H. R. 4644 because I believe we should not further delay the passing of this pay legislation by incorporating provisions which would threaten the pay increases proposed in H. R. 4644.

As for the classification features of the bill, much study has been given to them and I believe they should be given a trial. Then after a fair test has been given, we can make the needed adjustments in later legislation covering classification.

The Washington Star presented its readers an editorial last night, warning of a "repeat performance" of what happened last year when postal employees lost their increase and pointing out that the course now being pursued is heading in the same direction. It follows:

[From the Evening Star of March 23, 1955]

REPEAT PERFORMANCE?

It is beginning to look as though Congress is headed for a repeat performance of past

errors in handling postal and classified pay legislation. Last year Congress ignored warnings of a Presidential veto and passed legislation unacceptable to the administration. As a result Federal employees lost their pay raise. Now there are new warnings of a possible Presidential veto if a postal raise of more than 7.5 percent is voted. But the House has gone right ahead with plans to exceed that limit. And the Senate Civil Service Committee has reported a bill calling for a 10-percent increase.

The House rejected an opportunity Monday to pass a bill that would have lifted postal pay to the ceiling which President Eisenhower insists is necessary to keep the cost within reasonable bounds. Instead the House preferred to follow a course which will permit amendment of the committee-approved 7.5 percent bill when it reaches the floor. Of course, if the House eventually should vote for an 8- or 10-percent raise for postal workers, fair play would dictate a like increase for all Government employees in the classified service.

The President, in a letter to Chairman M-RRAY, of the House Civil Service Committee, last week, said he was concerned about the fiscal impact of even a 7.5-percent increase. "In fairness to you and your colleagues," he wrote, "I must make it clear that any additional increases in postal salaries above your committee's action would give me the gravest apprehension." hard to see how he could have made his warning any plainer, short of actually mentioning a veto. In fact, the language has been interpreted at the Capitol as being tantamount to a veto threat. If Congress continues to ignore the Presidential warning, it will be subjecting Federal employees to the risk of more shattered hopes. For there is no assurance that advocates of higher raises would be able to muster the twothirds vote in each House necessary to override a veto.

A Fair Basis for Federal Aid

EXTENSION OF REMARKS

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. METCALF. Mr. Speaker, a subcommittee of the House Committee on Education and Labor, 83d Congress, under the chairmanship of Hon. Carroll D. Kearns, held hearings on the need for Federal aid for school construction. In an unanimous report the subcommittee acknowledged the urgency of the need and recommended "that legislation be enacted providing for Federal payments to enable the States and local communities to expand their school construction program."

On the first day of the 84th Congress Mr. Kearns and Hon. CLEVELAND M. BAILEY, the ranking Democratic member of the Kearns subcommittee, introduced identical bills—H. R. 14 and H. R. 15.

One of the features of the Bailey-Kearns bills was the proposal to distribute the Federal aid to the States on a flat-grant basis. Money appropriated by the Federal Government would be allocated to the States on the basis of the ratio of school age population in the State to the total school age population in the Nation. Then each State, in order to secure its allotment, would match the

Federal allocation on a statewide 50-50

Other bills have been introduced providing different formulas for distribution. A modification of the principle of the Hill-Burton Act for hospital construction has been suggested, and population-taxation formulas have been advanced.

The equity of the Bailey-Kearns approach has support in the following article by Dr. Samuel M. Brownell in the Nation's Schools, March 1946, written before Dr. Brownell became Commissioner of Education. Dr. Brownell's article follows:

A FAIR BASIS FOR FEDERAL AID—DISTRIBUTION OF FUNDS ACCORDING TO NUMBER OF PUPILS WOULD AVOID OBJECTIONABLE FEATURES OF OTHER PLANS

(By Samuel M. Brownell, Department of Education, Yale University)

It is of national concern that each child receive an education which is reasonably adequate; yet, measured by any standards, there are now many children receiving an education which is entirely inadequate. Present economic and tax conditions

Present economic and tax conditions make some communities and States unable to meet even low standards of education. State and local educational consciences in other localities are so low that they permit patently inadequate educational conditions to continue.

THE FEDERAL CONTROL FACTOR

These statements record conclusions that have been made from and are supported by research investigations and the study of individuals and groups that avocate Federal financial aid to schools. But, as pointed out in the timely and important document, "Federal-State Relations in Education," I these facts must be considered in relation to certain others, as for instance, the fact that the foundations of democracy would be jeopardized by centralized control of education which might result from certain types of Federal financial support of schools.

Furthermore, a tremendous and needless waste of resources has been observed where there are uncoordinated Federal, State and local educational enteprises, notable particularly because some federally supported enterprises ignore, compete with or dominate State and locally supported educational programs.

Recognizing the foregoing issues and problems is one thing. Developing a program which will resolve them is another. For years professional groups have proposed that Federal aid be granted but these proposals have not been accepted. Instead, Federal funds and programs have "come in the back door." In addition to recognizing the undesirability of and dangers in the present situation, it is perhaps proper that we examine some of the reasons for the nonacceptance of past Federal-aid proposals.

Without attempting to be exhaustive, we suggest three possible factors contributing to their nonacceptance.

1. Confusion has existed as to what is meant by equality of Federal interest in the education of each child and as to the provisions for Federal contributions to the States. Local communities long ago abandoned the practice of providing education supplementary to whatever parents could or would provide. Rate bills were abolished as were special schools for indigents.

SCHOOLS PROVIDED FOR ALL

The principle upon which schooling was furnished was, in general, this: because the community has an interest in the educa-

³ Federal-State Relations in Education, Educational Policies Commission and Problems and Policies Committee, March 1945.

tion of each child, it will establish schools for any and all who wish to and can utilize them. It makes no difference whether a child's parents are wealthy or poor, white or black, live close to the school or a long distance away, the means of education are provided to all equally.

The claim for a Federal stake in the education of each child is based on the importance to the preservation and advance of democracy of having each child receive an adequate minimum or basic education. The Government's stake or interest would, therefore, seem to extend to all children regardless of the financial status of their parents or their community. A plan for contrbuting Federal funds equally to each publie school child would be in accord with long-established local school policy and would eliminate the contention held by many who have opposed one or another plan for Federal aid because they considercd it discriminatory.

ECONOMIC NEED NO CRITERION

2. Educational need is tied inseparably with economic need in most proposals for Federal aid. Economic need, i. e. lack of sufficient tax resources to provide good ed-ucation, in reality has little to do with ed-ucational need. The obtaining of adequate resources is a fundamental economic problem which is as basic to the support of public health, good roads and other governmental services as it is to the support of

The Federal Government may and does recognize this through a tax program which, in general, collects most heavily from individuals and localities which have a high economic capacity and least heavily from those with the least capacity. It also at-tempts to aid States and communities to become economically self-sufficient through development of their resources or discourages the continuance of economically poor areas through resettlement and so on.

A permanent policy of Federal aid to poor communities does not strike at the basic problem. Furthermore, it draws opposition from those who recognize it as a form of double taxation, that is, a method of taking the most from those communities which have the greatest capacity to pay and distributing to them the least because

of this capacity.

Clear recognition that economic need is a tax problem which should be separately considered from educational need would lend further support to those who accept the fact that the Federal Government has an interest in the education of all pupils alike. Educational need from the Federal point of view would be reckoned in terms of the number of pupils in school membership

in any and all parts of the Nation.
3. Proposals for Federal support profess to want to eliminate Federal control but seek to incorporate certain types of con-A genuine faith in the effectiveness of the democratic process and in the ability of the community and the State to provide adequate education for all pupils is consistent with the position that education is a State and local function. Full acceptance of this principle would recognize that in providing funds for education the Federal Government needs no control beyond a report to show that as much money has been spent by the State on public education as has been allotted to it.

State and local leadership and educational conscience would be relied upon to see that more adequate education was provided by utilizing the combined Federal, State, and local resources than was possible through State and local resources alone. Federal leadership could be devoted to assisting the State and local leaders and to stimulating a more enlightened educational conscience throughout the Nation.

A proposal which makes Federal aid supplementary to State and local support of education involves the determination by the Government of how much or what kind of education and educational support is required before the Federal grant is made. Distribution of Federal funds on the basis of the "pauper oath" or economic need calls for Federal control sufficient to determine the economic status of the State or com-

Acceptance of these controls opens Pandora's box. Those who distrust local and State leadership are in good position to press for controls to insure that school support will increase if Federal aid is given, to seek some means of preventing "misuse" of the money, to see that there is a State plan for using the money for teachers' salaries, to require equal distribution of funds to all races, or to require that the money be spent only in elementary schools and so on. These demands would make easier the opening of the way for further controls. They would evidence a lack of faith in local and State leadership and in democracy.

DOLLARS PER PUPIL PLAN IS FAIR

It may well be that educators could profit most from the nonacceptance of previous proposals for Federal aid to education by supporting a plan to appropriate and distribute to each State a given number of dollars per pupil in average membership in public elementary and secondary schools. plan would provide a simple and easily understood basis for recognizing the Federal stake in the education of each child, would treat educational need as separate from economic need and would permit the distribution of funds to be free from all Federal control beyond a State affidavit that the amount of money received had been spent on the

The proposal has other merits; objections to it can be raised also, but it certainly offers a remedy for a number of conditions which past proposals have overlooked.

Yalta and History

EXTENSION OF REMARKS OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Thursday, March 24, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Yalta and History," written by George Sokolsky, and published in the Washington Post of March 24, 1955.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

History has a curious way of asserting itself despite the efforts of vain men and powerful politicians to suppress the truth. Those who rewrite history to suit their private ends fail to suppress the whole truth because always somewhere, even hidden in desert sands, is another record which, in time, is uncovered.

Thus, for 10 years, the errors of Tcheran and Yalta have covered the political battlefield with the reputations of men who believed that they were wholly safe from the light of truth.

Before the Yalta Conference took place, Latvia, Estonia, Lithuania, East Finland, East Poland, Bessarabia, and Bukovina had already become absorbed in the Russian Empire. Stalin had erected Communist gov-

ernments in Bulgaria, Rumania, Yugoslavia, Hungary, and Albania prior to the Yalta Conference. He had also forced Communist participation in the governments of West Finland and Czechoslovakia and imperiled our position in Asia by maintaining a Chi-Communist military force in China.

The Yalta documents need to be read in this framework. It is not possible to believe that Roosevelt did not know the pattern that Stalin was cutting out of paper maps. Also, Roosevelt knew about the Molotov-Ribbentrop pact, and it should have been a guide to Stalin's weltanschauung. In fact, in the very first conversation between Roosevelt and Stalin at Yalta, Stalin made his position clear: The earth was to be managed by the three great powers and he was taking no back talk from any of the little nations. This is the conversa-tion as reported by Bohlen:

"Marshal Stalin made it quite plain on a number of occasions that he felt that the three great powers which had borne the brunt of the war and had liberated from German domination the small powers should have the unanimous right to preserve the peace of the world. He said that he could serve no other interest than that of the Soviet state and people, but that in the international arena the Soviet Union was prepared to pay its share in the preservation of peace. He said that it was ridiculous to believe that Albania would have an equal voice with the three great powers who had won the war and were present at this din-ner. * * *"

This policy Soviet Russia has pursued to the present day. Roosevelt is not reported to have protested against this principle of international conduct. Bohlen's notes say that he commented as follows:

The President said he agreed that the great powers bore the greater responsibility and that the peace should be written by the three powers represented at this

It was Winston Churchill who raised his voice, as apparently he often did, for the smaller countries, particularly for Poland. Bohlen gives this credit to Churchill:

"The Prime Minister said that there was no question of the small powers dictating to the big powers but that the great nations of the world should discharge their moral responsibility and leadership and should exercise their power with moderation and great respect for the rights of the smaller nations. • • • "

But Roosevelt said nothing about the Atlantic Charter, about the rights of small nations, about justice for friend and foe. This kind of talk was for the people: the hardheaded, practical men who sat in the Livadia Palace, on the Black Sea, had no time for petty talk. They were making history—by enslaving millions to Stalin's chariot.

It is not a pretty picture, but it is one that will undoubtedly be painted in even more lurid details when all the documents are available.

Congressman Dollinger's Report to His Constituents

EXTENSION OF REMARKS OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. DOLLINGER. Mr. Speaker, at the close of the first session of the 84th Congress, I shall prepare and include in the Congressional Record my report to my constituents. I make this statement now so that the people I represent may know that the report will reach them shortly after the close of the session, and that they will be advised of progress made and the status of legislation of interest to them.

Why Should America Stand Last?

EXTENSION OF REMARKS

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1955

Mr. TOLLEFSON. Mr. Speaker, one of the strongest statements in behalf of the American merchant marine and our shipbuilding industry appears in an article written by James A. Brownlow, president of the A. F. of L. metal trades department. I hope that Members of Congress will have an opportunity to read it, for it is most timely.

The article follows:

WHY SHOULD AMERICA STAND LAST?

(By James A. Brownlow, president, A. F. of L. metal trades department)

America's shipbuilding industry and merchant marine are vital links in our national defense. On the strength and readiness of the shipbuilding industry and the merchant marine the safety and economic well-being of all Americans depend to a considerable degree. We should have learned this lesson well—the hard way—from our experiences in World War I, World War II, and, more recently, the Korean conflict.

Each time our shipbuilding industry and our merchant marine were completely unprepared to meet the emergency. Each time our shipbuilding industry had to perform its tasks in a great rush and at great cost. Each time the industry had been allowed to stagnate until the next emergency hit us.

It is high time that all Americans, regardless of where we live or what we do for a living, awake to this national problem. We must see to it that our elected spokesmen in Congress are aware of our concern and of our insistence on legislation to meet this critical situation effectively.

What has happened to our once vast ship-building industry and our merchant marine is a sad saga hidden in statistics. Seldom does the story make the headlines. The reports and the releases of the Maritime Administration and the various shipbuilding and merchant marine associations tell a tale all Americans should know and do something about.

Lloyd's latest report Indicates that the United States has dropped to last place among the major shipbuilding nations of the free world. During the last quarter of 1954 our country fell from 6th to 12th place. On January 1 the gross tonnage on the ways in our private United States yards was less than half of that on October 1 of last year.

Lloyd's report is based on all vessels under construction having a gross tonnage of 100 gross tons or more. The Shipbuilders' Council of America collects figures on merchant vessels of 1,000 gross tons or over and which are under construction or on order. The council's report for January 1 reveals the same shocking story.

On that day the shipyards of the free world had under construction or on order 1,347 vessels of 11,249,398 gross tons. Of this total only 14 vessels of 193,660 gross tons were in

American yards, The United States had dropped to 10th among the major shipbuilding nations. On January 1 we had only 1.7 percent of the total tonnage building or on order.

What were other countries doing? Here is the picture;

Country:	Percer	rtage
Britain		35. 1
Germany		12.6
Sweden		12.3
Holland		9.8
Japan		7.0
France		5.3
Norway		4,8
Italy		3.9
Denmark		2.7

While the United States has been slipping rapidly in ship construction, other countries have been experiencing remarkable gains. During the last quarter of 1954 the yards of the United Kingdom, Japan, Germany, Holland, and Italy all rolled up substantial increases in new-tonnage construction. Japan nearly doubled her tonnage during the last quarter of 1954. She claims that during the last three quarters of 1954 she had more ships on order than in 80 years of shipbuilding. Japan now claims to be third in the world in shipbuilding capacity. The yards of Western Germany turned out The yards of Western Germany turned out of the yards have a backlog of 4,250,000 gross tons, the president of that country's shipbuilding conference has announced.

Meanwhile our own American shipbuilding industry is in a distressed condition, and it is indeed a sad commentary that this condition has been aggravated—and to a large measure caused—by American firms and their affiliates. They have aggravated the condition by placing ship construction orders in foreign shipyards.

While American yards and their skilled work forces are suffering from lack of work, United States companies and their affiliates have seen fit to build large numbers of oceangoing vessels in the busy shipyards of foreign countries which have been rolling up substantial tonnage.

As of last June 30 United States companies and their affiliates were building or had on order in foreign yards and for foreign registry 57 vessels, totaling 888,687 gross tons—roughly, four times the entire merchant ship tonnage which all our United States yards had building or on order as of that date.

The orders for 57 vessels to be built in foreign yards included 41 tankers of 678,252 gross tons, 10 ore carriers of 187,150 gross tons, and 6 dry-cargo vessels of 23,285 gross tons.

These orders of American companies and their affiliates placed in foreign shippyards amount to almost five times the total tonnage under construction or on order in our American yards on February 1. As of that date our yards had on the ways or on order only 13 seagoing or inland merchant vessels of 1,000 gross tons or more. These 13 vessels, 7 for Government account and 6 for private United States flag account, total only 188,960 gross tons.

These foreign shipbuilding orders of American companies and their affiliates would have assured employment for 1 year for more than the 36,000 skilled-worker nucleus which the Maritime Administration figures we need to maintain our private yards in a position to meet the needs of rapid expansion in the event of full mobilization.

If we include our coastal, Great Lakes, and inland waterways and the repair facilities, 130,000 workers are needed in the shipyards of the Nation. These workers and yards should be distributed in the proper ratio on the three coastal fronts, and also inland and Great Lakes waterways.

A few weeks ago another large American oil company (Tide Water Associated Oil) an-

nounced that it had ordered four 50,000-ton supertankers, the largest such ships ever built, to be constructed in France and delivered in late 1956 and early 1957.

The Maritime Administration has estimated that the construction of a considerably smaller supertanker of 35,500 deadweight tons provides approximately 750 manyears of shipyard work. On this basis, it would appear that these 4 supertankers alone would have supplied our shipyards with at least 4,000 manyears of shipyard work.

Each of these vessels ordered abroad is a direct loss to our shipbuilding industry. As all of them are to be operated under a foreign flag, they will also constitute a loss to our American merchant marine. It is through such practices that these companies fail to sustain our American standard of living and the purchasing power of American workers, which is principally responsible for the broad American markets for their products.

These companies are American companies. They have a moral obligation to support American industry and our standard of living. It is unfair of them to ignore the plight of American workers. The patronage of American workers has made their success possible.

Trade unionists are well acquainted with the tactics of the runaway shop and farmingout of work. What is this practice of American companies in placing their ship construction work in foreign yards and then operating the vessels under foreign flags but another form of this same old problem?

It is true that construction costs in foreign yards are substantially less than in our own. The American standard of living is higher. Direct and indirect costs are greater. Therefore, even though our shipyards are more efficiently operated than those in foreign lands, the end-product costs more.

The construction of a large ocean-going vessel is not nearly so susceptible to the techniques and economies of mass production which have enabled so many American industries to meet foreign competition and constantly improve American living standards. It is still essentially a construction operation requiring specialized skills and large amounts of hand labor.

The fact that a merchant vessel is an instrument of foreign commerce makes it particularly vulnerable to cost advantages of foreign construction. Foreign construction is further stimulated and encouraged by the savings which accrue through foreign flag operation. Foreign flag construction and operation under a foreign flag constitute a runaway from the decent living standards established over many years of struggle by American shipbuilding workers and merchant seamen through their respective trade union organizations. The saving on construction averages at least 30 percent, and thereafter foreign flag operating costs are only about one-fourth of the costs of operation under the American flag.

Ten short years ago the United States led the entire world in ship production. Between 1941 and 1945 our yards produced 5,280 ocean-going ships totaling 54 million deadweight tons. For every 100 workers employed in our private yards during the wartime peak, less than five are employed today. Today the United States is fighting for its life as a shipbuilding Nation. We stand in last place—not first—among the major shipbuilding countries of the free world.

America's shipbuilding facilities are a vital part of our national defense. The success of any wartime overseas operation depends directly on the availability of speedy modern vessels to transport men, equipment, and supplies. Prompt and adequate action by Congress on a program, including subsidies, to offset advantages of foreign yard construction and foreign flag operation is essential if we are going to maintain the necessary hard core of our shipbuilding industry and our merchant marine.

The merchant marine and the shipbuilding industry go hand in hand. The merchant marine picture is dark. For the first time since 1939 we have lost our world leadership in the volume of privately owned oceangoing tanker tonnage. As of the close of last year, according to the American Merchant Marine Institute, our privately owned oceangoing tanker tonnage had decreased by 38 vessels and 320,000 deadweight tons. This left us at the start of 1955 with 6,624,658 deadweight tons, as compared with the United Kingdom's 7,054,000 deadweight tons.

United States petroleum imports in 1954 were a little above 1953, and 5 times those of 1938. However, our American-flag tankers hauled only 33 percent of this oil in the first 9 months of 1954, while in 1938 American tankers hauled 53 percent of our incoming oil and in 1946 they hauled 76 percent.

oil and in 1946 they hauled 76 percent.

Our tanker fleet tonnage is at its lowest level in 6 years. The standing of the leading tanker nations on January 1 was as follows:

	D	cadweight
Country:		tonnage
United	Kingdom	7, 054, 000
United	States	6, 624, 658
Norway		5, 693, 000
Panama	·	3, 578, 000
Liberia.		2,609,000
Italy		1,642,000
France.		1,442,000
Sweden		1, 166, 000

The American people are the largest users of petroleum in the world. A vast portion of this petroleum comes from overseas. Recent testimony before the House Ways and Means Committee indicated that 6 companies import 70 percent of the foreign oil used in the United States. Five of these are American companies. These 5 are purported to have 89 percent of their proved oil reserves and 64 percent of their present oil production outside of the United States.

Increasingly these American companies are resorting to foreign ship construction and foreign-flag operation (frequently through their foreign-controlled affiliates). Foreign construction gives them an initial cost advantage. Often this is supplemented by a healthy-sized construction subsidy, accelerated cost-writeoff allowances and, in at least one country (which has now passed us in construction tonnage), a complete exemption from income tax of all revenue derived from new ships for the first 3 years of their operation.

Tonnage itself does not tell the whole story. The American Merchant Marine Institute estimates that about 75 percent of our American tanker fleet was built during World War II and only 12 percent since the war. By contrast, only 25 percent of the foreign flag tankers were built during the war and more than 50 percent of foreign trankers are relatively new, having been launched since the war.

About 85 percent of our tankers will face the problem of obsolescence within the next 10 years. Replacement of our tankers as they reach the 20-year age limit will require careful planning of industry and Government and the availability of large sums of money if our privately owned and operated tanker fleet is to be maintained.

During the last 12 months increasing numbers of American merchant seamen have been beached. These Americans are jobless because of generally slow conditions in our shipping industry, the transfer of more than 130 ships to foreign flags and the construction of new vessels for foreign flag operation.

On January 1, according to the Maritime Administration, our merchant fleet offered 58,800 berths. This was 7,550 fewer than a year earlier. Unemployment rolls and union waiting lists "reflect the sad state of the Nation's sengoing force," says the New York Times. According to this newspaper, the A. F. of L. Masters, Mates and Pilots report only one-third of 12,000 members at sea.

This union supplies deck officers for virtually all of the Nation's deep-sea shipping. The other unions of seagoing workers report longer-than-usual waits for jobs.

America's shipbuilding industry and America's merchant marine operate directly in the national interest. They are part and parcel of our national defense. Last year Congress enacted various measures designed to bolster the shipbuilding industry and the merchant marine. These included:

The so-called 50-50 cargo bill, requiring that at least one-half of all cargoes financed by the United States Government-whether inbound or outbound—must move in American-flag ships; a ship mortgage insurance law. A law providing for the private construction of 15 tankers for longterm Navy charter and the building of 4 by the Navy. The Liberty-ship-conversion program, providing for the experimental conversion of four of these vessels. The tanker trade in and build program. The passenger-cargo ship replacement program providing for the replacement of four passenger-cargo vessels for South American and Caribbean trade. The Navy (MSTS) special-ship program, involving seven special-type ships. The emergency-repair program providing \$12 million for repair of vessels from the laid-up fleet.

These programs are helpful. They mitigate—but do not solve—the national crisis in shipbuilding and the merchant marine. The long-term merchant ship construction program, which the 83d Congress failed to act on, is sorely needed. This proposal called for the construction in American shipyards of 60 cargo and cargo-passenger ships per year.

Adoption of this program would be a long step toward meeting the block obsolescence which faces our merchant fleet and would assure a nucleus of about 36,000 skilled workers employment in our merchant shippards for our oceangoing ships. According to the Maritime Administration, this is the minimum peacetime employment which must be maintained in our merchant ship construction program as a mobilization nucleus if our private yards are to be in a position to meet the needs of rapid expansion in the event of full mobilization. The 84th Congress, which is now in session, should take prompt and favorable action on similar legislation.

The present growing trend toward foreign construction and foreign-flag operation is sapping the strength of our shipbuilding industry and our merchant marine. Our national safety, which demands the maintenance of our shipbuilding at least at the mobilization nucleus level and a speedy modern merchant marine fleet with the skilled men to man it, is endangered.

Our merchant marine is our lifeline in wartime overseas operations. It must be ready and available to transport men, equipment, and mountains of supplies, should the need arise.

We must keep our American corporationcontrolled ship construction work in our American yards. We must see to it that American-owned vessels operate under the American flag. Effective action to solve these problems must be taken promptly by the 84th Congress.

Minimum Wage

EXTENSION OF REMARKS

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1955

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending

my remarks to include the full text of fact sheet No. 2 on fair labor standards for American workers from the CIO committee on fair labor standards. It is deserving of place in the working files of all Members of this body and of all persons interested in a subject that strikes at the very foundations of our national welfare.

Perhaps more than any other Member of the Congress, I have a personal interest in the minimum wage stemming from associations and activities in the era of the legislative birth of the concept that the least of our workers in the quality of labor required was entitled to a minimum wage sufficient to meet the demands of keeping body and soul together. As late as 1913 this concept was bitterly fought and stubbornly resisted in legislative councils.

FIRST STATE MINIMUM WAGE LAWS

In 1913 it was my privilege to chairman a committee from the State Senate of Illinois that attracted wide national attention. The revelations of that committee of the low wages paid to workers in even the most prestiged establishments, running from a dollar and a half to \$5 a week, aroused the conscience of the Nation, and resulted in the passage of the first State minimum-wage laws in our history.

In the 979-page report of the committee of which it was my privilege to be chairman, printed by the State of Illinois in 1916, will be found the full text of the testimony of many of the largest employers of the period and of other witnesses; testimony that stirred the conscience of the Nation, enlisted the active support of President Woodrow Wilson and of the governors of 35 States. including the great Hiram Johnson, of California, and resulted in the enactment of 6 State minimum-wage laws in 1 year. On page 52 of this report appears the recommendation of the committee for the immediate enactment of a minimum-wage law prohibiting the payment of less than a living wage, and stating:

To remove the deficit between cost of living and income from service is in the power of the legislature. Until it is done and everyone who has to work is assured of the minimum of a reasonable living, the State not only has fallen far short of the legitimate demands of plain justice, but failed to deal with a situation in economics interminably interwoven with deep moral problems. After nearly 3 years of study and inquiry, seeking statistics and viewpoints, reducing arguments to mathematics, applying accepted rules of economics and logic. your committee is arrived at the firm conclusion that the enactment of the proposed minimum-wage law is the essential initial step in the intelligent treatment of the problems under survey.

THREE DECADES LATER

More than three decades after those words were written and the start of the minimum-wage program on a State level which had resulted from the investigations and public hearings in 1913 of a select committee from the Senate of Illinois, there came to me the great satisfaction and privilege as a member of the 81st Congress to vote for a Federal minimum wage law assuring the least of our workers a wage not less than 75 cents an hour. Since that time the cost

of living has increased greatly, and it is imperative that this Congress should increase the minimum wage to \$1.25. There is now pending a bill to that effect. I am happy to be among its many cosponsors.

The statement from the CIO committee on fair labor standards follows:

FAIR LABOR STANDARDS FOR AMERICAN WORKERS

INDUSTRY ADJUSTED FAVORABLY TO HIGHER MIN-IMUM WAGE BATES 1933-35, 1939, 1941, 1950

1. Under the National Industrial Recovery Act industry successfully increased minimum wages and compensated for shortened workweek

Under the President's reemployment agreement, June to October 1933, workers in half the 159 industries for which data are available increased their hourly earnings from 7.5 to 20 percent. The lowest paying industries showed the highest increases in wages. Earnings increased by 50 percent in industries with average hourly earnings of 20 to 25 cents in June 1933; by 42.5 percent in industries with average hourly earnings of 25 to 30 cents; and by 30 percent in industries with average hourly earnings of 30 to 35 cents. Industries with the highest average hourly earnings, 75 to 80 cents, showed an increase in earnings of 8.8 percent.

In the code period from October 1933 through the first months of 1935, when the NRA was in effect, industries still further increased their wages as a result of improvements in the wage provisions of the codes. Again, the industries with the lowest wages made the greatest increases. Increases from 15 to 20 percent were recorded in the low-paying industries as compared with 5 percent in the highest paying group.

2. The 1938 act set a 30-cent minimim in 1939 directly affecting 6 percent of the American workers with constructive results

The actual distribution was as follows:

Workers under 30 cents-April 1939

Area	Number of em- ployees earning less than 30 cents	Per- cent of em- ploy- ees	Percent of total employ- ees cov- ered earning less than 30 cents
TotalSouthern States	650,000	100	6 12
Northern States	427, 200 207, 300	32	12
Western States	15, 520	2	î
Industry:			1111
Manufacturing	460, 000	71	6
Wholesale trade	79,000	12	5
Motor carriers	54, 000	8	6
Railroads Other nonmanufactur-	19,000	3	2
ing industries	38, 000	6	2

In fact, employment increased from October 1938 through May 1939 by 680,000 Workers with the rise in the minimum to 25 cents.

Business failures were greater in number before the act became effective than later. Highly competitive industries, such as cotton textiles, seamless hosiery, apparel, and paper products were stabilized and wage cutting as a competitive device was eliminated.

 The 40-cent minimum became effective by end of 1941 long before the act was contemplated (October 1945)

In September 1938, some 13 percent of all employees covered by the Fair Labor Standards Act were earning less than 40 cents. By the end of 1941, this group had been reduced to minor proportions.

When the 40-cent wage orders were issued by the Administrator, 1.6 million were receiv-

ing less than 40 cents. The percentage of workers directly affected by all wage orders was as follows: under 5 percent, 8 wage orders; 5 to 10 percent, 15 wage orders; 10 to 20 percent, 10 wage orders; 20 to 30 percent, 19 wage orders; 30 to 40 percent, 7 wage orders; and 40 percent or more, 11 wage orders. Of the 55 minimum wage orders for which estimates are available on the direct increases in the wage bill effected by them, 9 effected less than a 1-percent increase; effected an increase of 1 to 2 percent; 16 in increase of 2 to 3 percent; 8, 3 to 4 percent; 5, 4 to 5 percent; and 10 effected increases of 5 percent or more in the wage bill. In several instances the 40-cent orders applied to industries in which wages had been raised in 2, or sometimes 3, stages, so that the total increases amounted to more for them than for other industries. Three successive wage orders were applied to the textile and seamless hosiery industries.

These wage increases were made, industry absorbed them, and business prospered.

4. The 75-cent minimum wage absorbed with constructive effects in 1950

(a) Six percent, or 1.3 million, of the 21 million covered employees earned less than 75 cents at the time of the adoption of the 75-cent minimum. In manufacturing industries, there were 875,000 production workers earning less than 75 cents in November 1948, or 6.6 percent of the total employed.

(b) Increases in average hourly earnings in manufacturing industries were negligible. The rise from January through April 1950 was 1.6 cents.

Employment in manufacturing industries as a whole increased by 148,000 during this period, while total nonagricultural employ-

ment rose by 801,000.

(c) Manufacturing industries where increases in average hourly earnings, from January through April 1950, exceed 2 percent were 23 in number and employed approximately 2 million persons, or 14 percent of all manufacturing industries. (See table I for list of industries and percent increase in average earnings.) Total employment in this group of industries was quite stable in the period immediately after January 1950, and by January 1951 the number of production workers had increased by about 6 percent.

(d) Manufacturing industries in the following States showed increases in average hourly earnings in excess of 2 percent from January to April 1950;

	Average hourly earnings		
State	Janu- ary 1950	April 1950	Percent in- crease
A labama Arkansas Plorida Georgia Louisiana Mississippl Missouri New Mexico Tennessee Texas Vermont Virginia	\$1. 12 .96 1. 02 1. 03 1. 20 .91 1. 33 1. 29 1. 13 1. 30 1. 16 1. 14	\$1.17 1.01 1.06 1.07 1.25 .96 1.37 1.35 1.16 1.33 1.19	4.5 5.2 3.9 3.9 4.2 5.5 3.0 4.7 2.3 2.6 2.6

Total manufacturing employment in the above States increased by 5,000 between January and April 1950 in spite of a seasonal decline in Florida, which was the only one of these States recording a decline in manufacturing employment of as much as 2 percent. By January 1951, manufacturing employment in all these States had risen substantially and the total number employed had increased by 10 percent.

(e) The United States Department of Labor survey. Results of the Minimum Wage Increase of 1950, reports as follows:

1. The greatest effect of the 75-cent minimum was felt in the lowest-paying regions of the lowest-paying industries. Thus, in southern sawmilling, a 20-percent increase in average earnings was granted in the lowest-wage southeastern division as compared with a 5-percent increase in the highest wage border States.

2. The short-run effect of the 75-cent minimum in highly affected industries was to concentrate workers at the new minimum. Employers "did not try to maintain wage spreads between low-, middle- and high-wage occupations. These spreads were narrowed.

* * * The short-run indirect effect of the amended minimum on wages already equal to or higher than 75 cents an hour * * was not great."

was not great."

3. The "75-cent rate appeared to have had only minor effects on such variables as employment, plant shut-downs, prices, technological change, hiring policies, and overtime work."

(f) In his Annual Report for 1950 the Secretary of Labor published the following findings on the effects of the 75-cent min-

1. "Effects on employment * * * a listing of the information available * * * suggests a probable maximum (effect) of very small dimensions. * * Much of the unemployment reported appears to have been temporary in nature. In any case, the rising wage level already has tended to make the 75-cent minimum wage unimportant as a factor of any kind in most areas of the country, and negligible as a cause of unemployment. * * Most of the layoffs were made by establishments that were affected by seasonal decreases in activities. A large proportion of those laid off were rehired when activities again increased."

2. "Effects on industry * * * not only were plant closing few in number, but any changes in competitive conditions and dislocations in industry that might have resulted proved very temporary in nature."

locations in industry that might have resulted proved very temporary in nature."

3. "Effects on prices * * * prices for products of low-wage industries affected substantially by the necessity for the payment of higher wages do not seem to have risen as a group any higher than prices of other products * * prices were not as a rule immediately increased by passage of the 75-cent minimum wage rate. Increased efficiency of production, particularly through mechanization and high volume of operations * * apparently absorbed much of the increased costs."

Educational Facilities in South Carolina

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Thursday, March 24, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "South Carolina Enters New Era in Public Education," published in the Columbia, S. C., Record of March 15, 1955. The subheading is "Sales Tax Boosts Building of New Facilities; School Districts Are Consolidated." The article is written by Dr. E. R. Crow, director of the South Carolina Educational Finance Commission.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTH CAROLINA ENTERS NEW ERA IN PUBLIC EDUCATION—SALES TAX BOOSTS BUILDING OF NEW FACILITIES; SCHOOL DISTRICTS ARE CONSOLIDATED

(By E. R. Crow, director of the South Carolina State Educational Finance Commission)

In 1951 the general assembly enacted a law that provided for what is usually referred to as the new school program.

It is the purpose of this article to review the main features of this law, to report on its administration to date, and to some extent attempt an evaluation.

The 1951 act provided for State aid for school construction and for a transportation system to be financed and supervised by the State. The State educational finance commission was created to administer the new program. This commission is composed of the governor, who is chairman, the State superintendent of education, and five other members who are appointed by the governor and confirmed by the senate.

APPROPRIATION PER PUPIL

To finance the building program an appropriation was made of \$15 per pupil per year

in average daily attendance. This was increased in 1953 to \$20 per enrolled pupil. Provision was also made whereby school districts could anticipate their annual appropriations for 20 years and borrow from the State up to 75 percent of this total, the funds to be secured from the sale of State bonds up to a maximum of \$100 million. The 1951 act also provided for a 3-percent retail sales tax.

Other significant provisions of the act were (1) that funds expended on building projects are subject to the approval of the commission, and (2) that the commission should supervise the consolidation of school districts.

The foregoing statements, a summary of the provisions of the 1951 act, do not in themselves indicate the far-reaching nature of this legislation or the revolutionary effect it has had and will have on the public school system.

TO AVOID EVILS

The first problem that faced the commission was that of effecting such changes in the organization of the school system that would avoid the evils of which the State was a victim and avoid the use of a new source of revenue to perpetuate them. The law had recognized the inadequacy of the existing organization and had provided that county boards of education should be reconstituted and given power to consolidate school districts by direct action under the supervision of the commission thus effecting "desirable consolidation of school districts throughout the entire State." Since the General Assembly did not define what was meant by desirable consolidations it became the duty of the commission to do so.

DISTRICT REORGANIZATION

Why was it necessary to reorganize school districts as the first phase of the building program?

A State-wide survey made in 1948 had revealed the fact that there were in South Carolina more than 1,700 school districts, a number greater than the total number of school districts in all the other southern States south of the Ohio River and east of the Mississippi, the State of Mississippi being excepted. This fractionalization of the State made it impossible for any responsible board to plan an educational program over any considerable area. These school districts very often operated one- and two-teacher schools. Some had schools for one race, some for both. In fact there were districts that operated no schools at all and in which the sole function of the trustees was to transport pupils to another district.

To illustrate the confusion, we mention the number of districts in a few counties: Greenville, 82; Laurens, 49; Orangeburg, 43; Horry, 76; Chesterfield, 50; and Sumter, 26. In general, the story was the same throughout the State, although in 1950, as a result of the survey, a few counties had effected some consolidation.

Nearly all of these districts were elementary school districts. High school districts in the rural areas were superposed upon these according to a plan whereby each component district retained its identity. Thus these high schools, as well as the elementary schools, had their separate boards of trustees. In this manner, since the high school and the elementary school were under separate administration, any real coordination was impossible. The possibility of a unified school program was rendered impossible by the very nature of the school district system then in effect.

EURAL SCHOOLS ARE VICTIMS

In the operation of this system it was the rural schools that were the victims, for the conditions described generally did not apply to school systems in cities and in the larger towns.

Another obvious weakness in the smalldistrict system was the absence in many districts of sufficient tax resources to support a good program. Hence general absence of competent administrative and supervisory personnel.

In carrying out the mandate to effect desirable consolidations, the commission adopted certain criteria for the guidance of county boards of education, in whose hands the specific authority to effect consolidations had been lodged. The following are the most important items:

 Separate elementary-school districts shall be consolidated with high-school districts and placed under the same adminis-

tration.

2. Elementary schools shall be so planned as to have enrollment enough to provide a teacher for each grade taught, except where sparse population, natural barriers, or other considerations make the application of this requirement unwise.

3. New high schools shall have a minimum potential enrollment of 250 in the last 4 grades, with exceptions as noted above for

elementary schools.

4. Each school district shall provide high school as well as elementary facilities within the district for both races.

NUMBER IS REDUCED

As a result of the application of these criteria, the number of school districts was reduced to 102 by the end of 1952, with an average enrollment of a little more than 5,000. Thus the reorganization had laid the foundation for the development within the new districts of better educational opportunities.

As reorganization was completed, surveys were made by districts. These surveys evaluated existing physical facilities, made recommendations as to the consolidation of individual school units, and estimated the cost of new construction or renovation. These surveys represented the unbiased opinions of the survey teams as to the best course to pursue. The survey reports were made and reported to the local boards of trustees for their consideration.

The actual program of school construction was then in order. As surveys were com-pleted and as local school districts developed a districtwide building program, applications for approval of specific projects were sub-mitted to the Commission for its action. The Commission has examined applications submitted and has given its approval as funds are available when they are judged to be consistent with the standards and objectives of the program. As projects are approved, funds are provided to the local district. is the district that presents the application and it is the district not the State that awards the contract and through its architect supervises the construction. There is no prescribed architectural pattern. However, due to the influence of current architecture there is much similarity as to general pattern though much variation in detail. Economy and function are chief considerations. The new buildings are fire resistant, thus eliminating fire hazards.

ONE HUNDRED AND TWENTY-SEVEN MILLION DOLLARS APPROVED

To date the Commission has approved projects at a total estimated cost of \$127,030.-993.21. Of this \$75,289,965.92 has been allocated to Negro schools. This is approximately 60 percent of the total.

In accordance with the purpose of the act of 1951 the Commission has given priority to Negro school projects with the result that now the State is in sight of substantial equalization of school facilities. It is estimated that the total building program will be about two-thirds completed when buildings already approved have been constructed.

TRANSPORTATION SYSTEM

The second major function of the Commission is that of supervising the transportation system. The 1951 act required the Commission.

sion to acquire buses then owned by districts or contractors and to purchase additional ones through funds received from a \$7,500,000 bond issue. The law set forth limitations as to pupils to be served and prescribed that the Commission should issue regulations for the administration of the program. Wholesale purchase of school bus equipment on bids submitted was provided for and the highway department was given the responsibility for maintenance and for providing fuel and other supplies necessary for operation. Student drivers were authorized and a rigid program of training was given by the highway department.

The chaotic situation as to school districts had had its effect on transportation with the result that there was much duplication and confusion. Under the new system most of this has been eliminated. Significant savings have resulted from State purchase of school bus equipment and supplies, the use of high school students as drivers and better utilization of school-bus capacity. The student-driver program has been a success.

COST IS REDUCED

The reduction in the per pupil cost of transportation has been pronounced. In 1950-51, the last year of the operation of the old system, this cost was \$24.77. In 1953-54, the last year for which complete figures are available, this cost was \$17. This is a reduction in the per capita cost of 31.4 percent.

The number of busses in operation has increased from 2,200 in 1950-51 to 3.700 during the current year. The number of pupils transported has increased from 142,037 in 1950-51 to an estimated 241,200 during the present school year. Most of the additional service provided during the first years of the program went to meet the deficiency then existing for Negro pupils. As of the end of the last school year the percentage of all en-rolled pupils of each race that were transported was approximately the same. It is, therefore, possible to say that we have reached the point of substantial equality in providing transportation. As the consolidation of small schools with larger units proceeds, additional transportation will needed, for consolidation and transportation are tied together.

LESS THAN 4 YEARS

The foregoing brief account is dramatic when it is noted that it has been accomplished in less than 4 years. It is probably true to say that no State has ever done so much in so short a time. The program has had the support of the State government. It was launched in the first year of Governor Byrnes' administration and is being supported wholeheartedly by the administration of Governor Timmerman. The general assembly, since 1951, has done more for the public schools than at any previous time in the history of the State.

As this is being written the houses of the general assembly have passed separate but identical bills raising the limit on State bonds that may be outstanding at any one time from \$100 million to \$137.5 million. This will enable the commission to proceed according to a projected schedule and approve projects totaling \$218 million by 1960.

WILL IT BE ADEQUATE?

Will this be adequate? For the average district, yes. But not for those districts in which the enrollment increase is phenomenal. The larger cities cannot hope to meet their capital outlay needs from State funds. For it is the cities and not the rural areas that are increasing in population. The combined effect of the increased birth rate and of population shifts from rural to urban areas will mean that the latter will have to supplement State funds from their own resources to a considerable degree. School enrollment figures projected by P. C. Smith, assistant director, indicate an increase of 93,000 pupils in the next 5 years. This com-

pares with 91,000 increase during the last 9 years. By far the greater part of this increase will be in the towns and cities.

A significant feature of the program is that of equalization of educational opportunity as between the cities and the rural areas. With few exceptions school districts embrace both rural and urban areas and will, of course, offer the same educational advantages to all. Already more than 1,000 small substandard schools have been abandoned and the pupils transferred to modern schools. Practically all of these were rural schools.

This program represents an unprecedented effort by the State to provide better education for all its citizens.

Considered in relation to the economic progress we are now experiencing it can be truly said that South Carolina is going forward.

Farm Price Supports

EXTENSION OF REMARKS

HON, ROBERT D. HARRISON

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. HARRISON of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Washington Star of March 23, 1955]

APPEAL FOR RESPONSIBILITY

A persuasive appeal for responsible House action on farm price supports has been made to that body by a bipartisan minority of the Agriculture Committee. It is an appeal to defeat legislation which would restore mandatory 90 percent of parity supports for 5 basic crops—corn, wheat, cotton, peanuts, and rice—and it is an appeal that should be honored.

By law enacted last year, the Government is authorized to apply a flexible support formula within a range of 821/2 to 90 percent of parity on these 5 commodities. Initial application of this authority would apply to 1955 crops and there has been no opportunity vet to establish claims that the flexible formula will be injurious to the farmers or to the national interest. There has, however, been ample opportunity to recognize the damaging impact of a high, rigid price-support program that was adopted originally as a temporary wartime formula. The committee minority has summed up this evil result in one effective paragraph, as follows: "Rigid 90 percent mandatory price-support programs have falled to keep farm income from declining, created surpluses that have forced farm prices downward, held commodities off the market at great cost to the Government, undermined public support for sound farm programs, lost foreign and domestic markets, assisted foreign competitors to take our markets, and have taken the right to produce away from both small and large farmers."

Effectively, too, the committee minority drew some parallels between price structures for the commodities "favored" by the rigid supports and those for so-called nonbasic commodities. "It is an interesting and significant fact," they pointed out, "that the average price for nonbasic (unsupported) commodities has been higher (as measured by parity-price relationships) in every year since 1940 except one than the price of so-called basic commodities." As a consequence, the outlook today for the nonbasics is better than that for those which have been covered by high supports.

The flexible-support theory is a keystone of the Republican administration's program for dealing with the farm problem. Influential Democrats in both branches of Congress have favored it, at least to the point of urging that it be given a trial. Disposal of some of the huge Government-owned surpluses, expansion of research and educational work in agriculture, and some pending recommendations for helping the small low-income farmers are other major parts of the administration blueprint. At this stage it appears to have much greater merit than a retreat to a program that already has been proved costly and unsuccessful.

[From the Kansas City Times of February 19, 1955]

WHY ASK FOR MORE TROUBLE?

Farm prices have fallen appreciably since the end of the Korean war. All of that drop occurred when prices on basic crops were supported at 90 percent of parity. Meanwhile, huge surpluses were built up which have served to hold prices down and make the Government's bolstering efforts more difficult than ever.

more difficult than ever.

The new flexible price farm law did not go into effect until January 1 of this year. It has had no chance as yet to operate. For reasons rather difficult to understand, the opponents of flexible price supports blame that system for the fall in farm prices that came while the fixed, 90-percent supports were in effect.

Secretary Benson has proposed to Congress that the flexible price program should be given the chance to prove its worth. Certainly this is a logical proposal, at lenst until the opponents offer something better than going back to the old system under which prices fell and the surplus pile mounted.

SPANISH DAIRYMEN IRKED OVER UNITED STATES
GIFT OF SURPLUS

Madrid, Spain, January 13.—The United States has donated nearly 10,000 tons of powdered milk, butter, and cheese to the Spanish poor in the last 5 months and Spanish milk producers say they are being ruined.

A statement published today after a meeting of the Syndicate of Milk, Butter, and Cheese Producers said milk sales in the Valencia region have fallen off 25 percent and the budding powdered-milk industry in the Santander region is in danger of being put out of business.

The American program tentatively calls for shipment to Spain of 80,000 tons of powdered milk, 3,000 tons of butter, and 3,000 tons of cheese over a 3-year period from surplus farm products.

Welfare officials said the dairy products are being distributed only to persons unable to afford them except in the case of school children. At the same time, they added, Spanish powdered-milk producers have been assured that if they have any unsold surpluses as a result of the program they will be purchased at slightly below market prices by the Spanish Catholic welfare organization. Caritas.

Damage to the Total Economy

EXTENSION OF REMARKS

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. HERLONG. Mr. Speaker, high, rigid price supports for farm products help create unemployment.

Under rigid 90 percent price supports surpluses have been created, markets have been destroyed, resulting in the loss of net farm income. Since 1947, net farm income has shrunk from \$16.5 billion to \$12.5 billion in 1954. The main reason for the shrinkage is the loss of markets and the taking of 38 million acres out of production.

With smaller production and smaller markets farmers have less to spend, which means less opportunity for employment for laboring men. The road to full employment is an expanding, dynamic, competitive economy with improvements in production and expansion of markets by the device of lowering prices.

High, rigid price supports in themselves create unemployment. They shrink business activities in the rural villages and towns. The effects reach back into manufacturing centers and all through the economy.

When a large part of farm production is closed down it not only cuts farm profits but damages all those dependent upon agriculture for employment and business.

Some 53 to 40 million acres of the Nation's highest profit crops have been cut back under the conditions created by high, rigid 90 percent price supports. These include some of the most fertile and productive lands.

It will tend to slow down the expansion of the total economy. That is why leaders in all 48 States share the concern

about this great problem.

There will be less profits for farmers.

All those who sell to, or serve farmers, will transact less business—sell less farm machinery, fertilizers, chemicals, gas and oil, and all other supplies and services that are required to keep farms in full production.

There will be less for labor to do—less crop work, harvesting, processing, trans-

portation, storage, and sales.

Prices have been supported at artificially high levels in cotton. There may be a direct connection between this fact and the fact that in 1948 there were 1,387,000 persons employed in textile mills and on January 1, 1955, textile mill employment was only 1,079,000. Likewise, flour prices have been held at artificially high levels. Employment in flour mills in 1947 was over 39,000, and in 1953 it had dropped to 31,000.

Similarly, with from 35 to 40 million less acres devoted to the high-profit crops, all farm machinery manufacture has declined proportionately.

This has all occurred under 90-percent price supports and reasonably explains why we have less employment in industry.

Just the opposite has happened in Florida in the case of oranges. We have expanded production, kept price low—often 50 percent below parity, and expanded consumption, which has resulted in more employment. We did not have price supports for the citrus industry. The consumption of frozen orange juice has increased from less than 1 pound per person in 1935–39, to about 7.5 pounds per person in 1954.

To the extent farm production is cut back and restricted, it tends to weaken the consumer demand and national prosperity on which profitable farm markets depend.

Agriculture should be making its full contribution to the future national welfare. Farmers are greatly dependent upon full employment, and a vigorous, productive, and prosperous America. The degree to which we have such is to no small extent dependent upon the rate at which farms produce.

Operation of the high, rigid pricesupport laws has diverted more than mere acres.

It is diverting a big capital investment in farmland, buildings, machinery, and equipment to a lower level of use or to idleness.

It is diverting and disrupting crop rotation and proper land use.

It is reducing farm family labor to less profitable employment and in some cases partial idleness.

It is diverting employed farm workers and laborers in industries to other jobs or less employment.

It is cutting business for those who sell to or buy from farmers—and from all those who share in the business generated by production from the farms of the Nation.

To get more farm profits there must be increasing production and increasing consumption. Beware of the philosophy of scarcity. Agriculture must produce—and produce in large volume to be most profitable.

Labor, too, must have full employment in productive enterprises. Full agricultural production helps maintain full employment. When workers have good incomes it helps insure strong markets for farm products.

America did not become great on an economy of scarcity—nor will it remain great under such an approach. Restricted production is not the road to prosperity over the long pull. As we have learned through the years, a dynamic economy requires increased production and increased consumption. This is the way to more enjoyment of the better things of life by more people—the way to maintain a high level of living.

House Member Says Pentagon Knifes Reserve

EXTENSION OF REMARKS

HON, CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. BROWNSON. Mr. Speaker, shortly, Members of the House will be asked to consider the national Reserve plan advocated by the Department of Defense.

This plan or any other military manpower proposal cannot and should not be considered except in the overall concept of effective manpower utilization. In that connection a thoughtful observer is bound to ask, What is the matter with our present Reserve program? Why do the very generals charged with responsibility for the success of the Reserve program spend hours testifying that it is a virtual failure?

My distinguished colleague from Missouri [Mr. Curtis] has a direct and forthright way of thinking which often cuts through extraneous matter and arrives at sound, if unconventional, conclusions. His thinking on military problems dates back to his not inconsiderable World War II experience and his careful observation of present-day events. Under unanimous consent, I include an account in the Daily Oklahoman of Saturday, March 19, of a speech and interview given by the gentleman from Missouri [Mr. Curtis] at the Oklahoma City Life Underwriters in the Record.

HOUSE MEMBER SAYS PENTAGON KNIFES RE-SERVES—CONGRESSMAN SAYS LEADERS WANT ONLY BIG STANDING ARMY

(By Elwin Hatfield)

The Nation's high military leaders are sabotaging congressional efforts to develop a workable Reserve program in favor of a large standing Army, a United States Congressman charged here Friday.

"The Military Establishment," Represent-

"The Military Establishment." Representative Thomas Curits, Republican, of Missouri, said, "is determined that no Reserve program will work." Curits, here to address a meeting of the Oklahoma City Life Underwriters, made his statement on the Reserve program in an interview.

A member of the powerful House Ways and Means Committee, Representative Curris said that "until the Military Establishment determines to make a Reserve system work, it won't matter at all what laws Congress makes."

These leaders, Representative Cuarts said, "don't want the National Guard to be made attractive" or, for that matter, any organization which isn't a part of the regular, active duty establishment.

SEVERAL PLANS CONSIDERED

Congress now is trying to write a Reserve program which will correct inequities of present and past systems. Several have been proposed and are now under consideration.

At the same time, Congress is writing the next 2-year budget which, in concert with presidential recommendations, would cut the size of the Army and other services. This has brought testimony from the Army Chief of Staff, General Matthew Ridgway, that if anything, the Army must be increased.

Representative Curris, though, believes the armed services should be cut down to a fighting force by turning over housekeeping-type services to private industry.

"Why should we send mechanics in uniform to Panama when we can hire mechanics there who are just as well trained?" he asked.

ONLY 20 PERCENT FIGHTS

That such functions as auto maintenance, kitchen duty, and barracks scrubbing can be better and more cheaply performed by local civilians and local industry has been proven, he pointed out, in Japan and elsewhere.

Representative Cuaris, a Navy lieutenant commander during World War II, estimated that during that war only 20 percent of the total Armed Forces personnel were used in combat while the remaining 80 percent performed duties which could have been better handled by civilians and private industry.

"It's that 20 percent which they use to sell us on a large standing Military Establishment," he said.

"The men in the fighting forces should be trained and trained better than we have been training them," he said. SYSTEM HURTS ECONOMY

"If we can get these admirals and generals out of the coffee-roasting business and the optical business," he continued, the Nation can give that training under a budget it can stand.

The economy of the country can't stand the present system he said, nor, he added, can military efficiency stand it.

The Seabees of World War II had the

right idea, he said.

Those units-Navy construction battalions-hired men already trained to do civillan-type jobs in combat.

"If they wanted a bulldozer operator, they didn't call up a kid and send him to boot camp and then to bulldozer school."

OLD METHODS RETURN

"Instead they hired a bulldozer operator and put him to work."

The Seabees had to fight to be permitted to do that, he said. And now that the Regulars are back in control the old system is also back in effect.

Curtis also charged Armed Forces leaders Will destroy anything in the way of a re-

serve program that looks good.

He said he and two other World War II Veterans in the House proposed a reserve training program based on extension of high-school Reserve Officers' Training Corps program.

"We used the Army's own statements about the worth of the high-school ROTC to present our program," he said,

Right after that, funds for the high-

school ROTC program were cut. "The conclusion is rather obvious-anything that looks good, they'll destroy. The high-school ROTC, the National Guard, or What have you."

The Role of the College Library

EXTENSION OF REMARKS

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. BONNER. Mr. Speaker, the State of North Carolina, and especially the city of Greenville, was delighted to have Dr. Lawrence Quincy Mumford, Librarian of Congress and president of the American Library Association, make the principal address at the dedication ceremonies of the J. Y. Joyner Library on the campus of East Carolina College, Greenville, on March 8, 1955.

I have read with interest Dr. Mumford's address and I am confident that the people throughout the length and breadth of this Nation will find much enjoyment in reading his speech:

THE ROLE OF THE COLLEGE LIBRARY

(Address by Dr. Lawrence Quincy Mumford, Librarian of Congress and president of the American Library Association, at Founders Day, East Carolina College, March 8, 1955)

This, for me, is more a homecoming than it is a speaking engagement. I was born just a short distance to the south, and as One of Pitt County's most loyal alumni I can say with enthusiasm that I am delighted to The occasion has an added personal significance because several members of my family have been closely associated With East Carolina College. It is a pleasure hot only to come back to home ground and renew acquaintance with old friends but to bring all of you the greetings of the American Library Association and the Library of Congress

I am one of those who subscribe to Carlyle's dictum that the true university is a collection of books, and to the modern principle of educational thinking that the heart of a university is its library. The impor-tance of having a good collection of books as part of an institution of learning has been recognized since the founding of Harvard College in 1636; Yale University, in fact, started as a group of books even before it came into being as an institution. strengthen the supports of the college library, as we are doing today, is not only increasing our opportunities for educating the student but following one of the most timehonored of American traditions.

Although libraries have been an integral part of our colleges and universities for more than three centuries, it has only been within the last hundred years that they have begun to realize their full potentialities. If you take a look at the college library of the early or middle 19th century, and contrast it with one like this we are dedicating today.

you will see a great difference.

The library then was a much more restricted institution, a kind of storehouse where books were accumulated and access to them was severely controlled. At the University of Virginia, for example, the rules adopted in 1825 provided that no student could have more than three volumes out on loan at one time. To borrow books at all he had to show authorization from a professor. Fines for overdue books were graduated-in accordance with the size of the book detained. If a student lost a book, he had to pay three times its value. For this magnificent service, the library was open 1 whole hour a week.

The 19th-century college librarian was regarded chiefly as a custodian of the material interests of his library. He kept the books, preserved them from loss or injury, and used every means in his power to increase their number. But he was not expected to offer people any great encouragement to use them; this was not his job. A story is told about John Langdon Sibley, chief librarian of Harvard University from 1856 to 1877. Perhaps it is apocryphal, but I think it well illustrates this older concept of the librarian's function. The president of the university is said to have come upon Sibley one day locking the door to the library, and noticing that he seemed to be in unusually good spirits, asked why he was so happy. "Well," replied Sibley, "every one of my books is in its proper place on the shelves except two, and I am now on my way to Professor Agassiz's house to get them back."

The librarian of today has quite a different outlook. He still, to be sure, is a keeper of books; he is still concerned with preserving them from loss or injury, and none of us can possibly deny that he exercises every device in his power to increase his possessions. If I were asked to sum up in a few words wherein the difference lies, I would say simply that he thinks of books as tools for active use and that he is engaged in getting them into the hands of as wide a public as he can. It is a business—to pursue this comparison a little further—that has a multitude of shareholders, has large capacities for expansion, and never fails to pay dividends. huge complex of libraries, large and small, is dedicated to the proposition that books are not inanimate objects, to be stockniled and stored, but rather are instruments of information and enlightenment-the common property of all.

We see this reflected in the library we are dedicating today, which has been created by the joint endeavor of many hearts, many heads, and many hands. We see it in the readily accessible catalog, the bibliographical aids, the reference books-and in seeing them it is hard to realize what a struggle Henry Adams had with Librarian Sibley to get him to set aside special shelves for books which he assigned to be read by his students. We see it in the recreational reading room where students may browse, in the special reading rooks for periodicals and newspapers and North Caroliniana, and in the seminar rooms where students, teachers, and books are brought together. But, still more, we sense it in the very atmosphere-in the way the building has been planned to make it as inviting as possible not only for the student to carry on his work but to learn to know and to value books.

In dedicating this library, therefore, we take real pride in accomplishment. But a dedication is a pledge toward continued accomplishment, and, from this point on, you have every right to expect this library take on an even larger role in the life of the university.

How does your college library carry out this role? It does so in many ways, some of them obvious, some of them intangible. supplies materials needed for classroom instruction and, in fact, is the necessary extension of the classroom in the educative process. Some like to refer to its facilities as a workshop, the laboratory for the humanities and the social sciences. It also furnishes the means by which the student may broaden his knowledge beyond his field of specilization, increasing his resources for learning about nonacademic subjects. And it serves as a reservoir of knowledge upon which the advanced researcher may draw to make his contribution to learning.

But there is one intangible function that is perhaps more important than any of these. In the college library the student develops the ability to use tools of learning and thereby acquires the means of educating himself, quite apart from what he is required to learn in prescribed courses. I would not go so far as to say that all students acquire this ability and carry it away with them when they leave the college halls; in fact, it rather a tragedy that so many of our college graduates are not more devoted to serious reading. It is sufficient to say that, at the time of life when young minds are most receptive to learning, the college library offers them the means of acquiring the reading habit. And it is a challenge to the college library, as it is to the faculty, to see that the habit becomes so firmly rooted that it flourishes—for, as we all know, education is a process on which an entire lifetime is well spent.

Your college library has other challenges to meet, many of them shared, in one way or another, by all academic libraries. As essential part of the machinery of education, it must shape its services, from year to year, so as best to aid the college's educational program. It must, in other words, be responsive to new needs and to considerations that bring current practices into question. Improved methods of teaching, changes in the activities and composition of the academic community, and the development of new scientific techniques for scholarly research-these are some of the things that must be taken into account in its planning. Particularly important, in my opin-ion, is seeing that the professional competence of its staff continues to measure up to the library's resources. I am sure that you are all determined that the collections here, which now total nearly 100,000 volumes and will doubtless rise to many more, will continue to be adequately manned.

Another knotty problem for all libarians is the provision of ample bibliographic aids to the use of the library's resources. Justin Winsor, who followed Sibley at Harvard, said that a library without a catalog is a mob of books. Today few libraries are without some means of control over this mob, but unhappily there are few that can claim either that their catalogs are completely up to date

or adequate in other ways.

Some problems can be solved, at least partially, through cooperation. By such means much has already been done in de-

veloping and improving college and university library service in North Carolina. The exchange, 20 years ago, by Duke University and the University of North Carolina of their catalogs, and their cooperative selection of books illustrate interlibrary cooperation. The addition of cards representing the holdings of college and public libraries has created at Chapel Hill a North Carolina Union Catalog of great value. We can take pride, in fact, that representatives of North Carolina have played a major role in regional planning for higher education in the South. It has been said of this development of regional cooperation that the Southeast, traditionally book-poor, has, however, admirably advanced its position in recent years by the leverage of its own bootstraps. In enlightened cooperative efforts and intelligent exploitation of existing resources no other region can quite match the Southeast.

Further ideas for cooperation may be found in a plan proposed last summer for improving college library services in New York State. Intelligent self - interest prompted the comprehensive program suggested by an advisory committee of college librarians reporting to the Board of Regents of the University of the State of New York. Recognizing at the outset that no modern

college or university can act as a completely independent unit, the committee emphasized the educational and economic importance of institutional cooperation. It hoped to develop scholarly resources on a planned basis that would still respect both the common and special interests of each school. Noting that New York's church-supported colleges and its liberal arts and technical colleges each had special library requirements, the committee sought ways to promote greater integration of efforts and of resources. though college libraries in the State had overcrowded shelves, their librarians did not share the problem of university librarians, who were primarily concerned with storing extensive holdings of infrequently used materials. The chief difficulty of the college librarians seemed to be rendering service with limited resources. No one suggested a substitute for good library service on each college campus, but the committee did specify the type of books college libraries should supply as well as those considered beyond their capacity. It concluded that these libraries needed to have the New York State Library strengthened to serve them as a "library's library," supplying certain materials and services beyond the reach of many of the separate colleges but possible for all if provided on a cooperative basis through the State library.

But I see that I am venturing into the realm of possibilities, into questions that the Joyner library will want to explore for itself. Let me close, therefore, by saying that the library world, with East Carolina College, welcomes this occasion both for what it is the achievement of another landmark in your history-and for what it symbolizes another step in enriching and strengthening our democratic system of education. Long may this building stand to serve you, and

serve you well.

Increasing Minimum Wage to \$1.25 an Hour

EXTENSION OF REMARKS

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. ZELENKO. Mr. Speaker, under leave to extend my remarks, I present two resolutions adopted at the shop stewards conference conducted by the New York City CIO Council in New York City on March 19, 1955. The first resolution calls for the increase of the minimum wage to \$1.25 an hour, and the second resolution for the extending of the minimum wage coverage to retail industry. They follow:

RESOLUTION ON INCREASING THE MINIMUM WAGE TO \$1.25 AN HOUR

Whereas the United States, so richly endowed with natural resources and an able and industrious population, should insure to all its working men and women a fair day's pay for a fair day's work; and

Whereas this Nation suffered a serious recession in 1954, which caused nearly 3.5 million able-bodied men and women to be unemployed in 1954 and unable to maintain for themselves and their families a decent standard of living; and

Whereas the labor force increases steadily each year; and

Whereas in order to insure full employment, a rising standard of living for all and a stable, rapidly expanding economy, it is necessary materially to increase the purchasing power of all the people; and

Whereas the minimum wage as provided for by Congress in the Fair Labor Standards Act has remained unchanged at a level of 75 cents an hour since the year 1949; and

Whereas the cost of living has been steadily and inexorably rising since the year 1949;

Whereas the present minimum wage of seventy-five cents (75c) per hour is totally inadequate and no longer provides a min-imum acceptable standard of living for the working men and women of this Nation; Now, therefore be it

Resolved, That the New York City CIO Council calls upon the Congress of the United States immediately to enact bills now in Congress amending the Fair Labor Standards Act and raising the minimum wage from 75c an hour to \$1.25 an hour, and be it further

Resolved, That the New York City CIO Coucil calls upon all its affiliates and all the members of CIO in the metropolitan area to make the drive for the enactment of \$1.25 an hour minimum wage the major activity of CIO in the coming weeks, and be it fur-

Resolved, That the executive officers and Executive Board of the New York City CIO Council be empowered to take all measures necessary to secure the passage of the Federal minimum wage law including the following program:

1. A mass letter writing campaign to Congressmen from this area and to the Labor Committee of the Senate and House of Representatives.

2. A petition campaign calling upon all those interested to sign CIO petitions to Congress calling for enactment of the \$1.25 an hour Federal minimum wage law.

3. The executive officers of the New York City CIO Council to be authorized to seek a joint meeting of AFL and CIO in New York City for the purpose of furthering the campaign for the \$1.25 an hour minimum wage

RESOLUTION ON EXTENDING MINIMUM WAGE COVERAGE TO RETAIL INDUSTRY

Whereas there are more than 7 million men and women employed in the retail industry in the United States; and

Whereas they are without exception paid at a lower rate than their brothers and sisters in the productive industries; and

Whereas until now these retail workers have been denied the guaranties of subsistence wages provided by the Federal Wages and Hours Act: and

Whereas the continued payment of substandard wages to retail workers is a direct threat to the wage standards of all workers; and

Whereas the present minimum wage of 75 cents an hour applicable to those now covered by Federal law is insufficient to maintain a healthful and proper standard of living: Therefore be it

Resolved, That this conference of shop stewards representing workers of both productive and retail industry declare itself in favor of the Federal minimum wage being increased to \$1.25 an hour, and be it further

Resolved, That this group representative of many industries unite in a determined ef-fort to win inclusion of retail workers under the provisions of the Federal law, and be it finally

Resolved, That the New York City CIO Council take the leadership in inviting all other labor bodies and local unions to participate at this time in an aggressive campaign designed to win public support from all the workers in this area and from our representatives in both Houses of Congress.

Resolution on Housing Discrimination

EXTENSION OF REMARKS OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of the resolution on housing discrimination adopted by the American Veterans Committee at their Eighth convention in Boston, Mass., on December 5, 1954. The resolution fol-

Whereas the American Veterans Committee has continuously affirmed its unqualified belief in the fundamental democratic concept of equality of opportunity for all people in this Nation; and

Whereas we believe that the realization of the right of equal access to housing facilities without restriction or discrimination based upon race, religion, color, or national origin is of singular significance, because in practical effect, the realistic achievement of equality in many phases of human activity will be shaped and determined by the elimination of or nonelimination of discrimination in housing: Now, therefore, be it

Resolved, That we, the delegates to the 8th annual convention of the American Veterans Committee, in convention as-sembled, call upon the President of the United States to enunciate as the policy of this Nation, that the functions, programs. and services of the Government must not and shall not be used to aid in the fostering. maintenance, and perpetuation of discrimination by segregation or otherwise, in housing.

Urge that the President direct that all Federal agencies offering aid to private developers or to local communities for the development of housing and the acquisition, ownership, or assembly of land for redevelopment or housing construction, establish policy that all such Federal aids are to be extended only to those who commit contractually that multiple dwelling and multidwelling housing developments and related facilities under their control, and made possible by Federal funds, subsidies, insurance. guaranties, or other alds are not to be denied to any eligible families because of their race. religion, color, ancestry or national origin.

and that this policy of nondiscrimination and nonsegregation also be pursued by all Federal agencies directly engaged in the sale, leasing, or other disposal of homes or hous-

ing units.

Further urge that State and local governments declare discrimination, by segregation or otherwise, in housing to be against their public policy, and enact fair housing practices legislation, relating to housing developments as above described, with adequate provision for enforcement and sanction, and that their licensing and regulatory taxing, enforcement, planning, condemnation, and relocation functions be used to facilitate the elimination of racial separation and discrimination.

Walter White, Leader, Dies-President Eisenhower Joins in Recognition of His Devoted Service Over a Period of 40 Years

> EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to place before you and the other distinguished Members of this great legislative body newspaper recitals and editorials of facts, and also statements by distinguished American leaders, with reference to the life of Walter White, the distinguished leader of the National Association for the Advancement of Colored People, commonly known as NAACP.

I shall always remember with pleasure and benefit to my attempt to understand the problems which I have to consider and vote on the fact that I had the privilege of hearing Mr. White speak on occasions, and also the privilege of meeting

him personally.

It should also be noted that President Eisenhower paid high tribute to Mr. White in a personal telegram to the Widow, wherein he said:

His devoted service to his race over a period of 40 years was tireless and effective. Permit me to express to you my personal sympathies in your loss.

[From the Washington Post and Times Herald of March 23, 1955

WALTER WHITE EULOGIZED BY LEADERS

With President Eisenhower in the forefront, leaders throughout the Nation yesterday joined in mourning the death of Walter White, ardent champion of Negro rights, who at 61 succumbed to a heart aliment on Monday in his New York home.

Mr. White was executive secretary of the National Association for the Advancement of

Colored People.

Puneral services will be held at Thursday in St. Martin's Episcopal Church in New York. The body will be on view at the church from 2 p. m. to 6 p. m. today, and between 10 a. m. and 11 a. m. Thurs-

President Eisenhower paid high tribute to White in a personal telegram to the widow. The President wired:

"His devoted service to his race over a Period of 40 years was tireless and effective. Permit me to express to you my personal sympathies in your loss."

NAACP President Arthur Spingarn declared Mr. White's leadership had developed the NAACP from "a small society into its present position as the Nation's largest civilrights organization."

Mr. White's death brought a statement of sorrow and salute on behalf of Freedom House by Whitney North Seymour, chairman of the board, and Herbert Bayard Swope, chairman of the executive committee. Mr. White was a member of the directorate.

From the halls of Congress came these statements:

Senator HERBERT H. LEHMAN, Democrat, of New York: "The country has lost a great leader. Walter White was a courageous and unflinching fighter for freedom and justice."

Senator Leverett Saltonstall, Republican, of Massachusetts: "He was an ardent and sincere proponent of his cause."

Senator PAUL H. Douglas, Democrat, of Illinois: "Mr. White was a highly cultivated, able and very honorable man, not only a splendid member of his race, but also a true American. The country has been true American. The country has been richer for his life and it is much poorer because of his death."

Senator HUBERT H. HUMPHREY, Democrat. of Minnesota, said Mr. White "literally gave his life for the welfare of his people. was truly a fine citizen and an American."

[From the Washington Star of March 22, 1955]

WALTER WHITE, NAACP LEADER WHO FOUGHT SEGREGATION, DIES-ONLY ONE SIXTY-FOURTH NEGRO, HE CHOSE TO WORK FOR RACE HE CALLED OWN

Walter White, executive secretary of the National Association for the Advancement of Colored People and lifelong champion of Negro rights, died last night in New York at the age of 61.

Ill for several years, he died of heart disease in his home.

Mr. White's career, devoted to improving the lot of colored people, was climaxed by the Supreme Court's ban against segregation in public schools last year.

He had been a determined fighter against segregation, and despite ill health had been in the front ranks of those pressing the suit that finally resulted in the Supreme Court ruling.

FAMILIAR FIGURE HERE

Mr. White was a familiar figure in Washington. Several years ago, in 1939, he helped stage an open-air concert for Marian Andershe had been refused the use of Constitution Hall by the Daughters of the American Revolution on the grounds she was a Negro.

Then Secretary of Interior Harold Ickes made the mall in front of the Lincoln Memorial available for the concert. More than 75,000 persons attended.

White in complexion as well as in name, Walter White was black by sympathy and on the basis of a diluted strain of Negro blood. He might have had a career as a white man; he chose a career as a colored man to work for the race he claimed as his own.

FITTED SPECIAL JOB

He became assistant secretary of the National Association for the Advancement of Colored People in 1918. The organization employed him because it wanted a colored man who could pass as white to investigate lynchings. In 1931 he became secretary of the organization.

In the opinion of many, he provided the chief spark in the organization's drive to end discrimination on the basis of color. He lived to see segregation in housing, schools, interstate travel on trains, restaurants, all banned by court orders, and a general decline in distinctions based on color alone.

Fair skin, blue eyes, and blond hair made him more distinct from Negroes than from whites. E. A. Hooten, Harvard anthropologist, estimated Mr. White was one-sixtyfourth Negro, which would mean a Negro ancestor five generations back.

Mr. White was born in Atlanta on July 1, 1893. His father, George White, was a mail collector who is said to have suffered an injury and then to have died of neglect due

to his being a colored man.

RACE RIOT SHAPED CAREER

In 1906 there were race riots in Atlanta. From the White's neat, 8-room house, contrasting with the rest of the rundown neighborhood, young White saw a mob turned back by gun-fire. He wrote later that then, at the age of 13, he fully realized he was a

"I look like a white man and can pass for a white man," he said once, "but there is nothing that makes me want to. My sympathies are those of a black man."

He is said to have shown marked ability at his studies as a youth. He entered Atlanta University and received his A. B. degree there in 1916. Two years later, he went to New York and to the NAACP job.

During the next 30 years he was to travel 2 million miles in the interest of his race, investigating 41 lynchings and 8 race riots. He also brought hundreds of legal battles over civil rights and liberties to the courts.

WATCHED FATE OF LEGISLATION

He was a steady occupant of a seat in the Senate and House galleries when there were debates on legislation affecting the Negro. He fought for anti-lynching bills and watched from a gallery seat Senate filibusters which sidetracked them.

On July 2, 1937, he was awarded the NAACP's Spingarn medal for his services on behalf of that legislation. The presentation was made by the late Frank Murphy, then Governor of Michigan, at the organization's 28th annual conference in Detroit.

In 1949 there was a filibuster in the Senate over civil rights legislation. It resulted in a wordy dispute with J. Howard McGrath, then Senator from Rhode Island. in a Capitol corridor. The basis was a NAACP letter to its branch presidents in which Senator McGrath was accused of "turning tail before the Dixiecrats." Senator admitted using some strong lan-guage and charged Mr. White with attacking not his enemies but his friends.

Mr. White also attacked the late Senator Taft, Republican, of Ohio.

PRESSURE FOR CAUSE

All this was part of his policy of militant action and constant pressure to advance his

His political activities began when he was appointed a delegate to the Second Pan-African Congress, held in Europe in 1921. When Franklin Roosevelt became President, Mr. White was appointed a member of the Advisory Council for the Government of the Virgin Islands but resigned after a year.

Among the many positions he held were these: Member of the board of the New York State Training School for Boys, chairman, in 1935, of a Harlem low-cost housing project; member, in 1938, of the Governor's Commission on the Constitutional Convention of New York.

In 1939, he received an honorary doctor of laws degree from Howard University.

ACTIVE DURING WAR

During World War II, he fought for the breakdown of segregation of Negroes in the military services and for equal job rights in war materials factories.

Early in his career he turned to writing to advance his cause. He wrote Fire in the Flint, published in 1924, which tells the story of a Negro doctor in Georgia. It has been published in a half-dozen countries

March 24

On the publication of his second novel Flight in 1926, he received a Guggenheim Award and spent 1927 and 1928 in France. There he worked on a study of lynching, published in 1929 under the title Rope and Faggot. His autobiography A Man Called White, appeared in 1948.

He has also written for magazines and

newspapers.

In 1922 he married Leah Gladys Powell of Ithaca, N. Y. They had a daughter, Jane, an actress, and a son, Walter Carl Darrow, and were divorced in June, 1949. The next month he married Poppy Cannon, a white woman and magazine writer.

[From the Washington Post and Times Herald of March 24, 19551 WALTER WHITE

It was given to Walter White to enter and experience much of the promised land to which he led his people. As a boy in Atlanta, Ga., he knew at first hand the horror of race rioting and the ugliness of a lynch mob. He lived through racial discrimination in housing and schooling and But before his death the pattern recreation. of race relations in the United States had undergone a tremendous transformation. Violence against the Negro had virtually disappeared from the South. And segregation in public facilities had been declared by the courts of the land to be in contravention of the Constitution.

As executive secretary of the National Association for the Advancement of Colored People, Walter White played a dynamic part in effecting this change. And as a man, Nordic in appearance and predominantly of Caucasian ancestry, who chose freely to identify himself as a Negro, he played a dramatic part in helping his fellow Americans to understand the folly of race prejudice. He gave his life to a heroic cause now well on its way to triumph.

Growing Ranks of the Aged Pose Grave Social Problem

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article which appeared in the New York Times of February 21, 1955. It is the first in a series of 5 articles written by Edith Evans Asbury on the problems of the aging:

GROWING RANKS OF THE AGED POSE GRAVE SOCIAL PROBLEM

(First of five articles on the problems of the aging)

(By Edith Evans Asbury)

Modern American society, with its emphasis on industrialization and the glorification of youth, has swung so far from the veneration of age characteristic of ancient cultures that a crucial situation has developed.

Thanks to medical science, larger and larger numbers of men and women survive long past the Biblical "3 score and 10."

For a great many men and women in their 70's, 80's and 90's, the "gift" of longer life is more a punishment than a blessing. They pay for it in physical and mental suf-Their families, incomes strained to the breaking point by the financial burden, hearts wrung by the slow physical and men-tal crumbling of a beloved parent or grandparent, also pay heavily. And the enormous drain on public funds threatens to strike deep into the taxpayer's pocket.

One in every twelve persons in the United States is over 65 years old. In New York City the ratio is 1 in 11. One million of the city's 8 million are past 60.

Fifty percent of those admitted to mental hospitals in the New York area last year were over 60 years old. Thousands of chronically ill aged crowd the city's hospitals. Hundreds of these are in general hospitals using facilities far more expensive than they require, because they were in-tended for the short-term care of the acutely

Social workers and other specialists have been observing and discussing the rising proportion of the aged in our population for the last 10 years. The problems created by it are so urgent now that alarm is spreading far beyond professional welfare circles.

In Washington, Congress appropriated \$180 million last summer to encourage construction of hospitals and other medical facilities for the chronically ill aged.

A report on the care of the chronically ill

aged throughout the Nation is being prepared at the direction of the conference of State governors, to be presented at its next annual meeting at Chicago in August.

The resolution calling for the report, adopted by the governors at their 1954 con-

vention, says:

"Increased life expectancy should provide more meaningful rewards than mere prolongation of life itself. Our older citizens are entitled, in their advancing years, both to healthful living and to opportunities for useful and satisfying activity

Governor Harriman appointed Philip M. Kaiser last month to be a special assistant to handle problems concerning the aged and

STATE BILLS OFFER AID

Bills proposing to provide more housing for the aged, stimulate golden age clubs, remove antiage legislation and promote jobs for workers over 45 are before the State legislature. They were introduced January 24 by Senator Thomas C. Desmond, chairman of the New York State Joint Legislative Committee on Problems of the Aging.

In New York City, numerous means of coping with problems created by our aging population are being considered and set up by city departments and private welfare agen-

Dr. Basil C. MacLean, commissioner of the department of hospitals, wants to convert two city hospitals on Welfare Island into nursing homes for the infirm aged. They are the old metropolitan and city hospitals, which will be vacated when new hospitals being constructed to replace them are com-

A survey is being made of chronically ill patients in all the city hospitals to ascer-tain how many of them do not require ex-

pensive hospital care.

The department of hospitals also has asked the budget director for additional inspectors to keep tabs on the city's commercial nursing homes, for which it adopted a more stringent code of standards last fall.

Commissioner Henry L. McCarthy of the department of welfare wants to establish 'homesteads" for aged men and women on Ellis Island, which was recently abandoned as an immigration station.

Additional day-care centers to provide recreational activities for the aged who still live in their own homes are being sought by the welfare department.

The city health department wants to establish counseling centers for the aged offering service similar to that given for the last 3 years on an experimental basis in the Kipps Bay area of Manhattan and recently extended to East Harlem. Private agencies, too, are mobilizing to remedy the current situation and prevent its getting worse. HEALTH COUNCIL STUDIES

The Welfare and Health Council is conducting a series of institutes to study ways of improving proprietary nursing home care. To bridge the gap between crowded institutions for the aged and the rising aged population, private nursing homes have opened rapidly in the last 10 years. New York City now has 100, some of which have been harshly criticized as being more interested in profits than in giving adequate sympathetic care to their patients.

An information service about nursing homes is about to be opened by the Welfare and Health Council. It will provide information about facilities, type of service, and

The Community Service Society, whose director of services for the aged, Miss Ollie Randall, is also national president of the Gerontological Society, is embarked on a \$225,000 survey of the aged financed by a grant made last month by the Rockefeller Foundation.

On the surface, the distressing aspects of the latter years of today's aging men and women would appear to be the result of medical science's success in keeping so many people alive so long. Because of miracle drugs, antibiotics, the virtual elimination of many childhood diseases, the drastic reduction in infant and maternal deaths, modern sanitation, and dietary knowledge, millions now live much longer than they would have a generation ago. Even after chronic illness afflicts them, modern medical treatment keeps them alive much longer than was possible formerly.

Closer examination and deeper thinking

reveals equally significant reasons for the physical, mental, and financial hardships so often incurred as the result of longevity.

At what age does a person become old? A witty answer is that an old person is anyone 10 years older than you are. For retirement purposes, the answer is usually 65, frequently 60 sometimes 55, though rarely 70. Statisticians lean to 65, but use 60, too, as the boundary between middle and old age. Employment advertisements often set a celling at the age of 40, and commonly drop it to 35 or 30 years. We all know persons who seem young at 80 and others who seem old

WHERE IS THE DIVIDING LINE?

The impossibility of setting a precise year at which old age begins, or defining exactly what old age is, is a basic factor in the situation that has developed.

A companion factor contributing to the predicament of the older person is the attitude of our energetic, young, production-minded American culture that the 60-yearold, no matter how alert mentally and physically, is no longer a fit wage-earner, and is therefore useless.

Psychiatrists, physicians, psychologists, and social workers believe that much of the long-term mental and physical illness of the aged could have been prevented.

They argue, citing convincing evidence, that older men and women, demoralized by society's tacit scorn, break down mentally or physically, or both.

Men forced to retire while they are still able and eager to work, women deprived of their previous importance as wife, mother, and homemaker, feel relegated to the bottom of the social structure. Reduction in income and standard of living deepen the misery of empty days and lonely nights. Normal lessening of vigor and occasional illness, aggravated by frustration and fear, become more serious than need be and often the oldsters lapse into chronic physical or mental illness through sheer despair, these experts sav.

Practical minded business and government administrators as well as theorizing "do gooders" are convinced of the truth of this argument. For financial as well as for humanitarian reasons, they are banded together to devise ways of keeping older men and women happier and healthier longer.

Some ways have been found and are being put into effect. Actual dollar and cents savings, as well as gains in human health, dignity, and happiness, have been achieved.

Those preoccupied with the problems of aging consider their present progress a mere finger in the dike against which population statistics press fiercely.
Since 1900 the number of persons over 65

has quadrupled. During the same period, the United States population in general merely doubled. The number of persons 45 to 64 tripled, however, indicating that the proportion of older persons will continue to swell.

Many now happily unaware of darker aspects of the increased span of life probably will live past 65 and for many years there-after. And there will be a great many more others over 65 than there are now, with whom they must share whatever blessings or misfortunes old age brings.

Care Inadequate for the Sick Aged

EXTENSION OF REMARKS

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article which appeared in the New York Times of February 22, 1955. It is the second of a series of five articles Written by Edith Evans Asbury on the problems of the aging:

CARE INADEQUATE FOR THE SICK AGED-MOST INSTITUTIONS ACCEPTING THEM WERE NOT DESIGNED FOR THAT PURPOSE-PROBLEM IS INTENSIFYING-INCREASED LONGEVITY ADDS TO BURDENS CAUSED BY SENILITY AND CHRONIC ILLNESS

(By Ruth Evans Asbury)

Thousands of New York's aged already are mentally or physically ill and live in insti-tutions. More than half of these ailing aged are supported at public expense.

Two city infirmaries, a city nursing home, 11 State mental hospitals, and 100 commercially run nursing homes house and care for the aging ill from this area. Additional hundreds are being cared for in 91 homes for the aged operated by religious and philanthropic organizations. Nobody, including the city's commissioner of hospitals, knows how many chronically ill aged men and Women languish in general and voluntary hospital beds, not because they need expen-Sive care, but because there is no place to send them.

Most of the havens in which these men and women have found refuge for their declining years were not designed to handle their problems.

Bird S. Coler Infirmary, a 1,920-bed institution on Welfare Island, is an exception. One of the most modern and best equipped facilities in the Nation, it was planned to meet today's needs of the infirm aged.

was completed 21/2 years ago, and already is filled nearly to capacity.

Creedmore Hospital, for the mentally ill, on the other hand, was designed to accommodate a higher proportion of younger and ambulatory patients than it now has. it opened as a separate institution in 1935 only 28 percent of the patients in New York State mental hospitals were senile. Today this group constitutes 36 percent of the inmates of State hospitals.

Because most of Creedmoor's aging patients are bedfast or have limited mobility, they cannot, for instance, go to centrally located dining rooms in other buildings.

Replanning of food service for patients who cannot climb stairs, or even leave their beds-and some of the very old have to be spoon-fed like babies-is just one example of the adoption required at Creedmoor.

HOMES FOR AGED EVOLVING

Similar changes, usually at great expense, have become necessary in homes for the Originally planned as rest and retiremen places for ambulatory, and sometimes healthy, oldsters, many of these homes are gradually evolving into infirmaries or hos-

There are two major reasons for the evolution. First, their original inhabitants lived for many years after entering, became chronically ill, and continued to survive for many more years. Secondly, men and women enter homes for the aged now at the age of 75 or 80, usually for health reasons.

A generation ago, the average age at admission to a home for the aged was 60 or 65, and the reason was usually a need for

shelter and food.

Nowadays, men and women in their sixties have the wherewithal to buy food and shelter in their own communities, thanks to social security, old-age assistance, pensions, and the like. And they show an overwhelming preference for remaining independent, and outside an institution, as long as possible.

The old idea that retired men and women romp joyously into homes for aged, or sunny colonies in Florida to rest and relax after years of happy anticipation, has been dis-proved by recent surveys. They want to stay in their own homes in their own neighborhoods, near friends and relatives, regardless of the rigors of climate or penury

Eventually, because of the increased life span, illness and enfeeblement overtake many of the aging, and they have to enter some kind of institution when they can no longer take care of themselves.

When aging men and women begin to deteriorate they are prey to a variety of diseases, and sometimes suffer from more than one at the same time.

THE DISEASE OF SENILITY

One of the most distressing illnesses to befall the aged and their families is senility. Medical science has not found its cause or cure. It can last for many years, during which the patient gradually grows increasingly feeble physically and mentally, requiring more and more care. The cost, over a period of years, of providing for a severely senile relative is utterly beyond the means of the average family.

Mildly senile persons can remain with relatives if there is someone to keep an eye on them. They cannot be left alone for long. They are forgetful, may wander away, may turn on the gas to make coffee and forget to put a match to the gas. At this stage their medical needs are likely to be few.

New York's small families, usually living in small apartments, often with husband and wife both working, face a problem not to be underestimated even with mild senility. The situation is the more crtical if teen-agers in the family feel shamed by grandmother's behavior, or a daughter-inlaw resents the burden of caring for her.

As the disease progresses the senile person grows more forgetful, more vague, more childish. Physical and sanitation needs, as well as personality disturbances, become extremely difficult for the average family to cope with. At this point some kind of cus-todial care elsewhere is usually necessary to keep the rest of the family from being blown apart.

Senility, while it affects the mind, has physical, not mental, causes. In nontechnical language, it is the result of hardening of the arteries. The aging, thickening arteries permit less and less blood to flow to the brain, which becomes undernourished, starves, and fails.

The disease can occur in any person, regardless of how satisfying his occupation, physical health, mental, and emotional stability were during his active, mature years.

ALL GROUPS AFFECTED

All income groups are struck. Wealthy families can hire companions or nurses, and keep the patient at home when the disease becomes severe, or they can obtain suitable institutionalization-at great expense.

If the family is supported by welfare funds or demonstrably unable to pay for the care of the senile relative outside the home public agencies will assume all or part of the

The average, self-supporting, middle-income family, however, finds it virtually im-possible in New York City to solve the problem of long-term custodial care for a senile relative in a way commensurate with its pride and self-respect.

In a nursing home-if one can be found that is willing to take a senile patient-fees will be at least \$150 a month for bed, board, and nursing care alone. Medical treatment, when needed, will be billed separately.

Homes for the aged are extremely reluctant to accept senile patients, because of the more intensive, therefore more expensive, attention they require. Their financial resources are already strained to the breaking point by the unanticipated greater number of years their present population has survived, and by the resultant increase in chronic illness among them.

Another reason for the reluctance to accept a senile is that his childish behavior sometimes disturbs other patients.

By reducing their own standard of living, some middle-income families, at great financial hardship, manage to maintain a senile parent or grandparent. But the senile can survive for years. Usually, as things are now, the senile from the middle- and lower-income family eventually goes to a tax-supported institution, despite his family's financial sacrifices and pride.

Usually that institution is a mental hospital, to the further demoralization of the family and drain on the taxpayer.

STATE HOSPITALS OPPOSED

Many students of the problems of the aged believe that the majority of the senile do not belong in State hospitals for the mentally ill. They believe the care there is more expensive than need be for this type of patient.

According to State law, senile psychotics must be committed to a hospital for the mentally ill. Many welfare workers believe the law is sometimes loosely interpreted in order to commit nonpsychotic senile men and women because there is no place else to put

In the opinion of this group, the law should be rephrased to distinguish between psychotic and nonpsychotic senility. They advocate separate institutions, more like nursing homes than hospital for the senile.

If this were done, they argue, the senile's care would be less of a burden on the taxpayer, his last years could be spent more comfortably, and his descendants would be spared the stigma of mental illness.

Administrators of the State department of mental hygiene are outraged by the latter argument. They declare that no more stigma is attached to illness of the brain than to bodily illness.

Dr. James A. Brussel, assistant commissioner, insists that "no patient is in a State hospital for the mentally ill who is not mentally ill." "Our mental hospitals are so overcrowded now that we are hard pressed for space," Dr. Brussel declares.

"Don't you think we would be delighted to empty our beds of older people if they were not mentally ill?" Dr. Brussel demands. "Then we could reduce overcrowding and concentrate our efforts and facilities on the younger person who would receive more benefit from treatment and perhaps be cured."

A spotlight was thrown on the situation last December, when Supreme Court Justice Benjamin Brenner declared that he was sick and tired of sending old people to mental institutions simply because there is no place else to put them.

Referring to four elderly persons appearing before him for commitment, Justice Brenner said: "Since denial of custodial care and hospitalization to these people would probably result in their death, I find myself compelled to certify them as mentally ill."

Miss Ollie Randall, national president of the Gerontology Society, applauded the jurist's outburst as a welcome shock. It underscored a problem that deserves a high, if not the highest priority in the community—planning for old age, Miss Randall said.

Commissioner Brussel's retort is that after a thorough clinical study—"and you can be sure it was thorough"—all four of the persons to whom the jurist referred were found to be definitely very psychotic.

Miss Randall and scores of others, including physicians and psychiatrists as well as welfare workers, believe there is merit in drawing a sharper distinction between psychotic and nonpsychotic senility, and in providing separate facilities for them.

Even a distinct wing of a mental hospital, with a different name, which would appear on the death record handed down to his descendants, would be a humane step in the right direction, declares Justice Brenner. He also proposes that a new term, "helpless aged," be used in commitment proceedings.

No layman is qualified to diagnose psychosis. Qualified psychiatrists themselves may vary in their judgment as to when the borderline has been crossed from emotional disturbance and neurosis into psychosis.

To the untrained observer, mere erratic behavior may be deemed psychotic, or outward calm of a true psychotic may be mistaken as proof of normality.

PSYCHOSIS IS DEFINED

Dr. S. Bernard Wortis, professor of psychiatry and neurology at New York University College of Medicine and director of psychiatric and neurological services at University Hospital, New York University-Bellevue Medical Center, says there is no dispute about the exact definition of psychosis.

A psychotic, Dr. Wortis says, is an individual of normal intelligence in such a state of mind as to be unable to care for his own needs, unable to deal with the ordinary requirements of his normal environment, and devoid of insight into the consequences of his actions.

The city's psychiatrists base their decision on commital recommendations on whether the senile person has reached this state, Dr. Wortis says. He denies that they take into consideration any lack of other facilities for the patient's care outside a mental hospital.

The same definition, incidentally, almost applies to a baby. And, indeed, senile men and women revert to childishness as their disease progresses. As their memory falls, they forget acquired habits of self-control. This means dispering, constant change of clothing and bed linen, and sometimes resistance to being bathed and fed.

One of the most tragic sights imaginable is the wasted, feeble 90-year-old, a great-

grandmother, crying piteously in her bed for "Mamma, I want my mamma."

for, "Mamma, I want my mamma."

Not all the aged become senile. The percentage is small. However, the numbers are large, and are bound to increase as our aged population increases. Unless some answer is found to the problems posed by their need for specialized care, its expense will continue to engulf an evergrowing number of families, and the taxpayer.

Rise in Age Adds Burdens on Young

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article which appeared in the New York Times of February 23, 1955. It is the third in a series of five articles written by Edith Evans Asbury on the problems of the aging:

RISE IN AGED ADDS BURDENS ON YOUNG— LONGER SURVIVAL BEYOND POINT AT WHICH HEALTH BEGINS TO FAIL PILES UP MEDICAL BILLS—HOME CARE IS PROBLEM—CITY AND AGENCIES HERE PUSH PLAN TO KEEP THE FEELING OF "BELONGING" ALIVE IN ALL

(By Edith Evans Asbury)

The increase in the population of the aged is piling hugh medical bills on the younger wage earners and taxpayers.

Medical science has not only increased man's life expectancy, but it also has made it possible for him to survive longer after

his health begins to fail.

One in every 11 persons in New York City is over 65. Men of 65 have a life expectancy of 14 years, and women 17. At some time during the added later years, many, though by no means all, aging men and women acquire infirmities that slowly waste their minds, bodies, and financial resources.

The situation has developed so swiftly that the makeshift, emergency measures marshaled to cope with its medical aspects often cost more than necessary in terms of human dignity and money, in the opinion of experts concerned with the problems of the aging.

Many of the infirm aged, supported for years in hospitals and other institutions, could have remained healthier and happier longer, and at much less expense, if they had stayed longer in their own homes, these experts say.

In an effort to use funds as efficiently as possible, public and private welfare agencies have developed a plan for keeping the aged in their own homes as long as possible.

CARE FOR PAY IS LIMITED

Self-supporting families, too, can benefit from the procedure developed by these agencies for the care of the indigent aged. Unfortunately, facilities for this kind of care for the paying family are limited, and many who could benefit do not know about them.

But a beginning has been made. As awareness of the plan spreads, services on a fee basis will undoubtedly increase to meet the demand that is expected.

"Continuity of care" could be an overall name applied to the method devised by the welfare agencies for meeting, as humanely and economically as possible, the needs of the aged when they begin to fail in health.

The agencies have also developed a preventive program to combat the emotional and physical ravages of old age. This will be discussed in a subsequent article.

The system of continuity of care, while it has preventive aspects, is a remedial procedure. It was developed to cope with the rising medical costs of failing health brought on by the increased proportion of older men and women in our population.

In this city, there are a million residents over 60 years old. More than 700,000 of these are past 65. Seven and three-tenths percent of the men and women over 65 are supported

by the department of welfare.

Some of these elderly relief clients have good health, but are unable to find, or perform, work. The welfare department maintains them in their own homes, with relatives, or alone. If their health begins to decline, they receive medical treatment as needed at clinics, or from doctors sent to their homes.

Visiting nurses are also sent when needed. Visiting homemakers go to the home of the old person or couple, to assist with cleaning up, marketing, and planning.

MORALE OF AGED STRESSED

Keeping the older person in his own home, in his own community, among familiar sights and near friends, is far more beneficial to his morale than uprooting him and putting him into an institution, with its regimentation and lack of privacy.

The cost to the taxpayer is also a great deal less, according to Miss Charlotte Authier, director of the Bureau of Special Services of the Department of Welfare. Care outside the home, she says, ranges anywhere from

a minimum of \$3 a day to \$20.

The Weifare Department budget for a person living alone in his own home is \$110.42 a month, not including medical or nursing care, or other special health needs. Homemaker service averages \$10 a week, for 3 half days.

If an elderly welfare recipient is no longer able to remain at home because of need for continuous supervision, the department places him in a boarding home. Here, where, at the most, 4 older persons are quartered, a "foster mother" provides homelike conditions matching those from which her boarders came.

The oldster can still feel a part of a family, have a private room, go about the neighborhood, attend church, shop, and act as a part of the community. He is relieved of house-keeping responsibilities, although he can make his bed or putter around the house if he feels like it. When he is ill he can be served a tray in bed, and if he needs occasional medical attention a physician can be summoned.

FOUR HUNDRED HOMES FOR CITY CASES

Four hundred such boarding homes are utilized by the Department of Welfare at a cost of \$94.50 a month for a single room or \$89.50 for a shared room. "And we could use four or five hundred more such homes," Miss Authler says.

Some borderline seniles are placed by the department in these boarding homes, along with other kinds of ambulatory but infirm aged persons.

The oldsters whose infirmities require more attention than can be provided in a boarding home, is placed in a nursing home, a home for the aged, an infirmary or a hos-

pital, depending on his needs.

In a nursing home, he receives continuous nursing care and medical treatment as needed. Approximately 3,000 welfare clients receive this care in 70 proprietary nursing homes licensed by the department of hospitals. Rates range at costs ranging from \$150 to \$200 a month.

Those in need of custodial and medical care may be moved to a privately operated home for the aged equipped for this type of patient. The department uses 66 of these homes, paying fees ranging up to \$150 a

month, plus clothing and personal incidentals.

When the patient's illness progresses to the point where he needs more intensive medical treatment, the department moves him to infirmary accommodation. These include some of the homes for the aged and the publicly operated Bird S. Coler Infirmary on Welfare Island and Farm Colony on Staten Island. Here the cost averages \$6 a day, still well under the \$20 a day cost of beds in general hospitals.

The same type of continuity-of-care program is carried-out by Jewish, Catholic, and Protestant welfare agencies, other private welfare agencies, and by the social-service department of the department of hospitals. Homes for the aged, crowded to capacity, give the same service to prospective residents eligible for admission but still able to stay in their own homes.

MUCH CASEWORK IS NEEDED

Extensive knowledge of available facilities, intensive social casework with the individuals and families involved, and alert awareness of the whole field of problems connected with aging are required to carry out this program.

Perforce, the public and private welfare agencies have acquired the necessary information and skills, in order to deal effectively

with their own clientele.

Some of this expert knowledge, counseling, and skill is available also to self-supporting families. Religious and privately financed welfare agencies will, on request, supply it on a fee basis.

One commercial counseling service-Adult Counselors and Home Finders, at 33 Fifth Avenue-has been in business for 3 years to serve the paying public. It is operated by two former social workers who saw the need in the middle-income group for the same service they were giving the indigent,

and decided to provide it.

Homemakers for the aged in their own homes can be obtained in the metropolitan area from three commercial organizations. As can be inferred from their names, they Originally served families in a wide variety of emergencies, including those in which a young mother needed someone to care for her children while she was in the hospital, or just after her return with a new baby. three report an increasing demand, within the last year, for help for aging men and women.

The 3 are the Gotham Registry for Family Nurses, 100 West 72d Street; the Maternity Service Nurses Registry, 814 East 13th Street Brooklyn, and the Suburban Agency, 130 Leverich Street, Hempstead, L. I.

VISITING NURSE SERVICE HELPS

Visiting nurse service, too, can be obtained by the self-supporting family for its aged. It is available from the Visiting Nurse Service in Manhattan at 107 East 70th Street. This office also serves Queens and the Bronx. In Brooklyn there is an office at 138 South Oxford Street, and in Staten Island at 61 Stuyvesant Place.

Fifty percent of the Visiting Nurse Service's work is supplied free to those unable to Day. However, the agency also provides Service for those able to pay part or all of the Cost. Fees begin at \$3.50 for a 45-minute

A registered nurse will give the patient a bed bath, and treatments or injections ordered by a physician. The nurse will teach the family how to give the patient insulin for diabetes, and will work with both patient and family to help rehabilitate the victim of a stroke.

In addition to medical, nursing, and housekeeping help enabling the aging person to remain in his own home at much less than the cost of hospitalization, counseling is available to middle-income families as well as to the indigent.

This advice, based on knowledge of community facilities and techniques advisable for retaining and rehabilitating the mental and physical health of the aging, can be obtained on a fee basis from the voluntary family agencies and from the adult counselors and home finders mentioned above.

Families driven to the limit of endurance emotionally by an older member who is difficult to get along with, can get advice about various ways of handling the problem.

CASE OF GUILT-RIDDEN GIRL

Often the guilt-ridden daughter who can no longer bear to live in the same house with her domineering, but physically helpless mother or mother-in-law feels like a moral

The explanation may be that the older woman is irritable and demanding because she is demoralized and terrified by old age

and dependency.

Both women can be reassured by learning from expert counselors that they are not alone in their dilemma and that socially acceptable, economically feasible, and personally satisfactory solutions are possible.

These agencies offer counseling, too, to the bewildered older person unable to adjust to retirement, idleness, and income reduction, They may steer him toward new kinds of work more in keeping with his declining strength, part-time work at his acquired skill, or social activities and hobbies that will revive his interest in life and restore his pride in achievement.

Concrete evidence of the urgent need for more counseling and continuity of care is offered by the results of a study made of 95 aged patients at Goldwater Memorial Hos-

pital on Welfare Island.

The study, begun in 1953, is a joint project of the New York University-Bellevue Medical Center and the city department of hospitals, with financial aid from the New York Foundation. A similar survey under the same auspices is being made of the chronically ill in all the city's general hospitals, to determine how many of the patients do not belong in hospitals, and how they got there.

A recently published report of the survey the chronic disease and discharacterizes ability resulting from an aging population the Nation's No. 1 medical problem. Ninety percent of the group studied at Goldthe report says, had no medically justifiable reasons for continued hospitali-

zation.

Yet some of the 46 men and 49 women studied had been in Goldwater as long as 13 years. Unable to ascertain the exact cost of the lengthy hospitalization of the group, the report nevertheless declares that "an outlay of millions of dollars is directly in-

"In any event," the report says, "the cost of neglect is high and should be faced frankly. If we cannot act out of compassion and maturity, we will still have to act out of economic necessity."

Aids to Morale Needed for Aged

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article which appeared in the New York Times of February 24, 1955. It is the fourth in a series of five articles written by Edith Evans Asbury on the problems of the aging:

AIDS TO MORALE NEEDED FOR AGED-AS OVER-65 POPULATION RISES, EXPERTS ARE CONCERNED OVER WAYS TO KEEP IT OCCUPIED

(By Edith Evans Asbury)

While public and private agencies seek frantically for means to cope with the soaring cost of illness among the aged population, they quake at the prospect of the future.

The over-65 population in the United States has quadrupled since 1900; the number of persons 45 to 64 years old has tripled. This middle age group is passing into the over-65 group at the rate of about 400,000 a

One need not be an Einstein to deduce from these statistics, and from the rate of speed at which medical science achieves new victories over disease, that the aged are destined to form a much larger proportion of the population than they do now.

Today, 1 in every 12 persons in the country

is over 65 years old, and the ratio in New York City is 1 in 11. It is estimated that by 1980 1 in 7 of the Nation's population will

be over 65.

It is true that a great many men and women live to a hearty, happy old age, and die with merciful speed. Many of our most distinguished figures in government, industry, arts, and sciences are way past 65 and still active.

Prime Minister Winston Churchill is 80. T. J. Watson, chairman of the International Business Machines Corp., is 81. Former Vice President Alben Barkley, who recently got himself elected to the United States Senate after an arduous campaign, is 77. Toscanini was still vigorously directing the N. B. C. Symphony Orchestra up to last April, when he retired at the age of 87.

Carl Sandburg is still turning out literary and scholarly masterpieces at 77. Grandma Moses, at 95, is still busy painting, an art she

took up when she was 78 years old. Former President Herbert Hoover, Gen. Douglas MacArthur, Albert Einstein, and many, many others can be cited who continue to contribute their wisdom and skill to the Nation long after passing 65.

MANY WORKING AFTER 75

In many walks of life, men and women continue working after they reach the age of 65. It is estimated that 23 percent of those over 65 years old in the United States are employed and supporting another 7 percent who are their wives. Several hundred thousand past 75 are still working, usually for themselves (farmers, for instance) or at part-time jobs for others.

Experts concerned with the problems of the aged believe that many of the remaining 70 percent could be employed if it were not mandatory retirement practices. They believe much of the debilitating, expensive illness among older men and women can be prevented in the future, if steps are taken now to revise the attitude of society that decrees retirement at a chronological, rather than physiological age.

That a happy person is a healthy person is the thesis underlying this belief. Eliminate the cruelly scornful attitude of society toward older men and women, and their costly mental and physical deterioration will

be reduced sharply.

The United States, hewed out of a wilderness by young, vigorous men and women, built into industrial eminence by efficient production methods, glorifies youth and has little respect for those who do not contribute to the national economy. This attitude is accentuated by our culture's strong Puritan tradition, in which work has a unique value.

So long as its citizens are self-supporting members of the economy, they find the American way of life worth living, no matter how much of a struggle it is at times. fight for their jobs and advancement, they fight for their children, for the causes in which they believe, and for prestige, with whatever weapons are at hand. They refuse to acknowledge that they are old until confronted with irrefutable, shocking evidence.

VERDICT SHAKES MORALE

When the stunning verdict is forced upon them it staggers their morale. Unless some way can be found to rescue and preserve the older person's morale he will begin to deteriorate mentally and physically, in the opinion of physicians, psychiatrists, psychologists, social workers, and Government administrators concerned today with problems of the aging.

Men forced to retire by their chronological age while they are still physiologically able, energetic women who have outlived their role as mothers and homemakers suffer keenly at being relegated to the shelf. Unless they can find some new means of bolstering their egos by activity and achievement, they wither away in the face of society's judgment that they are useless.

Expelled from the battlefield, where, during all their thinking years, they gloried in the challenge, they cower in a no-man's land between the army of fellows that has ostracized them, and death.

"We are wasting our most precious human resources, wisdom, by our present social attitude toward our aging population," declared Dr. Howard Rusk, chairman of the Department of Physical Medicine and Rehabilitation of New York University-Bellevue Medical Center and associate editor of the New York Times.

"People are not born wise," Dr. Rusk says.
"They may be born brilliant, but wisdom comes only with experience, and experience comes only with time."

Distinguished members of his own profession furnish examples of the folly of arbitrary retirement because of age. As one of many similar cases, he cited the late Dr. Harvey Cushing, the first and one of the greatest neuro-surgeons, who was retired by Harvard University. Dr. Cushing promptly moved over to the Yale faculty, and continued teaching until he was 68.

JOBS HARD TO GET AFTER 40

The age barrier to employment begins to rear itself long before 65. Jobs are frequently advertised as offered only to applicants under 40. Sometimes the limit is placed at 35 or at 30.

"We have a terrible time persuading personnel managers to even interview workers over 40, no matter how well qualified those applicants are," says Mrs. Marguerite Coleman, supervisor of special placement service for the New York Employment Service.

The difficulty of finding employment for those over 60 is inordinately greater. Yet many could be placed, Mrs. Coleman says, if a larger staff could be assigned to the task. At present only four persons in the New York office serve the over-40 group, and they are able to handle only 10 percent of the applications.

"It is really a tragic business," Mrs. Coleman says.

The only other agency that offers special assistance to the older worker in finding full or part-time work in the city is the federation employment service, operated by the Federation of Jewish Philanthropies.

Many of the idle, older men and women, are perfectly capable, physically and mentally, of continuing full time at the same kind of work they always did, Mrs. Coleman says.

Others could work part time. For example, the New York office piaced a 70-year-old retired librarian in a 3-day-a-week post in the records department of a hospital. Retired bookkeepers are placed with small firms whose books need attention only 1 or 2 days a week. Retired teachers can be part-time tutors.

The employment service also operates a training class for older office workers. Here

women who were stenographers or secretaries before they were married can, now that they need to return to work, brush up on their typing and shorthand.

Not only does the employed older person save the taxpayers money by supporting himself, but he is a contributor to the national economy and is paying taxes.

national economy and is paying taxes.

During November, 1954, the most recent month for which statistics have been completed, 79,000 men and women filed new applications for employment throughout the State employment service. Of these, 22 percent were between 46 and 64 years old, and 2 percent were over 65. Already pending were applications from 93,000 men and women between 46 and 64, and 22,000 from persons over 65.

"Somebody has to support these people," Mrs. Coleman said. "The community cannot afford to have that many unproductive people."

Senator Thomas C. Desmond, chairman of the State joint legislative committee on the problems of the aging, has a bill before the legislature that would appropriate \$50,000 to be used for employment counseling for older workers. He has introduced it perennially, several times, and so far it has been defeated each year. He has also offered a measure that, if adopted, would remove anti-age legislation.

Pointing out that the life expectancy of a 65-year-old man is 14 years, and of a 65-year-old woman is 17 years. Senator Desmond asks: "What do we expect these forcibly retired people to do all that time, sit on their hands?"

Another bill introduced by Senator Desmond would provide paid recreation leaders to work with the aged. These leaders would help organize and direct "senior citizens clubs," "golden age clubs" and other recreational activities that would get the aged out of their lonely rooms more often and give them something to live for.

In the city, 14 day-care centers for older men and women are operated by the department of welfare. They are an important link in the department's "continuity of care" program designed to keep older relief clients in their own homes as long as possible.

NEW INTERESTS PROVIDED

Here, older men and women, widowed, lonely because most of their friends have died, can make new friends, develop hobbies, participate in study groups. New Yorkers from all walks of life attend these centers, which have libraries and workshops as well as lounges and meeting rooms.

Similar recreational programs for older men and women are offered in some churches, and some homes for the aged provide them for older people in the neighboring community.

Mère such centers should be established by churches, civic clubs, and various organizations, declares Harry A. Levine, director of the welfare department's centers.

Many churches and synagogues are open all day and could provide space for activities for older people, Mr. Levine says.

According to Commissioner McCarthy, the centers pay off in dollars-and-cents savings to the taxpayers, as well as in emotional benefits to the aging. He has asked the budget director for money to open additional centers, which, he says, "can cut down referrals to mental hospitals.

"We don't get mental breakdowns to the same degree among the aged if they are kept busy." Commissioner McCarthy declares.

The large number of widowed women among the aged poses a special problem. Women tend to outlive men, whether married or not.

The widowed women suffer as keenly from loss of status and feelings of futility as do men and women forcibly retired from employment outside the home.

SPECIAL PROBLEMS IN CITY

In smaller cities, and on farms, there is usually room in the home for a grandmother or aging aunt, and plenty of things for her to do around the house and in the community. In New York, with its small apartments and mobile population, this is less likely to be true.

Depressed at being crowded out of the general scheme, many of these women take solace in recollections of the past, when they were important. This group is especially in need of help, if mental breakdown is to be prevented.

As has been pointed out earlier, 30 percent of the over-65 population in the Nation are employed or supported by their husbands. Nearly all of the remaining 70 percent must subsist on sharply reduced incomes, whether the source be pension, annuity, social security or old-age asistance. Adjustment to a reduced standard of living intensifies all the other misfortunes of this group.

Despite the gloomy shadows thrown across their latter years, most old people manage to adjust to their hardships.

Assistance in making that adjustment is given at two adult counseling centers in Manhattan, operated jointly by the city departments of health and welfare, with a grant from the New York Foundation.

The centers are the outgrowth of a survey made in 1952 of 500 men and women over 60 living in the Yorkville-Kipps Bay area. The department of health, Cornell University Medical College, the New York Foundation and the Russell Sage Foundation arranged the study.

All income levels were represented by the 500, who were selected at random. Some lived in luxurious Park Avenue apartments, others in very poor homes on Second Avenue. The area covered was between 34th and 90th Streets, and between Fifth Avenue and the East River.

Some kind of counseling to plan for and adjust to old age was revealed as being one of the greatest needs of the aged.

As the result of the study, an experimental counseling center was established at 411 East 69th Street in 1953. A second center was opened early this year in East Harlem, at 312 East 109th Street.

At both centers the service is available to all the aged, regardless of income. It is rendered by a staff that includes a physician, psychiatrist, a public health nurse, social case worker and clinical psychologist.

Less than half the problems brought in by the troubled older men and women are related to health. But its sponsors believe that the expansion of the service would be one of the most effective preventive health measures possible.

"Their main, besetting problem is not health, but morale," says Dr. Theodore Rosenthal, Assistant Commissioner of the Health Department.

"And if you can keep old people occupied they keep out of hospitals. Mental health has an important effect on their physical health."

Europe Leads United States in Assisting Aged

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article which appeared in the New York Times of February 25, 1955. It is the last article in a series of five written by Edith Evans Asbury on the problems of the aging:

EUROPE LEADS UNITED STATES IN ASSISTING AGED—OBSERVERS FINDS THIS COUNTRY SUFFERS BY A COMPARISON WITH ALD GIVEN ABROAD—RESPECT FOR OLD CITED—BUT RIS-ING PROPORTION OF THE ELDERLY IS CAUSING A BIG PROBLEM IN SOME AREAS

(By Edith Evans Asbury)

The proportion of the aged in the population is rising in Europe as well as in the United States.

In Great Britain 10.83 percent of the population are 65 years or older. In Germany 9.28 percent are over 65. The percentage in the United States is 8.118.

Both Germany and Britain had about the same percentage of over 65 population as this country in 1900. In Germany it was 4.88, Britain had 4.69, and the United States 4.05.

France, Sweden, and Norway had large number of aged in 1900, their percentages being 8,20, 8,37, and 7,90, respectively. Today in France 11,80 percent of the population are over 65, in Sweden 10,31, and in Norway 9,70.

The Europeans began planning for the welfare of the aged long before we did. That was partly because their populations have been aging gradually over a longer period. Also they showed concern earlier because older persons in those countries receive more deference from their families and the public.

UNITED STATES SUFFERS IN CONTRAST

A report on a tour made last summer to observe how the aged are cared for in Europe and Scandinavia has been made by Miss Ollie A. Randall, national president of the American Geronological Society. She said:

"We sensed above everything else a feeling that nothing was too good for the old people. It is something that we in this country have

not acquired to the same degree."

Miss Flora Fox, director of the Central

Miss Flora Fox, director of the Central Bureau for the Jewish Aged, who also made the tour said she was "deeply impressed by the acceptance of the aged as people and entitled to special housing. It puts to shame the meager efforts in this country," she added.

Government-sponsored retirement systems were well established in Germany and the Scandinavian countries when we established ours, largely patterned after theirs, in 1935.

Bismarck introduced social security in Germany in 1873. Britain established a noncontributory pension plan, involving a means test, in 1908. A contributory plan, without means test, was started in 1925.

In early times the Swedes, or rather their Viking forebears, solved the old-age problem by pushing their old folk over the nearest precipice. Today, their old-age pension system is so inclusive it covers every Swede at his 67th birthday, irrespective of financial status.

The King is excepted, but the Queen is not. She, being 67 this year, will receive the pention.

Government-subsidized low-rent housing planned especially for older couples, or for unmarried men and women, has also been constructed on a large scale in Germany and the Scandinavian countries.

OTHER GRANTS BESIDES MONEY

Besides money payments, some European countries provide other benefits for the retired aged. In France, some cities grant coal, milk, sugar, and other food allocations as well as hospitalization.

Denmark, in addition to subsidizing lowrent apartments that house 5 percent of the country's pensioners, pays rent subsidies to those living in other housing.

Sweden, too, either provides specially built low-rent housing, or rent subsidy to the aged pensioners.

With their entrenched systems and their experience in administering them, it might have been expected that those far-sighted countries would be better prepared than the United States to handle today's aging population.

The European countries are, however, as perplexed and bedeviled as the United States by the mounting costs of chronic illness among the aging. They are learning, as we are, that pensions are not the final answer for the aged. And in many of the countries the retirement insurance structures have suffered from devaluations, war-devastation and other blows to national economies.

As rapidly as possible, the European countries are making adjustments. There is a trend toward changing from fixed pensions to fiexible ones tied to the cost of living. The Scandinavian countries already pay cost-of-living pensions. That system is being considered by the Governments of England and Germany.

DOUBTS ON MANDATORY RETIRING

The medically increased span of life, with its lengthened period of retirement, and the higher incidence of chronic illness have resulted in Europe as here in a trend away from institutionalization. It is also raising doubts about the desirability of mandatory retirement.

In some of the European countries older men and women who prefer to continue working are spared the hardship of enforced idleness and reduced income that is suffered by many American men and women past the mandatory retirement age.

Older persons are encouraged to stay on the job in England and Denmark. They receive larger pensions as a reward for delaying retirement, because in those countries there are more jobs than there are workers to fill them.

A third of the men and women over 70 in Sweden are still working. In Germany those retired on social security are permitted to earn money, and the majority do.

In France, on the other hand, it is reported that it is the lifetime dream of nearly every state employee to retire on a pension as soon as possible—at 50 or 55. Frenchmen, perhaps, feel less of a call to prove their worth to society by continuing to work. Older men and women are an integral part of the family in France, commanding respect and often obelsance.

In Europe, as here, strenuous efforts are being made to keep ailing older persons in their own homes as long as possible, both for their own morale and to avoid higher cost of hospitalization.

Since Britain has socialized medicine, the aged are entitled to free medical care, including drugs and hospitalization. Homes for the aged are available, but about 95 percent of the aged maintain their own households or live with their children. This is approximately the same percentage as in the United States.

Officers of the National Assistance Board visit pensioners who need help, and the board contributes financially to voluntary agencies providing recreation, meals, or other services for the elderly in their own homes.

CLUBS ALSO OFFER SERVICES

More than 2,300 clubs, providing recreation, handicraft classes, and above all, companionship, are run by local groups affiliated with the National Old People's Welfare Committee, in which voluntary and statutory bodies are represented.

Mobile food services provide many old persons with hot meals in their homes.

Prosperous Sweden, which has not engaged in a war since 1814, provides handsomely for the aged. That country's national health program, effective this year, supplies hospital and medical care and free medicine for everyone, including the aged.

In addition, there are many state and municipal services for alling older persons. Visiting nurses and homemakers are sent without charge.

About 23,000 low-priced apartments and 210 modern houses for the aged with 8,800 beds, the bulk in single rooms, also have been built for Sweden's aged.

Less blessed with prosperity, Germany and France face a more severe problem. West Germany's own people have aged earlier, physiologically, because of the rigors of war. And the country has been flooded with large numbers of aging refugees from East Germany and the Balkans. Medical care, drugs, and hospitalization are free for Germans receiving pensions under the compulsory insurance system.

PROBLEM IS ACUTE IN FRANCE

France's problem is acute, because it has the oldest population in the world. The average age of the French is 35, compared with 30 in the United States. The percentage of men and women over 60 in France is 16.2 as against 0.9 in the United States. Many of France's aged are war widows.

As France also has had a high increase in the birth rate, she has a disproportionate number of persons either over 60 or recently born. This places a heavy burden upon persons in the producing years, whose numbers have been cut by the casualties of two wars.

So far the problem of an aging population has not arisen in the underdeveloped countries of Asia, but it is expected to develop there, too, within the next 20 years. The benefits of medical science that extend the life span are easily exportable. Already mortality rates in some of those countries have fallen sharply.

It may be that by the time their aged populations assumes larger proportions, the underdeveloped countries will be better prepared to grapple with the problem than were the United States and Europe.

For one thing, larger numbers of children in their traditionally larger families will also survive, thanks to medical science. Secondly, their predominantly agrarian society provides more space and opportunity for older men and women in the family.

And last, but not least, the Asian family pattern protects older men and women from the demoralization so often at the root of their dilemma in our modern, industrialized society.

Many of the so-called underdeveloped countries have preserved, along with other antiquated customs, the belief that a family includes not only parents and children, but grandparents, aunts, uncles, and cousins to the second and third generation.

These older members remain in the household, sharing in its work, its play, its poverty or prosperity, and its love.

Federal Participation in the School Lunch Program

EXTENSION OF REMARKS

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks, I should like to include the following letter from Mr. Harvey K. Allen, of the bureau of school lunches, Board of Education of the City of New York, so that my colleagues may consider the remarks on the necessity of increased Federal participation in the school-lunch program:

BOARD OF EDUCATION
OF THE CITY OF NEW YORK.
BUREAU OF SCHOOL LUNCHES.
Brooklyn, N. Y., March 21, 1955.

Hon. Francis E. Dorn,
Member of Congress,
House Office Building,

Washington, D. C.

DEAR CONGRESSMAN DORN: For the past several years the Federal appropriation for the national school-lunch program has remained unchanged. During the same period, however, the number of children in the program has increased greatly, and so, of course, has the cost of serving a school lunch. The Federal aid has had to be spread more and more thinly, with the result that the rate of Federal assistance per lunch has steadily declined. In consequence, the States and local communities, already hard pressed to meet the heavy costs of constructing and operating new schools, have been obliged to bear the entire increase in the cost of the school-lunch program.

Claims of the Secretary of Agriculture have led some Members of Congress to believe that donations of surplus commodities and the special school milk funds provided by the Agriculture Act of 1954 make an increase in the school-lunch appropriation unnecessary. The facts, however, do not support these claims. On the contrary, the testimony adduced in the recent hearings of the House Subcommittee on Agriculture Appropriations by public witnesses provides ample evidence of the compelling need for an increase of at least \$25 million in the Federal school-lunch appropriations for 1956.

There is a strong move now under way to obtain a substantially larger school-lunch appropriation than the \$84 million authorized for the current year. It is proposed that the additional funds be provided either by increasing the school-lunch appropriation or by requiring that a portion of the customs receipts available to the Secretary of Agriculture be apportioned among the States as cash assistance to be expended under the provisions of the National School Lunch Act of 1946. This proposal has the special merit of being equally beneficial to consumers and producers of agricultural products. Not only would it provide urgently needed additional funds to expand the national school-lunch program, but it would also promote the domestic consumption of agricultural com-

modities of all kinds.

On behalf of New York City parents and their children, may I urge that you join other interested Members of Congress in vigorously seeking an increase in Federal cash assistance for school lunches by whatever method appears to be most suitable and feasible.

Please accept this renewed assurance of my high esteem, and believe me.

Sincerely yours,

HARVEY K. ALLEN.

Our Defense Policy-Part I

EXTENSION OF REMARKS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article in two parts entitled "Mission for the Army: The Winning of World War III," which appeared in the February 1955, issue of the Army Journal.

Herewith is part I:
Mission for the Army: the Winning of
World War III

(This article is the product of discussion and study by a number of soldiers whose interest in their profession goes far beyond their daily duty. Its purpose is to suggest a program of action that the Government of the United States can profitably delegate to the United States Army in the interest of national security. It is also designed to reassure those few soldiers who have expressed concern about the future of their profession. We believe this article shows them that the Army is and must continue to be a dominant military force.)

We must recognize the creeping aggression that we call the cold war for what it is; world war III. If world war IV—the nuclear and thermonuclear war—comes it will be because of our failure to meet and defeat the present Soviet challenge,

We believe it demonstrable that United States concentration on preparing for thermonuclear war has weakened our power to resist creeping aggression. Our reluctance to face up to the fact that we can be destroyed piecemeal as well as in one overpowering assault threatens us with defeat in world war III.

In the next few paragraphs we "brief" some evidence that shows how our preoccupation with war with a "big bang" has limited the execution of plans and operations that will protect us from defeat in world war III.

Our reliance on nuclear weapons and strategic air-delivery systems has been a clear signal to the Communists that our real preparations are for a final showdown and that we are largely unprepared to stop limited aggression.

Our success in building military strength in Europe has given the Communists the opportunity to move in Asia. Communist success in Asia may mean the eventual encirclement of Europe via the Middle East and the isolation of Europe from the United States. "The road to London lies through Peiping," Lenin said many years ago. That road may also lead to Washington.

The inhibitions and frustrations of the Korean war should not paralyze us into inaction. Asia is the active theater of world war III, and such phrases as "the wrong war in the wrong place" and "we should never let our armies become bogged down on the mainland of Asia" will not change this situation. We do not necessarily have to let the enemy choose the battlefield, but we do have to counter his moves directly or indirectly, and up to now our only indirect counter has been the threat of massive retaliation—which he considers a massive bluff on our part.

We must face up to the fact that creeping aggression is military aggression as well as internal subversion and propaganda. Greece, Korea, and Indochina make that clear. The ultimate aims of subversion and propaganda are to pave the way for armed aggression. Indeed, we have that from the mouth of a key Communist spokesman who, at a policy conference in Peiping in 1949, said: "Armed struggle can, and must, be the main form in the people's liberation struggles in many colonial and semicolonial countries. But this does not mean that armed struggle does not need the coordination of other forms of the struggle."

In a brilliant analysis in this magazine last month Lt. Col. Robert B. Rigg demonstrated that the "parallel between tactical patterns and growth of the Vist Minh and of the Red Chinese in the Chinese civil war is so precise that even the circumstances of today's truce predict tomorrow's trouble."

"Today's truce predicts tomorrow's trouble"—that phrase is a clear warning that

we must take steps to stop aggression in Asia—or lose world war III.

THE ARMY: DECISIVE ARM IN WAR

Unlike the Air Force, the Army cannot concentrate on one kind of warfare. National security requires the Army to prepare to fight in all kinds: general and limited, conventional and thermonuclear.

It is not a downgrading or belittling of the Army's vital roles in Europe or in an atomic war to say that the Communist bid for Asia is an important and significant challenge to the Army. In the words of the latest edition of FM 100-5, "The continued possibility of such limited wars requires the maintenance in being of Army forces fully organized, trained and equipped for combat, and at the same time possessing a capacity for strategic mobility."

Thus the Army must build an alternate military force capable of checking creeping aggression in the era of nuclear parity. If such an army is not created and maintained we will be postponing the ultimate decision to times and places and means of the Soviet's own choosing. If we do create such forces and win world war III, world war IV may never happen. The stakes are high.

To win world war III we must overcome inhibitions that now chain us. It has generally been concluded that a military deployment capable of coping with nibbling aggression would result in an undesirable dispersion of United States forces in a thin line around the Soviet periphery. The task is frequently presented as impossible. The specter of unlimited Communist manpower is always raised whenever the recurrent issue of confronting Communist aggression in Asia arises. The fact that the monolithic Soviet bloc can exploit the advantages of its interior lines position is also advanced to explain why nothing can be done to check the Red tide.

It would be the height of military folly, of course, to try to contain the Soviet orbit by dispersing a thin line of men around the Red periphery. Even the original containment policy recognized this fallacy in recommending the creation of selected positions of strength. However, in the implementation of the containment policy few such positions were created.

The geographic realities of Asia belie the interior lines advantage which the Communists reputedly possess. Asia is a whole series of vast terrain compartments, communication between which is far more difficult by land than it is by sea. By exploiting sea and air power the free world, partciularly the United States, has a great capability to concentrate at a particular point on the rim of Asia. In terms of effective manpower, the Communist hordes do not enjoy the over-whelming numerical superiority commonly attributed to them. Even unlimited manpower must be trained and must be supervised by skilled noncoms and officers. These requirements set a very real limit on the amount of men the Communists can place on the field. Difficulties of supply and of communications further reduce the effective forces which the Communists can support in any one area. Neither the Russian nor the Chinese Communists have demonstrated a capacity or a desire to conduct two military campaigns simultaneously.

The cards are not completely stacked against us. We should not avoid fighting a limited war just because it happens to be in Asia, particularly if it could be advantageous to us. The decision to fight in Korea was an immense gain for the free world. A limited victory in Korea, one that resulted in a peace involving a withdrawal of Chinese Communist support from the Viet Minh, would have been even more useful.

The Communist challenge in Asia can be met and frustrated if the United States, in concert with its Asiatic allies, devises a

method and creates forces for defeating overt aggression. Taking into regard the strategic situation in Asia, land forces of moderate size, of high tactical mobility and capable of using air and naval support, could effectively block Communist aggression.

This aspect of the problem is receiving recognition outside the Government. In a study, The Requirements of Deterrence, prepared at Princeton University's Center of Internal Studies, William W. Kaufmann concludes: "If we are to reduce our dangerous dependence on massive retaliation and the instrumentality of SAC, we must strengthen the other arms of the services. The most obvious need is the ground forces. * The tactical air forces probably suffer from undernourishment as well."

To check Communist expansion in Asia we must have military forces and a strategy for their employment. Simultaneously we must help these countries counter Communist subversion and internal insurrection. These efforts must be designed to march in harness or both may fail.

Territorial conquest by communism has never occurred without the application of force despite the illusion that the military goal of conquest can be attained by propaganda and other nonviolent pressures. illusion has led us to give more consideration to economic and technical assistance than to creating and maintaining the military shield which will alone insure the success of our assistance programs. Communist strategic planners have never believed that they can win their aims without ultimate resort to military action. If the Communist strategy of the future is consistent with that of the past, subversion will be only a prelude to the ultimate use of force.

We must therefore be prepared to check overt aggression as well as subversive infil-If it can be demonstrated that it is possible to stop limited aggression by limited wars without an extraordinary drain on our resources, the security position of the entire free world will be enhanced.

Shortly after the outbreak of the Korean War we began in earnest to train free Asians to defend themselves. The most striking illustration of this program was in Korea, where some 20 divisions were organized and The cost of maintaining these forces into the indefinite future runs into hundreds of millions of dollars a year. The strain of keeping so many men under arms is too much for Korea itself. Thus, considerable additional economic assistance is necessary. An effort to create equivalent forces in all the threatened countries of Southeast Asia would be stupendous and expensive. This has been recognized and the trend now is toward placing limitations on the size of indigenous forces that are supported by us. Massive retaliation is supposed to take up the slack. It has been advocated that we should build up constabulary type forces designed primarily to maintain border security and assure internal control against Communist agents. Such a counterswing of the pendulum, however, would not solve the problem. Security forces, comparable to those maintained in Korea prior to 1950, would not be able to take the shock of overt aggression.

A compromise provides the solution. If, in each threatened country, a few suitably organized divisions are formed, the nucleus of resistance to external attack would be on hand. These divisions could also serve to train an indigenous reserve force to be called

up in the event of hostilities.

Two or three indigenous divisions by themselves would not be able to check the Communist forces that could be pitted against any country of southeast Asia. But if they could be rapidly reinforced by mobile United States task forces situated within the general area, they should be adequate to

withstand the early Communist concentration. The necessity of providing such reinforcement was stated by President Eisenhower in a published letter to Secretary Wilson on January 5, 1955:

"To provide for meeting lesser hostile action-such as local aggression not broadened by the intervention of a major aggressor's forces-growing reliance can be placed upon the forces now being built and strengthened in many areas of the free world. But because this reliance cannot be complete, and because our own vital interests, collective security, and pledged faith might well be involved, there remain certain contigencies for which the United States should be ready with mobile forces to help indigenous troops deter local aggression, direct or indirect."

Mobile forces organized and regionally can provide a demonstrable capahility to defend the threatened areas Ilnited States and allied forces already exist in the Korea-Japan area. Elements of similar task forces are already on hand in various parts of Southeast Asia. Additional United States Army divisions, located perhaps in the Philippines, could provide the deterrent force needed for Southeast Asia. Subsequently, a comparable force could be organized for the Middle East to assure protection to that exposed region.

These task forces could be designed to use atomic weapons, even though under certain circumstances the weapons themselves might not be used. Whether or not atomic weapons were used, we should devise a concept for meeting aggression on a limited basis without invoking general war, but without precluding limited retaliation against the source of the aggression. In general, we should seek to limit the area of the conflict without necessarily limiting the means we use to check aggression. Some will object that any employment of atomic weapons in a limited war will necessarily bring about a general nuclear war. According to this view, an aggressor will widen the conflict if defeat seems inevitable. The logic of this argument does not stand up in the thermonuclear age. It implies that a loss of face resulting from a setback to limited aggression would be less acceptable to Communist leaders than the nuclear destruction of their own countries. Communist rulers probably have just as much interest in preventing a general nuclear war as do the leaders of the West. Whatever limitations may be imposed, we must be able to defeat the aggressor and every effort must be made to save the victim country from utter ruin. If these general principles are adopted, this concept would be given support by the free peoples of Asia. A few of the countries located along the arc stretching from the Mediterranean to the Sea of Japan might be able to develop forces in excess of their immediate needs and also make a contribution to the mobile U. N. task forces established to deter aggression in the various threatened regions.

THE ARMY'S PARAMOUNT BOLE

Although these task forces will comprise elements of all the services, the Army's contribution would be paramount. This confirms the axiom suggested by Raymond Aron that "regular armies have no substitute as instruments of the cold war." When the army adopts the blocking of creeping expansion as a basic mission, it can take the many practical steps. Many of the problems we ran into in Korea resulted from our efforts to remake Korea into a Western European or American type of theater of combat. The engineer effort required in Korea was prodigious, but was it all necessary? It is possible to fight and fight well in Asia without all the impedimenta and logistical detail to which we have become accustomed. This squares with the growing conviction that atomic weapons will demand an army able to

live in austerity.

Certain of Field Marshal Montgomery's recommendations for an army required to fight a general nuclear war are quite in line with what we need to fight limited wars in Asia. Let's check off some of them.

"Armies must develop a more lively and opportunity type of battle leader than exists present, in both junior and senior ranks. Such a leader must have the imagination, the daring, and the resources to seize fleeting local opportunities; he must be trained to act independently and immediately within the framework of a general plan, rather than on precise and detailed orders or only after reference to a superior.

"Land forces must become less dependent on roads and more capable of cross-country movement.

"The supply system of land armies must be streamlined. They must become much less dependent on fixed lines of supply such as roads and rallways.

"Armies need a simple line of supply based on an airlift. Today, when supply lines are cut by enemy action, armies cease to operate efficiently. The system of the future should provide air supply to forward maintenance areas from base depots many miles to the rear, and well dispersed.

"The airlift from base depots to forward maintenance areas must be by some type of vertical lift aircraft, which can take off and land vertically, and which fly at a fast speed like an ordinary aircraft in level flight.

"There is clearly a tremendous future for vertical lift aircraft, and it must be exploited for the benefit of land forces."

The Army must have the new, light weapons that are easy to handle and effective in Asian combat. In setting requirements for equipment, transport, ordnance, and supply, the Army must continue to stress simplicity. and lightness. Every item of equipment should be designed to make it easier to train indigenous troops to use it. Services and facilities which are desirable but not necessary for fighting effectiveness must be eliminated. In training we must stress the adverse terrain and weather conditions which are encountered in most Asian areas. Only an army with the highest standards of proficiency, discipline, and general military effectiveness can stop creeping aggression.

There is no room in this discussion for comment on tactics. It is well to observe, however, that many valuable objective lessons can be gleaned from our experiences in Greece, Korea, the Burma campaign of World War II, British operations against the Communists in Malaya, and the long conflict in Indochina.

Our Defense Policy-Part II

EXTENSION OF REMARKS OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1955

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include part II of the article entitled "Mission for the Army: The Winning of World War III," which appeared in the February 1955 issue of the Army Journal:

A highly important part of this total concept for stopping creeping aggression—and winning world war III—is the example, guidance, and leadership the United States can give the free nations with whom it is working. It is important that soldiers assigned to MAAG missions always be carefully selected and trained for their task. Proficiency in the language of the country is necessary and the intellectual ability to acquire an insight into the real motivations of the people of the country is desirable. Highly trained, knowledgeable men assigned to MAAG missions do much more than merely give advice on military matters. They can contribute to activities that will stabilize the internal affairs of the country and thus make it less susceptible to Communist subversion and propaganda. But the most important task of these cadres will be in training military leaders.

The Communists have made headway in Asia because they long ago recognized the importance of selecting and training men capable of organizing revolutionary armies.
As Lenin once expressed it, "We see innumerable examples of how the better organized, more class-conscious, and better armed minority forces its will upon the majority and vanquishes it." Because Communist warfare cannot be treated in isolated pockets, a new approach to the problem of leadership training in the threatened countries of Asia is essential. The United States Army will have vast numbers of potential indigenous leaders passing through its training establishments, and thus it can play an important role in developing men capable of coping with a wide array of Communist maneuvers. This training must not be satisfied solely with technical proficiency (how many Chinese fighting against us in Korea were trained in United States operated schools?); it must also be designed to build a mental bridge between America and Asia.

Our experience in Korea is most revealing here. We had little success in building effective Korean military units until we were able to concentrate on creating a strong corps of Korean officers and noncommissioned officers. Success in this activity can in time overcome failures in other activities for intelligent, knowledgeable indigenous leadership will support our objectives not only within their own military forces but within the whole government. For the best of these United States trained leaders will almost invariably become important governmental officials.

In short, the infinitely complex and difficult task of our MAAG missions cannot be overstressed. It is an important task that demands the best efforts of our Army leadership. The Army has the competence to perform it—providing it receives the full support of our entire Government leadership.

THE SUMMING UP

The power vacuum in Asia can be filled only by the United States Army. If it is given the task, military strategy will truly serve diplomacy. Once we demonstrate that we have a powerful and effective alternate to nuclear war, communism will be thrown on the defensive and many of the fears and tensions which now fret the free world alliance will disappear.

The problem is both a political and a military one. The absence of effective, flexible free world military forces in Asia makes Communist subversion easier. The Communist threat has military, social, and economic facets. The closest coordination will have to be effected between civilian agencies coping with the social and economic challenge of communism and the military men assigned to develop means, including indigenous forces, to close the door against "local wars."

Our Korean experience has demonstrated that Asian nations will welcome United States participation in the defense of their independence. Collective security for Asia is possible when it becomes evident that we are prepared to put appropriate military flesh on the bare bones of any political commitments we may make.

The designation of the Department of the Army as the executive agency for the Government for developing the military answer to local aggression would be a forward step. Responsibility for planning and action in the cold war must be clearly fixed. Of all the services, only the Army is capable of combating creeping aggression. Occupation duty in Japan and Germany, experience of its constabulary in Germany, anti-Communist campaigns in Greece, the war in Korea, and farflung MAAG missions have given the Army a large reservoir of experienced men who are able to develop a program against creeping expansion.

Such a military program demands a more vigorous defense effort than is currently planned. We must also face the reality of the conflict which is now being fought to our disadvantage and make military preparations that will not only stop creeping aggression but will also be an insurance policy against the holocaust of thermonuclear war. The Army's immediate duty is to furnish information which will be a basis for public understanding of the issues involved. When our citizens understand why creeping aggression must be stopped, they will make provision for an army adequate to discharge this mission.

The point of view represented in this article has some differences from that expressed in the state of the Union message: "The forthcoming military budget * * * emphasizes modern airpower in the Air Force, Navy, and Marine Corps. * * * It provides for reduction of forces in certain categories and their expansion in others, to fit them into the military realities of our time."

Closely related to the Army's ability to check creeping expansion is the proposed plan to enlarge and invigorate the Ready Reserve forces. This desirable objective is to be attained in part by means of funds made available by a big reduction in the Army's standing forces. Presumably the forces to be cut are "in excess of the Nation's immediate needs." If we are to maintain the balanced and flexible Armed Forces required to block creeping aggression, the decision to cut down active forces in order to build up the Reserves merits the closest scrutiny. Reserve program should be designed to fulfill military needs beyond those of meeting creeping aggression now and the initial tasks of a possible general war. For the first purpose the United States presently lacks adequate means in terms of ready Army divisions, and the cuts will only enlarge this critical deficiency. As for the second point, most expert military opinion agrees that more is to be gained by having an adequate Regular force ready when hostilities begin than to depend on "trained" Reserves.

A policy which does not recognize the danger of limited aggression or will force the Army hastily to improvise combat formations if called upon to fight (Korea, June 1950) is not sound policy. It does not fit into the military realities of our time. Creeping agression must be checkmated as rapidly as nuclear attack if it is to be checked at all.

Finally, this is not an argument for cutting down the Strategic Air Force. On the contrary, it is a plea for SAC plus the forces we need to stop creeping aggression. Nor is it an argument for lessening the Army's vital interests in Europe and elsewhere. It is a challenge and a plan for meeting communism wherever it threatens. It can assure victory in world war III and very possibly make world war IV unnecessary.

The Port of Baltimore—A Truly Outstanding Magazine Report by the Baltimore Sunday Sun on the Second Busiest Port in America

EXTENSION OF REMARKS

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1955

Mr. GARMATZ. Mr. Speaker, one of the finest magazine-publishing efforts I have seen in a long time was accomplished recently by one of our Baltimore daily newspapers, the Baltimore Sun, in its Sunday magazine of January 9. The entire issue of this "metrogravure" section was devoted to the great port of Baltimore, and it was, as I said, a truly outstanding job.

It described in remarkable photographs and interesting, comprehensive fact-filled special articles the history, the work and the workers of the port of Baltimore, and did so in such a way that the true scope and impressive magnitude of our great port were finally and dramatically brought home to even the most casual reader.

While all of us in Baltimore know thoroughly well that our port is, as Miss Helen Delich described it in 1 of the 5 outstanding feature articles she wrote for the Sun magazine "the heart and the lifeblood of the city of Baltimore." the facts as they are developed in this excellent special report give a rounded picture of Baltimore's port which impressed every one familiar with the story. And for those who are not already aware of Baltimore's position as second most active port in the Nation and of the great advantages it provides for shippers, the Sun magazine tells a startling and convincing story.

Because of these attributes, many of the articles in the Sun magazine of January 9, deserve to be placed in the Congressional Record for the attention of all of those citizens and officials of the Nation interested in maritime matters.

I only wish it were possible to incorporate in the RECORD some of the great photographs also contained in the Sun magazine, particularly the fine shots of the port and of its workers, taken by A. Aubrey Bodine and Hans Mark, the Baltimore Sun magazine's photographers. Unfortunately, that is not possible. But I do hope that those shipper and maritime executives who find themselves newly impressed by the advantages of Baltimore's port as a result of reading some of these articles in the Congres-SIONAL RECORD will arrange to see and read the magazine in which they appeared originally, for the cold type of the CONGRESSIONAL RECORD cannot begin to reflect the dramatic effect of the magazine itself.

For myself, I want to congratulate the Baltimore Sunday Sun, its editors, and advertising staff for the excellent job they combined together to accomplish in putting out this outstanding magazine, and also all of those staff members who had any part in preparing the magazine. Miss Helen Delich, who regularly reports marine news for the Sun papers, and is one of the best maritime reporters in the Nation, deserves special praise for the five articles in the magazine which carry her byline.

Every article and every photograph in the section are excellent, from the opening article by Richard K. Tucker entitled "Baltimore's Giant—Our Port Sprawls Along 40 Miles of Patapsco River Shoreline," to the historical piece by Miss Delich at the end entitled "Baltimore's Growth as Port Began in 1706," which traces the port's days from clipper ships, through steamboat service, and the ever-changing years of the past century as Baltimore's port, at the beginning of the atomic age, prepares for new improvements and the challenge of tomorrow.

The Port of Baltimore, No. 2—Colorful Article, "Baltimore's Giant," by Richard K. Tucker, in Special Baltimore Sunday Sun Magazine, Recreates the Atmosphere of a Great Port

EXTENSION OF REMARKS

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. GARMATZ. Mr. Speaker, the first article in the Baltimore Sunday Sun magazine of January 9 devoted to the Port of Baltimore captures the scene, the color, and atmosphere of the giant which is a port named Baltimore, which, as Richard K. Tucker wrote it, "sprawls along 40 miles of Patapsco tidewater shoreline, fed by all the seas of the world. He is sometimes untidy, sometimes rough, but he is rich."

Under unanimous consent of the House, I include the text of that article, as follows:

BALTIMORE'S GIANT—OUR PORT SPRAWLS
ALONG 40 MILES OF PATAPSCO RIVER SHORE-LINE

(By Richard K. Tucker)

Sometimes, in an early morning fog, the glant lies misty and half hidden. At first there is only the gray-green of the water, the flash of a light, the warning sound of a bell.

Then, beyond the thin curl of foam at the bow, beyond the stolid white seabird that perches on the close red channel marker, the giant rises slowly, and sprawls against the sky and shakes the smoky mist from his limbs.

He has visitors today, as every day; visitors from Japan and Malaya and the South China Sea; from Africa and the Mediterranean; from the storied Gulf of Persia and the ancient waterways of northern Europe.

The giant who feeds on saltwater does not rise sparkling and clean-limbed to greet them. He shows them what they need. He shows great black smokestacks, huge gray elevators, weathered buildings. He shows soot and black tar and rust and a jumbled, crowded shoreline where dirty weeds sometimes struggle for survival. He smells of chemicals and fertillzer.

But he is also fragrant with spices from the Indies and with freshly roasted coffee. If he churns smoke at one point, he pours bright golden streams of wheat at another.

With one great rusty arm he operates a mammoth junk yard, and with another builds the newest and biggest oil tankers afloat. While dirty weeds may tangle one leg, a national shrine green with well-kept grass surrounds another.

There is the harsh clank and crash of freight-car couplings as the giant comes to life; and the groan of winches and the savage roar of faster machinery.

But there is also the soft sound of a concertina, and there are the songs of the Italian, the Greek, the Frenchman; and the quiet Mohammedan rites of a Turk thousands of miles from the mosques of home.

The giant is a port named Baltimore. He sprawls along 40 miles of Patapsco tidewater shoreline, fed by all the seas of the world. He is sometimes untidy, sometimes rough, but he is rich.

He greets no movie stars arriving from Paris. Except when they need him in dire emergency, no luxury liners seek his aid. The fancy ships with the names of queens sometimes come to him only once—to die in a scrap yard.

He greets men who work. And he greets instead of perfumed ladies in mink, great cargoes of ore, oil, chemicals and lumber. He gives back coal and wheat and machinery, a tractor for a field in France, an automobile for an executive in Venezuela. He also gives weapons for the survival of freedom.

In the evening, as the men walk from the great ships into a tangle of water-front streets, the city sees the dusky Lascar, the quiet Oriental, the Frenchman in his beret, the sturdy, pink-cheeked Scandinavian, the Englishman whose ancestors may have sailed with Drake.

More often it sees the sailor from Maine or California, or the young man from Nebraska who never smelled sea water until he was 20 years old.

Where do they come from, these sailormen whose uniforms range from sweaters and berets, to navy blue, to dungarees, to gray flannel suits? Or that skipper in sturdy dark wool and gold watch chain, looking not unlike a Peoria railroad man?

Well, they are in from Mombasa, Lulea, La Guaira, Karachi, Demarara, Tarafa, Lobito, Izmir, Mena al Ahmadi and Las Piedras.

Or they may have sailed from Oran, Bangkok, Calcutta, Cebu, Liverpool, or Halifax. Or, maybe, just from Houston, Tex.

Some have drunk sake in Yokohoma, or sat in the teahouses of Osaka a few weeks ago; they have tasted the wines of Marseilles and the pastas of Italy, and heard temple bells in Malaya. Or maybe the last time ashore was Chester, Pa.

When they have had their beer, and their steaks, and danced with a girl or two, or maybe only after they have been to the YMCA, or the union hall, they will go back to the ships, and back to the sea.

But the giant port is more than sailors from faraway places with strange-sounding names. It is the husky muscle of the long-shoreman who perhaps never travels beyond Highlandtown; the sweat of the man who makes steel at Sparrows Point, and the man who builds great ships.

It is the chemist in his laboratory, the shipping executive in his uptown suite; the trucker, the railroad man, the Coast Guardsman, the customs man.

It is the tugboat man on the sturdy little boat with a name like Elmer or Justine, and the man who operates a piledriver with the unlikely name of Mary. It is the pilot waving farewell as he drops off a ship into a small boat after his trip up from the Capes, and the fireboat man pouring streams of water from big brass nozzles on red boats called Torrent and Cataract.

Sometimes it is grim-faced men in police boats grappling for a body beneath the gray surface of tides that suck and whirl around old bulkheads.

To some, it is the boatman from Virginia or the Eastern Shore, tied up along Pratt Street, with oysters in December and water-melons in July. Or, nearby, the trim ships that are whiter than gulls, unloading bananas from Central America.

The giant that feeds on sait water, and on coal and iron ore and oil, has something for everyone. Although he would cost more than \$400 million to recreate tomorrow, he keeps growing. His work is never done.

He is always busy—but sometimes in the dusk of a summer's day the giant relaxes and watches the gay lights of an excursion boat headed for the bay. Sometimes at noon he pauses to chuckle at the joke of a dockhand, and sometimes of an evening he dreams a little to the sound of a Spanish guitar.

And, always, he carries bright flags in his hands and wears white scabirds on his shoulders.

The Port of Baltimore, No. 3—Baltimore
Sunday Sun Magazine Article "The
Port is the Lifeblood of the City," by
Miss Helen Delich, Tells What Baltimore's Port Means to Baltimore, to
Maryland, and the Nation.

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. GARMATZ. Mr. Speaker, the first of five outstanding articles under the byline of Miss Helen Delich in the Baltimore Sunday Sun magazine of January 9 devoted to the port of Baltimore tell how the port "accounts for the biggest wedge of Baltimore's economic pie."

The port is responsible for the employment of 90,000 persons in the Baltimore metropolitan area and, indirectly, for the employment of an estimated 400,000 throughout the State.

She reports.

About 40,000 of these people earn their daily bread at jobs connected with the movement of ships and cargoes—longshoremen, shipyard workers, tugboat operators, lighterage men, chandlers, agents, and surveyers. The other thousands work in chemical plants which are here because the port supplies their raw materials; for the railroads, whose 500 acres of Baltimore yards serve the port; in steel mills, served by the ore plers; in tire plants, such as one in Cumberland, which depends upon Baltimore to supply its East Indian rubber. * *

Indirectly dependent on the port are, for example, the canneries of the State; they use tin that comes to Baltimore factories from Bolivia. Soft-drink producers depend upon Puerto Rican sugar for their pop—and upon Portuguese cork to line the bottle caps.

The full text of this article is as follows:

THE PORT IS THE LIFEBLOOD OF THE CITY—
IT GIVES JOBS TO 90,000 HERE, INDIRECTLY TO
400.000 OVER THE STATE

(By Helen Delich)

The port of Baltimore is the heart and the lifeblood of the city of Baltimore.

The second busiest port in America, it is the thing that has made Baltimore the Nation's sixth largest city. To it, from world ports, come ships laden with the thousand raw materials that feed mills, furnaces, and factories. From it the ships sail away with American goods, American grain and coal, for the markets of the world.

The business of the port accounts for the biggest wedge of Baltimore's economic pie. Almost 70 cents of every dollar spent in Baltimore can be traced back to port activityand so can 60 cents of every dollar spent in the State of Maryland. The industries dependent upon the port spend a little more than 25 percent of the State's buying income every year. That is about \$325 mil-

Those figures do not include the ocean freight revenue to steamship lines, which, in turn, is distributed here, or the rail and truck freight income, or the wages of ships' crews, or the amount gained through the

manufacture of the items.

What makes the port big business? It's copra from the Philippines, raw sugar from Cuba. It's iron ore from Liberia, chrome from Turkey, potash from Spain, perch fillets from Germany. It's a mountain of manufactured items ranging from Japanese binoculars to Calcutta cloth to English sports cars. It's the shipping out of the wealth of America's farms and forests and minesand of Baltimore's factories, too.

Tied up in it though they are, an amazing number of Baltimoreans are unaware of the magnitude and the importance of the port. They do not realize, for example, that the is the city's biggest single industry. They think of it, rather, as a few banana boats tied up along Pratt Street, or an occasional rusting freighter glimpsed beneath

the Bay Bridge.

A few boats? Some 400 ships move up the Patapsco every month to unload car-goes along the Baltimore waterfront—a waterfront which is 40 miles long and contains 270 berths, capable of handling everything from a Chesapeake bugeye to a 63,000ton ore carrier.

It includes such facilities as four giant ore discharging piers, which supply steel mills in Youngstown and Chicago as well as in Baltimore; grain elevators which can hold 12 million bushels of midwestern and Canadian grain until ships come to carry it to such places as Yugoslavia and Germany and India; three intricate automatic coal piers that load coal for the free world and the vast industries that the port built in Baltimore.

These industries include the Nation's largest copper refinery, its largest alcohol plant, its largest tidewater steel mill, its largest straw hat manufacturer-and a dozen other operations that demand superlatives to describe their size and scope.

But one of the adjectives that port ex-perts like to use is "diversification," and indeed the industries supplied by the port are nothing if not diversified. Television set manufacturers are on the list; so are soap factories, umbrella makers, broom plants, tin decorating establishments, spice packagers, oil refineries.

In terms of people, that adds up. The port is responsible for the employment of 90,000 persons in the Baltimore metropolitan area and, indirectly, for the employment of an estimated 400,000 throughout the State.

About 40,000 of these people earn their daily bread at jobs connected with the movement of ships and cargoes-longshoremen, shipyard workers, tugboat operators, lighterage men, chandlers, agents and surveyors. The other thousands work in chemical plants which are here because the port supplies their raw materials for the railroads, whose 500 acres of Baltimore yards serve the port; in steel mills, served by the ore piers; in tire plants, such as one in Cumberland, which depends upon Baltimore to supply its East Indian rubber.

And that Cumberland plant, significantly, exports finished tires through the port, typifying the two-way aspect of the traffic. pump manufacturer in Salisbury exports pumps, too, and a leading paper straw producer in Prince Georges County ships all over the Caribbean through Baltimore. Countless more examples could be drawn from about the State.

For instance, paints, manufactured spices, portable electric tools, military equipment, automobiles, sulfuric acid, glass steel switch boxes and covers, oak lumber, scrap brass and scrap iron, electrical insulators-all these things are exported.

Indirectly dependent on the port are, for example, the canneries of the State; they use tin that comes to Baltimore can factories from Bolivia. Soft dring producers depend upon Puerto Rican sugar for their popand upon Portuguese cork to line the bottle caps, which, to add another link to the chain, are made in a Baltimore factory.

So the port of Baltimore, a reality because of one of the world's greatest natural harbors, is more than a few graceful ships glimpsed during a Sunday drive. It is a web of railroads, fleets of trucks, a forest of smokestacks, a growing city with 1 million

Without the port, Baltimore probably would be about the size of Frostburg, Md.

The Port of Baltimore, No. 4-Labor Peace, Rail Facilities, Frequent Sailings Win Favor for the Port, According to Reports From New York, Chicago, and Pittsburgh Field Offices

> EXTENSION OF REMARKS OF

HON, EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. GARMATZ. Mr. Speaker, under unanimous consent I include in the REC-ORD another of the outstanding articles contained in the special Baltimore Sunday Sun magazine of January 9, devoted to the port of Baltimore. This article. entitled "Seeing Ourselves As Others See Us," contains a factual appraisal by officials of the port of Baltimore's field offices in Pittsburgh, New York, and Chicago on the factors which impress shippers in the Midwest with the port of Baltimore's tremendous advantages over other ports.

The field office officials were instructed to "please omit the booster stuff" and provide the facts as seen by "outside interests who have no local ax to grind or no local sentimentality." The result-and this is true of every article in the Sunday Sun magazine on the portis an impressive story of Baltimore's maritime position.

The full text of the article is as fol-

SEFING OURSELVES AS OTHERS SEE US-LABOR PEACE, RAIL FACILITIES, FREQUENT SAILINGS WIN FAVOR FOR THE PORT

What does the Midwest shipper think about the port of Baltimore?

To get the answer, the association of commerce asked its three port of Baltimore field offices, located in New York, Chicago, and Pittsburgh, to sound out interior shippers, on an entirely objective basis.

"Please omit the booster stuff," the assoclation told its field-office managers. we want is a factual appraisal of the port from outside interests, who have no local ax to grind or no local sentimentality."

The three field offices, as well as solicitation in Washington and nearby areas, are operated as a part of the port-promotion program of the association's export and import bureau

That bureau is a direct descendant of the export and import board of trade formed here in 1919 to promote the port in the long-range planning program for Baltimore's economic development which was set up following World War I.

In the 35 years since, the port work has had only four directors—the late William M. Brittain, G. H. Pouder, Joseph L. Stanton, and the present director, Stacey Bender, Jr. The late Austin McLanshan was the first chairman of the port program, and the late Van Lear Black was the first chairman of its finance committee.

PITTSBURGH

"I tried to give it the hard-boiled approach," said Harry R. Capps of the Pittsburgh office, "and made a close check with some of the larger shippers in this teeming Pittsburgh-Cleveland area. These included new shipper accounts we have secured in the last year or two, as well as some of the older ones.

"Undoubtedly the first and foremost rea-son prominent traffic men are turning to the port of Baltimore is the wonderful labor

record that we have established.

"They tell me it would now be downright silly to trust some of the other North Atlantic ports, which seem to be always on strike, with the responsibility that is in-volved in the handling of a large export order. They know full well that a prolonged port tieup spells disaster for any company whose cargo is involved.

"The next most important reason for an obvious trend toward Baltimore by the export traffic managers is the practical one of savings in freight rates from the Pennsylvania and Ohio territories. While these savings have been in effect a long time, some of the larger shippers are just beginning to pay attention to them as competition becomes tighter.

'I am told that even though the freightrate saving does not in many cases reflect a greater profit for the shipper, it does tend to make a satisfied customer when the freight-

rate saving is turned back to the consignee. "Another thing I want to stress is the shippers' feeling that the honest, friendly, cooperative services rendered by the Baltimore forwarders are unparalleled. This has proved to be a factor in many cases. There are no hidden charges and every case is open and aboveboard.

"The ability to load directly from opentop cars to the vessel at Baltimore's piers, with the absolute minimum of damage, another important point out here. To this I might add that our shippers have noticed the sharp absence of pilferage in Baltimore as compared to some competing ports.

While it may sound like an overstatement. I have been told by some shippers recently that the only reason the port of Baltimore was not used in all cases was due to circumstances beyond the shipper's control.

"All this, of course, does not mean that we can take anything for granted. We have our work cut out in this vital territory, which is a natural for the port of Baltimore. The squeeze of competition is growing all the time. However, we were in on the ground floor in Pittsburgh and that has counted for

NEW YORK

"Up here on the opposition's grounds," reported Charles C. Rock from the New York office, "and in a place where so much ship-per control is located, it has been a tough job to combat the New York fixation.

have had to sell the Baltimore port efficiency and economy idea hard, and to try to get it into the minds of management's new

cost consciousness.

"The idea that labor is on the port of Baltimore team has been the biggest factor here in gaining confidence for our port's handling of New York-controlled cargoes. There has been plenty of skepticism to overcome in this field, too, with the port labor troubles here still fresh in everybody's mind.

"Many New York traffic managers now tell me that the port of Baltimore is their choice because it offers savings that cannot be found at any other port on the eastern seaboard.

"One traffic manager stated a few days ago that the considerable savings experienced by his company since diverting cargo to Baltimore are so compelling that they cannot do otherwise than continue.

"He gave me the following rundown of Baltimore's port advantages, as he sees them: "1. Direct loading of cargo from railroad

cars to ships' holds.

"2. Excellent geographical location of the port, with freight differentials giving savings of 60 cents per ton or more.

"3. Absence of cartage charges within the

port, and heavy lift charges.

"4. Free dockage for ships calling at Baltimore, affording shippers assurance of frequent and dependable steamship service.

"5. Efficiency in cargo handling, which eliminates unreasonable handling costs and

possibility of damage.

"6. Availability of three trunkline railroads and a terminal railroad, affording expeditious and dependable freight service to and from the interior.

"I guess the majority opinion in the New York area, in respect to use of the port of Baltimore, can be summed up in our stable labor force and the above-listed advantages. Together they spell 'economy.' These two factors form the most attractive asset which our port has to advertise."

CHICAGO

"Increased steamship sailings from Baltlmore, both by the long-established lines and those which recently have entered the port, represent the strongest appeal to shippers in this area," said A. LeRoy Johnson of the Chicago office.

"Don't let's forget that the impressive increase in the production of semi-finished and manufactured products within the greater Baltimore region, for which worldwide markets exist, has played a large part in bringing these increased sailings to the port, and making it profitable for ships to call at Baltimore to handle shipments of these home territory industries.

"The resulting increased sailings and services have importantly heightened the interest in Baltimore of central western shippers, to whom sailing frequency is a vital consideration.

"I am trying to say that the industrial expansion in the port of Baltimore and its surrounding region in recent years has been a major key factor in augmenting the export and import tonnages being handled through our port for the account of international traders in the Central West territory.

"I checked back on our sailing schedules for 1946, when this office was established, and compared them with current 1954 schedules. The contrast was amazing. This, after all, is the best evidence of the reaction of shippers and receivers of foreign cargo to Baltimore's overall port promotion. Port steamship service is the magic word out here.

I should like to mention the pool-car operations now offered between the Midwest and the port of Baltimore, some of which use our port exclusively, as well as the growing list of freight forwarders. Somebody has to create the offerings of cargo and the railroads and forwarders are key factors in

that job. The old word-of-mouth method has contributed immensely to the Baltimore port job in this territory.

While Baltimore did not actually ploneer in the establishment of field offices for port promotion, only a very few were in existence when Baltimore's were opened. Subsequently, there has been a great rush in this direction. Chicago offices now include New Orleans, New York, Mobile, Charleston, Portland (Oreg.), San Francisco, Philadelphia, and Hampton Roads.

In addition to day-to-day solicitation of cargo, both general and bulk, the offices function as information centers on Baltimore. The association credits them with producing 500,000 tons of new port cargo in 1953 and predicts as much or more in 1954 when the figures are in.

However, the association does not like to make too many claims in this respect. The work of the offices is naturally confidential, for competitive reasons, and it is therefore difficult to give a satisfactory picture of

In any case, the field offices keep the port up to concert pitch.

The Port of Baltimore, No. 5—Baltimore
Offers Midwest Shippers Savings Running as High as 8 Cents per 100 Pounds

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. GARMATZ. Mr. Speaker, the background of Baltimore's advantages as a port also explains why some other port cities are carring on a relentless drive to break the freight differential which favors Baltimore.

The following article Lower Freight Rates a Port Advantage, by Helen Delich, traces the development of Baltimore's special shipping advantages as "the most western of the eastern seaports, and the most southern of the northern ports, and the most northern of the southern outlets to the Atlantic Ocean," and is another of the excellent reports on Baltimor'e port contained in the Baltimore Sunday Sun magazine of January 9:

LOWER FREIGHT RATES A PORT ADVANTAGE— BALTIMORE OPFERS MIDWEST SHIPPERS SAV-INGS RUNNING AS HIGH AS 8 CENTS PER 100 POUNDS

(By Helen Delich)

The port of Baltimore is often described as the most western of the eastern seaports, the most southern of the northern ports, and the most northern of the southern outlets to the Atlantic Ocean.

At other times it is referred to as "the port for Pittsburgh," and "the port of Akron," and the port of other industrial centers in the Midwest, because it is the closest port to them and handles the majority of their ore imports and their heavy steel and machinery exports.

Because of its location in relation to the Midwest, this port has been able to offer cheaper freight rates on all commodities that are both exported and imported. Some of the rates are from 1 to 8 cents per 100 pounds cheaper on general-cargo items than Philadelphia or New York can quote. And on bulk cargoes, the freight rates are 20 to 60 cents a ton cheaper through Baltimore.

In the highly competitive picture today, every cent saved is important to a traffic manager, so the port of Baltimore means more to him than ever.

For example, this port, as compared to Philadelphia, represents a saving of at least \$2,000 in freight rates alone on 10,000 tons of manganese ore moving to Pittsburgh, or \$3,000 if it is going to Marietta, Ohio.

Fifty carloads of tinplate can be exported from Steubenville, Ohio, with a \$500 saving on freight rates if handled through Baltimore instead of Philadelphia, and a \$2,000 saving over New York.

This does not take into consideration the money saved through more efficient long-shore operations and faster turnaround of white

It is no wonder, therefore, that the rival ports want to take this important asset away from Baltimore and are fighting harder now than at any time since 1877, when the present lower freight rates first went into effect.

The most recent step to break the differential was inaugurated by Philadelphia and the Pennsylvania Rallroad about 3 years ago on import iron ore moving to 17 points west of Pittsburgh. Philadelphia's victory inspired Boston and New York to seek the same rates.

The case now is in the hands of the Interstate Commerce Commission, with Baltimore not only defending itself against New York and Boston, but also trying to have the ICC remove the parity from Philadelphia and recreate the differential between this port and that one.

The principal fear in Baltimore waterfront circles is that once a break is made in the freight-rate differential, more will follow until the entire differential collapses.

Actually the equalization of the import iron ore rate with Philadelphia has already made a difference in the movement of that commodity through this port for considerable tonnage bound for the Midwest has passed through Philadelphia since parity became effective.

The only other loss this port has suffered on its differential concerns ex-lake grain (grain moved from the Midwest across the Great Lakes by boat and then shipped to the Atlantic Ocean by railroad for export).

For many years Baltimore shared the lowest rate on this particular grain only with Philadelphia, but finally Albany, New York, Boston, and Portland succeeded in having the difference of one-half cent per 100 bushels removed. Although the ex-lake grain rate is not considered too important to the port tonnagewise, the principle of a dent in the differential is of the utmost importance.

For this reason, many local businesses and industries have united to help fight the import iron ore case before the ICC.

As G. H. Pouder, executive vice president of the Baltimore Association of Commerce, says:

"No more vital issue confronts the port of Baltimore than the preservation of its differential freight-rate structure. Based on our primary port asset of location, it is a basic advantage which through the years has been of immense importance in building and sustaining the business of the harbor.

"Rival ports have launched attack after attack on this rate pattern in the last half century, but the Interstate Commerce Commission has always reaffirmed its validity and the attacks falled. Our competitors consider this a very julcy morsel.

"They are now gathering their forces for another major effort, one phase of which is the current ore case, and Baltimore is fighting back with all of its resources. Our economic future will be profoundly influenced by the results.

"The preservation of our port rate advantages should enlist the interest of every citizen and the support of all fields of business as well as of the city and State. It

calls for our best skills and most concen-

Maintenance of the freight rate differential on foreign-trade cargo is considered of particular importance now that the St. Lawrence Seaway is to become a reality in 6 or more years. At that time, 27-foot-draft oceangoing ships will be able to sail into the Midwest from which Baltimore now draws quantities of its commerce.

Ships going all the way into the Midwestern ports will take several weeks longer than if discharging in Baltimore, but this factor alone is not expected to particularly deter shippers of bulk items like grain and

Therefore, local port interests are concentrating on general-cargo movements, particularly on exports because their producers can be contacted so easily and emphasis placed on the money-saving use of the port

The seaway may help Baltimore in another way-by making shippers more conscious of cheaper costs once they use a seaway port; they may be shocked at the difference between New York and the budding Midwest "ocean" ports. Therefore, they will search for the cheapest North Atlantic port during the winter months when the seaway will be frozen over. Naturally, Baltimore will rank high in consideration because its overall costs already are cheaper than New York's.

Actually, the seaway's effects are so uncertain that no experts will hazard a prediction. Some persons believe that the increased foreign trade of the Nation on the whole will provide enough business for all ports, and so none will feel any detrimental

effects of the inland waterway.

The construction of the seaway doubly emphasizes the importance of maintaining the freight differential, which can be traced back to 1869, when the railroads granted a 10-cent advantage to Baltimore due to its proximity to the West. The next year this was reduced to 5 cents per 100 pounds of grain.

In 1876 the railroads decided to adopt a tariff based upon the relative distance of the Atlantic ports from western points, rather than base the rates upon those of New York The 13 percent advantage to Baltimore and 10 percent to Philadelphia from Chicago lasted only 6 weeks; then a rate war was begun by the New York railroads.

Prospects of bankruptcy within a few months resulted in the differential rate agreement of April 5, 1877, between the trunkline railroads themselves. On eastbound freight to Baltimore, there was a differential of 3 cents on all classes, and on westbound freight a differential of 8 cents on the first 2 classes and 3 cents on the

others.

Along with the struggle to maintain the hold on midwestern business, local port interests are watching the expansion of southern ports as the industrial boom in the South broadens, calling for more waterfront facilities in the Carolinas, Georgia, and Florida, and along the gulf coast. Because southern rail rates are cheaper, some ports there already have the same freight rates to the Midwest as Baltimore on certain commodi-

The leading local interests are also alert to the widespread promotion programs which New York, Hampton Roads, and Philadelphia are engaged in.

These combined pressures upon the port, Maryland's most important asset, have resulted in the city and State supplying funds for an up-to-date study of port needs.

This survey is expected to call for the establishment of a Port Authority of Maryland, with the legislation being introduced in the current session of the general assembly.

In the meantime, the local interests are rallying to obtain deeper channels into the port to accommodate the mammoth ore carriers and tankers being constructed around the world, and fighting to widen and deepen the Chesapeake and Delaware Canal. Congress has authorized the latter project, but has not yet provided funds.

When these channel changes are completed Baltimore will have two unbeatable connections to the Atlantic Ocean-an asset no other North American port can claim.

The Port of Baltimore, No. 6-Helen Delich Article in Baltimore Sunday Sun Magazine Tells About Baltimore's Longshoremen "Noted for Fast, Efficient Work"

EXTENSION OF REMARKS

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1955

Mr. GARMATZ. Mr. Speaker, longshoring is one of Baltimore's biggest industries. It is also a hazardous occupation. In the Baltimore Sunday Sun Magazine of January 9, Helen Delich reports on the methods used by Baltimore's stevedores-that is, waterfront employers-and longshoremen to give Baltimore's port such an outstanding international reputation for efficiency of loading and unloading operations.

This article represents the findings of one of the outstanding maritime correspondents in the country into a calm and peaceful field of management-labor relations in Baltimore which, in some areas of the country, is extremely controversial, explosive, and unstable. The text of the article is as follows:

NOTED FOR FAST, EFFICIENT WORK-BALTIMORE SYSTEM OF OPERATING IS TERMED IDEAL FOR ALL PORTS

(By Helen Delich)

The port of Baltimore's international reputation for no corruption, no wildcat strikes, and no constant work stoppages, but for efficient, fast cargo handling is credited to its

longshoremen and stevedores.

The 3,400 longshoremen and 20 stevedores have done their job here so well that favorable word is broadcast throughout the world by steamship executives and such groups as the Senate Interstate and Foreign Commerce Subcommittee investigating waterfront rackets, the New York Anticrime Commission the Waterfront Commission of New York.

In fact, these groups, after considerable study of the subject, look upon the Baltimore system as the ideal one for all ports.

The activities of the Baltimore longshoremen caused the Senate subcommittee to say it "was favorably impressed with the Baltimore system and its apparent benefits. Its chief advantage seems to be that it gives the stevedore-employer-a direct voice in the selection of his employee, while at the same time providing a system where integrity and efficiency among the men are encouraged, recognized, and rewarded.

"Conscientious members of the labor force appear to have substantial job security, and the system has eliminated the goons and racketeers, as well as the incompetent loafers, who are so much in evidence elsewhere."

Testimony presented to the Senators described the Baltimore longshoreman as hard-

working, a family man, a homeowner, and one proud to bring home a pay envelope every week. His family and home traits were held to be among the principal reasons he towers far above the New York longshoreman and is not interested in conniving and racketeering.

Most persons erroneously use the words stevedore and longshoreman interchangeably. The stevedore is the employer, the owner of the company. The longshoreman is

the workingman.

The longshoreman's occupation is listed by insurance companies as the most hazardous in the Nation, but still many sons follow in their father's footsteps. The men range in age from 17 to 75. Some of the older ones decline to stop working even though a pension system has been worked out between the International Longshoremen's Association and the Steamship Trade Association.

In Baltimore, three-fourths of the longshoremen are Negroes; the rest are principally of Polish and Irish extraction. All

work under a system of gangs.

Sixteen men form the basic gang. Headed by a gang carrier, the others are a deckman, 2 winchmen, 8 hold men, and 4 wharfingers. The same men compose the same gang year in and year out.

The gang carrier is the leader of the group; he has been given that position because the 15 men under him signed a paper petitioning that he be. Their request has to be approved

at a general union meeting.

The deckman signals the winchmen, who operate the mechanical winches that lift and lower cargo. The safety of the men in the hold and on the dock depends on the deckman's accurate signaling; a wrong move by him could plant tons of cargo right on top of a man. The hold men hold and discharge the pallets inside the vessel's cargo holds, and the wharfingers perform the same task on the pier.

On certain cargoes, designated in the contract, a gang must get extra men. Some of the extras belong to no gang at all, while some are members of gangs not working on

that particular day.

The longshoreman's work is sporadic. He may go days without a job because

shipping is slow, and then he may work hours a day for several days in a row. Every morning he goes to the union hall

with the rest of his gang, hoping that his gang carrier's name will be called out, for that means at least 4 hours' work that day. However, he is seldom certain when he leaves home whether it will be.

Often, under the present method of operation, his gang is placed "on the hill" told to stand by--the evening before by a stevedore, but that doesn't guarantee him work the next morning-the ship may fail

to arrive or bad weather may prevent work. Even though it is "on the hill," the gang has to go to the union hall the next morning for confirmation of the order for that Sometimes it loses the opportunity of working for another stevedore by standing by for one whose ship didn't show up.

Perhaps the standby gang will only begin working at 1 p. m. that day for the original stevedore, which means it will have around the union hall 5 hours until the ship was ready.

In 1954, out of 3,200 men who had more than 700 hours of work, 1,800 put in more than 1,200 hours or averaged 30 hours or more a week.

The hiring of longshoremen in Baltimore by the gang system dates back to 1913, when the ILA was first formed. The Polish longshoremen who formed the majority of the water-front labor at that time inaugurated this system by selecting certain men they wanted to lead them.

Most of the time a gang works for the same company, which has first choice on that gang. However, when that stevedore doesn't have any work the gang works elsewhere, or it may split up and work as extra men with other gangs.

But as soon as the original steamship line has work again, it uses its priority and takes its gangs back. The company port captain calls up the union hall, designates the gang by giving the name of the carrier, the number of tractor drivers and usually their names, and the number of extra men needed.

The union delegates pass on the orders over loudspeakers in the hall by calling, "Phillip's gang, pier 8, Port Covington, United States Lines"; "Eady's gang, pier 6, Locust Point, Ramsay, Scarlett with four extra men; tractor drivers Sam, Jones, and Petey"; "Bender, pier 5, Port Covington, Robert C. Herd"; "Hurd, with eight extra men, Sparrows Point High Pier, for Rukert Terminals."

Gang Carrier Steve Phillip has been longshoring for about 30 years, Howard Eady for 28 years, and Harm Hurd for 50 years, specializing in steel. William Bender, after 50 years, is breaking his son in as a deckman in his gang. Then there are "Big Jeep," "Little Jeep," S. O. Thomas and Gus Price. Altogether there are 137 gangs in the port-32 belonging to local 829, the white local, and 105 to local 858, the Negro local.

Not all longshoremen are engaged in the actual loading and discharging of cargo on ships, and not all belong to gangs.

These exceptions include the foremen, who help supervise the gangs for the companies; the checks and tally men, who count the goods going on and off the ships; the stowage planners, who lay out the cargo plans; the gearmen, who take care of all the equipment in the shantles; the carpenters, who build bins in grain ships and short heavy pieces of machinery in position in the holds; and the line handlers, who help dock and undock ships.

Then there are the specialized gangs engaged only in the trimming of grain and coal in ships' holds, and those used in clean-

holds and ships.

Each longshoreman in Baltimore is issued number by which he works and which is engraved on a brass check, which must be shown whenever he goes to work and gets paid. This prevents a man from assuming 2 or 3 names and working under them for several companies—as the longshoremen in New York have been doing. Also, he cannot draw unemployment compensation under one name while working under a different one.

Hurd and Bender can both remember when a longshoreman's wage was about 25 cents

Today the wage is \$2.35 an hour, with pension and welfare benefits.

The wages and the number of hours for which a man is paid are the same all along the North Atlantic coast, so Baltimore is no worse or better off on these issues.

As for the excellence of their work, the

local longshoremen are said to be able to handle general cargo nearly three times as fast as others, even though bulk cargo is

supposed to be their real field.

One stevedore executive recently remarked that in New York the longshoremen move only 14 tons of cargo an hour, compared to 40 tons an hour of the same type cargo in Baltimore.

The excellence of the work continuity in Baltimore speaks for itself from the records. In 1953, New York had 152 wildcat strikestypical of that port. The 1954 record was

not far behind.

Philadelphia has averaged three port tieups annually in the last several years.

An unwritten agreement between union and management here helps prevent pilferage on a major scale. The union does not condone it any more than does the steamship agent or owner or railroad at whose terminal the ships dock and the cargo is worked. In fact, in several instances locally, the union leaders have permitted stevedores

to refuse to work a gang because of stealing. Usually the other men in the gang then force the return of the goods.

But in New York pilferage takes place on a grand scale.

Both management and labor also are credited for the healthy local situation along these salient points:

1. The local longshore leaders—August Idzik, William Haile, Stephen Mach, John Barry, Mickey Hughes, Tom Wilkerson, Andy Lutz, and Edward Jones-have refused to follow the racketeering pattern of New York.

2. The longshoremen have perpetuated the long-established stability by refusing to strike.

3. A longshoreman can work only by turning in a brass check number designated by the Steamship Trade, and almost all payments are by check.

4. Truck drivers and their helpers are permitted to do their own loading and unloading, and call for assistance only when needed. This caused the Senate committee to say: "Baltimare is free of the vicious extortions of the public loaders."

5. The use of union halls for hiring men here eliminates the dock payoffs that existed in New York previously, and the expensive (paid for indirectly by the shipper) Waterfront Commission hiring halls, the present rule-of-the-day in that racket-ridden port.

A close alliance has always existed between the union and the steamship trade to which most of the employers belong, as well as the few other companies which negotiate individual contracts with the ILA.

The Steamship Trade Association of Baltimore is composed of steamship agents, maintenance concerns, stevedoring companies, watchmen and ship ceilers. That organization acts as the management and makes all the contracts with labor for them. Ten other companies negotiate privately with the union, following the pattern set by the STA.

It is a combination of all these circumstances, with the longshoremen serving as the hub, that has given Baltimore its place as the second busiest port in the country, along with labor stability and efficiency.

Actually, longshoring-the lifeblood of the port—is one of Baltimore's biggest industries. As many men are engaged directly in it as are employed by the Baltimore Transit Co., or are engaged in shipbuilding, repairing and scrapping.

The Port of Baltimore, No. 7-Baltimore Sunday Sun Magazine Picture Story Tells of Port's Preeminence in Building, Repairing, Scrapping Ships

EXTENSION OF REMARKS

HON, EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. GARMATZ. Mr. Speaker, in another of the excellent illustrated stories of Baltimore's great port in the Baltimore Sunday Sun magazine of January 9, the article We Build Ships, Repair Them, Scrap Them, by Helen Delich, reports on Baltimore's preeminence in these three fields. From the Revolutionary War until the present day, Baltimore's shipyards have been vital to the Nation's defense in turning out the vessels which have been the backbone of our merchant marine, as well as many naval combat ships.

The Nation's first steam tanker, the world's first submarine, 49 ships used in World War I, and the largest number from any one port-609-were built for

World War II, at Baltimore's facilities.

Miss Delich tells this story, and also the story of the great ships scrapped at Baltimore, in the article which follows: WE BUILD SHIPS, REPAIR THEM, SCRAP THEM-

BALTIMORE TODAY IS A WORLD CENTER OF ALL THREE OF THESE ACTIVITIES

(By Helen Delich)

Maryland has been a shipbuilding center ever since the colonists found abundant stands of virgin timber to use in building wooden vessels and copper ore for sheathing the bottoms. Oxford and Grays Inn Creek were among the Chesapeake Bay towns that vied with Fells Point to produce the best

As the industry gradually concentrated in the Baltimore area, repair yards sprang up, and later dismantling facilities, so that today Baltimore is a world center of all three of these activities.

From their earliest beginnings, Baltimore shipbuilding and repair yards have achieved countless firsts to establish all kinds of worldwide records—for total tonnage produced, for new types of ships, for largest ships and for fastest ships.

Baltimore led the Nation in construction from the mid-18th century through the Civil War, and as recently as 1953 the Sparrows Point yard led the world in the production of new ships, delivering 10 with a total dead-

weight tonnage of 216,138.

Shipbuilding in Maryland was begun on Kent Island, in 1634, by Capt. William Claiborne, who needed pinnaces and shallops for his bay trading activities. In 1662 it was begun at Baltimore by Abraham Clark, who settled in the area of Fells Point. But it was not until nearly 80 years later, when William Fell became interested in shipping. that there was planted the real seed of timore-World Shipbuilding Center."

Fells Point was ideal for producing log canoes, brigs, brigantines, and barkentines, for yellow pine and oak could easily be brought from the Carolinas and Georgia by water and Maryland itself had white oak, locust, and red cedar. The State's numerous iron works supplied metal for guns and ship parts. Also Baltimore was easily accessible to the linseed-oil manufacturers and the cordage and naval stores suppliers.

The pride of workmanship has been evident throughout the entire 200 years of major shipbuilding-since 1752, when the brig Philip and James became the first square-

rigger to be built here.

"Maryland started out right and it has been on the right path ever since as far as shipbuilding is concerned," says an interna-tional maritime executive. "The people engaged in the industry in this area seem to have a natural talent and the inclination to produce a superior job.

"Only the most skilled immigrants and shipyard workers seem to come here.'

Baltimore's shipbuilding reputation first came from the rakish topsail schooner that was developed in the last quarter of the 18th century and that was a big factor in the outcome of the Revolutionary War and the War of 1812. During the Revolution 248 vessels, most of them built at Fells Point, sailed from Baltimore, and in 1812 Baltimore produced 126 speedy privateers.

In 1832 the renowned Ann McKim marked the end of the Baltimore clipper age and the advent of the clipper ships—the principal difference between the two types is that the latter were bigger; they could carry more

than 600 tons of cargo.

The California gold rush motivated Baltimore yards to produce clipper ships still more rapidly; the most famous of these were the Scaman and Scaman's Bride. Then came

the Mary Whitridge, which completed a trip

to Liverpool in 13 days 7 hours.

With the outbreak of the Civil War shipbuilding dwindled. However, ship repairboth foreign oceangoing vessels and domestic paddle-wheelers-mounted in importance. Columbia Iron Works was founded. Its \$375,000 graving dock, large enough to accommodate a ship 470 feet long, was a far cry from the screw dock erected in 1828 on Mr. Ramsay's wharf.

Three large Navy craft—the gunboat Petrel and cruisers Montgomery and Detroit-were built there, as was the Nation's

first steam tanker, the Maverick.

But the Columbia yard went into receivership in 1899. A group of prominent Bal-timoreans formed the Baltimore Shipbuilding & Drydock Co., in an effort to save the port's reputation and finish the leftover construction on the ways. When that company, in turn, was forced into receivership in 1904, century-old William Skinner firm bought it and combined the two properties.

During this period the world's first submarine, the Argonaut, was built at the foot of Federal Hill, a rival commercial shipyard at Sparrows Point was progressing, and the United States Coast Guard selected Curtis Bay as the site of its only shipbuilding yard.

While it was owned by the Maryland Steel Co., Sparrows Point's most spectacular achievement was constructing the floating drydock Dewey-500 feet long, 99 feet wide, and 30 feet deep-for the Navy in 1905. The Dewey was towed 13,000 miles to the Philippine Islands in what was described as the greatest feat ever attempted up to that time in transoceanic navigation.

Most of the ships built around Baltimore before World War I were Navy destroyers and ferry boats. By the time the United States was involved in the war, Bethlehem Steel had brought Sparrows Point. It contributed 49 ships for World War I use.

With passage of the 1936 Merchant Marine Act calling for a strong American-flag fleet. the local yards were expanding and modernizing just in time to supply 609 major -the largest number from any one port-to help win World War II. Of these. 101 were specialized types, ranging from troop transports to team combat vessels, built at Sparrows Point. The 508 others were Libertys, Victorys, and LST's, built at the Bethlehem yard at Fairfield.

This outstanding record of production was achieved by J. M. (Jack) Willis, who has launched more than 1,000 ships and is considered the Nation's foremost shipbuilder. At present he is general manager in charge of shipyards for Bethlehem in the Baltimore

district.

Sparrows Point produced the world's first supertanker in 1948, the 18,000-ton World Peace, and in 1953 established a world record for overall production. Now it is preparing to construct three 32,000-ton tankers—each of these larger than the total registered tonnage of this port a century ago.

Each of these mammoth ships will provide about 850,000 man-hours of employment for shipyard workers and 1,700,000 more in supply industries. Today when a ship is built at Sparrows Point, the entire Nation is in-

volved in its production.

It takes about 5 months from the time a keel is laid for a ship to reach the launching stage. Even before the keel-laying mold loft workers and patternmakers have laid out the templates and made life-size wooden patterns of every section of the vessel.

And at the launching only the vessel's outer steel structure and 10 percent of her engines and insides go down the ways. Tugs tow the powerless hull to the fitting-out dock where her engines, turbines, electrical wiring, furnishings, and navigational gear are installed during another 5-month period.

Both the construction and repair yards here get some foreign-flag work, but this

Nation's higher standard of living and naturally higher costs tend to route foreign owners to yards where labor is cheaper.

The port's two principal repair yards are Maryland Drydock and Bethlehem-Key Highway, whose keen rivalry has built them up to the topmost level of ability and now induces many ships to come to Baltimore in ballast just for their repairs.

Smaller local yards are General Ship Re-pair, Baltimore Marine Works, Chesapeake Marine Railway, and Booz Bros., the last named still operating under the name it started with nearly a century ago.

In 1922 Maryland Drydock replaced the 2year-old Globe Shipbuilding & Drydock Co. During the last war, this yard performed endless mammoth conversions for the Navy and Maritime Commission on all types of vessels, repaired tankers with half of their sides torpedoed out. Later, it converted five 12,000ton general-cargo carriers into Great Lakes ore ships.

Recently, Maryland became the first commercial yard to be awarded a contract for applying a special type of plastic coating (saran) to all tank surfaces of a gasoline-

carrying tanker.

Under the supervision of President George H. French, Maryland Drydock is countering the general downward trend in ship repairing by resorting to industrial production in order to keep its skilled workmen and yard shops busy. It is producing things for power, petroleum, and chemical industries.

The Key Highway yard grew out of the old Skinner yard, which followed its predecessor into receivership and was bought by Bethlehem from the Baltimore Drydock and

Shipbuilding Co.

Now Key Highway-which initiated the construction of Great Lakes ore carriers outside the Lakes-is experimenting for Maritime Administration to see whether the World War II Liberty can be transformed into a desirable fast ship.

At the present time, both major yards are dependent somewhat on the emergency repair and conversion of Government ships to help keep their facilities and drydocks-10 are available in this port-in operation and to prevent their skilled men from turning to other crafts. Because it takes at least years for a man to become a top-scale, skilled shipyard worker, the yards feel they cannot afford to lose many.

The scrapping of ships is related to the

building of them and, surprisingly, requires special knowledge. The scrapping must be done piece by piece in reverse procedure from shipbuilding. All of the interior fix-tures are removed and then gradually the vessel is cut down, deckhouse by deckhouse, and on down to the keel plates.

Boston Metals Co. and the Patapsco Scrap Corp. are Baltimore's scrapping yards. Smaller ones have folded up because of the

sharp drop in scrap steel prices.

Started in 1904 by Morris Shapiro, a young immigrant who could hardly afford to feed himself when he started to gather junk iron and sell it, Boston Metals has destroyed almost as many famous ships as the local shipyards have built or repaired.

The vessels which ultimately helped make Mr. Shapiro into a multimillionaire and racetrack owner include the Kron Prinz Wilhelm II, George Washington, and Kron Prinzessin Cecillie, the aircraft carriers Wake Island, Attu, and Reprisal, and the Pennsylvania.

In 1925 this yard won international acclaim for Baltimore by being the only one to make a bid to scrap 200 War Shipping Board vessels, at a price of \$1,370,000.

Patapsco Scrap was created by Bethlehem after World War II on the old Fairfield building site, and has demolished many destroyers and old cruisers, along with ferryboats and merchant ships, including the liner Veendam. The 3 shipyard industries, which at their peak employed about 80,000 people in this area, now are down to about 5,000. The building and repair yards particularly are arguing for an American merchant marine to help preserve their own status as well as that of the Nation.

of the Nation.

The firmly believe that American-fiag ships—built in Baltimore or any other port—are vital as the Nation's fourth arm of defense, besides being paramount to United

States industry.

And new construction naturally would make more old ships available for the scrap yards and conversion into new steel for the modern craft.

The Port of Baltimore, No. 8-The Fascination of Baltimore's Great Port to Those Who Watch Its Teeming Activities

> EXTENSION OF REMARKS OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. GARMATZ. Mr. Speaker, in putting together the excellent magazine of January 9 devoted to the port of Baltimore, the Sunday Sun included a curious camera feature devoted to interviews with various Marylanders who were asked "What do you find most interesting about the port?"

These answers, I think, go far toward demonstrating the fascinating attraction which the port of Baltimore holds for all of us in Baltimore and for our friends in neighboring communities. They speak of the romance of the place, the excitement, and the interesting atmosphere. One Baltimorean sums up the magnitude of the port's commerce with the provocative question, "Who eats all the bananas that come in?"

These thumbnail impressions of a great port and of its tremendously varied sounds, sights, smells, and activities

CURIOUS CAMERA

Question: "What do you find most interesting about the port?"

Mr. Norman Ruckert, Jr., Catonsville, Md.: "I've been around the port for 24 years and every job is different; that's what makes it interesting. That's also what keeps men around the water. I've done everything from crating firebrick to grinding and bagging fish scrap."

Mrs. Irene Spatafore, 7445 Edsworth Road: "The big boats are fascinating. I never realized they were so huge until I went down to Pratt Street. There is a certain romance about foreign ships, and the passing thought of traveling to foreign ports upon them."
Mr. Willis B. Hedges, Essex, Md.: "I find

the great variety of commodities that enter the port of Baltimore most interesting. I'm around the water every day and have seen chestnuts from Turkey, broom corn from Greece, and horseradish from Germany. Every ship brings some strange cargo."

Mrs. Mable Altmeyer, 7507 Lange Street: "The unloading of boats is probably the most interesting thing. There's so much activity that you think of ants swarming over a box, each carrying away his share. It also amazes me to think who eats all the bananas that come in."

Mr. Charles C. Schroeder, 1615 North Milton Avenue: "The most interesting sight is the large ships arriving so low in the water that their Plimsoll marks are on the water-That means the ships are loaded to capacity and there'll be lots of work for everyone connected with the port."

The Port of Baltimore, No. 9-Some Figures on Baltimore Exports and Imports

EXTENSION OF REMARKS

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1955

Mr. GARMATZ. Mr. Speaker, the Baltimore Sunday Sun, in pictures and text, told the exciting and impressive story of Baltimore's great port in its metrogravure magazine section of January 9. As impressive as anything in that magazine were the somewhat dry but convincing statistics on the port's commerce reported in the following article, Some Figures:

SOME FIGURES

The value of exports handled through Baltimore annually has increased 215 times since 1790, the first year for which complete statistics are available.

The 1790 exports were valued at \$2,027,-000; they included 223,062 bushels of wheat, 127,234 barrels of flour, 5,533 barrels of bread and thousands of pounds of tobacco.

The 1953 exports were worth \$430 million; these included 70,773,693 bushels of grain and 1,486,127 tons of coal. The remainder were fertilizer and chemicals, steel and heavy machinery, and general cargo.

The total foreign tonnage of 21,420,300 shipped from this port in 1953 was valued

at \$913,400,000.

Other interesting old figures contained in various historical sources show that in 1689, when Joppa was a leading Maryland port 25,000 hogsheads of tobacco were transported to England. Tobacco was the most important commodity this State exported until 1750, when grain began entering the picture.

In 1761 Baltimore's tobacco shipments were valued at £140,000, and all the other

exports at £80,000.

In 1799, as the third commercial port of the country, Baltimore saw its exports rise to a value of \$16,610,000. Imports had not yet become a prime factor in the picture.

Through the years, the value of cargo increased along with tonnage. In 1853 the total tonnage was 262,685; of this, 143,596 was ex-

ports and the remainder imports.

The 1873 tonnage jumped to 411,161 in exports and 397,167 in imports. By 1877 the value of the port's foreign commerce was \$62,025,641-a rise from \$17,381,591 since

In 1883 imports overtook exports, with 795,524 tons, compared to 662,542. within a decade the total foreign tonnage had risen nearly fourfold to 4,607,176 as Baltimore expanded industrially and its ties spread to more corners of the world.

The 1913 total foreign tonnage of 5,408,544 was valued at \$149,369,677; in 1923, 6,620,691 tons were valued at \$185,272,267; in 1933, 3,634,878 at \$71,516,060; in 1943, 4,202,742 tons at \$902,254,000.

The port's record tonnage was made in 1947, when it led the Nation with 24,611,490, most of which was coal. The value of that

huge quantity, however, was only \$737,631,-998, because of the low value attached to the bulk coal.

The value of an average ton of exports last ear was \$89, compared to \$29 for the average ton of imports. About half of the imports were ores, which have a low value.

In 1860 the value of a ton of imports had

teen \$47 and of exports \$50.

Baltimore's lead as a grain-exporting port for many years is further emphasized by the fact that in 1879, nearly 60,000,000 bushels were shipped out of here to foreign points. This figure is only 10,773,693 bushels less than the port's total in 1953.

The Port of Baltimore, No. 10-Helen Delich Tells How Baltimore's Fine Natural Harbor Gave It Ascendancy

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1955

Mr. GARMATZ. Mr. Speaker, the final article in the Baltimore Sunday Sun magazine of January 9 devoted to the port of Baltimore is another in the fine series written for this section by Helen Delich, and portrays the historical development of the port from the time when Capt. John Smith first visited the Patapsco, which he called the River Bolus.

A great port long before that day in September 1814 when our national anthem was inspired by the defense of Fort McHenry, Baltimore's growth as a port began, as this article reports, in 1706, with steamboat service beginning in 1813.

How the people of Baltimore, the railroads, the merchant leaders, and men of vision down through the years joined in building up the port of Baltimore to its present position of leadership, is told in this article, as follows:

BALTIMORE'S GROWTH AS PORT BEGAN IN 1706-OUR FINE NATURAL HARBOR GAVE US ASCENDANCY OVER ALL RIVALS IN THIS AREA (By Helen Delich)

Five ports once flourished simultaneously within the boundaries of what is now the port of Baltimore.

Humphreys Creek, Whetstone Point, Jones Town, Baltimore Town and the town of Fells Point-all within a 4-mile radius-competed with one another for trade during the early 18th century.

Then there were also the old, established ports of Annapolis on the Severn River and Joppa on the small, winding Bush River.

The trade of all these small colonial ports

was exclusively with England.

Ironically, Baltimore Town, which because of its extremely shallow harbor was engaged in less actual shipping than any of its rival ports, was destined to absorb its four closest neighbors, prosper far beyond the others and two and a half centuries later rank as a major factor in world commerce.

The history of the port of Baltimore begins with Capt. John Smith, the first white man to set foot on the shores of the Patapsco, or River Bolus, as he named it. One of his souvenirs was said to have been a sample of red iron ore, which was plentiful on the virgin shores; that ore one day was to become the area's largest import.

Midway in the 17th century, David Jones was among the few white settlers along

the Patapsco River. He built in the area later called Jones Town. And Thomas Cole obtained a warrant for 550 acres which he called Coles Harbor. Sixty-one years later part of that land was designated Baltimore Town.

However, most of the activity of that period was taking place elsewhere in Maryland: the Ark and Dove had landed the first real Maryland settlers at St. Marys.

Joppa Town and Humphreys Creek-the latter near the present Sparrows Point-were made ports of entry in 1683. But the broader and deeper Patapsco soon proved to be a better natural harbor than the silting-in Bush River, and trade moved down to it.

Whetstone Point, now known as Locust Point, was officially recognized as a second port in 1706. Because the first two attempts-one in Dorchester County and the other near Joppa-to honor Lord Baltimore by naming a town after him had failed, his name was selected in 1729 when the General Assembly provided \$600 to buy 60 acres on the north side of the Patapsco in Baltimore County and named it Baltimore Town.

In the beginning, Baltimore Town served chiefly as an industrial site; the shipping centers were Jones Town, Gwynns Falls and the newly founded Fells Point, For in 1730 William Fell, a ship carpenter, arrived from England, built a home at the foot of Lancaster Street and opened a store. long, however, he began building bay craft.

With every farm put to producing tobacco, the earliest exports from the area consisted

principally of this product.

Ships with imported cargoes provided the earliest stores by anchoring out in the harbor and advertising their wares along the shores by word of mouth.

Baltimore Town mushroomed to 113 acres by merging with Jones Town in 1745, the same year Irish-born Drs. John and Henry Stevenson settled in the area.

At that time, there was a shipyard on Jones Falls at the location Mercy Hospital now occupies.

While his brother Henry established the Nation's first smallpox hospital here, Dr. John Stevenson abandoned medicine and concentrated on the port's trade potentials. He foresaw the value of the Patapsco River branches, and he inaugurated grain exporting and brick importing.

He persuaded some of his Irish friends to send a ship here in 1750 for a cargo of wheat. The venture resulted in a handsome profit and a new trade had started-the first of the big bulk movements for which the port was to become famous.

Finally some Baltimoreans owned vessels and could begin trading elsewhere than in England. The West Indies and other Colonial seaboard cities received most of the early

Just before the Revolutionary War, Fells Point was absorbed by Baltimore Town. Because this port was never blockaded by the British, a considerable amount of Annapolis' trade was diverted here permanently, and Baltimoreans were able to build and produce ships to help fight the war.

Afterward-the events came within a few years of each other-John O'Donnell bought and established Canton, nine port wardens were appointed to ascertain the depth and course of the channel, the first marine-insurance company boomed, wealth Baltimoreans formed the Charitable Marine Society to provide a rest home for their hardy seamen, and in 1797 Baltimore was incorporated as a city.

Soon after the advent of the famous Baltimore clippers the United States again went to war with Great Britain. Baltimore's greatest moment in this conflict came September 14, 1814, when Francis Scott Key was inspired to write the Star-Spangled Banner by the British bombardment of Fort McHenry.

Some historians believe that the Baltimore clippers can be credited to a great extent with the defeat of the British on the seas, for over half of the American-used ships were constructed here.

While the War of 1812 was in progress the first steamboat to operate out of Baltimorethe Chesapeake-inaugurated a service to Frenchtown. That was in 1813. A few years later the Weems Line placed five side-wheelers in service.

After the war Baltimore spent time re establishing its trade routes. Then, in 1827, the railroad train Tom Thumb was invented as a defense for this port against the Erie Canal and other proposed canals leading from the West to rival eastern seaports. Baltimoreans felt that they had to have a real connection to the West or they would lose their trade of coffee, grain, and tobacco.

In 1828 a company was formed to make a screw dock-the first version of a floating drydock-for the repairing of ships' bottoms here; this was erected on Mr. Ramsay's wharf. The Canton Co. was formed by Peter Cooper to build up the eastern adjunct to Baltimore.

The lack of cargo space in the Baltimore clippers resulted in an innovation in these sleek, fast vessels, and the Ann McKim was established in the China trade. She is said to have been the last of the Baltimore clippers and the first of the clipper ships, which had cargo space as well as speed. Some Baltimore clippers were sent to South America to help those countries free themselves.

For the next three decades Baltimore, New York, and New Orleans vied for first position in the Nation for overall tonnage handled

across the piers.

In 1840 the Baltimore Steam Packet Line, more popularly known as the Old Bay Line, began operating down Chesapeake Bay; today it is the only overnight steamboat line in the Nation. In 1854 the Merchants & Miners Transportation Co. started a coastwise service that was popular until the be-ginning of World War II.

The Baltimore & Ohio Railroad was developing the Locust Point terminals by this time as an outlet for its western freight.

Channel depths and widths became extremely important when the larger steam vessels came into use. Although some dredging around the wharves had been going on for decades and a main channel 12 feet deep had been dredged from the inner basin past Fort McHenry, it was not until 1858 that deep-draft vessels could enter the harbor.

The first Federal Government channel authorization, granted in 1836, did not become a reality until 1866, when work was started on the Craighill Channel; it was enlarged to 24-foot depth and 250-foot width at a cost

of \$400,000.

The famous cigar ship of Ross and Thomas Winans was built in 1858, at a \$2 million

Next, the port became embroiled in the Civil War, with trade coming to a virtual standstill. The armor for the Monitor was forged at the Abbott Iron Works in Canton.

It was several years after the Civil War ended before Baltimore's trade approached its normal activity. However, in the meantime the Union Railroad had built tracks from Relay to the Canton waterfront, because the Northern Central was never able to complete its Canton extension.

The Baltimore & Ohio Railroad, not satisfied with operating marine terminals, purchased three wooden propeller ships for use in ocean trade. But these ships could not compete with foreign lines, and soon the B. & O. negotiated with the North German Lloyd to bring its ships into Locust Point. Other foreign lines started regular routes to Baltimore, and this once again became a big port.

In 1873, the Pennsylvania Railroad bought the controlling stock of the Northern Central, and thus began its association with Baltimore in the Canton area.

Baltimore's standing as a principal grain and flour exporting center was regained in the 1870's, when the B. & O. and the Union Grain Elevator Co. constructed grain elevators.

Sugar was lost as an import when four local refineries went bankrupt in 1879, and did not become a major factor again until 1922.

In 1887, the Maryand Steel Co. located at Sparrows Point, began the importation of iron ore from Cuba.

In the 1880's, the cruisers Montgomery and Detroit were built at the Columbia Iron Works, located between Fort McHenry and the B. & O.'s Locust Point. The first marine hospital for seamen was established in Wyman's Park, and the city replaced the port wardens with a harbor board.

By this time immigrants began pouring in through Baltimore at the rate of nearly 50,000 a year, to reach a total of 1,542,000

Ferries and small bridges connected the various sections of the harbor; the channel was deepened to 30 feet, and the first submarine, the Argonaut, was built here.

At the turn of the 20th century, the Pennsylvania Railroad built piers 6 and 7 in Canton, and the Western Maryland Railway-which had stretched westward to West Virginia and Pennsylvania—began building up Port Covington to extend its railroad across the seas.

Passenger lines connected Baltimore with many foreign lands, steamers sailed out of here for all of the Chesapeake Bay tributaries and other United States seaports.

By the time this Nation was involved in World War I, the Bethlehem Steel Co. had purchased the Sparrows Point plant, the three railroads were building modern coal piers, and the Western Maryland had set the pace for a multimillion bushel grain elevator, to be followed by the other two railroads.

The port flourished during the war, helping to supply the Armed Forces abroad and also

building large ships.

Development Act was passed The Port in 1920, with \$50 million made available. The only major user of this loan has been the Western Maryland Railway, which built the port's most modern general cargo facilities at Port Covington in 1928.

Also between the two World Wars, the Canton Railroad constructed its pier 11 and later leased it to the Pennsylvania, and the Pennsylvania built pier 1. The Maryland Drydock Co. bought out the 2-year-old Globe Shipbuilding & Drydock Co., and the Bethlehem interests absorbed several small uptown shipyards. These two together have given Baltimore the reputation of having the best ship repairing facilities in the Nation.

The Export and Import Board of Trade was established to stimulate commercial growth of the port, and Rukert Terminals Corp. became an important factor as the port's independent operation.

The port's leading export in 1934 was scrap metal to Japan. Now truck freight was beginning to change the complexion of port operation.

And then for the first 10 months of World War II this port was virtually starving because the military would not send any freight through here.

Loud and hungry wails reversed this situation, and before long the piers were jammed with cargoes of all types. This port led the Nation in shipbuilding, with 542 vessels turned out by the Bethlehem interests at Fairfield and Sparrows Point. All of the re-pair yards were busy working on torpedoed tankers and freighters. New industries sprang up.

Right after peace returned, 11 Liberty ships loaded with heavy equipment-turbogenerators, dam sluices, blast-furnace partssailed out of Baltimore for Russia.

Shipbuilding dropped to almost nothing, and soon foreign-flag ships once again began taking over most of the cargoes in and out of the port.

A survey of the port's needs was made by an outside engineering firm in 1949. As a result, the Port of Baltimore Commission was inaugurated and various facilities have been modernized.

In 1953 the Bethlehem-Sparrows Point Shipyard led the world in production, and Baltimore led in ore importation and grain exportation.

And now, at the beginning of the atomic age, the port of Baltimore is undergoing another survey, with discussion centering on improved general cargo facilities and a port authority.

A Cuban View of Abraham Lincoln

EXTENSION OF REMARKS OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include therein an excerpt from the writings of Dr. Emeterio S. Santovenia, a Cuban historian, giving his views regarding Abraham Lincoln.

Dr. Emeterio S. Santovenia was born at Pinar del Rio, Cuba, May 23, 1899. He served as Presidential secretary, 1934; senator, 1940-48; Minister of State 1943-44; since March 1952, president of the Agricultural and Industrial Development Bank of Cuba; has been for several years vice president of the Pan American Institute of Geography and History; author of innumerable books. the majority of which are on historical questions. He is the only author who has published three books in Spanish on Lincoln: Lincoln, Buenos Aires, 1948; Lincoln en Marti, Habana, 1948; Lincoln, El Precursor de la Buena Vecindad, Habana, 1951.

These facts should be of more than ordinary interest to all Americans. The publication of his books in the Spanish language will do much to spread the life. character, and public service of one of the world's great men. It will have a happy and beneficial effect in cementing the ties of friendship among the Latin American countries and the United States.

The excerpts follow:

LINCOLN IN MARTI: A CUBAN VIEW OF ABRAHAM LINCOLN

(By Emeterio S. Santovenia, with an introduction by Manual Pedro González)

INTRODUCTION

In 1953 this Hispanic world commemorated the first centennial of the birth of José Marti (January 28, 1853). The celebration culminated in an international Congress of Martian Writers held in Habana from February 20 through the 27th, which was attended by writers and scholars from the United States, from all Latin America, and from France and Spain. There is hardly a newspaper or literary magazine or an aca-demic center of higher culture throughout the Hispanic world that in one way or another did not contribute to the solemnity of that event. Even the Senate of the United States, the Department of State, and the august New York Times took notice of the occasion and paid tribute to the greatness of José Martí, frail little man of genius.

The sad paradox—for all our years of good-neighbor policy and all the millions spent in fostering cultural relations with Latin America—is that before January 28, 1953, probably no more than a small fraction of 1 percent of the population of the United States had ever heard or read the name of José Martí or knew who he was.

The almost universal ignorance prevailing in the United States about Marti is all the more inexcusable—and regrettable—because he was born less than a hundred miles from the shores of Florida and spent the last 15 years of his life in the United States. Furthermore, he contributed in various ways to the cultural development of that country and became the most sagacious foreign interpreter of North American intellectual life toward the end of the century. American cultures, both Anglo-Saxon and Hispanic, had in him a brilliant interpreter and the strongest link between them that has appeared so far. Both are profoundly indebted to him.

José Marti was born in Havana, Cuba, on January 28, 1853, of Spanish parentage. His activities in behalf of the independence of the island were manifest at an early age and at 17 he was sentenced to 6 years of hard labor in the quarries near Havana. After he had served part of the sentence, the penalty was commuted to exile in Spain.

In spite of great hardships Marti completed his academic training in Spain and received his diplomas of licenciado in philosophy and also in law. He settled in Mexico City in 1875 and remained there until the revolt of Porfirio Diaz against the liberal government forced him into exile. From Mexico he went to Guatemala, where he taught literature and philosophy, but again a despotic rule drove him from his home.

An amnesty proclaimed by the Spanish crown permitted Marti to return to his fatherland; but revolutionary activities soon brought him to the attention of the authorities, and in 1879 he was again exiled to Spain. He escaped to France and after a few days in Paris sailed for New York, where he arrived in January 1880. After a short stay in Venezuela in the same year, he returned to New York and, except for short trips to Mexico, Central America, Santo Domingo, and Jamaica, he lived there until 1895, when he left for Cuba. On May 19 of that year, he was killed in hattle

During the decade and a half that Marti lived in the United States, he worked off and on as bookkeeper, translator, teacher, editorial writer for the New York Sun, and consul of Argentina, Uruguay, and Paraguay. Until 1892 he was a regular contributor to the most important newspapers of Spanish America, especially to La Nación of Buenos Aires. His articles about life in the United States made this country better known in Latin America than it had ever been before or has been since. At the same time he was a sort of cultural ambassador at large and a spiritual symbol of the other America in New York.

The most exhausting of all his enterprises was the founding and directing of the Cuban Hevolutionary Party. Into this organization he brought the Cubans living in exile and scattered all over the Atlantic coast from Key West to Boston, and in the Caribbean countries. Over a period of years of patient waiting and preparation, he educated Cuban residents in the United States to the point where they ardently desired independence for Cuba. He kept the patriotic fires burning and instilled hope in the hearts of Cuban patriots in Cuba and abroad.

Because everything he wrote was inspired by deep sympathy and tenderness, coupled

with a boundless love of humanity, because in the apostolic crusade that was his life he proved himself to be always pure and disinterested and wise, Marti has become one of the most beloved heroes of Latin America. In the United States, on the other hand, he is practically unknown despite the fact that he interpreted and spread abroad its culture and extolled the merits and virtures of its great men and institutions.

The author of Lincoln in Marti, Emeterio S. Santovenia, is one of the most prominent historians of Cuba today. He is both a seri-ous scholar and a prolific writer. The list of his publications is impressive, containing as it does more than 80 titles, most of them His intellectual curiosity transcends the field of historical studies and the national boundaries of Cuba. In addition, he is a lawyer by profession and has been an active figure in the political life of his country. For a time he was a member of the senate and later secretary of state. He is one of the few men in Cuba today who came out of the corrupting game of politics clean and enjoying the esteem of honest people. Santovenia has long presided over the National Academy of History, a position that attests the high regard in which he is held by his colleagues.

Abraham Lincoln has been the subject of Dr. Santovenia's intellectual pursuits for many years and the theme of several of his most ambitious works. The same year in which the Spanish edition of the present volume appeared in Habana (1948), he published in Argentina a voluminous biography of the Great Emancipator. A third volume entitled "Lincoln, Precursor of the Good Neighbor Policy," was published in Habana in 1951. José Marti excepted, no other historical figure has held Dr. Santovenia's prolonged and deep interest as Lincoln has.

In the following pages the reader will find ample evidence of the author's devotion to these two heroes. There is a great deal in common between them in spite of their many differences in idiosyncrasy, genius, and achievement. Both men epitomize and, to a large extent, symbolize the very best of their respective peoples and cultures. Both are—Marti even more than Lincoln—infinitely superior to the aggregate mass of their social environments. They represent the sum total of the finest intellectual and moral qualities to be found in the Spanish as well as in the Anglo-Saxon peoples. Emerson would have called them "representative men."

This small volume is not one of Dr. Santovenia's more ambitious studies of either Lincoln or Marti, but it is the only one in which he has brought them together, interweaving their respective lives and ideologies. In it the reader will encounter a Lincoln as seen through the idealizing eyes of Marti—and those of Dr. Santovenia. The author has inevitably blended his own ideas and interpretations of Lincoln with those of Marti. In fact, the fusion is so complete at times that the reader is not always certain whether the ideas expressed are those of Dr. Santovenia or of Marti. It is clear, however, that in such cases the two are in complete agreement, and Dr. Santovenia's carefully planned use of quotation marks prevents any confusion as to Marti's exact words when they are

Writing as he did for a public familiar with the life and historical role of both Lincoln and Marti, the author in his original Spanish text doubtless assumed more knowledge of Marti than exists among the readers of this English translation. Also, in stressing the similarities of the two men, he has tended to ignore their great divergencies, but this is intrinsic in his thesis—the divergencies could be taken for granted; the similarities have never been stated, and so may rightly be stressed. It is believed, therefore, that the North American reader will find his con-

ception of Lincoln enriched by the combined views of these two distinguished Cubans. He will realize that Lincoln belongs not only to the United States but to the Spanish-American world as well, that he has been an inspiration far beyond the borders of his own country, and that the idealization here presented may well be a valuable counterbalance to the factuality of today's scholarship.

Since Marti was a devoted admirer of Lincoln, it is surprising that he never wrote an extensive study of him. Perhaps, as Dr. Santovenia suggests, he was too immersed in the spirit of Lincoln and revered him too much to write a lengthy essay on him as he did on so many American public figures of the time. Nevertheless, in the dozens of direct references and allusions to him to be found scattered all through Marti's writings, we have indisputable proof of his veneration for the Emancipator. The author's difficult task has been to present a coherent account of Lincoln based on Marti's statements and passing remarks written on different occasions during a long literary career. The integration of these fragmentary conclusions or passing references into a coherent study has been the author's purpose throughout. More than his own views on the subject, he has been interested in presenting Marti's, and he had subordinated his own ideas and his great erudition to the design-and the desire-of making known Marti's opinion of the great leader.

Professor Fogelquist has given us a careful and accurate translation of a book that is far from easy to render into English. Without betraying the original, he has endeavored to present Marti's and Dr. Santovenia's ideas and style in a correct and precise version which at no time detracts from the merits of the Spanish text.

Manuel Pedro González.

MAY 1953

AUTHOR'S PREFACE

The study of the lives of Abraham Lincoln and José Marti has been one of my habitual pursuits for many years. Through my investigations I have learned that Marti had a profound knowledge of the life and work of Lincoln. This conclusion has led me to another, equally important: Each of these eminent men, morally of the same lineage, resembled the other in intelligence, temperament, personality, fair-mindedness, and charity. What is more, Marti had yearnings, disappointments, sufferings, and readiness for useful sacrifice similar to those which have made Lincoln stand out in space and time.

It will be readily apparent why I have chosen the title which the present pages bear: "Lincoln in Marti. Marti admired the fine qualities of Lincoln's character, and it was his fondest aspiration to be like him. This goal he indeed attained. Lincoln occupied a place of eminence among all the men of universal greatness who entered into Marti's faith. And this preference had a very close relationship with the fact that Marti combined within himself qualities similar to those which Lincoln cherished and which he placed at the service of human betterment.

Marti did not produce a single extensive work on Lincoln, a notable difference from what he accomplished with respect to some of the contemporaries of the Great Emancipator. The reason may have been that Lincoln's example was already a part of the faith whereby he lived, for the life of Lincoln was rooted in that of Marti. But he mentioned him and referred to him so repeatedly and so eloquently that what he said touched on every phase of Lincoln's life. It inspired him particularly in times of stress and when he was engaged in creative activity. With a paragraph from here and a phrase from there, with what I have drawn from an essay or

gleaned from a journalistic note, throughout Marti's extensive works, I have put together what I am so bold as to consider a new historical sketch of Lincoln-one that we owe to José Marti.

In addition to gathering the many quotations from Marti's works, my task has consisted in arranging and adapting them. have used each quotation because of its application to some aspect of Lincoln's life or to events that occurred after his death.

EMETERIO S. SANTOVENIA.

Habana, 1948.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES .- The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim re-port of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44. SECTION 182b. SAME: ILLUS-TRATIONS, MAPS, DIAGRAMS .- No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.
- 2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the Record shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will mentions be permitted. These reunusual indentions be permitted. These re-strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following

5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks .- If manuscript or proofs have not been time for publication in the proceedings, the - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the

printing of the RECORD.

7. Thirty-day limit.-The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Appendix to daily Record.-When either House has granted leave to print (1) a speech not delivered in either House, (2) a news-paper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been

previously printed.

10. Official reporters.—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

11. Estimate of cost.-No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional Record which is in contravention of this paragraph.

12. Illustrations .- Pursuant to section 182b. title 44, United States Code (as shown above). requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. Corrections .- The permanent Recoap is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shal' be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the pessions of Congress to receive orders for subscriptions to the RECORD at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Opposition to Closing of Army and Navy Hospital at Hot Springs, Ark.

EXTENSION OF REMARKS

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES
Friday, March 25, 1955

Mr. McCLEILAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "A Hospital Fights To Survive," written by Claude A. Brown, published in the Arkansas Democrat, of Little Rock, on Sunday, March 13, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A Hospital Fights To Survive

(By Claude A. Brown)

Without legislation or Government expenditure, Hot Springs' Army and Navy Hospital could be transferred immediately from the Defense Department to the Veterans' Administration.

This transfer, which is the fervent hope of all those interested in the rehabilitation institution that overlooks the Nation's oldest spa, would accomplish two things:

1. It would prevent the closing of the general medical and surgical hospital and its subsequent deterioration through lack of use; and

2. It would offer greatly needed physical medicine and rehabilitation facilities, as well as facilities for research of chronic organic disorders so essential to the Veterans' Administration program.

In addition, it would prevent a great psychological loss to Hot Springs, since the hospital's abandonment might create in the public mind the impression that the Government considered the thermal waters of no therapeutic value. It would destroy the faith sustained for more than a century by thousands of health seekers who annually visit this famous medical center.

In October 1953, the Defense Department ordered the hospital closed. Loud protests by Arkansas managed to get this order canceled. But last January, the Defense Department again issued the closing order—and declared that the hospital must be closed by June 30 this year.

Protests were again made by Governors Cherry and Faubus, Congressmen, veterans' organizations, and leading citizens. But the Defense Department insisted that the hospital, which was built 72 years ago, must be shut down as an economy measure.

Congressmen then turned to the Veterans' Administration and prevailed upon them to take over the plant. A medical team from the VA central and area offices came to the hospital early in February to conduct a

The writer of this article was formerly a national field representative of the American Legion, and as part of his job he visited 45 Veterans' Administration hospitals in 14 States and Puerto Rico. In this writer's opinion, no VA hospital has facilities that are better for physical medicine and rehabili-

tation than the Army and Navy Hospital in Hot Springs.

After much research, this writer has found that by virtue of investments over the years, the Veterans' Administration already has a great financial interest in this hospital.

This plant, which consists of 59 buildings, is valued at \$20 million. Of that figure, the Veterans' Administration is responsible for at least one-fifth, or 4 million. Chiefly through the legislative efforts of the American Legion, the Rogers hospital-construction bill No. 234 was passed by Congress in 1929, which gave \$1,050,000 of the Veterans' Administration appropriation to the Army and Navy Hospital for rebuilding.

From 1933 to 1950, the VA spent \$3 million for the care of veterans in that hospital at rates that varied from \$3.75 to \$10.50 a bed

In this writer's opinion, there are many reasons why it would be desirable and practical for the VA to take over the Army and Navy Hospital. This article is an attempt to point up these reasons and to trace the history of the Army and Navy Hospital, one of the oldest in the Nation.

By transferring the Army and Navy Hospital to the Veterans' Administration, 412 general medical and surgical beds would be ready for occupancy at once, affecting a savings of more than \$22,000 per bed, according to the price the Veterans' Administration now pays for the construction of new hospitals.

On January 1 of this year, the Veterans' Administration had about 110,000 beds in 163 hospitals, classified as follows: Tubercular, 15,217; neuropsychiatric, 56,711; neurological, 3,929; and general medical and surgical, 34,128. An additional 16,775 domiciliary patients were in VA homes set up for that purpose.

The 34,128 general medical and surgical and 16,775 domiciliary beds total 50,903 now available for more than 21 million veterans of World War I, World War II, and Korea. This is only one-fourth of 1 percent of the war veterans entitled to Government hospital care when beds are available.

Although the hospital has been designated as Army and Navy, its supervision is directly under the Army Surgeon General. For more than 67 years, many high-ranking Army officers, including Gen. John J. Pershing, have occupied rooms in officers' quarters, utilizing separate dining and bathhouse facilities. Under Veterans' Administration procedure, all patients would be accepted on a common basis, without distinction as to race, class, or rank.

Adequate VA hospital facilities exist in Little Rock and Fayetteville for emergency and acutely ill veterans, since the turnover of beds is about 20 days for each patient. A VA medical center at Hot Springs could provide, however, greatly needed beds for chronic patients requiring extensive physical medicine and rehabilitation and relieve other hospitals of patients who require prolonged hospital care.

The proposed transfer would be a mutually agreeable procedure, requiring no legislation. There are numerous precedents for such action. The new 500-bed Navy hospital completed in Houston, Tex.—one of the few completely air-conditioned installations—was turned over by the Navy to the Veterans' Administration even before it was opened. In San Juan, Puerto Rico, the

San Patricio, a 200-bed naval hospital, is being operated by the Veterans' Administration subject to return to the Defense Department in the event of hostilities.

Many military installations, such as the Kennedy Hospital, Memphis, Thayer Hospital, Nashville, Tenn., and Winter Hospital, Topeka, Kans., are included in the 163 hospitals and domiciliary homes now under the jurisdiction of the Veterans' Administration. In the event of national emergency any of the Veterans' Administration facilities are subject to transfer to the Defense Department.

In view of the existing problem of treating chronic patients who require prolonged hospital and domiciliary care, continued operation of the Army and Navy Hospital by the Veterans' Administration would be an investment in national defense,

The most vital need filled by the hospital transfer, however, would be the establishment of an outstanding medical center for physical medicine and rehabilitation. This relatively new program, which is gaining momentum as an essential adjunct to surgery, could make history in Hot Springs. Through physiotherapy, muscles and nerves are stimulated following surgery, eliminating bed sores and blood clots during convalescence. Hydrotherapy, from radioactive thermal springs, is applied in therapeutic pools, in conjunction with whirlpool, hot and cold alternating needle showers, sun bathing, and medicinal water baths. These treatments concern the patient's entire body rather than specific parts afflicted by diseases or injuries.

Army and Navy became a polio treatment center in December 1943, when an epidemic of infantile paralysis struck Army camps. More than 1,000 patients received treatment, and several classes for physiotherapists were trained to apply the Elizabeth Kenny method of nerve and muscle stimulation. The hospital maintains a thermal pool. Wheelchair patients are lowered into this pool so that their limbs may be manipulated under warm water by aides.

More than 275 former patients have formed thte Army-Navy Hospital Polio Veterans' Association, comprising service men and women from all 48 States, and are making vigorous protests against closing the hospital. Miss Frances Hallfrisch, of Flint, Mich., association founder, is a former therapist at the Army and Navy.

Another paramount service that could be provided at Hot Springs is research study of chronic organic diseases. Prior to World War II, there was no adequate research program in VA hospitals. At present, \$385,892 is being spent annually for 617 specialists and clinical assistants in VA general medical and surgical hospitals. None of these hospitals has more varied nor greater volume of medical data for clinical studies than the Army and Navy Hospital.

There are more than 4,000 volumes in the medical library comprising the most complete collection of medical data on rheumatism and orthopedic disorders in existence.

The hospital likewise has research facilities for study and treatment of various forms of arthritis, neuritis, genito-urinary diseases, chronic metallic poisoning, skin infections; certain metabolic disorders such as gout, diabetes, nephritis, and chronic gastrointestinal ailments, hepatitis, dysentery,

stomach ulcers, cancer, and other organic diseases requiring extensive treatment.

There are seven VA paraplegic centers to provide intensive physiotherapy for the completely paralyzed war veterans. One of these centers is the Kennedy Hospital, Memphis, where 250 of these patients have filled the wards to maximum capacity. Since the Kennedy Hospital lacks permanent treatment facilities, a new paraplegic center could be established at the Hot Springs hospital for new patients requiring complete physical medicine service, and for outpatients re-quiring temporary treatments.

Most of the paralyzed patients are nonservice connected, drawing \$135.45 monthly pensions except when hospitalized. Those whose paralysis resulted from misconduct receive no monetary benefits, hence require

continuous hospital care.

More than 11,000 deep and skin cancer treatments by X-ray and radium were provided during a single year by the staff in Hot Springs. Army and Navy is 1 of 3 Army hospitals in the Nation with comparable facilitles for such treatments.

There is a woman's ward, now being used for maternity cases, which would provide adequate beds for women veterans with maximum privacy. Under regulations, wom-en veterans are entitled to non-service hospitalization in private hospitals at Government expense if VA beds are not available.

When the Eastman Hotel was old for \$510,000 to the Defense Department in 1942, the Army and Navy hospital was filled to overcapacity with more than 1,000 patients. There were 2,000 Veterans' Administration applications for hospitalization on the waiting list. At considerable expense, an enclosed overhead ramp was erected to connect with the hospital. Three firewalls were constructed, dividing the structure, and airtight barriers were placed in corridors to close automatically in case of fire. The building, renovated throughout, was made highly fire resistant.

After hostilities ended in World War II and Korea, the Eastman annex ceased to be essential for hospital operation. Its chief function now is to provide low-cost housing for personnel, auxiliary services, canteen, recreation, and quarters for retired officers and enlisted men as pay patients for short periods. Under Veterans' Administration management, the annex could be put to proper domiciliary use, and would become a

needed adjunct to the hospital.

No domiciliary homes are within 500 miles. The nearest are at Wadsof Hot Springs. The nearest are at Wads-worth, Kans.; Biloxi, Miss.; Temple, Tex.; Mountain Home, Tenn., and Wood, Wis, Veterans seeking domiciliary care must be able to walk, must require minimum institutional care, and have no gainful employment. Under the occupational therapy program, many of the members train themselves in furniture repairing, plastic and woodcraft, shoe repairing, rug making, and other crafts and become gainfully self-employed. Some qualify as employees in these homes, and thereby reduce the overhead cost of domiciliary service.

Hot Springs has as high a percentage of professional medical talent as any city of comparable size in the Nation. Despite a shortage of VA medical personnel, adequate consultant and attending specialist service would be available. Operation under the dean's committee of the University of Arkansas Medical School as is provided for VA hospitals in Little Rock and North Little Rock would present no problem, since Hot Springs is only 57 miles from Little Rock.

The hospital personnel at present comprises 300 civilian and military employees. Adequate housing for staff personnel is available, which is not the case in some new VA installations. It is likely that house-keeping quarters for staff personnel in the Eastman annex would prove an incentive to recruit employees.

Therefore, it would appear that the Veterans' Administration has a vested right and an opportunity to acquire by transfer, at no cost, a modern, completely equipped hospital plant for 412 patients and 300 domiciliary patients. It would require more than \$20 million and 2 years' construction to replace this facility.

The Safeguarding of Political Liberty and Social Justice in the United States

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, March 25, 1955

Mr. LEHMAN. Mr. President, on March 20, 1955, Mr. William F. Schnitzler, secretary-treasurer of the American Federation of Labor, made a very incisive and compelling address before the annual convention of Americans for Democratic Action.

This speech by Mr. Schnitzler should be widely read. It should be read by every Member of Congress.

I ask unanimous consent that it be printed in the Appendix of the RECORD. There being no objection, the address was ordered to be printed in the RECORD,

as follows:

TEXT OF ADDRESS BY WILLIAM F. SCHNITZLER, SECRETARY-TREASURER, AMERICAN FEDERA-TION OF LABOR. BEFORE THE AMERICANS FOR DEMOCRATIC ACTION CONVENTION, SHORE-HAM HOTEL, MARCH 20, 1955

Except for the season, there is very little in the atmosphere of Washington today to stimulate or to inspire the advocates of democratic action. The political forces entrenched here are deaf to your resolutions and hostile to your philosophy. The executive branch is now but a countinghouse, and the budget a baffle against the expansion of human rights and the attainment of practical human goals.

The situation illustrates the old rule, which says that the richer the prize, the harder is the struggle and the more determined the opposition. If your goals are limited, your opinions safe, your principles flexible and your program meager, success is cheap and easy-but then the game is scarcely worth the candle. As a matter of national policy, this approach is known as dynamic conservatism. Reduced to more basic English, it means getting nowhere fast and is characterized by an apparent shortage of burning public issues. It may serve to create an illusion of security and of effective government, which can last just so long as our national store of luck holds out against the mounting pressure of problems unmet, decisions avoided, and needs unfilled-after that, the deluge.

But if, on the other hand, you have higher goals and bolder projects in mind, the odds increase in like degree. You become con-troversial, and therefore unpopular in important circles. The timid depart, when the wolves begin to howl. The spirit and endurance are tried by long periods of frustration, sustained only by the conviction that the future is on your side-that the trials of today are a necessary prelude to the gains of tomorrow.

The experience of the trade union movement bears witness to the resistance that stands in the way of social and economic progress. The protection and encourage-

ment of the interests of business and the institution of private profit are accomplished as a matter of routine by the courts, legis-lators and public officials of the land, and are regarded as an altogether proper function of government. But the achievement of a fair distribution of the fruits of labor, and the protection of the standards of labor, are arduous and endless tasks-and are constantly assailed as an interference with natural law.

Each modest gain that we have madewhether the elimination of child labor and the exploitation of women, the 40-hour week. decent health and safety conditions or reasonable wage scales-came only as the product of years of agitation and organization, demonstrations of protest on the part of multitudes, and personal sacrifice on the part of individuals.

If the timing of these gains had been left to the discretion of such leaders and great brains as those who hold the reins of government today, they would never have been achieved, and our children would still go down to the mill or the pit, instead of to the school or the playground for the day. The arguments, expert opinions, and responsible judgments which they now employ in opposition to the dollar-and-a-quarter minimum wage, negotiated employment guarantles, aid to education, and other proposals for the benefit of the many, are the same arguments that were used against the enactment of child labor laws, the first public schools, the 40-cent minimum wage, and the first negotiated wage increase. When they tell us that such measures are economically unsound, will disturb the confidence of investors, impose a ruinous burden upon industry, destroy individual ini-tiative and sap the moral fiber, we can truthfully say that this is where we came in. We have heard it all before.

Time and experience have shown that we were right in our advocacy of these reforms, and that the best brains of big business were totally wrong. The Nation is far better off today because the efforts of organized labor succeeded in some degree than it would be had the viewpoint of our opposition prevailed. And I believe that we are still right today, and that they are just as wrong as they were 50 years ago.

In the struggle for human betterment, there is no sharp dividing line between economic and political affairs. One conditions the other. The same forces, arguments and pressures are arrayed in opposition, right across the board. In your own efforts to advance a progressive program in the spheres of local, State and national government, I am sure that you have found attached to your task many of the same

conditions that we encounter.

If the going seems particularly difficult to you today, and the headway slight, let yourselves be reminded that the price you seek is a priceless one-worth any challenge and any effort. That prize is the attainment of a truly liberal society, in which all men can live together in peace, security, and freedom, with an equal opportunity to develop their skills, talents and ideas to their fullest capacities-using their government neither as an instrument of repression nor of mere bookkeeping, but as a legitimate means for the attainment of their mutual ends.

Such a society requires a government which concerns itself actively with the problems and needs of human beings as well as of corporations, and which is most concerned about those whose problems and needs are greatest. It seeks the broadest expansion, rather than the narrowest interpretation, of the rights of individuals. Any resemblance between such a government and the present administration is, of course, purely rhetor-

It is during just such times as these when your counsel is least appreciated and the things that you stand for are most coldly rejected by the powers-that-be—that the activities, the energies and the enthusiasm of liberal organizations such as your own are most sorely needed, if the ideals that once made this Nation the best hope on earth are to be kept alive. When those ideals are abandoned by public officialdom, the people themselves must accept the burden of their defense. If groups like your own do not take up that burden, you may be sure that no one else will.

be sure that no one else will.

This is no imaginary danger. The official guardianship of our liberties is in the hands of men who seem to be far more anxious for convictions than for fair trials, far more interested in compiling an impressive total of victims than in due process, far more concerned about headlines than about the caliber of their witnesses or the reputations of the innocent. The Department of Justice today devotes its talents to the discovery of loopholes in the Bill of Rights, to the narrowest possible construction of our civil liberties, and to the invention of new ways to get around the protections of the constitution. Such progress has been made along this line that the attorney general now offers the startling argument that due process of law is a privilege reserved only to indicted criminals, and that those whose reputations and livelihoods are wrecked on the unproven word of a phantom informer have no rights of redress in law.

If the defense of our liberties and our security is in the hands of men such as these, then who will defend us from the defenders? This I do know-when the shield of the Bill of Rights is stolen from the guiltiest criminal it is stolen in like degree from every citizen. When railroading by accusation is accepted as an adequate legal substitute for concrete evidence and proofwhen those who make use of their constitutional rights are denied the right to sell second-hand planos, to operate an insurance agency, to work in a plant, or are subjected to other arbitrary penalties and discriminations-then few of us are entirely safe unless we remain all alone, without a telephone. Idle gossip and irresponsible slander be-

come as damning as guilt itself.

In the eyes of the administration's lawyers, the Bill of Rights is apparently viewed as a limitation upon, rather than an expression of, our civil liberties. It is argued that one's reputation or employment do not fall Within the strict letter of those rights which are specifically spelled out in the Constitu-I am not a lawyer, but I would suggest to the Attorney General an occasional reference, for guidance as to the spirit of the law, to the ninth amendment, which states as follows: "The enumeration in the Constitution, of certain rights, shall not be construed to deny or disperse others retained by the people." Is the "pursuit of happiness," free from snares and entrapments engineered by an arbitrary bureaucracy, no longer one of the rights "retained by the people"?

Aside from the injury to civil liberties, there is the very real danger that the obvious blunders, inequities, and political vices inherent in the administration's approach to the security problem may serve to discredit the entire cause of security and thereby contribute unwittingly to the ends of America's enemies. To be truly effective, a security program must be scrupulous, fair, and honest—not only for the sake of civil liberties, but for the sake of its own and of the Nation's strength and integrity.

At this stage in your history you have, no doubt, grown inured to most of the tired epithets that come your way, seeking to brand you in the public eye as "leftwingers," "radicals," or "Socialists." Those terms have been directed at the trade-union movement for generations, and have long since ceased to disturb us. I do not believe that anyone who tries to find any substantial degree of real leftism or socialism among our

printers, plumbers, potters, bricklayers, and boilermakers can remain very much impressed by the accuracy of such labels.

Besides, the history of progress in this country indicates that the gap between left and right can be measured more readily by the calendar than by the violence of the debate on any given day. Time makes believers of the most hardened skeptics. The main difference between the liberal and the conservative seems to be that the liberal endeavors to keep ahead of the times, while the conservative eventually catches up with the times long after the issue has been settled over his strenuous protests.

A good case in point may be found in the current efforts of the American Bar Association to gain admission for lawyers into the old-age and survivors insurance system. The only reason why they are not in the system already, of course, is because of the hitherto bitter opposition of the bar association. As recently as last year, when the program was extended to other groups, social security was still, in the eyes of the stately members of the bar, a diabolical plot to undermine our liberties, and they would have none of it. This year, apparently, some sober second thoughts have finally begun to penetrate and they have decided to have a slice of that Socialist ple after all.

This is one contribution at least that we can credit to the Eisenhower administration. By clutching this old New Deal reform to their bosom, the Republicans have at last endowed it with the virtue of orthodox respectability. There are still a few such as Manion and others who subsist on the vague fears of the tired businessman, who continue to raise an occasional cry of alarm against social security—but then that is their profession and I would be the last person to take the bread out of the mouths even of those in the doomster trade.

There is another unwitting service that can be credited to this administration. By subjecting it to the test, they have shaken the credibility of one of the most treasured myths of the old guard—the legend of the big-business man as a superman and the ultimate savior of government.

We have been exposed to the ex-boss of General Motors as Secretary of Defense for some time now, and if his performance in this capacity has shown anything remarkable, it is a pair of size 14 feet of clay. Another big brain from business has presided over the Department of Commerce for many months with results not visible to the naked eye, except for an occasional jurisdictional raid on the Labor Department. His attitude on those occasions leads one to the conclusion that he serves on the Cabinet as Boston's protest against the 20th century.

As for the pride of the M. A. Hanna Co., Secretary Humphrey, his zeal as the guardian of the Nation's Treasury is exceeded only by his eagerness to distribute largess to his big-business admirers, their corporations and stockholders. If you believe that there is some inconsistency there and that people with low incomes should be cut in on any benefits or incentives that are being passed out, then you are just irresponsible, political, and silly.

I cannot help but wonder how the M. A. Hanna Co. could have survived the type of management that the Treasury now enjoysone that is so loose in its distribution of special favors to the wealthy that it not only gave away billions on purpose but threw in another billion by mistake, by allowing corporations to deduct the same expenses twice. I doubt if any old-line New Dealers would have been guilty of such a blunder. We hear a great deal of fine talk about statesmanship and responsibility and the importance of balancing the budget, but when the sums are totaled up we find that, once again, the rich got the gravy and they gave the deficit to the poor. If this is the way that businessmen govern our

affairs, then I can only say: "Bring back the bureaucrats and politicians."

We sometimes hear it said today that there is a shortage of good political issues. I do not believe this. Under an administration that does nothing for the general public interest without seeking to divert it in some way into the channels of private profit, there can be a shortage of issues only among those who believe that nothing should be done. If you have a positive program to offer as an alternative to both inaction and reaction, there will always be plenty of genuine public issues.

Labor, as you know, is moving surely in the direction of unity. We intend to use the added strength thus engendered for no selfish purpose, but for the enhancement of the general welfare, in the cause of social, economic, and political progress. In approaching the great issues of the day, labor will endeavor to exert all of the influence that is due it as the representative of millions of workers and their families whose interests are affected by the outcome of those issues. A united trade-union movement will function, not as an instrument of "bossism" in any sense, but as the only instrument through which it is possible for the workers of America to bring their just and proper share of the weight to bear upon the scales of political and economic decision.

In approaching the next elections we expect to play the game hard, but we shall play it straight. We shall not emulate the tactics of the smear artists and the professional poisonmongers employed so loosely by the leaders of the Old Guard.

But we do intend to exercise our right to place responsibility directly at the door where it properly belongs. In a sound and healthy democratic order, no individual is entitled to the privilege of blind support or to immunity from public criticism. We, at least, shall never extend that privilege or that immunity.

We have absolutely no desire or intent to injure, to degrade, or to detract in any way from the personal popularity or good repute of the present occupant of the White House, for we deplore the slanders that were circulated by many of the members of his own party about previous occupants of the White House. We are concerned, and vitally concerned, with the content of the policies and programs that issue from the White House, and we intend to speak our minds fully and freely on that score.

I have no interest at all in the personal life or habits of anyone in public office. A President who is willing to stand up and fight for, as well as to talk about, the rights and interests of the people when the occasion demands it would draw nothing but praise from me, though he played golf, pool, or poker from sun to sun. I am interested in where his convictions and his policies are, and not his person.

And when he speaks in a liberal or humanitarian vein I want to see if his budget is in line with what he says before reaching any final judgment—for the road to perdition is paved with pious statements and good intentions.

If it is to survive at all, the cause of human progress must be served, not only at home, but abroad as well. The trade-union movement is endeavoring to live up to that responsibility. Through the International Confederation of Free Trade Unions, and through our participation in and support of the International Labor Organization, we are trying to extend to ordinary people everywhere the means with which to attain their legitimate aspirations by democratic means. We are engaged at close quarters with the forces of Communist tyranny in the battle to determine who shall lead the workers of the world.

That battle is in a crucial phase today. The Soviet Union has fully realized something that our own Government has almost totally ignored—the importance of the International Labor Organization as an avenue to the minds and loyalties of the plain people of the world, whose attitudes, in the long run, will count for far more than the friendship of kings, generals, diplomats, and foreign ministers. The Soviet Union has now gained admission into the ILO and is endeavoring to frustrate its campaign against slave labor, and to pervert its important operations to the service of its own ends. only enlightened way in which we can respond to this challenge is to expand and to make more meaningful our own role in the work of the organization. This requires a far greater degree of public understanding and appreciation of the work of the ILO than now exists. The ADA, as well as other liberal groups, can do a great deal to help us bring this about.

The liberal movement in this country, like our trade union movement, has been plagued by disunity. I hope that in the months to come you will direct yourselves to the task of laying the necessary groundwork for success, by working to bring about a greater measure of unity of purpose and action among all of those who are in agreement with your principles and your program. Only then can you hope to center the attention of the public upon the needs that require attention and the shortcomings that demand reform, and to create the kind of an atmosphere in which, once again, social prog-

ress is posible.

Integration in the South

EXTENSION OF REMARKS

HON, JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES Friday, March 25, 1955

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article which was published in the Indianola (Miss.) Enterprise on Thursday, March 17, 1955, which included a letter by Mr. T. M. Pitts, mayor of Indianola, Miss. The letter is an answer to a magazine article which recently appeared in Look magazine, which was written by Mr. Hodding Carter, editor of a newspaper at Greenville, Miss.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAYOR PITTS PROTESTS CARTER ARTICLE IN RECENT LOOK MAGAZINE IN LETTER

In a letter to Lawrence K. Grossman, of Look magazine, Mayor T. M. Pitts cites some facts which failed to appear in the article which recently appeared in the widely circulated magazine.

culated magazine.
The letter is as follows:

"Reading Mr. Hodding Carter's article in the March 22 issue of Look magazine, A Wave of Terror Threatens the South, is like starting in the middle of a book. The wave of terror which followed the War Between the States is perhaps the reason the South is now opposed to integration of the races."

"With the assassination of Abraham Lincoln, the best friend the South had in those days, little men came into power and there followed the darkest pages in American history this section has ever known, the reconstruction period. Able and honest men in governmental positions were replaced by irresponsible, thieving rascals, renegates from the North who used the Negroes of the South to further their ends. With the backing of a friendly Congress, a subservient Federal Court, and the bayonets of the Federal troops, conditions reached the state where white people were unable to secure justice in any court. They were afraid to walk the streets, even in the daytime, for fear of being attacked, robbed, or killed.

"A similar situation threatens today. Little men are now in power; there is a subservient Federal Court; only an order need be given to have Federal troops in our midst. Carpetbaggers and scalawags, with the aid of such organizations as the NAACP, could soon have the reconstruction period in full operation again.

"Perhaps this introduction explains why the South, and especially Mississippi, became alarmed when the Supreme Court handed the decision on integration last year. It was evident that concerted action would be needed in order that all legal courses be used.

So was born the Citizen's Council.

"Mr. Carter is letting his imagination run wild when he compares the purpose of the council with the Ku Kiux Kian of 1920. The purpose of the citizens' council includes preserving separation of white and colored races, working out problems on a local or State level without interference of outside agitative groups, and obtaining these ends through legal measures and court actions. One of the purposes of the council is to prevent such hot-headed action as Mr. Carter attributed to some fictitious town marshal.

"Economic pressure to the extent that Mr. Carter infers has not been used. Our local Negro physician is still carrying on his practice in the county hospital. Credit has not been denied where credit was due and there have been no mortgages foreclosed as a punishment for opinions. The Federal Government has already practiced more economic pressure than the citizens' council ever had in mind. Accepted labor-union practices of using strikes, boycotts, or goon squads, to put their ideas over have not been used by the citizens' councils.

"In order to understand the man, Hodding Carter, a little better I would recommend that you read his autobiography, Where Main Street Meets the River. This book is well written and very interesting, but it leaves the reader with no doubt that Mr. Carter has been a knight in shining armor, crusading for this or that, or criticizing someone all his life. As a result he has achieved fame and fortune. To me he is a fanatical demagog with an egotistical and arrogant bearing. He has set himself up as an interpreter of conditions in the South and in so doing resorts to misstatements and twisting of facts.

"You can see in this article that Mr. Carter is attempting to aline the Jews and Catholics against the citizens' council. Our local chapter has both Jews and Catholics as members. One of the most surprised persons to read that the citizens' councils were against Catholicism was a young stenographer in the council office, herself a Catholic. The council does not hold any ill will toward any individual regardless of race, creed, or color, so long as there is no advocation of integration or mongrelization of the races.

"I should like to call to Mr. Carter's attention that it is against the law and customs in Mississippi to stage mixed athletic events. If the people desire to stage such events they should first get the law changed instead of letting Mr. Carter or some promoter take the law into his own hands.

"Mr. Carter was misinformed regarding the program of the meeting of the Sons and Daughters of the Knights of Tabor. The primary purpose of this organization is to take care of the sick in their membership and to maintain a hospital at Mound Bayou, supported by their membership dues.

"The local chapter of this organization asked me as mayor of Indianola to give the address of welcome. When I saw listed on their program "Modern Youth and Present Day Education." I told them I would not welcome any group where racial agitation was discussed or advocated. In conference with their State officers, Mayor Green, from Mound Bayou, the superintendent of colored schools. Hollandale, a member from Greenville whose name I cannot recall, Mr. Arthur B. Clark, Sr., and I were assured that the subject in question had nothing to do with the recent Supreme Court ruling. This organization was not told that they could not meet in Indianola but that they would not be welcomed by the mayor if their program was to foster racial discord. I gave the welcome address and I understand they had a successful meeting. We shall be glad to have them return whenever they wish.

March 25

"It seems to be all right for organized and well-financed racial agitating groups to operate in Mississippl, but when the white people of the South form a counter organization it is all wrong. The South, Mississippi in particular, is determined not to have a modern reconstruction period where the NAACP and kindred organizations force their will

upon the people.

"Our crusading knight in shiping armor from Greenville is still raking in the cash from this crusade. The Citizens' Councils are passing laws to protect the interest of the people of Mississippi and the South. Both sides are happy at present.

"T. M. Pirrs, "Mayor of Indianola."

Playing Politics With Value of the Dollar

EXTENSION OF REMARKS

HON, JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES
Friday, March 25, 1955

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the Record an article appearing in the March 19 issue of the Magazine of Wall Street entitled "Playing Politics With Value of the Dollar." This article was written by Mr. McLellan Smith, Washington correspondent for the Delaware State News, of Dover, Del., and a frequent contributor to nationally circulated financial and business periodicals.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLAYING POLITICS WITH VALUE OF THE DOLLAR (By McLellan Smith)

When President Eisenhower labeled the Democrat-inspired proposal to cut income taxes as "some kind of height of fiscal irresponsibility," he was not indulging in the rhetoric of partisan political attack.

An examination of the surrounding circumstances, including the facts of national fiscal life, the country's debt position—and not forgetting the partisan motivation—shows that the President's term was more descriptive than condemnatory.

As of March 1 we had a dollar worth 52.1 cents (1926=100) and were moving toward a balanced budget. Last year the dollar was worth 50 cents as the budget deficit was around \$2 billion higher than now. There is a direct relationship between budget deficits and the value of the dollar; when the

former is high, the dollar moves downward, when the deficit is low, the dollar buys more.

The politically inspired \$20 slash for everyone, effective next January 1, would have meant that receipts would be slashed by \$2.4 billion in a single year, about \$800 million of which would be clipped from fiscal 1956 receipts. Further, it would have removed around 5 million individuals from the Federal income-tax rolls, making them parasites except for their payments of excise levies and indirect tax payments through their purchases of goods and services from tax-paying industries—all of which include their Federal taxes in the prices of those goods or services.

Wisely, President Eisenhower has proposed no further tax cuts until they can be justified by reductions in spending and increased revenue derived from the Nation's economic growth. This economic growth seems reasonably assured, although not at the many economists deem necessary. Reductions in spending appear to be remote as Congress prepares to hike the cost of the Federal civilian payroll, give substantial pay boosts to the Armed Forces, and is confronted with a not-so-cold war in Asia which may flare up white heat at any moment.

THREAT IN PREMATURE TAX CUT

The politically inspired tax slash is in direct opposition to the administration's successful efforts of the past 2 years to reduce deficit financing in an approach to a balanced budget. Such cuts impose a direct threat to the welfare of everyone—rich and poor alike. It could only bring about inflation, an evil which has left a trail of wrecked nations in the pages of history,

In brief, the cut would be nothing more than the individual lending to himself. And, in making the loan to himself, he would become responsible for principal and interest. For example, for every \$20 the taxpayer does not pay into the Treasury, the Government would have to borrow a like amount. This would cause a further imbalance of the budget and hike the public debt. public debt mounts and the budget gets further out of kilter, the value of the dollar moves downward, the cost of living moves up. We have inflation. Thus the \$20 slash would hurt those who can least afford it. Inflation hits the little people much harder than it hits the rich.

Let's take a brief look at what budget deficits do to the value of the dollar. The estimated budget deficit for fiscal 1955, which ends next June 30, is \$4.5 billion. As the current fiscal year opened, the dollar had a purchasing power slightly in excess of 50 cents (1926=100). As the year wore along, the dollar inched up. When the fiscal 1956 budget went to Congress last January, the dollar had moved close to 51 cents. When it was fully understood that the estimated deficit for fiscal 1956 was \$2.5 billion, an almost 50 percent decline from the current year, the dollar moved up to 52.1 cents as of March 1.

Reverse the situation, that is, through a premature tax cut, bring about a larger budget deficit, and the dollar will start cellarward again. And any ill-advised cut could very well bring the 1956 budget deficit up by several billions more and project a 1957 budget deficit quite out of hand.

Here's how it could happen.

A \$20 slash-or its equivalent-would de-Prive the Treasury of \$2.3 billion in a single year, \$800 million of which would be whittled from fiscal 1956 revenue. The Armed Forces are slated for \$750 million in pay hikes beginning July 1. Half the impact of this will be on fiscal 1956 disbursements. Congress now proposes to raise the civilian payrolls by approximately \$900 million annually, half of which would be chargeable to fiscal 1956. Add the three items-tax cut, Armed Forces pay increases, and increased civilian Payroll—they come to \$1.625 billion, swelling the 1956 budget deficit from \$2.4 billion to slightly more than \$4 billion.

MORE DOLLAR DEPRECIATIONS

There is no absolutely accurate way to pro ject fiscal 1957, first full year in which the Treasury would feel the total impact of new cuts. However, with fiscal 1956 as a base, and assuming that revenues in 1957 will be approximately at fiscal 1956 levels, we see an even greater budget deficit, a larger public debt and more inflation, and a further depreciated dollar.

Still using fiscal 1956 and its \$2.4 billion budget deficit as a base, and assuming that fiscal 1957 revenues are at the fiscal 1956 level, we find as follows:

	Billions
Revenue lost through \$20 slas	h \$2.300
Increased civilian payroll	.900
Increased Armed Forces pay	

To be remembered, Congress is months away from the end of the current session, It is considering increased appropriations for highways, for educational facilities, and for public-works projects. Next year is an election year. All of these may be hiked-high-

Budget deficit ____ 3.950

ways, education, and public works. hikes will be politically motivated, but their effect on the budget imbalance will be just as bad as if they were spiritually inspired. These 3 may tote up to another \$400 million-not tabulated or accounted for here.

Why is the proposed \$20 cut-or any cut like it-contrary to the public interest?

The answer is not too complicated. cut would reverse the successful trend of the administration during the last 2 years in reducing deficits and working toward a bal-anced budget. The 1953 fiscal deficit was nearly \$9.5 billion, while the projected deficit for fiscal 1954 inched close to \$10 billion.

ADMINISTRATIVE TAX CUTS

Planned spending for fiscal 1954 was slashed by more than \$10 billion, reducing the 1954 deficit by \$6 billion. This moved two-thirds of the way toward a balanced budget. Hard on the heels of this accomplishment, the administration, with the help of Congress, cut taxes by \$7.4 billion. The administration envisages other tax cuts, but only at such times as it can see them justified by lowered spending and increased revenue from an economic growth which would broaden the tax base.

In his last state of the Union message, President Eisenhower said, "I am hopeful that such tax reductions can be made next but only if the economic growth of the Nation and spending cuts justified such reduction. Cuts at the present time, without indication of where substitute revenue will come from-except through borrowingare nothing more than irresponsible gestures, patently designed to have its effect at the 1956 ballot box.

Here are some of the fiscal facts of life and of the present administration:

Last year's \$7.4-billion tax cut helped the "little people" more than it helped those in the higher brackets. In brief, the cut amounted to around 10 percent for the small taxpayer, around 2 percent for the wealthy. There was a \$1-billion cut in excise levies on goods in everyday use, and the so-called little people reaped most of the advantage.

WHEN TAX CUTS ARE CONSTRUCTIVE

The tax slashes of a year ago promoted the investment of more money in plant equipment and tools. Investments of this type create jobs. Not to be overlooked is the resultant increased confidence in Government as it moves toward the balanced budget. And bear in mind, as the budget imbalance moves down the value of the dollar moves up.

Several weeks ago the Bureau of Labor Statistics released its report on the cost-ofliving index for the month of January. That report revealed that the dollar has stopped its downward trend. Will the dollar move up or down in value with relation to food, clothing, and shelter? There are two potential answers-maintain our present tax structure, and the trend will be unward. kick the tax structure in the teeth with unwarranted slashes, and the trend will be reversed.

In the words of Treasury Secretary Humphrey, "Inflation, rampant for the past several years, has been checked. The cost of living has not increased now for over 2 years as compared with the fact that it almost doubled in the 15 previous years. This has been worth billions of dollars to millions of Americans. This checking of inflation has protected * * * the full value of savings * and savings in insurance policies and pension funds."

It would not be amiss to have a brief survey of things the administration has done in the past 2 years to effect savings for the taxpayer. In fiscal 1953, the Federal civil payroll, set by the previous administration, stood at \$9.9 billion. President Eisenhower moved into the White House in January of that year, consequently he could slash only the fiscal 1954 civilian payroll. This he did, bringing it down \$400 million to \$9.5 billion. In the current fiscal year it is estimated at \$9.3 billion, another \$200 million saving.

COMPARISON OF GOVERNMENT COSTS

When this administration came in, it cost \$173 a year to clothe a soldier. This year the cost is down to \$159, a \$16 saving per man; or, on the cost of Government doing business, around \$48 million a year. This has been brought about through efficient, business-like methods in purchasing, not through any lowering of the quality of the soldier's apparel. Similar savings have been effected in Air Force, Navy, Marine Corps.

Elsewhere in the military picture, despite the 20-percent increased cost of fighting aircraft and other attendant increased costs. the Defense Establishment, working under the direction of the President has kept many costs down. In fiscal 1953, and President Eisenhower took office in January of that year, it cost around \$60,000 to train a fighter pilot. That cost has not risen one dime.

Through General Services Administration (GSA), the Government's overall purchasing agency, annual savings, through centralized buying, now runs close to \$700 million a year. It would be possible to fill far more pages than are available here, simply cataloging the annual savings effected through businesslike procedure, as compared with political expediency, in Federal spending.

The Late John W. Davis

SPEECH

HON, CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. BAILEY. Mr. Speaker, a disagreeable task faces me at this time. The ticker has just announced the death of John W. Davis, in a hospital at Charleston, S. C., from a sudden attack of pneumonia

Mr. Davis, one of West Virginia's best known citizens and one of the Nation's outstanding legal minds, it will be recalled, served West Virginia and the particular district I have the honor to represent at the present time in the Congress of the United States, from 1910 until some time in 1913, when the late President Woodrow Wilson appointed him Solicitor General of the United States, in which capacity he served with great brilliance.

Mr. Davis, it will be recalled, was the Democratic nominee for President in 1924. He will also be remembered in more recent days—and I am sure some-body else will want to pay tribute to him for this service—as representing the State of South Carolina in the recent case in the United States Supreme Court on the question of segregation. May I say that it is unfortunate that this matter was just now brought to my attention, because I know there are many of his friends who served with him years ago in Government who would want to pay tribute to him.

Mr. Speaker, I ask unanimous consent that all Members who desire to do so may have the privilege of extending their remarks on the death of John W. Davis at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Brooklyn Eagle

EXTENSION OF REMARKS

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Friday, March 25, 1955

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Pittsburgh Post-Gazette of March 19, 1955, dealing with the passing of the Brooklyn Eagle.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE EAGLE IS SILENCED

The 114-year-old Brooklyn Eagle is the latest victim of an attempt to make labor conditions apply uniformly within an area or an industry without allowance for the individual company's financial ability to meet them.

Although the Eagle was the only daily newspaper in the largest community in America (nearly 3 million residents), it was no match either in size or resources for the seven metropolitan giants across the river in Manhattan. Still, the American Newspaper Guild, representing the paper's news and business office employees, insisted that the Eagle should match the wage pattern set by the Manhattan dailies. In support of that demand, it struck the Eagle 7 weeks ago.

Now the paper's publisher, Frank D. Schroth, has bowed to the inevitable and shut the paper down, throwing 630 people out of work and leaving Brooklyn without a major daily specializing in local coverage.

The passing of the Eagle is tragic, we feel, not only for its effects upon its employees and the community it served but because it follows an ominous trend. We have seen the trend develop in other industries, such as steel and automobiles, where a powerful union imposes the same conditions upon

marginal producers as upon industry leaders. If the marginal producer falls by the way-side, it's tust too bad.

We cannot see what labor has to gain by encouraging the trend toward monopoly situations which must inevitably require Government controls as onerous to labor as to management,

Federal Security Program

EXTENSION OF REMARKS

HON, HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Friday, March 25, 1955

Mr. LEHMAN. Mr. President, recently the Anti-Defamation League of B'nai B'rith, a most respected and responsible organization, issued a statement dealing with the Federal security program.

The statement is so cogent and so compelling that I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Washington, D. C., March 15.—The arithmetic of the Federal security program, showing that in at least 9 out of 10 cases Government workers had been suspended on groundless charges, were cited today by the Anti-Defamation League of B'nai B'rith in testimony urging a total reexamination of the Federal loyalty-security program.

the Federal loyalty-security program.

Appearing before the Subcommittee on Reorganization of the Senate Committee on Government Operations, Judge David A. Rose, of Boston, chairman of the league's civil-rights committee, reported that a survey made by his organization pointed up the unnecessary hardship and heartache resulting from current security procedures.

These could be avoided, he said, if regulations were revised so that it would not be mandatory to suspend an employee against whom formal charges are filed until his case is adjudicated.

He also expressed the opinion that security officers were guilty of passing the buck instead of properly evaluating security cases. Stricter training and qualifications for such officials are needed, he said.

Judge Rose's testimony was in support of Senate Resolution 21 which calls for establishment of a bipartisan commission of Congressmen, administration leaders, and private citizens to review completely the Federal loyalty-security program. He told the subcommittee, of which Senator Hubert Humphrey, Democrat, of Minnesota, is chairman, that "disquiet over the operation of the program makes an independent reexamination almost imperative."

The jurist recited the details of a survey made by ADL among 8 Washington law firms which, he said, have handled more than 450 security cases under the Truman and Eisenhower directives.

"The most striking finding is that these lawyers won more than 90 percent of the cases," he testified. "In other words, in 9 cases out of 10, the formal charges brought by the Government against an employee proved to be groundless. This arithmetic reveals some of the unnecessary hardship and heartache of the security program, because the present policy and practice are that the employee against whom charges are filed must first be suspended.

"In the overwhelming majority of cases, if past experience is a guide, he will ulti-

mately be reinstated with back pay. But that will take an average of 6 months. * * * Meanwhile, the employee will have been severed from his job. A wall of suspicion will have been erected between him and his neighbor and his fellow employees. Demoralization will have set it. Reinstatement with back pay cannot completely undo the damage wrought by the practice of suspending first and hearing afterward."

Judge Rose said there was justification and need for a Federal security program. However, he recommended a workable standard to replace the current principle that a government worker's continued employment must be, as required by the Eisenhower Executive order, "clearly consistent with the interests of national security." He quoted the "unanimous opinion" of the lawyers interviewed by ADL that the existing principle "places too severe a burden on the Government employee."

His criticism of security officers was that "they have failed to stop a thin or hollow case in its tracks, but have preferred to let the issue go to a hearing board for determination.

"We expect a district attorney to have the decency and sense of duty to refuse to take a case to court if it is too thin. We expect a judge to toss out a case without letting it go to the jury if thte evidence has raised no real issue of fact. We should expect no less of security officers," Judge Rose said.

He recommended that security officers be held responsible for passing along "untenable charges" that a preliminary examination or face-to-face meeting with the employee would have exploded.

Changes in the security program which were announced last week by Attorney General Brownell were characterized by Judge Rose as improvements which did not go far enough to remedy "existing injustices and hardships."

"Any security program which confuses honest dissent with disloyalty inflicts grave injustice on loyal Americans and impedes rather than advances the basic objective of protecting the American Government from its external and internal enemies," he said.

Can Small Business Prosper?

EXTENSION OF REMARKS

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES
Friday, March 25, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excellent address entitled "Can Small Business Prosper?" delivered by John W. Douglas, president of the Republic Foil & Metal Mills, Inc., of Danbury, Conn., before the Harvard Business School Club, at Hartford, Conn., on February 16, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CAN SMALL BUSINESS PROSPER? INTRODUCTION

Mr. Patten and gentlemen, under any circumstances it would be a pleasure to meet with you here this evening. However, this is a very special occasion for me since I have always dreamt that I, a Yale man, might have a captive Harvard audience. Of course, the dream did not contemplate discussing

such a dry subject as small business; nevertheless, any port in a storm.

The Small Business Act of 1953 defines a small business as one which is independently owned and operated and which is not dominant in its field of operation. This seems to be as good a definition as any I have seen. I will direct my remarks, however, to typical small industrial corporations as differentiated from partnerships, distributors, and merchandisers whose problems are often substantially different from those of manufacturers.

As a preface to my remarks, I wish to emphasize that I have no ax to grind and advocate no special favors. In short, my objective is the discussion of the broad aspects of industrial problems as they relate to small manufacturers rather than special problems of specific divisions of our economy.

My qualifications-such as they are-for tackling this assignment are primarily derived from practical experience gained in organizing a small aluminum foil rolling mill in 1945 in a highly competitive field and guiding it through a maze of pitfalls until today it is a successful company which enjoys an enviable reputation for quality and service, a steady record of earnings and a sound financial position although producing less than 5 percent of our national output and employing approximately 125 persons.

Our company is typical of thousands who

purchase semifabricated products from suppliers and then compete with these same suppliers in the further processing and sale of fabricated items: I assume, therefore, that our problems are representative to a greater or lesser degree of those of other manufacturers who fit into this broad industrial classification.

It is a well-established fact that the commencement of a business is a hazardous undertaking and at best the chances against success are great. I have often been asked what motivated me to raise a sizable sum of money and start a manufacturing enterprise in the face of such heavy odds. Quite frankly, there were times when I wondered this myself. However, most of us have forgotten that in the afterglow of World War II, the future promised a great big beautiful world of comparatively low taxes and real incentive to risk money. These horizons have since become so shrouded in fog as to discourage the employment of pioneering initiative and risk capital in new manufacturing enterprises. It is this condition which so alarms me and must be corrected if we are to enjoy a sound competitive economic growth.

COMPETITION WITH BIG CORPORATIONS

It is popular to attribute a large share of the blame for small companies' problems to big business monopolies. This is a favorite explanation because it has undeniable political and emotional appeal. However, it has been my experience that the vast majority of large corporations are responsible organizations staffed by able and experienced executives who clearly understand that their selfish interests—if you will—lie in the growth of a healthy competitive economy.

From time to time, there are instances of large corporations exercising their power to destroy small companies either by design or chance. There are also instances of the employment of unethical and irresponsible practices by small companies. Until the Judgment Day, no segment of our industry ever be entirely free from wrongdoing will nor will the degree of bigness or smallness ever establish a just measure of responsibility and the right to do business. Certainly, determination as to whether a corporation constitutes a monopoly should be based upon its record in meeting its obligation to its industry and the public and not upon its size alone.

While mass producers display marked superiority in certain phases of industrial pro-

duction and merchandising, small compa-? taxation. Let us sincerely hope that the nies often offer services, quality, and prices which their large competitors cannot hope to meet. Consequently, the various segments of our industrial society have their own important niches and under normal conditions live together profitably.

THE EFFECTS OF GOVERNMENT POLICIES ON SMALL CORPORATIONS

Where should the principal blame rest for the spreading stagnation of small corporations and the abnormal rash of mergers and acquisitions which are throwing our economy out of balance? The evidence points clearly to Federal policies, laws, and regulations. would be foolish to state that the Government has created this condition by design. However, the planning of the very economists, tax experts, and politicians who claim to champion the rights of the little man, has fostered big government, big business, and big labor unions, who in turn make natural, if quarrelsome, bedfellows.

The Government's basic responsibility is to make equitable laws and to police them. However, commencing in 1933, the Government passed a series of regulations relative to matters normally considered to be within the province of private industry. These regulations disturbed the equilibrium and in turn led to more Government tinkering. They also afforded opportunities for pressure groups, including industries and corporations, to promote their self-interests which further aggravated the condition. Needless to say, World War II served to compound the confusion which the administration did little to unsnarl in the following years.

The result of this policy has been the creation of an unhealthy and unnatural business climate. On top of this condition, the sharply increased tax burdens struck at the very foundations of small business.

THE EXCESS-PROFITS TAX

Taxes, of necessity, attained enormous heights during World War II and remained a sufficiently high level during 1946 through 1949 to discourage the adequate siphoning of risk capital to new manufacturing enterprises. However, it was the reenactment of the excess-profits tax following the start of the Korean war in 1950 which dealt new, small, and marginal corporations a staggering blow. This act was levied at the rate of 30 percent on all corporate earnings in excess of 83 percent of base-period earnings where the base period was the 3 most profitable years for the 4-year period, 1946-49. Special provisions were included to give recognition to new enterprises and the needs of certain others to whom the overall formulas could not be applied. Unfortunately, in most instances, the so-called relief provisions afforded little or no relief.

During World War II, the principles of this form of taxation were demonstrated to be unsound and discriminatory and to work undue hardships on small and growing corporations. Yet within 5 years of its original expiration, the political appeal of the magical misnomer "excess profits" heavily outweighed this knowledge on the part of the administration, Members of Congress, and Government tax advisers. Once passed. Congressmen wept crocodile tears and vigorously concurred to the injustice of the tax. However, it was this tax which was extended 6 months beyond its original expiration date at the insistence of the Secretary of the Treasury in the same breath in which he it "an iniquity as well as an inequity."

Mark Twain is credited with the observation that everyone complains about the weather but no one does anything about it. This seems to have been a reasonable description of Washington's approach to excessprofits legislation. Volumes of testimony and numerous congressional reports have now built an ironclad cause against this form of

Government has at last learned a lesson.

THE EFFECTS OF ACCELERATED DEPRECIATION

Along with the excess-profits-tax provisions and an increase in the taxable base, the Revenue Act of 1950 made provision for accelerated depreciation of facilities constructed or installed to promote defense production through investment of private capital. This amortization was made effective through the issuance of certificates of necessity which permit a company to amortize various percentages of a new facility over a 5-year period instead of over its normal useful life. underlying principle behind certificates of necessity is to expand private industry's productive capacity to meet mobilization goals while holding Government ownership of defense facilities to a minimum. While this objective is undeniably sound, certificates, in many instances, have permitted companies to build facilities applicable for peacetime use on cheap tax dollars. As the law now reads, at the end of the 5-year grace period, these corporations will be penalized by higher taxes because of the accelerated amortization. However, pressures are already mounting in Washington to grant these beneficiaries extended tax relief or additional certificates of necessity for facilities which would normally be built without need for special tax benefits. This can be detected in the growing tendency to stretch the definition of facilities to promote national defense-a broad description under any circumstances.

Below are listed the dollars of certificates authorized 1950 through 1954:

1950 (November-December) _	1, 353, 525, 000
1951	11, 433, 867, 000
1952	12, 639, 496, 000
1953	4, 807, 211, 000
1954	. 1, 823, 877, 000

The total has tapered sharply since the peak in 1952. However, the volume remains considerable.

In addition to defense certificates of necessity, the Government is offering tax amortization certificates to companies who build in labor-surplus areas. This dangerous plan presents endless opportunities for political wirepulling and can compound regional and corporate injustices. It is an intrusion upon State and local rights which will do nothing to bolster the prestige of the Federal Government.

THE DUAL STANDARD OF TAXATION AND ITS RESULTS

The net effect of special tax benefits has been the establishment of a dual standard of taxation-one often applying to large, well-established corporations, the other to new and small companies.

This condition can lead to very serious results. For example, for the past 4 years, some integrated producers of basic raw materials have enjoyed tax rates as much as 20 percent below those of competitors, who, of necessity, may also be customers. The tax advantages and other incentives offered by the Government to increase basic production now tend to discourage new companies from entering competition unless sharp price increases are assured. However, such price increases on basic materials might enable established producers to lower prices of finished products, thereby driving their nonintegrated competitors out of business. Thus the Government has created a Frankenstein monster which presents a real challenge to industry.

THE 1954 TAX ACT

During the 1954 session, Congress introduced several tax reforms, the most important of which are referred to herewith.

1. The law permits more rapid depreciation of assets acquired during 1954 and thereafter and allows more area of choice in computing depreciation of all assets. These provisions will be of considerable aid to growth corporations.

2. Dividend credit provisions take out some of the sting of double taxation and improve the climate for investment capital.

3. Liberalized treatment is provided for net losses, organization, research, and development expenses, accumulation of surplus and

reserves for estimated expenses.

4. The law tightened provisions relating to acquisitions of net-loss companies and closed certain other loopholes. Perhaps this section of the act was inspired by the following advertisement which appeared in the March 6, 1953, edition of the Wall Street Journal:

"Wanted, to buy profit-making corporation, by corporation with \$600,000 tax loss; existing management retained. Write full particulars to Box A-178, the Wall Street Journal."

Whereas these changes are noteworthy steps in the right direction, they are not the final answer. Small business is forced to rely to a very major extent upon retained earnings and depreciation allowances for its capital needs, since the floating of new security issues and borrowing proves very diffi-Under the circumstances, excessive cult. taxation can become a prime weapon of destruction.

Let us look at how lethal that weapon has proved to be since 1950. During the 3-year period of 1951 through 1953, the working capital of all manufacturing companies increased approximately \$6,300,000,000. However, while companies having assets of \$100 million or more added to their working capital by more than \$5 billion, the working capital of those having assets of less than \$1 million shrank by \$550 million. While total assets of manufacturing corporations increased by \$25 billion, assets declined among those having total assets of less than \$1 million. Earned surplus and surplus reserves of all manufacturers increased approximately \$9 billion. Yet those of an asset size of less than \$1 million increased by only \$27 million.

The serious decline in the fortunes of small business can be reversed only through broad tax relief granted promptly. In spite of steadily mounting inflation, the \$25,000 surtax base has remained unchanged since 1950 and is now of inconsequential assistance to any except the smallest companies. Assuming this principle of taxation to be sound, a substantial increase in the surtax base is long overdue and would afford wide relief without discrimination against any group. However, no segment of our corporate economy can absorb 52 percent taxes indefinitely. The administration should not fall in 1956 to make good on its 1952 pledges to reduce corporate taxes.

UNIONS AND SMALL BUSINESS

Another matter which is of grave concern to small business is the rapid trend toward industrywide wage bargaining on a national scale. Nearly all businessmen recognize and accept the fact that unions occupy a vitally important position in our economy. However, investors, the public, and workers have every right to expect the same legal protection against irresponsible, unbridled and monopolistic union practices as they now have against such practices on the part of corporations. Yet very few legal restrictions have been placed upon union activities nor are they subject to the antitrust laws applicable to business.

It goes without saying that mass production groups such as automobiles and basic steel can pay workers more than less mechanized producers. It is equally true that large, well established, and prosperous industries are in a position to pay rates and fringe benefits which might well destroy new and small corporations or marginal producers. However, in spite of the economic facts and democratic principles involved, unions are pressing for labor bargaining on a national scale using industry-crippling strikes as their weapon to club key producers into submission. We need only turn to Europe to see the disastrous results of nationwide politically dominated wage agreements. Government well knows the consequences of unbridled power in the hands of any group. We have every right to expect congressional action to place proper restrictions upon the activities of this segment of our economy.

THE TARIFF AND SMALL BUSINESS

The problems relating to the tariff are highly complex and controversial. Proponents and critics are equally emphatic in their opinions depending upon the effects of international trade upon their interests. We do not have time here to debate the pros and cons of this issue. However, it is worth noting that heavy industry which once was the champion of protection, can now, in many instances, be counted among the strongest supporters of reduced tariffs while industries which have heavy labor costs per sales dollar, including most small businesses, oppose tariff reduction.

It is most unfortunate and may prove very costly that tariff agreements have become an international bargaining medium on the part of the State Department whose past record indicates a certain lack of Yankee shrewdness, ingenuity, and hard-headedness. I feel sure that foreign friendship cannot be bought by gifts and favors. Nor do I believe that industries and corporations should be used as pawns to international agreements. confident that tariff reductions which unduly injure any segment of our domestic economy will be contrary to the best interests of the United States.

Finally, I have noted proposals on the part responsible Government officials to the effect that industries and corporations injured by tariff reductions should be granted special subsidies or tax concessions. represents bureaucratic muddling at it confused worst and doesn't warrant intelligent argument beyond the observation that it typifies the kind of Government thinking which really frightens business.

THE SMALL BUSINESS ADMINISTRATION

Before closing, I wish to mention the Small Business Administration, which was established by act of Congress in July 1953 to assume not only the functions of the de-funct Small Defense Plants Administration and the Reconstruction Finance Corp., but also to offer a broad scope of Government assistance to small business. Whereas I have had no contact with this group, I suspect that Government agencies of this type serve more of a political than a practical purpose. It is my understanding that to date the Small Business Administration has not justified the substantial appropriation allotted for its operation. Whether it will be reconstituted upon its termination date of June 30, 1955, remains doubtful.

Basically, small business must stand on its own feet. Companies which are undercapitalized, lack sound management experience and engineering ability, or enter a marginal field of endeavor should not look to the Government for special favors. is no law which forces a company to start in business. There should be no undue protection against self-inflicted failure.

To summarize, our national economy can be compared to an expensive watch. Tinkering harms its timing, and its value will ultimately be destroyed unless it is repaired by an expert and then permitted to operate smoothly without undue disturbance.

The Government has been tinkering with business for more than 20 years, until we have lost our balance and our sense of values. The time is long overdue for a complete overhaul of tax and other laws for the purpose of reducing inequities and restoring proper balances. This goal can be achieved only by the substitution of vigorous leader-

ship for the jigsaw approach of the past. Such leadership would replenish the confidence needed to encourage risk capital and permit the prosperous growth of small corporations. Washington holds the key to the future.

Destroy Yalta and You Destroy the Possibility of a Free Poland

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. SIEMINSKI. Mr. Speaker, under unanimous consent, printed below is a letter from a friend which might well have been captioned: "Political Pygmies: Destroy Yalta and You Destroy the Possibility of a Free Poland."

In it, American-born, Americanreared George Otlowski, president of the American Publishing Co., of Perth Amboy, N. J., cautions those who had no ideas for victory and who became political giants with their hindsight when the war was won, to study the implications involved in vitiating the Yalta accords. The letter follows:

AMERICAN PUBLISHING CO., INC., Perth Amboy, N. J., March 22, 1955. Hon, ALFRED D. SIEMINSKI,

House of Representatives,

Washington, D. C.

DEAR CONGRESSMAN: For the longest time, in and out of Congress, much was made of the supposed insidiousness of Yalta. There were many Congressmen who used this agreement as a catch-all phrase to get votes in Polish-American districts.

The so-called secret agreements at Yalta were supposed to have sold Poland and the Eastern European countries down the river to communism.

Many Congressmen rode this political horse until it was exhausted the other day by the public revelation of the Yalta agreement.

This so-called secret and insidious document reveals nothing else but the sincere and honest efforts of Roosevelt and Churchill to try to establish a free and independent Poland at Yalta. The fact that Stalin agreed to this document, and after it was signed threw it in a Red barbage can, does not detract from the high purpose of the instrument itself.

If Poland is ever to be free, its freedom will rest upon the Yalta agreement. Destroy Yalta and you destroy the possibility of a free Poland. It's as simple as that. This is what you must tell the Congressmen who used the Yalta agreement as a political subterfuge to try to fool the American people that this agreement was a sellout.

For years these Congressmen were having a good time on a political hayride, mouthing and hollering about this "sellout of democratic countries." Tell them that this was cheap political trickery that has come to its own end now.

They based appeals to the Polish-American voters upon this trickery. Tell them that that will no longer work. These Americans are politically mature and they cannot be fooled by the insinuations that were made about Yalta. The Yalta document can now be read by all.

The Yalta agreement as revealed merely covered four essential points:

1. Russia's entry into the war against

2. Dismemberment and control of Ger-

many.
3. The establishment of a free and independent Poland.

4. The formation of the United Nations.

The fact that the Russian Government never lived up to this agreement does not detract from its high purpose even when it is viewed today, and even though it has been perverted and scuttled by the Communists.

The political pygmies who were quiet during the war and who had no ideas for victory became the political giants with their hind-sight after the war was won as to what should have been done at Yalta. After the war, these same political pygmies would have the American people believe that the war was won, that the Nazi and Japanese war machines were crushed by a series of mistakes, instead of the great leadership that won the war—the leadership represented by Roose-velt and Churchill.

Tell these political pygmies of doom to go back to their holes to fight their small fights, to raise their soiled standards with squabbling and bickering among lesser people—lesser people than Americans, who by their nature have always set their sights for bigger tasks in the full light of the sun. Tell these political pygmies that they have squeezed the Yalta sponge dry. The record now speaks for itself.

America must constantly remind the Russian Government of the promises that they made at Yalta and it must insist that the Russian Government keep these promises to reestablish freedom in Eastern Europe.

Yalta is the instrument by which a free and independent Poland must be resurrected.

The freedom and independence of Eastern Europe rests with Yalta. The free world must be constantly reminded of this and our State Department must constantly strive to have Russia live up to the real and full meaning of Yalta.

Sincerely,

George Otlowski, Publisher, Glos Narodu, American Citizen, Polish American Weekly.

Burley Tobacco Acreage Allotments and Marketing Quotas

SPEECH

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4951) directing a redetermination of the national marketing quota for burley tobacco for the 1955-56 marketing year, and for other purposes.

Mr. ABBITT. Mr. Chairman, for sometime—in fact, since its inception—we have been very proud, indeed, of our tobacco problem. It has worked well because the growers have been willing and anxious to follow the recommendations of the Department as to production. They have acreage allotments and marketing quotas. They have at all times in the burley tobacco, flue-cured tobacco, and dark fired type governed themselves according to the marketing quotas and acreage allotments in line with the recommendations of the Department and because they have kept their supply in line with the needs, the program has

worked well. But for the past several years the production of burley tobacco per acre has increased tremendously. The farmers, by very careful planning and following the advice of experts, have increased their yield. We find that last year, in the fall, when the Department of Agriculture estimated the supply of burley tobacco, they were wrong by a considerable percent. They estimated that we would have a production of approximately 582 million pounds, but when the crop was sold it was actually 670 million pounds. So we find that we now have a carryover of a $3\frac{1}{2}$ -year supply.

Mr. PERKINS. What is the normal

supply?

Mr. ABBITT. Heretofore, before now, the normal supply was 2.6 years; but we find now that the disappearance is not nearly as much as over the 5-year period. Due to our good doctor friends, our ladies, and perhaps some others, not as much tobacco is being consumed now as in the past.

Mr. BURNSIDE. Mr. Chairman, will

the gentleman yield?

Mr. ABBITT. I yield to the gentleman

from West Virginia.

Mr. BURNSIDE. Is it not true that at this time there are 3.5 years' usings based on current levels of disappearance according to the Department of Agriculture 1954 statement—Commodity Stabilization Service, Tobacco Division—which would be seven-tenths of a year above desired level, or 2.8 years.

Mr. ABBITT. That is if you went by the old disappearance formula, but if you go by the true disappearance formula, the actual disappearance formula, you have far more than that on hand. What we have to do is face realities.

Mr. BURNSIDE. The gentleman will recognize that according to the statement of the Department of Agriculture at this time there is seven-tenths of a year's supply on hand?

Mr. ABBITT. Is the gentleman saying that we should not have any reduc-

tion in our tobacco quota?

Mr. BURNSIDE. No. I am basing it on the statement that the Department

of Agriculture has put out.

Mr. ABBITT. I do not controvert what the gentleman says. I would like to know whether he says we should have any reduction?

Mr. BURNSIDE. Yes; I agree with the reduction. As a matter of fact, I agree with every recommendation that the eight State committee reported, but they do not recommend getting under seventenths or six-tenths.

Mr. ABBITT. The gentleman was in favor of increasing the minimum to 1 acre and introduced a bill to that effect.

Mr. BURNSIDE. At one time, that is

Mr. ABBITT. Does the gentleman think that is wrong?

Mr. BURNSIDE. I would like to see it at 1 acre because our small farmers have so little to live on, but we have to face facts.

Mr. ABBITT. I wish we could have $2\frac{1}{2}$ acres or more. What I am saying here is that if we want to continue any program, if we want to have a burley-

tobacco program, if we believe in a farm program, we have to have this bill, in my opinion.

It does a number of things. We find that in the burley-tobacco sections, as well as possibly some other sections, more tobacco is being raised by the farmers than they were allotted. When they sell this excess tobacco, they pay under the present law a 50-percent penalty, but they get credit in their history and in establishing future allotments for this excessive tobacco. So, the Department at the beginning of the year, when they found out that they had underestimated the supply, held meetings in the burleytobacco section and tried to ascertain what could be done to improve the program. They held two such meetings. Then word came to our subcommittee that something needed to be done for the tobacco program. We called a meeting of our subcommittee and called the Department officials down, and they made five recommendations.

One was that the act be amended to permit the Department to make a redetermination of the allotments for 1955. Under the present law, once the allotment has been announced, it cannot be cut. So, if we are to have a redetermination, we have got to have this act, and apparently everybody agrees that we have to have a redetermination if we are going to keep our program.

In addition to that, they recommended that the penalty on excess tobacco be raised from 50 percent to 75 percent. That is in this bill, and apparently everybody agrees on that.

They also recommended that no longer could any excess tobacco harvested be counted in future history. This bill takes care of that, and apparently everybody agrees on those three features.

Now, the controversial provision was explained by our able chairman, who knows the tobacco program so well. In the burley-type program we have minimum allotments. The minimum is seven-tenths of an acre. That means a vast number of growers, when the others take cuts, cannot take any. The Department pointed out to us that this was one of the big problems, and it was suggested by a number of people-as a matter of fact, the majority of those who testified—that we eliminate the minimum acreage-allotment provision. As a matter of compromise, this bill drops the minimum acreage from seventenths of an acre to five-tenths, and that is the controversy.

Now, in addition to that, here is the crux of the matter as I see it. This bill provides that if it goes into law, after the Secretary makes a redetermination of the allotment and after the new allotment has been announced—and, by the way, the bill also limits it to 25 percent—after the allotment has been announced, then the growers are given the privilege and opportunity of voting as to whether or not they will accept the allotment as announced by the Secretary, and with one exception all of the growers that appeared before our subcommittee approved that proposal.

I hope that you will save our tobacco program and go along with the commit-

tee on this bill.

H. R. 12

EXTENSION OF REMARKS OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. HILL. Mr. Speaker, after our Easter recess the House will have before it for consideration H. R. 12, a bill reported out of the Committee on Agriculture, which would rescind the action of the 83d Congress wherein a system of sliding-scale parity was written into the Agriculture Act of 1949, as amended.

The reasons advanced by the majority committee report for taking this action are based on the relatively low level of farm income. Farm costs remain high.

The inconsistency in the reasoning of the majority report accompanying H. R. 12 should be obvious. The restoration of the 90 percent of parity, as H. R. 12 seeks to do, would perpetuate the situation which has led to present difficulties.

No system of supports for agricultural products can operate successfully without accompanying controls. The higher the support the more rigid the controls. We have already seen this type of support program sag of its own weight. Diminishing returns to the farmer, mounting surpluses and continued high cost of food to the consumer have been to a large extent due to the present pricesupport programs.

It is my opinion, Mr. Speaker, that the answer lies not in continued high rigid supports, but in better distribution and merchandising of our farm products to the consuming public which provides the farmer his fair share of the cost of his product without Federal subsidies. A better job of selling can help the farmer. Rigid supports mean rigid production controls and the little farmer is all too often forced to reduce his operation to one of unsound economic practice. The sliding scale of supports adopted last year may not be the complete or final answer, but does it make sense to discard it before it has even had a chance to operate for one crop season?

Mr. Speaker, under unanimous consent, I insert an editorial on this subject from the New York Times of March 13, entitled "Farm Surpluses":

FARM SURPLUSES

The magnitude of the problem faced by Washington in dealing with farm surpluses is revealed in the latest figures on Governmentowned farm products. At the end of 1954 the Government held title to some \$4,230,000,000 worth of farm surplus food and fiber and was incurring a daily bill of \$700,000 to store them. Moreover, there was almost \$3 bil-lion outstanding in farm product loans. Thus more than \$7 billion in Federal funds was committed to the farm price support program and this figure represented an increase of \$1,500,000,000 in 1 year. Put another way, each American had a \$44.50 stake in the farm problem by the end of last year.

The present administration has made

strenuous efforts to reduce the staggering surplus inventory, but so far has been able to dispose of only relatively small amounts. The Government's disposal program has been slowed by the necessity to avoid depressing farm product prices in the world market since this would alienate friendly nations

who must sell their own agricultural products abroad. An attempt is being made to open and to develop new markets for our surpluses, but this at best is a difficult, longrange project. Meanwhile, it is anticipated that the Government will have to take over many of the agricultural products on which it has granted loans, and that its total investment will run to \$9 billion before any leveling off begins.

Clearly, farm surpluses remain one of our major domestic problems. Lower price supports becoming effective this year and increased Government disposal activities should tend to check our mounting storage of crops. However, it is plain that the farm support program will burden the American taxpayer for years to come.

Is There Adequate Medical Training in the United States?

SPEECH OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, February 10, 1955

Mr. SIEMINSKI. Mr. Speaker, when I first came to Congress in 1951, the Korean war was at high tide and one of the first disappointments many of my constituents experienced was their inability, through me, to use the good offices of the House of Representatives to help gain admission for their sons and daughters to out-of-State medical or dental schools. New Jersey had neither. It does now. Therein lies the tale of this talk: "Is there adequate medical training in the United States?" I suggest that my colleagues read the following and judge for themselves:

IS THERE ADEQUATE MEDICAL TRAINING IN THE UNITED STATES?

I. HOW MANY MEDICAL SCHOOLS ARE THERE IN THE UNITED STATES?

1. There are 74 approved medical schools and 6 approved schools of basic medical sciences in the United States, including 1 approved medical school in Puerto Rico.

II. HOW MANY STUDENTS ARE THEY TRAINING?

- 1. Twenty-seven thousand six hundred and five students were enrolled in the country's medical schools and 438 students in schools of basic sciences in 1953-54, making a total of 28,043 persons now preparing to fill the Nation's need for doctors.
- 2. Six thousand eight hundred and sixteen students graduated from medical schools in the United States during the year ending June 30, 1954. However, it is estimated that about 4,000 doctors are lost each year through death and retirement, so that the actual net increase of doctors was only 2,816. III. HOW MANY APPLICATIONS FOR ADMISSION TO MEDICAL SCHOOLS ARE RECEIVED?

1. Fourteen thousand six hundred and seventy-eight individuals applied for admission to American medical schools for the college year of 1953-54.

(a) Forty-three percent of these appli-cants came from 6 States (New York, Pennsylvania, Ohio, Texas, Illinois, and California).

(b) Applicants from the following 7 States (Delaware, Maine, Nevada, New Hampshire, New Mexico, Wyoming) represented only 1.4 percent of all persons submitting applications for admission to our medical schools.

(a) Among these 7 States there is only 1 approved medical school-in Vermont,

2. In contrast, a total of 20,000 individuals applied for admission to American medical schools during the college year 1951-52. This drop in the number of applications reflects three things:

(a) The increasing cost of medical school tuition is pricing thousands of potential medical school students out of the market. (New York University recently raised its medical school tuition to \$1,000 a year.)

(b) The end of eligibility under the GI

bill of rights.

(c) A general feeling among college graduates that it is just too tough to get into medical schools.

IV. HOW MANY OF THESE APPLICANTS WERE ACCEPTED?

- 1. Fifty-three percent of the 14,678 applicants, 7,489, were admitted as freshmen to the medical colleges in the United States in 1953-54.
- (a) 41 percent of all first-year students in 1953-54 in the United States came from the 6 States listed above (New York, Pennsylvania, Ohio, Texas, Illinois, and California) in which are situated 36 percent of the approved medical schools.
- V. WHAT ARE THE DIFFICULTIES ABOUT GAINING ADMISSION TO OUR MEDICAL SCHOOLS?

1. Large numbers of qualified applicants are unable to gain admittance to any medical college in this country because of geographical restrictions.

(a) Thirty-eight percent of the State and municipally owned medical colleges (15 out of 39) restrict enrollment of 1st-year stu-dents to residents of the State in which the school is located.

(b) Twenty-three schools limit the number of out-of-State residents to less than 10 percent of the positions in the entering class. (c) Only 22 schools admit out-of-State

residents in numbers equal to more than 50 percent of the positions in the entering

All but one of these schools is privately supported.

2. As a result of these geographical restric-tions, some medical schools are forced to take nearly everyone who applies, while others can accept only 1 out of every 10 or 15 applicants.

(a) The State medical schools, because of their restrictions against out-of-State students, have fewer applicants than the private medical schools.

(b) Thirty-six percent of all applications (17,434 of 48,586) were made to the 22 schools admitting out-of-State residents to more than 50 percent of the positions in the entering class

(c) Of the 7,489 freshmen admitted to our medical schools in 1953-54, 1,889, or 25 percent of the total, were admitted to these 22

schools.

3. The basic barrier to increasing the number of physicians is actually the limited capacity of our medical schools. This means that the proportion of students who enter medical school has remained almost constant for the past 20 years, whereas the pro-portion who receive a college education has more than quadrupled, and the proportion entering engineering has increased sixfold.

VI. HAS THE NUMBER OF MEDICAL SCHOOL GRAD-UATES INCREASED TO CORRESPOND WITH THE INCREASE IN POPULATION IN THE UNITED

STATES? No.

1. In 1910, there were 4.440 medical school graduates when the United States population was about 92 million.

2. In 1954, there were 6,816 medical school graduates when the estimated population was 160,927,000.

3. In other words, since 1910 the population has increased 75 percent, yet the annual number of medical school graduates has only increased 54.5 percent.

4. Based on the generally accepted ratio of one active doctor for every 750 people, our

net rise in population in 1954 demanded a net increase of 3,333 new doctors, yet our actual net increase of new doctors was only 2,816 in 1954, a deficit of 517 in 1 year alone, excluding any consideration of the existing shortage of some 20,000 doctors.

VII. HOW MANY DOCTORS ARE IN PRACTICE IN THE UNITED STATES?

1. As of December 31, 1953, the total number of physicians in the continental United States was 218,522. This includes: 156,333 engaged in private practice; 6,677 in full-time research and teaching and physicians employed by insurance companies, industries, and health departments; 29,161 interns, residents in hospitals, and physicians engaged in hospital administration; 17,040 in Government services; 9,311 retired or not in practice.

VIII, HOW MANY MORE DOCTORS DO WE NEED TO BRING THE REGIONS OF THE NATION WITH THE LOWEST RATIOS OF PHYSICIANS TO POPULA-TION UP TO THE CURRENT AVERAGE FOR THE NATION?

1. The report made in 1952 by the President's Commission on the Health Needs of the Nation stated that in 1960, in order to bring the regions of the Nation with the present lowest ratios of physicians to population up to the current average for the Nation, it would require 22,000 aditional physicians over and above the predicted supply for that year.

(a) This means that between 1952 (when this estimate was made) and 1960 our existing medical schools must train about 2,750 more physicians per year (or roughly 50-percent more medical-school graduates per year than are currently being graduated yearly in order to have these additional 22,000 badly needed physicians in 1960.

IX. HOW MANY MORE DOCTORS WILL WE NEED BY 1960 FOR REASONABLY COMPREHENSIVE MEDI-CAL CARE FOR THE WHOLE CIVILIAN POPULA-TION?

- 1. The report of the President's Commission on the Health Needs of the Nation, made in 1952, stated that by 1960, the United States will need 30,000 additional physicians over and above the predicted supply for that Year for reasonably comprehensive medical care to the whole civilian population, for the pressing needs of public-health services, industrial medicine, mental and tuberculosis staffs, faculties of medical schools and schools of public health, and to meet all the requirements of the Armed Forces at present mobilization levels. This estimate, however, would still leave the physician-population ratio for the country as a whole well below that which prevails in some sections of the country today.
- M. HOW MANY MORE DOCTORS WOULD WE NEED BY 1960 FOR THE WHOLE NATION TO HAVE THE SAME PHYSICIAN POPULATION RATIO OF NEW ENGLAND AND THE CENTRAL ATLANTIC STATES?
- 1. The report of the President's Commission on the health needs of the Nation, made in 1952, stated that in 1960, in order to bring all regions of the United States up to the average physician-population ratio of New England and the Central Atlantic States, it would require 45,000 additional physicians over and above the predicted supply for that year.

(a) This means that between 1952 (when this estimate was made) and 1960 our existing medical schools must train about 5.625 more physicians per year (or roughly twice as many more medical school graduates per year) than are currently being graduated yearly in order to have these additional 45.000 badly needed physicians in 1960.

MI. HOW MUCH MONEY DO DOCTORS EARN YEAR-LY IN THE UNITED STATES?

1. In 1949 (latest figures available), United States doctors (excluding interns and fulltime teachers) averaged \$11,058 net. General Practitioners of all ages averaged \$8,835.

- 2. In 1950, the average physician earned \$11,538.
- 3. In 1951, the average physician earned \$12,518.
- 4. Among full specialists in independent practice in 1949, the fields in which the largest incomes were made are the following:

Aver	rage net
inco	me, 1949
Neurological surgery	\$28,628
Pathology	22, 284
Gynecology	19, 283
Orthopedic surgery	18,809
Roentgenology-radiology	18, 540
General surgery	17, 765
Obstetrics and gynecology	17, 102
Neurology and psychiatry	16, 476
Urology	16, 370
Cardiology	15, 589

5. Among salaried full specialists in 1949, the fields in which the largest incomes were made are the following:

	erage net ome, 1949
Roentgenology-radiologyPathology	. 11,745
Multiple specialtiesOphthalmology-otolaryngology	. 10,644
Anesthesia Orthopedic surgery	10,034
General surgery	9, 233
Physical medicine	

XII. WHICH ARE THE LARGEST MEDICAL SCHOOLS
IN THE UNITED STATES?

The first 10 medical schools with the largest enrollments for 1953-54 are:

	State	Enroll- ment	Grad- uates
1. University of Tennessee 2. University of Michigan 3. University of Illinois 4. Jafferson Medical College 5. University of Texas, Galveston 6. Indiana University School of Medicine 7. Ohio State University College of Medicine 8. State University of New York, New York City 9. Northwestern University 10. Harvard Medical School	Michigan Illinois Pennsylvania Texas Indiana Ohio New York	750 728 667 666 599 575 575 575 573 533 531	159 155 169 163 132 139 136 131 134

XIII. HOW MANY NEW MEDICAL SCHOOLS HAVE BEEN ESTABLISHED IN THE LAST 20 YEARS IN THE UNITED STATES?

- 1. Only five medical schools have been established since 1935:
- (a) Medical College of Alabama, division of University of Alabama, Birmingham, Ala., established 1943;
- (b) Southwestern Medical Foundation, Dallas, Tex., established 1943, which became a branch of the University of Texas on September 1, 1949, and changed its name to the Southwestern Medical School of the University of Texas.
- (c) University of Washington School of Medicine, Seattle, Wash., established in 1946;
- (d) University of California at Los Angeles, established in 1951, will admit its fourth class in 1954;
- (e) University of Miami School of Medicine, established 1952, will admit its third year class in 1954, and plans to have all 4 years in operation by the fall of 1955.
- 2. There were 1,136 students enrolled in these five medical schools for the year 1953-54. There were only a total of 227 graduates in the year ending June 30, 1954, from the Medical College of Alabama, Southwestern Medical School, and the University of Washington School of Medicine. The University of California at Los Angeles Medical School and the University of Miami School of Medicine have not as yet graduated any medical students.

KIV. ARE ANY NEW MEDICAL SCHOOLS BEING PLANNED?

- 1. If medical-school development plans, as outlined in the Journal of the American Medical Association of September 11, 1954, are carried through, four 4-year medical schools will be added. These new schools would be:
- (a) The Albert Einstein College of Medicine at Yeshiva University anticipates that progress on construction will be sufficiently rapid to permit admission of a first-year class in 1955.
- (b) The University of Florida at Gainesville has received a \$5 million appropriation from the 1953 legislature to develop the medical-science building that will constitute the first unit of the college of medicine. Ac-

cording to current planning, the school will admit its first class in 1956.

- (c) A new medical school—Seton Hall College of Medicine and Dentistry—has just been incorporated in New Jersey. It is hoped that the new college will be ready to accept students for the fall of 1955. This new college will be at the Jersey City Medical Center.
- (d) University of Kentucky's board of trustees has sanctioned the establishment of a medical school in Lexington to cost about \$25 million. This will not get underway constructionwise until about July 1, 1955.
- XV. ARE ANY 2-YEAR SCHOOLS PLANNING TO EX-PAND TO 4-YEAR MEDICAL SCHOOLS?
- The following 2-year schools have plans to expand to 4 years:
- (a) The University of Mississippi is completing the construction program of its new hospital and medical-school building at Jackson. It is anticipated that the first regular third-year class will be registered in the fall of 1955.
- (b) The legislature of Missouri has appropriated \$13,500,000 for the building program now underway at the University of Missouri, and it is hoped that the developmental program will permit the 1953-54 entering class to continue on into its third year of training at the University of Missouri.
- (c) At West Virginia University, planning for their new medical center continues, but no definite date has as yet been advanced for registration of the first third-year class.
- (d) In North Dakota, the legislature has directed that the school of medicine admit a third-year class by 1955, and that a full 4-year program be in operation by 1956.
- It is impossible to predict the number of students who will graduate from these new 4-year schools and the 2-year schools planning to expand to 4-year schools in the next 6 years. For example, the University of Florida at Gainesville will only enroll 50 freshmen. This means a first graduating class of only about 45 doctors. By 1960, when it is estimated we will need at least 22,000 doctors over and above the predicted supply of new doctors graduating each year (about 6,800), most of these schools will have been able to turn out only 1 graduating class toward meeting this deficit.

XVI. HOW MUCH MONEY DO MEDICAL SCHOOLS SPEND EACH YEAR FOR TRAINING NEW DOCTORS?

1. Estimated funds available to our medical schools in 1954-55 totaled \$148,645,201.

Budgeted funds and appropri-\$93, 408, 312 ations_ Funds for miscellaneous proj-4,978,812 ects Research grants from outside 43, 383, 666 agencies_____ Teaching grants from outside agencies_____ 6, 874, 411

Total_____ 148, 645, 201

2. The \$93-million estimated basic budgets of the medical schools represent an average budget of about \$1,167,604 for each of the 80 schools if the money were evenly distributed.

(a) Thirty-eight schools report 1954-55 budgets of over a million dollars; six of the 4-year schools report budgets of less than \$500,000, with one such school having a budget of less than \$400,000.

3. Of the \$93-million estimated basic budgets of the medical schools, about \$18,-182,000, or only 19.5 percent, of the budgets is provided by students' tuition.

XVII. WHAT ARE THE MEDICAL SCHOOLS SPENDING FOR CONSTRUCTION?

1. An estimated \$110,013,846 is budgeted for capital expenditures at the present time for construction and equipment of basic medical science, hospital and clinic, dormitory and other facilities.

(a) During 1953 projects of this nature totaling \$64,115,574 were completed.

- 2. In 1947-48 medical schools estimated a need of about \$330 million for construction of facilities over and above operating-fund needs and research-fund needs. All but 4 schools out of 79 reported a need for additional or improved space.
- 3. The Journal of the American Medical Association of September 11, 1954, states: "Medical schools indicate that large sums are still needed for construction of new buildings, remodeling and modernization of existing facilities, and the purchase and installment of new permanent equipment." XVIII. HAVE THE COSTS OF EDUCATING A DOCTOR INCREASED?
- 1. The average cost of educating one doctor has increased more than 100 percent in the last 20 years, and is estimated today at more than \$13,000. Epoch-making advances in scientific knowledge in the past few decades have made the essential curricula for a medical student much more complicated and costly, as well as a steadily rising cost of living due to inflation.

XIX. HAVE THE TUITION FEES INCREASED FOR MEDICAL STUDENTS?

1. Tuition fees for resident students have increased 62 percent since 1940, and tuition fees for nonresident students have increased 76 percent during the same period. However, they pay only about one-fifth of the cost; and the fees cannot be raised without seriously narrowing the groups from which our future doctors can come.

Average tuition fees for resident students:

1940-41_____ \$391 633 1954-55_____ Average tuition fees for nonresident stu-

MX. WHAT IS THE COST TO A STUDENT FOR A MEDICAL EDUCATION?

1953-54_____

1. The average annual expenditure by a student for 1 year of medical school 1953-54 was \$2,380, a total of about \$9,520 for the entire undergraduate period. included tuition, special fees, equipment, books, and essential living costs.

2. Minimum costs reported averaged approximately \$1,690 per year, or \$6,760 for the entire 4 years.

3. Of the \$3,000 to \$4,500 a year it costs the medical school to educate him, the medical student pays \$600 to \$900 a year in tuition, or about one-fifth of the cost.

XXI. IS THERE A SHORTAGE OF QUALIFIED PER-SONNEL TO FILL TEACHING POSITIONS IN MEDICAL SCHOOLS? TO FILL INTERNSHIPS? TO FILL RESIDENCIES?

1. Yes. Out of 80 schools, for the year 1954-55, there were 258 vacant full-time positions. Of these 258 vacancies, 107 were in basic medical science faculties and 151 were in clinical departments.

2. In 1954, 22 percent of the 10,542 available internships in 844 hospitals were unfilled. This shortage of more than 2,000 interns is a serious crippler of hospital services throughout the county since interns are the backbone of emergency and routine medical services in many hospitals. This shortage poses a serious threat to good patient

3. In 1954, 21 percent of the residency appointments in the various medical specialties were not filled. Of 23,630 approved residencies in internal medicine, surgery, obstretics, pediatrics, etc., 5,011 were not taken. The resident, who takes an average of 2 years training in a specialty after completed his internship, is a valuable and

key part of any hospital staff.
4. The New York Times reports that in their 1952 nationwide survey it was found that "45 percent (of the Nation's medical schools) find it difficult to get a sufficient number of qualified faculty members.'

XXII. ARE THERE SHORTAGES OF NURSES, AUXIL-IARY NURSING WORKERS AND TECHNICIANS?

- 1. Yes. According to latest available figures taken from the 1952 report of the President's Commission on the Health Needs of the Nation, it is estimated that the shortage of nurses for this country as a whole in 1960 may exceed 50,000.
- (a) In 1951, about 27,000 nurses graduated from 3-year programs and less than 2,000 from 4- or 5-year programs which lead to a college degree. The expected supply of nurses in 1960 will not meet the increased demands of new hospitals and expanding community health services, nor will it make up present deficiencies.
- (b) In public hearings before the President's Commission on the Health Needs of the Nation, community leaders pleaded for more nurses to staff their essential health services. Hospital administrators testified to large numbers of wards closed because they cannot obtain nurses to staff the beds. Mental and tuberculosis hospitals need more nurses, public health units are begging for them, industrial health programs suffer for want of them. Nursing schools and nursing education suffer from a lack of qualified teachers.
- 2. There are almost 300,000 auxiliary nursing workers in hospitals, and perhaps another 100,000 elsewhere. The need in 1960 for these workers is estimated at more than 450.000.
- (a) Most auxiliary workers receive poor training. This training should be developed and intensified so that these workers can take over routine housekeeping and bedside tasks to release the graduate nurses to use the special skills in which they have been trained.
- 3. The technician shortage is a serious bottleneck in the provision of medical service. Hospitals in the United States recently reported about 18,000 vacant positions workers in 7 major fields allied to medicine (1. e., laboratory technicians, therapists of all kinds, X-ray technicians, hospital administrators, clinical psychologists, etc.), and an expected need for 35,000 additional workers in these allied fields in another 5 years.

The opening of new hospitals and the increasing demand for more comprehensive medical services will aggravate these deficiencies

4. President Eisenhower in his state of the Union message to Congress on January 7, 1955, stated as one of his medical recommendations: "To reduce the gaps in medical service, I shall propose: New measures to facilitate construction of needed health facilities and help reduce shortages of trained health personnel."

XXIII. DO OUR MEDICAL SCHOOLS NEED FINANCIAL SUPPORT?

1. In a nationwide survey conducted by the New York Times in 1952 it was found that "30 percent of the Nation's medical schools report that they are unable to get sufficient funds to meet their operating budgets."

2. Brig. Gen. James S. Simmons, the late dean of the Harvard School of Public Health, states that the Nation's 10 schools of public health are in a precarious financial position with student tuition fees paying less than 10 percent of the cost of training these students. "The financial plight of these 10 public-health schools is such that their total output of specialists is now only one-fifth of the number needed to operate the Nation's peacetime health program."

3. The medical colleges absorb approximately 30 percent of the total budgets of the universities of which they are a part, although they enroll only 10 percent of the total university population. "Many university trustees are wondering whether they can afford their medical schools," said a recent statement of the National Fund for Medical Education.

4. In 1948, as the result of surveys compiled through the American Medical Association, the Surgeon General's Office and the Association of American Medical Colleges, the National Fund for Medical Education states that the Nation's medical schools had a deficit of \$10 million and that by 1955 the deficit will probably be \$20 million.

(a) The Surgeon General's committee goes even further and states that \$30 million additional was needed (in 1948) in annual income to adequately perform the existing functions of our 79 medical schools, over and above the \$10 million yearly needed to compensate for existing annual deficits actually on the books in red ink.

(b) None of the foregoing takes construction needs into consideration. In 1947-48 medical schools estimated a need of about \$330 million for construction of facilities. over and above operating-fund needs and research-fund needs. All but 4 schools out of 79 reported a need for additional or improved space.

5. Medical-school budgets have already been trimmed to a point where any further reduction would endanger the quality of the product; that is, of medical teaching and research, and eventually of medical practice and medical care. Faculty time per student today is already 7 percent lower than it was 10 years ago; some schools have had to reduce teaching staffs to bare minimums. Current deficits now make it difficult to retain capable faculty members and make needed additions to the faculties impossible to consider.

XXIV. WHAT IS THE MEDICAL PROFESSION DOING TO HELP ITSELF FINANCIALLY IN THE MATTER OF EDUCATION AND TRAINING?

1. The National Fund for Medical Education was founded in 1949 as a central fundraising agency for the Nation's medical schools. From its inception until July 1954, the fund distributed \$6,941,056 to the medical schools. Of this amount, roughly, 45 percent, or a little over \$3 million, was raised by the American Medical Education Foundation (an arm of the American Medical Association).

(a) The \$6,941,056 expenditure by the National Fund for Medical Education represents a per annum average allotment of a little more than \$1 million since the establishment of the fund. This contrasts with the goal of the national fund, which is to provide the medical schools of the Nation with funds approximating \$10 million annually to aid in meeting the operational cost of their educational programs and to the annual deficits of our medical schools Which is estimated to be between \$10 million and \$30 million.

2. This \$10 yearly goal of the national fund includes no funds for construction, research, or scholarships. In January 1954 a sum of \$154,296,214 was requested for the construction of research facilities alone by medical schools, hospitals, and institutions throughout the United States from the National Institutes of Health, United States Public Health Service, Bethesda, Md.

XXV. HOW DOES EXPENDITURE FOR MEDICAL EDUCATION COMPARE WITH MONEY SPENT ELSEWHERE BY THE AMERICAN PEOPLE?

1. In contrast to the \$93,408,312 to be spent for medical education in the academic year 1954-55, the American public spent approximately in 1953; \$5,310,000,000 for tobacco products and smoking supplies; \$377 million for parimutuel net receipts; \$105,960,000 for makeup bases, face powder, and lipsticks; \$96 million for face creams.

Mr. Speaker, we in New Jersey are no strangers to the problem of adequate medical training as my opening remarks and certain research data cited below indicate.

In 1951, during my first term in Congress, I sent letters to every medical school in the United States and Canada on behalf of my constituents and their aspiring young men and women. Letters of regret from the deans of those schools said, in effect, "sorry, we're filled," or, "as our medical school is State controlled We are obliged to accommodate our own cititzens first; sorry."

Data concerning medical or dental schools in New Jersey shows no dental schools in being up to 1954. The first dental school is reported to have been established in December 1954 in Jersey

City by Seton Hall University.

According to the New Jersey History Committee's Outline History of New Jersey, a rival medical society to the New Jersey Medical Society established in 1790 a school at Elizabethtown which was closed in 1807. In addition to this, Queens College, later Rutgers, permitted a school to be opened in New Brunswick, under its charter. This school was attended mostly by New York students and in 1811, when the New York Legislature refused to license its graduates, it closed.

The American Medical Association Directory, 1950, lists the following medical schools as having operated in New Jersey until 1891 when all of their charters Were revoked-why, is not disclosed: Hygieo-Therapeutic College, Bergen Heights; Medical and Surgical College of the State of New Jersey, organized 1838; Livingstone University, Haddonfield; Central University of Medicine and Science, Jersey City.

Then came the 20th century with its three wars. Each stepped up the need for medical and dental doctors and operatives-World War I, World War II, and Korea. In December 1954 Seton Hall University, of New Jersey, established a medical and dental school, open to all, in Jersey City.

In America, we are reared with the spirit of standing on our own feet, to hold our own. As one of the first of the Original Three States to join the Union in 1787, it is fitting and proper that with its new medical and dental school, the State of New Jersey, at long last, can take its place in the ranks of those who can more adequately look after their own, and others, too, if need be.

The below cited article of January 15. 1955, from local New Jersey sources, tells more on this score, and adds, I think, information for the benefit of the House on the question. "Is there adequate medical training in the United States?"

DEAN OF MEDICINE NAMED FOR SETON MEDICAL SCHOOL.

South Orange.-A long-awaited announcement was forthcoming this week when the identity of the dean of medicine in the Seton Hall College of Medicine and Dentistry was announced by Seton Hall University's president, Msgr. John L. McNulty.

Heading up the medical side of New Jersey's first college of medicine and dentistry will be Dr. Charles L. Brown, presently dean of the Hahnemann Medical College, Phila-

The dean of the dental school, according to previous announcement, has also been selected and he is expected to be named in the near future.

Dr. Brown's resignation at Hahnemann will be effective July 1. Prior to that time, he will act as consultant for the Seton Hall

College of Medicine.

Monsignor McNulty identified Dr. Brown as "a man with an unbroken span of over 20 years' experience in medical education with some of the best medical schools in the country. He has," Monsignor McNulty continued, "demonstrated an organizing and administrative ability that could be equaled by few and that has gained for him national recognition as an authority in medical education."

The Seton Hall president said that Dr. Brown will begin right away the determination of admission policy and procedures; the formulation of curricula; the screening of candidates for faculty appointment; and the overall pattern of organization for the Seton Hall College of Medicine.

The new dean will also represent the Seton Hall College of Medicine in consultations on the transformation of the 16-story clinical building in Jersey City Medical Center into a medical education unit with classrooms, laboratories, conference rooms, and library facilities. He plans to take up residence in

Jersey City after July 1.

Dr. Brown received his bachelor of science degree from the University of Oklahoma in 1919 and his doctorate in medicine from the same school in 1921. In 1923 he joined the faculty of the Harvard University Medical School as an instructor in pathology. He participated in a teaching fellowship and served as an instructor in internal medicine at Harvard until 1928 when he joined the faculty of the University of Michigan Medical School as an associate professor of medicine.

In 1935, he left Michigan to become head of the department of medicine at the Temple University Medical School in Philadelphia.

His association with Hahnemann Medical College began in 1946 when he was appointed dean. In 1948 he assumed additional duties as head of the division and the department of medicine at Hahnemann.

Correlative with his experience as a medical educator, Dr. Brown has held many hospital positions. He has been resident pathologist at the Children's Hospital, Boston; chief of the department of medicine, Phila-

delphia General Hospital, and head of the department of medicine, Hahnemann Hos-

pital.

Dr. Brown is a fellow of the American College of Physicians, and a diplomate of the American Board of Internal Medicine. He is a former president of the Philadelphia County Medical Society and received the Strittmatter award from that organization in 1951. In the same year he received an honorary doctor of law degree from Temple University.

As dean of the Seton Hall College of Medicine, Dr. Brown will retain the position of chief consultant in internal medicine to the Chief Medical Director of the Veterans' Ad-

ministration in Washington.

He has contributed many scientific papers to the journals of the profession and is a member of the editorial board of the J. B. Lippincott Publishing Co. He is currently engaged in writing a textbook on medical

treatment in general practice.

The Seton Hall College of Medicine and Dentistry, New Jersey's first, was incorporated on August 6 last year. On August 11 ceremonies marking the formal establish-ment were held in the Medical Center and attended by public officials and prominent educators and professional men. The new medical-dental college received its charter from the State board of education on November 17, and a formal lease for the use of the clinical building was signed by the college on December 11, 1954.

Burley Tobacco Acreage Allotments and Marketing Quotas

SPEECH

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4951) directing a redetermination of the national marketing quota for burley tobacco for the 1955-56 marketing year, and for other purposes.

Mr. BURNSIDE. Mr. Chairman, later shall introduce an amendment that will take care of part of the trouble that we are faced with here.

I have here with me at this time the recommendations from all of the tobacco leaders of the United States. They did not make one single iota of recommendation to cut to five-tenths. They have made some very good recommendations. I want to read them. They are splendid recommendations which come from the leaders of all the tobacco growers of the United States.

This is to the Secretary of Agriculture:

The Eight State Burley Tobacco Committee recommends and respectfully requests you to recommend to the Congress that legislation to be enacted-

A. To discourage production of excess

1. Provide that production of nonquota tobacco shall not give any entitlement to a

2. Provide that excess production by an allotment producer shall result in a penalty of allotment reduction in an amount equal

to the excess production in a prior year.

3. Provide for a civil penalty that will constituteI want to compliment the gentleman for the statements he made a few moments ago. This will do something toward correcting the type of things he wants to see corrected.

Provide for a civil penalty that will constitute a more effective deterrent to excess production.

One of the reasons why we are in this trouble, this serious trouble, is that a few people started taking over excessive amounts of acreage in the last few years by paying the penalty. The farmers realized that so they are increasing the penalty, as is indicated further on in this statement.

a. Increase the penalty on marketing excess tobacco to 75 percent of the previous year's average market price.

That is a very good suggestion.

Mr. FORRESTER. Mr. Chairman, will the gentleman yield?

Mr. BURNSIDE. I yield to the gentleman from Georgia.

Mr. FORRESTER. I would like to ask the gentleman what would be the case if the penalty were 100 percent?

Mr. BURNSIDE. It would be even better.

Mr. FORRESTER. What would that do toward solving the excess-tobacco problem?

Mr. BURNSIDE. It would keep them from taking the penalty for a few years and then going on and producing a large acreage.

Mr. FORRESTER. But would that not materially reduced this surplus tobacco of which the gentleman is speaking?

Mr. BURNSIDE. It would do this. Each year we found a few people dropping tobacco. It would take care of part of it in that way. This is not the whole answer. I will give some other suggestions to take care of the situation,

To improve measurement by statutory provision for it with standards and penalties clearly defined.

One of the troubles we had was actually having overacreage by the old methods, and by improper methods of checking.

Require aerial surveys annually.

That is another way to check it, to see that they will not overproduce.

Eliminate tolerance in calculations of acreage.

That is another way to cut down on it, to eliminate tolerances in calculations of acreage.

Provide for criminal punishment as a misdemeanor of not more than 1 year or not more than \$10,000 or both for willful inaccurate measurement, making the penalty cover the Government employee only.

To amend title 7, United States Code Annotated, section 1315, to establish a minimum allotment of 10 percent rather than 25 percent of the cropland.

This is another way we can cut down this excess. I know some cases where a fellow will plant in his backyard, have a half acre in his backyard in a city or town or village. He is certainly no farmer, but he has been sponging on the farmers. So that, too, will cut down on this acreage.

To provide that whenever there is an increase in quota, the increase shall be shared

only by those having taken a decrease in quota in a prior year until all decreases have been restored. As far as the foreseeable future is concerned, this would benefit only those growers who have taken curtailments within the past two crop years, but, in any event, every segment of the industry ought to recognize that restoration of cuts should be shared only by those who have suffered cuts until original quotas have been fully restored.

To authorize the Secretary of Agriculture to redetermine and set marketing quotas for 1955.

This is respectfully submitted by the Eight-State Burley Tobacco Committee, and is signed by John M. Barry, chairman

Mr. Chairman, I call attention to this fact, which many of you do not realize, that 1,850 farmers, that is, five-tenths of 1 percent of them, produced 27,500 acres of tobacco. That is more acreage than the gentleman from Ohio has in the entire State of Ohio. That is more acreage than the gentleman from Virginia has in his entire acreage. That is more acreage than the gentleman from North Carolina has in his entire acreage, just in that five-tenths of 1 percent of the tobacco farmers about as many acres as all of these States put together.

Listen to these figures. They are startling when you start to look into them, when you start crying about these big tobacco farmers that have over 100 acres, when we are worrying about five-tenths, so a man can buy his food and his clothes.

From 20 to 50 acres, there are 400 of them, and that is only one-tenth in percentage of the tobacco farmers, and they produce 14,000 acres, more than the entire State of Ohio, more than the entire State of West Virginia, and many of the other States like Georgia, Arkansas, and all those thrown in together.

Three one-thousandths, mind you, produce 1,500 acres of tobacco. One farmer with about 350 acres, 9 other farmers with over 100 acres of tobacco. And then we cry crocodile tears about some of these big boys.

I want to tell you this: It is not their tenants they are worrying about, because in the last few years—and I have gone through the tobacco country for a number of years—they have been consolidating and telling their tenants to go find a job somewhere else in some city. They have been concentrating these acreages.

I am reading from the official tobacco report that I got from Mr. WATTS.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. BURNSIDE. I yield.

Mr. COOLEY. The gentleman made a statement that there were 1,000 farmers in America farming 100 acres of burley tobacco.

Mr. BURNSIDE. No; if I made that statement it is in error.

Mr. COOLEY. That is what the gentleman said. I have it right here on this paper.

Mr. BURNSIDE. There are 1,850 tobacco farmers, five-tenths of 1 percent of the farmers, that produced 27,550 acres.

Mr. COOLEY. The gentleman said there were 1,000 farmers who had 100 acres of burley tobacco each. Mr. BURNSIDE. If I said that, I am mistaken. But I did say this, and I will repeat it again if the gentleman will permit me to go on. I will explain it to you again and I am glad to go over it because I want the Members of Congress to know what is happening under this law.

Mr. COOLEY. Will not the gentleman yield for a correction? According to the paper which has been handed to me, there are only 10 in the United States.

Mr. BURNSIDE. I will go back over it and I will state further that if I made a mistake, I will be glad for it to be corrected. I will give you this information. One tobacco farmer produced about 350 acres. Then 9, I think I used the figure 9, others which represents only three one-thousandths of the tobacco farmers who produced 1,500 acres of tobacco. That is the statement I thought I made.

Mr. COOLEY. I know the gentleman wants to be fair. Do you not know that no one man cultivates that tobacco, but that it is divided among the tenant farmers and this would be putting the tenant farmerers out on the road.

Mr. BURNSIDE. If the gentleman will wait just a moment, I will explain that situation. You know and I know that due to new methods, they have been reducing the number of tenant farmers and sending the others to the cities. I know it because I have seen it. I have seen it happen over and over again.

Mr. COOLEY. How many acres of tobacco do you think one man can cultivate and harvest?

Mr. BURNSIDE. At least 8 or 9 acres. Mr. COOLEY. Well, then, they must be better in West Virginia than they are down in North Carolina.

Mr. BURNSIDE. They are much better because of these modern methods. As a matter of fact, they have a new method of catching the tobacco bugs which produce the worms. They are using a sonic method to catch the tobacco bugs. You know that and I know that. That was a source of great trouble a few years ago to the tobacco farmers and required a tremendous amount of labor.

But let us go on with these questions. Here is the problem that we are facing. I want to read to you a telegram which I received from the tobacco farmers of West Virginia:

March 21, 1955, the burley tobacco growers of West Virginia are opposed to reducing minimum allotments below seven-tenths of an acre. We fear that program will be voted out in referendum if minimum is reduced. Red-card tobacco creation surplus. Your support requested.

All of you in the other tobacco programs do not want to see it voted out, and they tell me positively they are going to vote it out. They have met this week and they say they are going to vote it out.

This telegram is signed by Clayton Stanley, secretary of the West Virginia Burley Tobacco Grower's Association. I want to say, the gentleman who signed it produces 1.4 acres and he will be cut, and he knows it is necessary to keep from cutting the lower producing farmer. Why? Because they would have these mountain farmers, as you have had the other small farmers, living on less than \$300 per year.

About Taxes

EXTENSION OF REMARKS

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the New Era, of Reading, Pa., which is the official publication of Conference of Eastern Pennsylvania Central Labor Unions, AFL:

ABOUT TAXES

Could you use a \$20 tax cut?

The Republicans say you are irresponsible for answering "Yes," even though stockholders got theirs last year in the omnibus taxrevision bill.

What makes a \$20 cut for workers irresponsible when a more liberal reduction for stock-

holders was not irresponsible?

Marriner Eccles, former Chairman of the Federal Reserve Board, says that an extra \$20 in every consumer's hands would go a long way toward a healthy growth of our economy.

Eccles believes it would help the little fellow by stimulating economic consumption and thus creating more jobs to make more

goods to fill up the shelves.

Unfortunately, the Republican philosophy is that things are in good shape just as long as big business makes money, stockholders are well taken care of, and unemployment is maintained at a normal rate of between three and five million.

And make no mistake about this—despite his deceptive smile and flowery speeches, President Eisenhower is just as guilty as the rest of his party for penalizing the "little guy" to maintain prosperity for the big campaign contributors on top of the heap.

It's about time that the President is forced to accept his responsibility. And even more important—it's about time the daily press of America instructs its reporters in Washington to ask the same sharp questions they used to put to President Truman and Roosevelt. The days of pussyfooting and sheltering of President Eisenhower should now end and truth in reporting once more should return to the "free press."

The truth in this tax issue is that Democrats actually beat President Eisenhower to the punch by insisting the people get a break his year—instead of next year—as the President

dent planned.

Wrapped up in the picture, of course, is the time-honored trickle-down theory on which the Republican actionaries hold a patent. It is a variation of the Charles "Bird Dog" Wilson theme that what's good for General Motors is good for the country.

Workers are supposed to look up to the big brass of the Republican regime and bask in the benevolence of their paternalistic rule, thankful to grab the crumbs thrown them

under the table.

It is interesting to note that while the administration boasts of the Nation's good economic health, the Republican barometer of prosperity, namely the stock market, has plummeted sharply in the past week just because a couple of Senators asked a few questions in public about market operations.

True, this decline could be caused by any number of factors, but it gives support to the theory that administration economic and fiscal policies have enhanced the role of manipulators and speculators at the expense of the great mass of workers.

From where we sit, and viewing present trends from a perspective of the great GOP depression, it makes much more sense to give a \$20 tax relief to a consumer who will spend it than to reserve such a tax relief for stockholders who will gamble with it.

History is on the side of those asking for the \$20 tax cut to stimulate consumer spending. President Eisenhower and his administration would do well not to ignore this precedent.

"Simplified" Income Tax Forms

EXTENSION OF REMARKS

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial by Mr. Elmer Price, in the Lincoln County (Oreg.) Leader:

"SIMPLIFIED" INCOME TAX FORMS

A low, sullen murmur of desperation is

spre: ling cross country.

It is rising from citizens who have carefully digested the phrase: "After reading these instructions you should be able to prepare your own return," and spent futile hours grappling with the new "simplified" income-tax forms.

Despite all the propaganda regarding their simplicity, the new tax forms seem to many to be far more complicated (if that is possible) and more exasperating than any in the past.

From every section of the country this

criticism is being heard.

And all of this, too, after so-called experts spent months working out an incometax return which they finally described as so simple and easy that any moron could handle it.

Someone the other day had what is probably a good suggestion: it was an amendment to the tax laws which would require every Member of Congress to prepare his own return without any outside help whatsoever, and that every other year, his wife be required to take over the job—without help.

While undoubtedly many in Congress do make out their own returns, most of them are as incapable as you and I of understanding all of the malarky and legal phraseology which get into such things. It might help the situation as quickly as anything we can think of at the present.

The Late John W. Davis

SPEECH

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. BAILEY. Mr. Speaker, speaking for myself and the Members of the West Virginia delegation and I am sure every living West Virginian, I should like to say that we deeply appreciate the very fine remarks of the distinguished gentleman from Virginia [Mr. Tuck].

Mr. Speaker, at this time I ask permission to revise and extend my remarks, because there is very much more that I

would like to say in tribute to one of the greatest West Virginians, and certainly one of the outstanding Americans of the past century.

The SPEAKER. Without objection, it

is so ordered.

There is no objection.

Burley Tobacco Acreage Allotment and Marketing Quo'

SPEECH

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4951) directing a redetermination of the national marketing quota for burley tobacco for the 1955-56 marketing year, and for other purposes.

Mr. BAILEY. Mr. Chairman, I move to strike out the requisite number of

words.

Mr. Chairman, you will recall that some 2 or 3 days ago this same question came up under suspension of the rules of the House for action, which was refused. So my colleague from West Virginia and the gentleman from Ohio who has just addressed you and others who are interested in the distribution of allotment acreage of burley tobacco really have a problem. It was enough of a problem to prevent the suspension of the rules. Now we are here trying to improve it in the form of an adjustment, in the form of an amendment. I understand that the gentleman from Tennessee will follow the amendment of the gentleman from West Virginia [Mr. BURNSIDE] should it lose, with another amendment proposing to fix the minimum acreage at six-tenths of an acre.

There was no reason why there could not have been, and I thought there was to be, a compromise here so that this floor fight could have been avoided. Now, if we cannot have seven-tenths of an acre minimum base, then we will be willing to take six-tenths, since the argument is that we have to have a reduction and it must apply to all categories in the burley field. We feel that the seven-tenths existing minimum is the deadline below which no reduction should be made, because these little fellows, let me say to you, my colleagues, are the fellows that have been struggling along with this small allotment.

Let me remind you that today no State in the Union is in worse economic condition than the State of West Virginia. In our State the big industry is coal, and it is practically dead. We have no income, and you are proposing to reduce the income of some 2,000 or 3,000, maybe 2,400, small tobacco growers in this same area where the Government is already feeding 75 percent of the people with surplus food.

Nothing should be done that would further reduce the income of the peo-

ple in that section.

Appendix

A National Highway Program

EXTENSION OF REMARKS

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. CASE of South Dakota. Mr. President, I ask unanimous cosnent to have printed in the Appendix of the Record an address I made at the 53d annual convention of the American Road Builders, at New Orleans, La., on January 12, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ROADS AT HAND AND ROADS AHEAD

Mr. Chairman, President Reindollar, President-elect Robertson, my colleagues of the Congress, and ladies and gentlemen, it is a privilege to be here to attend the 53d annual convention of this great organization and to participate in its deliberations. We may at this gathering point out some deficiencies in our highways, we may lament the slowness of progress in some respects, we may set our sights on new goals for national achievement, but the solid fact is that no other large nation on the face of the earth today has as many miles of good roads as the United States of America.

The credit for this must go in large measure to the enterprise and the resourcefulness of those who comprise the American Road Builders Association. You represent the individuals and the firms and the research institutions who comprise the American Roadbuilders Association. You who are here today represent those who have met the problems of highway construction and licked them. You bring to congressional hearings the lessons of experience. You show us how we may write into legislation practical ways to meet the ambitions of the American people. Your chairman, Mr. Steelman, was overgenerous in his introduction of me. Actually, any contribution that I may have made during the course of legislative consideration either of the Highway Act of 1954 or of some prior highway act when I was a Member of the House of Representatives and on the Appropriations Committee there or as a member of the Committee on Public Works and its Subcommittee on Roads before I became chairman during the last session-any contributions I may have made have been due to some suggestion that I got from somebody else, and in many instances from members of the American Road Bullders Association.

So, I say, you have shown us how to write into legislation practical ways to meet the ambitions and the needs of the American people. And it is a privilege to attend your 53d annual convention in New Orleans, one of the distinctive cities of America, and one of the great cities of the world.

The Public Works Committee of the Senate, as Senator Dennis Chavez, of New Mexico, so well said yesterday, is a nonpolitical committee. We have had the benefit of great leadership during my membership on that committee. During the first 2 years I was

in the Senate, Senator Chavez, himself, was the chairman of the committee. During the past 2 years Senator EDWARD MARTIN, of Pennsylvania, has been chairman. both great Americans and they have conducted the deliberations of the committee on a nonpolitical basis. We tried to find out what America needed in roadbuilding, what it needed in rivers and harbors development, and addressed our efforts to that end, regardless of any particular political implications that any action might have. Speaking here in behalf of what is now the minority membership of the Senate Committee on Public Works and the Committee on Roads, I want you to understand that I am sure the tasks of the coming year will be tackled in the same nonpartisan fashion. In acknowledging the help you have given in our congressional hearings, I want to express special thanks for the factual and informational data submitted by your executive vice president, Lt. Gen. Eugene Reybold, at the hearings of the Senate Committee on Public Roads in 1952 and of Bob Reindollar at the hearings of the Senate Public Works Subcommittee on Roads in 1954. I would be remiss if I did not, speaking to your organization, say "Thank you" to all of you.

And I would be remiss, also, if I did not tell you that throughout the congressional year, we have been helped by the aids of your organization. I understand they prefer to be kept in anonymity but, nevertheless, I really would like to mention all of their names. These aids of yours are in touch with the people on Capitol Hill and are always ready to supply us with the latest data on highway matters from the construction standpoint.

My topic for this morning is "Roads at Hand and Roads Ahead." Under the first part of it, I wish briefly to set forth the intent of Congress, as nearly as I know it, in the Federal Highway Act of 1954 with special reference to some new features in that legislation. Under the second part of the topic, "Roads Ahead," I shall review in brief detail the recommendations of the President's special committee, the report which General Clay presented to the President only yesterday. I sat in with other members of the roads committees on a preview of the report last Friday night.

First, then, "Roads at Hand"—the special features of the Federal Highway Act of 1954. This is the law under which Federal funds will be available for highway programs in the 2 fiscal years of 1956 and 1957, the first of which begins next July 1.

Foremost is the fact that this Act, for the first time in Federal highway legislation, makes available for highway purposes an amount in dollars substantially equal to the amount of revenue expected to be collected in the same period of time from the Federal tax on gasoline and lubricating oils. This does not include the revenue in excise taxes on automobiles or accessories which more nearly compare with the excise taxes on other articles one may purchase.

The total amount provided for the primary, secondary, urban, and interstate systems in this new act was \$875 million for each year compared with \$575 million per year in the prior biennium. That increase of \$300 million on a \$575 million base was a very substantial increase, over 52 percent in fact.

The amount of \$22½ million for forest highways, \$24 million, for forest roads and trails, \$12½ million for roads and trails in the national parks, \$11 million for parkways, \$10 million for Indian roads and trails, \$1 million for public-lands roads, and other amounts for the inter-American highway and for research and financing studies lifted the grand total so close to \$1 billion that the act was properly characterized by the President, as a billion-dollar road bill, or as your chairman here this morning perhaps more accurately describes it, a \$2 billion bill for the biennium.

We did something else, too, in dealing with these roads of Uncle Sam, the roads and highways in national forests, national parks, and national reservations. And these are given a little extra mention, because I think in the general thinking of highway systems we haven't realized the way in which those roads fit into the national system and the way also in which the roads in our parks and recreational areas in keeping with the suggestion that 50 percent of our traffic is for recreational purposes-those people who are out for recreational purposes will appreciate these recreational features of the highways as they drive along, but in many instances they are headed for one of the national playgrounds. And so what we do for the highways in those national playgrounds is important. Now, for the first time in this act, we propose to give the Federal Government itself as good a deal as we have been giving the States; that is, the right to count on the amount of money which the legislative hearings established was what was needed in a proper distribution of highway funds.

For many years, the biennial highway act has been made the basis for allotment to the States and has been regarded as a commitment so that the several State legislatures could count on those amounts and plan their revenue gathering and allocations accordingly. But, prior to the present, the figures for the national forests roads and trails—not highways but the roads and trails—and for the national parks and the Indian reservations have been only top limit authorizations and there has been a woeful lag in the actual appropriations.

Testimony taken in our Senate hearings last spring established that this lag in the 8 years from 1947 to 1954 for the National Park Service amounted to \$70 million-that is, that much was authorized that was not appropriated-and almost \$20 million for the Indian Bureau. We established that appropriations for the roads in the national parks were running at an average of about million a year against a standing authorization in the legislative act of \$10 million. The appropriation for the fiscal year 1951 for the National Park Service was \$21/2 million. That year, the park visitors exceeded 40 million people but the amount of money was less than it was in the thirties when the visitors were half as many. For fiscal 1953 and 1954 the appropriations for roads in the parks was in the \$4 million-class against the \$10 million in authorizations although park visitation the last few years has gone up to 45 million per year.

In this connection we developed some interesting figures on maintenance. I suppose these figures on maintenance might have other applications, too. But, it was costing the National Park Service \$1,571 per mile to maintain the old south approach

road in Yellowstone Park on the old bituminous surface against only \$202 on the new sections of bituminous. In the Shenandoah National Park, maintenance on the old bituminous sections was running \$1.443 per mile against \$163 on the new sections.

Our committee could not ignore the implications of such testimony. We decided that the Federal agencies responsible for maintaining the Government's own property should have the same assurance to count on the figures in the highway act that the States had on their partnership roads. So the Senate committee wrote into section 6 of the 1954 act contract authority for the amounts in the bill. The House conferees concurred in our action. And I might say that we did the unusual thing of making this provision applicable to the authorization of the current 1955 fiscal year as well as the blennium ahead of 1956 and 1957, so that today the Forest Service for its roads and trails fund, the Park Service for its roads and trails and parkways, and the Indian Service for its reservation roads now have this new authority, and each one is now engaged in programing roads which will permit them to make real progress in meeting their construction responsibilities. And, to a group which represents the road contractors, I suggest that you let the different agencies know that they now have contract authority to go ahead with the amounts described in the highway authorization act.

I have dwelt on this section of the bill a bit more, perhaps, than is proportionate to the total picture, because it has been a neglected one. We dld not feature it in our presentation to the Senate, and I doubt that many people throughout the industry have been fully aware of the significance of this establishment of this contract authority on these minor highway-fund allotments.

But, in the long sweep of highway planning, and I was particularly glad that Mr. Neill emphasized that in his remarks this morning, the roads and the highways of our national recreational grounds have great importance. The American people like to They head for those playgrounds. They travel thousands and thousands of miles to get there-and it is important that when they get there they find decent roads to travel. All the way that they travel they pay some gasoline-tax revenues, too, and of course, they create part of the traffic problem on the highways in getting there. Your appreciation of the Tetons in South Yellowstone can be marred considerably if you have to bounce around on pitted blacktop. And your vision of some spouting gesyer is not helped by viewing it through a cloud of gravel dust.

The big increase of funding, however, in the 1954 act was the stepup in the Federal-aid system—from \$550 million for the primary, secondary, and urban to \$700 million per year and in the interstate from a simple \$25 million to \$175 million—the two increases amounting to the \$300 million increases on the \$575 million base that has been previously mentioned.

These increases were not accomplished by accident. I, personally, had introduced a bill, S. 2859, a few days before the so-called administration bill was introduced in the House. My bill called for \$1 billion, \$2 million for each of the 2 fiscal years as compared with the \$887 million in the bill introduced and subsequently passed in the House of Representatives.

Now, I think I should say to this association that your spokesmen in their testimony before the House and again before the Senate said that the lesser amount was not adequate and I think I should say that your testimony helped to establish the increase which the Senate committee reported and which the Senate approved. In conference, some adjustments were made, but still the final total

was close to the billion dollar figure and justified the statements that Congress was providing a sum approximating the amount collected in Federal taxes on highway fuels—and that that represents an increase of approximately 50 percent over the prior biennium.

I may have stressed the figures involved more than you expected, but there is a special significance to them. It is this: that the amounts set up in the 1954 Highway Act for primary and secondary systems are the amounts which the President's Special Commission headed by General Clay now has adopted and proposes to use as the base for those purposes in the new program to be submitted to the Congress. Had the old base been continued in the last Congress, it is entirely possible that that would have been the base for the continuing regular primary and secondary systems in the Clay report. We set a new mark and that has been used as the new base.

One other feature of the 1954 act before I turn to "Roads Ahead." That is the provision for the interstate system. The interstate system and the urban system are, of course, really selected segments of the primary system. That is from the standpoint of physical construction.

The congressional committees were not insensible to the many witnesses we had who urged larger allocations for those highly expensive portions of the primary system—the high standard routes of particular importance in the national defense, often described as the strategic network, and the routes through or around cities, the urban system. Your organization pointed out the great importance of these roads. So did the representatives of the Association of State Highway Officials, the American Municipal Association, the American Automobile Association and many others.

And the committees responded. The House bill proposed stepping up from \$25 million to an even \$200 million. The Senate committee reported \$150 million, six times the previous amount. We settled on the midway figure of \$175 million, a 600 percent increase.

At the same time, we provided that the share of the Federal Government would be 60 percent as against 40 percent for the State contribution. Now, that was not with the thought of reducing the total amount of roads built but rather because we recognized the very practical problem that in most States the mileage on the interstate system is less than the mileage on the other system. A great many people live on the other systems, in the small towns and in the smaller cities and in the country. Each State high-way authority feels a great deal of pressure to complete their roads, too. When the people see a larger amount per mile put on the segments of the interstate system, which frequently are the better roads of the State. it makes it difficult for the State highway authorities to justify taking the larger amount that is necessary to meet the standards of construction for the interstate system and leave somebody's pet project neglected. And, so, in order to create a justification for the State highway authoritics to put some money in the interstate system, we proposed that 60-40 base. Now that principal has been recognized to an even greater degree in the recommendations the President's Advisory Committee. This discussion of the interstate system leads directly to the second part of the topic, "Roads Ahead."

In 1953 I had suggested that we have a joint congressional study of highway needs and highway financing. The House committee, however, had a study of its own under way. I believe that your organization testified at its hearings. Some of us felt, however, that we needed more than a general hearing

on highway construction, that we needed to have the benefit of detailed study by experts in the field of construction, design, financing and related subjects; that we needed to consider completing the systems and getting caught up with the growing demands. We felt we should not merely build today for what we see today but build so that when we got through with a project or route we would have met the needs that existed when we started and also the needs that had come into being during the period of construction.

So, the Senate wrote into the 1954 act this section incorporating the language I suggested, to which your chairman has alluded, section 13. I am going to read it—it is not very long:

"Sec. 13. The Secretary of Commerce is authorized and directed to make a comprehensive study of all phases of highway financing, including a study of the costs of completing the several systems of highways in the several States and of the progress and feasibility of toll roads with particular attention to the possible effects of such toll roads upon the Federal-aid highway programs, and coordination thereof, and to make a report of his findings including recommendations with respect to Federal participation in toll roads, to be submitted to the Congress not later than February 1, 1955: Provided, That not to exceed \$100,000 from funds available for administrative expenses shall be expended for the purposes of this section."

In his letter yesterday, formally presenting the report of the Special Advisory Committee to President Eisenhower, the chairman, Gen. Lucius Clay, wrote: "Early in 1955 the Bureau of Public Roads, pursuant to a directive of Congress (that is, sec. 13) will submit a comprehensive report on its current study of highway needs and financing. The estimates used by this committee (that is, the estimate used by the Clay committee) have been based upon preliminary tabulations of data by the Bureau, and hence no major inconsistencies are anticipated."

In other words, it is anticipated that the recommendations for roadbuilding in the reports of the Clay committee submitted yesterday will fit into the findings of need that will be submitted to the Congress in the report of the Bureau of Public Roads under the directive cited. And the fact that the Clay committee's recommendations grow out of the estimates of needs and costs made by the Bureau of Public Roads suggests, I think, the degree of support which the recommendations of the committee wil have from governmental sources, at least as to goals.

Now, the President's Advisory Committee's recommendations are buttressed also by their own hearings in the White House on October 7 and 8, 1954, and by the work of the Conference of Governors and their committee and by studies of an interagency committee representing the several Cabinet departments.

To the features of the committee's recommendations, I want to give a very brief outline:

First, from the data compiled by the Bureau under the study directed by section 13 of the 1954 act, the President's Advisory Committee estimates that \$101 billion would be required to complete all highway systems. Federal, State, and county and be current at the end of 10 years. I have heard some discussion and there is some confusion about the set of different figures, \$101 billion, \$50 billion, \$25 billion. The \$101 billion figures is the figure which the committee finds would be necessary to complete all the systems and be current at the end of 10 years,

Second. The Committee finds that if the present levels of expenditure were continued, \$47 billion of this \$101 billion would be provided, thus leaving a gap of \$54 billion. Now.

that \$47 billion would embrace a continuation of the present Federal aid program at the level cited in the 1954 act, plus the State and local, plus the existing toll authorities and whatever other programs are in the picture at the present time. Thus, \$47 billion of the \$101 billion would be provided by continuing the present program but that leaves a gap of \$54 billion. The Committee would concur in the recommendations of the governors' committee that the Federal Government provide 30 percent of this \$54 billion with States and local governments or road authorities taking the other 70 percent.

Third. The Clay Committee specifically recommends that the Federal Government take over and complete the presently designated national system of interstate highway system of approximately 38,000 miles at a cost of \$27 billion, of which the Federal Government would supply \$25 billion and others \$2 billion. In reality, this would be \$23 billion direct Federal and \$4 billion equally divided to handle urban connections, That is, \$23 billion for the general system would be provided directly by the Federal Government, \$4 billion of the \$27 billion was estimated as what would be required for the urban connections and that would be on a matching basis. That is where the \$2 billion out of the \$27 billion comes. Twenty-three billions dollars plus \$4 billion, the \$4 billion divided by 2 for Federal and local sharing.

Fourth. The Committee recommends that the Federal share of the interstate system be financed through bonds issued by a National Highway Corporation to be retired in 30 years, by annual appropriations of an amount equal to the proceeds from the gasoline tax and the revenue from the Federal tax on lubricating oils. This amount, the Commit-tee specifically states—and General Clay emphasized this in talking with us Friday night-this amount, the equivalent of the Federal tax on gasoline and the tax on lubricating oil, should be sufficient with the increase that they anticipate as the highways are constructed, should be sufficient to maintain the level of appropriations established in the 1954 Highway Act for the regular pri-mary and secondary aid systems, as well as \$75 million for the continuation of the urban system and adequate amounts for the public domain lands as well as to provide for the retirement of bonds in 30 years.

Fifth. The President's Committee further specifically proposes that the Federal Highway Corporation reimburse the States any seguments of the interstate system built to acceptable standards since 1947, whether free roads or toll, to the extent of the non-Federal participation; and that this reimbursement money be available for use by the State to build what might be called lieu roads elsewhere in the State on whatever part of the State's system State law might provide.

This reimbursement money, however, would be available only if the State was keeping up its regular matching program on other systems. That is, as it was explained to us, it would not be the intent that a State might sit back and say: "We'll take this money you are going to pay back to us and then ease up on our own appropriations." The State would have to keep up its regular matching program but if it did and if it had segments of the interstate system that were built to acceptable standards, Whether it was a continuation of a part of a toll system or a freeway, the State would get the reimbursement for that.

I might say further in explanation, General Clay pointed out that would not mean the discontinuance of the Federal aid or the discontinuance of the tolls. His Committee is suggesting that we accept those roads that are in being if they meet the standards of

the interstate system.

Thus, to treat all alike, the Federal Government through this Federal Highway Cor-

poration would stand ready to reimburse the States for the acceptable portions of the interstate system that it had built to acceptable standards since 1947, whether toll or free, and that that money paid for them would be available for the State to spend on building lieu roads. I use the term "lieu roads" because out in our State we have what we called lieu land. Sections 16 and 36 in each township of our State are dedicated as school lands but there were some sections which were homesteaded and taken up before that provision in the State enabling act was adopted. To make up for those, we set aside some other land and called it lieu lands. Well, these would be lieu roads. In place of the money that had been spent on the interstate system up to date the State would get back this money for building lieu roads. That is, would get back the non-Federal portion of the cost of the portion accepted for the interstate system.

Sixth. The Federal Government under this plan would provide 90 percent of the costs of rights-of-way on the interstate system and would use, or make available, its power of eminent domain to acquire rightsof-way if the State is lacking in such authority, that is, for the interstate system. Seventh. The interstate system would

be programed for completion in 10 years, that is by 1965, and designed to fully meet traffic needs of 1975 and constructed to last

through 1985-a 30-year life.

Eighth. The committee proposes—when I say committee, I mean the Clay committee the committee proposes that the bonds be subscribed to by the Treasury, if necessary, to a \$5 billion limit; but General Clay said that the committee was of the opinion, following their consultations with investment bankers, that the bonds would sell in the market; especially so if the long terms were offered at one-eighth percent over the regular governments and the short term at onequarter above.

Now, that is the picture as I understand it from hastily skimming through the preliminary draft of the committee's report and from the discussion General Clay had with members of the roads committees last Friday night. If some of you should have questions and if there is an opportunity for discussion later on, I'll be glad to answer them. if I can-but I think I have told you about all I know about it.

But, it is to be remembered that there are details that will have to be worked out in congressional hearings-and, as one of the speakers said yesterday, others may propose, but, in the final analysis, Congress disposes.

Personally, I agree with what Senator CHAVEZ and Congressmen Fallon and Mc-GREGOR have already said in suggesting that your roads committees in Congress will give a sympathetic hearing to this proposal or to any proposal to enable the country to meet increasing traffic demands. Deaths of 38,000 per year, many of them avoidable on properly designed highways are too many. That is over 100 every day of the year. And of course, the casualties of disabling and painful accidents are about four times that much. We must do all we can to meet the economic and humanitarian needs of modern travel.

I do see, I think, some hurdles that must be met by the President's Committee.

One big hurdle will be to demonstrate that the completion of the interstate system will not delay or interfere with the building of the badly needed roads on the primary, secondary, and urban systems that are not a part of the designated interstate routes.

There are two answers likely to be offered to this question: First, that relieving the States of matching on the interstate will release funds for construction of the other systems; second, that the reimbursement for funds already spent will make possible some "lieu" roads in some neglected sections.

These provisions are very important. In my State, for instance, we permit refunds of the State gasoline tax to farmers for the portion of their gas that is used off the highway-that is, in tractors for plowing, harvesting, etc., the nonhighway use. Now, in my State, that happens to amount to 29 percent of the revenue we receive in the State gasoline tax. You know and I know what the farmers would think about continuing the Federal gas tax at the 2-cent level which is not refundable in any degree if they thought the purpose was only to build a superhighway a hundred miles away. Or the residents of towns and cities not on the interstate route. It will be the job of Congress, I think, to write the provision for these "lieu" roads clearly into the legislation as well as to make clear that the funds otherwise released from matching on the interstate system will be used for completing other systems if public acceptance is to be won for this expediting of the interstate system.

Mr. Chairman and delegates to this convention, in conclusion may I say again that it has been a privilege to talk with you on this subject of "Roads at Hand and Roads Ahead." You truly are a group of builders— "Roads at Hand and Roads roadbuilders. There is the whole thrill of America at its best in the tasks you under-

I'd like to leave with you these lines by Edwin Markham:

"We men of earth have here the stuff Of Paradise-we have enough. We need no other stones to build The Temple of the Unfulfilled-Here on the paths of every day, Here on the common, human way Is all the stuff the gods would take To build a Heaven, to mold and make New Edens. Ours the task sublime To build Eternity in Time."

And, so I salute you, the roadbuilders of America.

Invitations by Soviet Russia To Hold Conferences

EXTENSION OF REMARKS OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES Monday, March 28, 1955

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Dear Mr. Dulles," written by Father Ralph Gorman, C. P., and published in the Sign magazine for January 1955.

I completely agree with the suggestion in the editorial that the United States should never enter into any conference with the Soviet leaders in a defensive state of mind. We should always begin by asking them to explain the things which are wrong with Soviet policy in the satellite states, the slavelabor camps, and other areas where their policy of human slavery appears at its worst.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEAR MR. DULLES

No doubt you could call this an open letter, but I'd rather not, as I don't like the term. Usually an open letter is written by someone who has a grouch on about someone or something and puts it in the papers for everybody to read. I don't agree with everything you've done as Secretary of State, but in general I think you've done a very good job in very difficult circumstances.

I don't know how you feel about it, but you must be awfully tired of getting invitations from the Russians to have a conference. You know they're not sincere. You know they don't want to settle anything. They're just playing to the galleries. They're covering up their evil tracks. They want to sound off about how they're a great, peace-loving people, always willing to sit down at a con-ference table to settle all difficulties, and we're a bunch of warmongers bent on starting world war III.

You know even better than I do that, while Americans laugh off this propaganda, there are a lot of people who listen to it and believe it. Just as a few samples, there are the Bevanites in England, the neutralists in France, the left-wing Socialists in Italy, the followers of Nehru in India, some of the Social Democrats in Western Germany, and a lot of ordinary people everywhere. They a lot of ordinary people everywhere. They swallow it crude, just as the Reds spoon it

Now, I hope you won't think I'm being funny when I say you ought to go in for this conference business and in a big way. think you ought to come out for bigger and better conferences. Instead of sitting down there in Washington waiting for an invitation from the Reds, why not send them In fact, why not send them one every month or so? And when you send them the invitation, send one to all other nations so they'll all know how conference-minded you are. And release it to all the papers and news agencies so all the world will know how willing you are to sit down and talk to

Of course, you'll have to suggest something to talk about. Well, I can offer a lot of topics, and you can think up a great many

As a starter, why not offer to discuss what's happened to the three Baltic States-Latvia, Estonia, and Lithuania? We still recognize them as independent democratic Republics, but we haven't heard anything about them lately.

And here are a few questions that ought to be raised. Are the satellite states really independent? Why do the Reds talk peace and then go out and shoot down our planes without warning and without provocation? What about the Siberian slave-labor camps where upward of ten to fifteen million prisoners are worked and frozen to death? might even ask whether the people of Russia want their present rulers, or are they all enslaved? If they want peace, why do the Russians build up such a terrific military establishment in aggressive weapons that the rest of the world has to leave peaceful pursuits and arm itself in self-defense?

I could go on and on, but why bother? You know the list of possible subjects better than I do.

I know the Russians won't accept your invitations. But that isn't the point. It really doesn't matter if they don't. We'll be stealing their propaganda fire away from them. We'll be putting them on the defense. be showing them up before the rest of the world. We'll be getting some good out of the U. N., which the Reds have almost taken over as a propaganda medium.

And think of all the fun we'd have in the bargain. I'd just love to hear the answers they'd give to such invitations. Maybe they wouldn't even answer, but I'd get a chuckle anyway thinking of the squirming they'd do.

So I conclude, Mr. Dulles, with the suggestion that you get right to work sending out the invitations. I think it might even be well to begin by announcing your complete conversion to the Red idea of bigger and better conferences. In fact, you might even declare that the new slogan for the State Department under your administration will be "Let's have a conference."

Sincerely yours,
FATHER RALPH GORMAN, C. P.

A Tribute to George Meany

EXTENSION OF REMARKS OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I should like to have entered in the RECORD an article appearing in the Catholic Standard of Friday, March 25, 1955. It announces the recipient of the annual Laetare medal awarded by the University of Notre Dame. It is most fitting that the award this year went to George Meany, president of the A. F. of L., and prospective president of the mergered A. F. of L. and CIO unions.

Those of us familiar with the honor attached to such an award cannot help but be assured that a most important segment of our national economy is under the leadership of a man who has achieved the peak of his profession.

The article follows:

UNION HEAD GEORGE MEANY IS LAETARE MEDAL WINNER

Notre Dame, Ind.-George Meany, president of the American Federation of Labor, was named recipient of the University of Notre Dame's 1955 Laetare Medal.

Mr. Meany, who is slated to head the 15 million-member labor organization resulting from the all but assured merger of the F. of L. and the CIO, is the first labor leader to receive the annual award since it was first given in 1883.

The Lactare Medal is awarded each year to a man or woman whose genius has enobled the arts and sciences, illustrated the ideals of the church, and enriched the heritage of humanity. While the recipient is announced on Laetare Sunday—an occasion for joy in mid-Lent in the liturgy of the church-formal presentation of the medal is arranged for a time and place convenient to the win-

In announcing the choice of the veteran union AFL leader as 1955 Laetare medalist, Father Theodore M. Hesburgh, C. S. C., Notre Dame president, declared:

"For more than 20 years in which he has exercised local, State, and national leader-ship, George Meany has exemplified the ability and integrity of a labor statesman. He has opposed those who would debauch the dignity of the working man. With equal vigor he has combated those who would subvert America's free enterprise system. His substantial contributions to the welfare of workers, to the orderly development of trade unionism, and to the fostering of concord among employers and unions, while at the same time remaining steadfast in the tenets of his faith, have prompted the University of Notre Dame to confer upon him the highest honor within its power to bestow on a Catholic layman.

Mr. Meany, the son of a New York plumber and himself a plumber by trade, joins a

list of distinguished citizens who have received the Lactare medal. Jefferson Caf-fery, who recently retired as United States Ambassador to Egypt, received the award last year. Other recent recipients include Thomas E. Murray, member of the Atomic Energy Commission; actress Irene Dunne, and Gen. J. Lawton Collins, former Army Chief of Staff.

The 1955 medalist succeeded the late William Green as head of the AFL in 1952. One of the founders of the anti-Communist International Confederation of Free Trade Unions in 1949, Mr. Meany came up through the ranks of the AFL plumbers' union and became president of the New York State Federation of Labor in 1934. During World War II he served for 3 years on the National War Labor Board.

In 1919, Mr. Meany married the former Eugenia A. McMahon. They have 3 daughters and 2 grandchildren. The Meany family live in Bethesda.

Country Music

EXTENSION OF REMARKS OF

HON. ARTHUR WINSTEAD

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. WINSTEAD. Mr. Speaker, on March 3 I introduced House Joint Resolution 245, which provides for the designation of the 26th day of May of each year, beginning with the year 1955, as National Country Music Day.

On May 26 of the past 2 years Jimmie Rodgers memorial celebrations were held at Meridian, Miss., in commemoration of the contribution made to country, hillbilly, and folk music by the late Jimmie Rodgers-known as the blue yodeler and America's singing brake-The date, May 26, has been man. chosen for the annual celebrations because it is the anniversary of his death.

Many thousand visitors have attended the past two celebrations and it is expected that all past attendance records will be broken this year.

Past programs have presented a long list of the Nation's top country, hillbilly and folk music singers and artists. Performers of equal ability and prominence are expected to participate in this year's celebration.

At the celebrations held in the past, prominent leaders in the entertainment, railroad, governmental, labor and political world have taken an active part. Governors White of Mississippi and Clement of Tennessee and other high State officials have actively joined in these celebrations. The feature speaker at last year's memorial celebration was Adlai E. Stevenson. Mr. W. P. Kennedy, Cleveland, Ohio, president of the Brotherhood of Railroad Trainmen, has taken a deep interest in these celebrations and has appeared on the program for the past 2 years. Other notables of the Nation's labor world have contributed much toward making the past celebrations events of unqualified success.

From all indications, this year's Jimmie Rodgers memorial celebration

promises to be even more successful than the two previous ones.

Mr. James H. Skewes, editor and publisher of the Meridian Star, together with capable members of his staff have played a great part in making these past events so successful.

Many of the people of the city of Meridian and the State of Mississippi are justifiably proud that the late Jimmie Rodgers was the inspiration of this annual celebration.

I think it was fitting, in recognition of his contribution to country, hillbilly and folk music that a statue was dedicated in Meridian, Miss., to the memory of its native son, James Charles Rodgers, on the 20th anniversary of his death, May 26, 1953. He was universally known as Jimmie Rodgers, the blue yodeler and America's singing brakeman. He was a pioneer in that type music that has built an industry out of hillbilly, or country music

At 14. Jimmie Rodgers became a railroad man, assistant foreman to his father. His first job was on a work train, but soon he had a regular run on the New Orleans & Northeastern, from Meridian to New Orleans. He had always wanted to sing, but lacked confidence. The railroad crews heartily enjoyed his rollicking ballads of the railroads, his plaintive crooning of plantation melodies, and the songs of hills and rivers. He was a railroad man-and a minstrel. During 1917 and 1918, Jimmie served his country by doing what was required of all railroad men, attending to his trainman's duties. The casualty of one of his best friends during World War I caused him to write his first composition, a sentimental song. From the first his railroad buddies liked the song and so did the young fellows in Meri-

In the spring of 1920 Jimmie Rodgers had a siege of pneumonia and for 3 months in the autumn of 1924, he struggled desperately to overcome tuberculosis. The following years, he and his Wife, Carrie Williamson Rodgers, fought against poverty and the ravages of tuberculosis. In May 1927, the Jimmie Rodgers Entertainers broadcast over a new radio station, WWNC, from Asheville, N. C. By strange coincidence the officials of a large recording company tuned in on the new station and hearing Jimmie Rodgers, they found a natural, His local popularity increased, but later he was truly discovered in Bristol, Tenn., by a Victor record scout, who was searching the hills for talent. Still battling tuberculosis, Jimmie Rodgers began a career that was fabulous even in the Phonograph industry. It is estimated that the blues yodel records sold over 5 million copies.

Jimmie Rodgers left a mark on all hillbilly music. He has been recognized for the simplicity of his accomplishments. His songs dealt with real problems. They came from the heart and the people responded.

Jimmie Rodgers' obituary in the Meridian Star stated that he was an honorary member of the Texas Rangers, a Mason, and a Shriner, but perhaps his

closest ties of friendship always cherished by him and frequently referred to in many of the songs of his original composition, were found within the ranks of the railroad men of the Meridian section with whom he served as railroad brakeman before entering upon his professional career, and from whom the active pallbearers were selected. The singing brakeman died in New York City where he had gone 3 weeks prior to his death to make recordings. Under the care of a fulltime nurse, he believed himself able to make further contributions to the development of country music in America.

The demands for hillbilly music have continued to multiply since Jimmie Rodgers made his first recording, and some state as much as fivefold since World War II. Ten years ago, if a hillbilly record sold 10,000 copies, it was a hit; today a 50,000 sale is mediocre. These tunes continue to come from the plains, the prairies, and the hills. Once a specialty product marketed mainly in the deep South, hillbilly music has a nationwide sales field. With the war, hillbilly, or country music, quickly came out of the hills. Many of our large training camps were in the South. The GI's who might never have been exposed to this music heard it constantly. They liked it—and brought the songs home with them. Postwar shifts in population helped spread it, and disc jockeys followed through and gave country music to a widening audience. It all tied in with a trend toward simpler songs-and nothing is simpler than country music.

Back in 1930 country singers started going highly commercial when Gene Autry's popularity began. Following him came a long procession of names, including Hank Williams, George Morgan, Red Foley, Ernest Tubb, Roy Acuff, Jimmy Wakely, Eddy Arnold, and others. The home of the Grand Ole Opry has become known as the Broadway of country music.

Roy Acuff has said:

If you aren's a country boy, you can't write or sing country music. It is simplicity of our songs, I guess. More than that, it is something in here—something in the heart.

The question has been asked: What kind of music is it? It has never been definitely named. Hillbilly or country music comes near. There are many who believe history will write it down as the true American music. Writers of this type music, like Fred Rose, say theirs is the music of a people who may not know the mathematics of a Wagnerian opera or a Brahms symphony, but they know what it is to hear the sound of songs like those that Jimmie Rodgers wrote and sang: Old Pal of My Heart, The Land of My Boyhood Dreams, Mississippi Moon, Waiting for a Train, and so on. These songs tell a story and touch the heart of country and city folks alike.

Mississippi can be truly called a musical State, if one judges by it singing folk, rather than by the number of its symphony orchestras. Living close to the soil, they have retained the lore, the customs, and the songs of their ancestors. The songs of the railroad, the riv-

er, and the field are a part of our heritage. Jimmie Rodgers helped to maintain that heritage, not only for the State of Mississippi but for all home-loving Americans.

My resolution is as follows:

Resolved, etc., That the 26th day of May of each year, begining with the year 1955 is hereby designated as National Country Music Day, in recognition of the contribution made to American music lore by the writers, singers, and players of country music.

The following is a clipping from the March 20, 1955, issue of the Meridian Star, Meridian, Miss., with reference to the coming Jimmie Rodgers Memorial Celebration:

IN AND ROUND MERIDIAN
(By C. H. Phillips)

The third annual observance of the Jimmie Rodgers memorial celebration in Meridian carries an appeal linked to the dreams and aspirations of millions of people in all the 48, well-evidenced by the attendance of many thousands of visitors in our town in 1953 and in 1954. There seems to be little or no doubt but that country music, in and of itself, expreseses the yearnings for peace and security so paramount now in the minds of America's teeming masses. So be it * * * In a literal sense, folk in our town have won, and sustained thus far, an achievement without a parallel in United States history. With the help of such folk and institutions as Ernest Tubb, Hank Snow, Ralph Peer, Roy Acuff, Jimmie Davis, Horace Logan, Louisiana Hayride, Grand Ole Opry, The Billboard, Country Song Roundup, Norm Silver, Cash Box, Pickin' and Singin', Bill Alexander and Steve Sholes and others of RCA-Victor, Governor Frank Clement of Tennessee, Governor Hugh White and Lt. Gov. Carroll Gartin of Mississippi, Dan Collins, Adiai Stevenson of Illinois, Railroad Train-man President W. P. Kennedy, Minnie Pearl, Eddie Hill, Red Foley, Congressman ARTHUR WINSTEAD, Senators John Stennis and Jim EASTLAND, Congresman JAMIE WHITTEN, Jas H. Skewes, R. D. Hendon and his band, Hank Thompson, Hill and Range Songs. Meridian and Bigbee Railroad (The M & B donated the big engine honoring Rodgers on Tom Bailey drive), and hundreds of other artists, we have set a stage of permanence for tremendous American folk-song potential . . This column today expresses appreciation to all, for the contributions already made to this magnificent movement * * Likewise, it is proper that we here and now dedicate ourselves to an expression of thanks to Dizzy Dean and to Falstaff folk who are bringing him here as part of our coming observation which falls, as it were, on National Country Music Day, May 26, likewise the day in 1933 when America's great "Blue Yodeler" into immortality * * * Meridian passed folk, and those in all Mississippi, also will be interested to know, in re the coming show, that the Philip Morris people are going to give it every possible break. It may be that Tennessee Ernie will be a top-guest this year. But, in any event, we do know the Philip Morris folk, in the light of the truth that good will is the one asset competition can neither undersell nor destroy, are going to give national public plugs to celebration. Hence, once more, due thanks to Falstaff and to Philip Morris for assistance that will not be forgotten * * * In the premises, the 1955 program ought to set the final groundwork for a continued Jimmie Rodgers Memorial Celebration in national sense * * In the face of this national attention, it is our hope that we, in our town and in Mississippi, will live up to a tremendous bit of obligation. Let us make all of the coming visitors feel at home. And actually be at home. Informally, of course.

Metropolitan Opera

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by Rudolf Bing, general manager of the Metropolitan Opera Association, before the National Press Club of Washington, D. C., Friday, March 25, 1955:

Gentlemen, I feel greatly honored to have been asked to address members of the National Press Club in Washington, all the more as I understand that this distinction is usually reserved for statesmen, diplomats, and generals returning from battle. I presume that I may be counted in the last-named category, because I can assure you, gentlemen, that running an opera company is nothing less than a battle; a battle every day, a battle every hour, and a battle in particular whenever the annual budget comes up for discussion.

Since it is my privilege to have been entrusted with the destinies of the leading opera company in the United States, while both by background and by early experience I am a European, I must hasten to add that opera is an uphill fight anywhere in the world. I have often found in discussions with Americans that there is a widespread feeling that over there in Europe everything in the operatic field is just sweetness and light, no problems ever arise and the manager blissfully rests on a bed of roses.

A lovely pipedream, gentlemen, but I am afraid nothing more than that. Indeed, many of the most crucial problems of operatic life are as prevalent in Europe as they are here, although it is true that there are some specific and particularly difficult problems inherent in American operatic life which are either unknown to opera in Europe or, at least, known only to a much lesser degree. I will today attempt to outline some of these peculiarly American facets of operatic life and at the same time try to contrast them with the situation as it exists in countries such as Italy, Austria, Germany, and France.

Perhaps in trying to organize the vast material under review I should begin by dividing it into two basic problems which face any operatic manager: artistic and economic. Yet, no sooner have I said this than I feel tempted to withdraw it because it occurs to me how inextricably these two problems are interlinked. There is hardly any artistic problem that does not at the same time present an economic one and, on the other hand, there are few economic decisions made in any theater that are not somehow reflected in artistic results.

The extremely close interconnection between matters artistic and economic becomes evidence at once when we take a brief glance at the operatic picture across the United States. Here is what we see: One important and permanent company-the Metropolitan in New York-and even that one is permanent only in a relative way since we play in New York from mid-November to mid-April and then we go on tour until the end of May, which means that even the Metropolitan Opera is active only during 7 months of the year. The other opera companies in the United States play for much shorter periods than that: San Francisco and the recently revived Chicago opera for 5 to 7 weeks per year, the New York City Center for 2 short 5-week seasons in the spring and in the fall, a few other professional companies such as those in Cincinnati, San Antonio, New Orleans, and some others whose annual seasons rarely exceed half a dozen performances. To this we must add a couple of traveling companies and of course the large body of operatic activity in schools, colleges, and universities which, however—while extremely important in terms of the operatic future—are not pertinent to the subject of my present consideration which is largely devoted to the professional operatic activity.

Now, in what way does this overall picture, which as you will allow is by no means a luxurious one, highlight the interrelation between opera and money? Well, in a very simple way. Opera is by definition a moneylosing and therefore a noncommercial ven-I hear it often said that only in recent decades has the ever-increasing cost of production caused this disproportion between money taken in and money spent in an opera house. This, I submit, is entirely untrue. In fact, with very rare and almost freakish exceptions, opera has never paid its way and, as far as I can see, never will. It always amuses me when people ask whether by any chance I am for subsidy: I say I am amused because people who ask me that obviously try to make me skate on thin ice, since as foreigner in this country I ought not to discuss so controversial a subject as subsidy for the arts. However, I am perfectly willing to state my opinion on the question of subsidies: as far as opera is concerned, I can truthfully say that there has never been any kind of operatic activity of substantial proportions that has been able to exist without subsidies. How so? Very simply this way: if you produce something which costs \$15 to produce but all that you can get into your till by selling it is \$10 then you operate on a deficit and if you are able to continue operating somebody must make up for that deficit. And whoever does, subsidizes you. I claim, gentlemen, that the Metropolitan Opera of New York today is-and indeed always has been-subsidized; subsidized by its friends who are generous enough and love opera sufficiently up for these deficits. So you see, there is a very simple way of avoiding this allegedly ticklish question; for subsidy does not have to be Government subsidy.

On the other hand, one cannot deny that it is government subsidy that has kept operatic culture in Europe going for centuries and indeed that without it none of the great opera centers such as La Scala, the Vienna Staatsoper, Covent Garden, and all the others could exist. Let me quote a few examples. In West Germany alone there are today at least 50 opera houses in action, every single one of them subsidized either by the state or by the civic authorities or by a combination of the two, as for instance, to switch to Italy for a moment, the famous La Scala in Milan.

Just as a matter of further illustration, the west Berlin opera, subsidized by the senate of that city, draws an annual amount of a little over 4 million marks or approximately the equivalent of \$1 million, which, by the way, is almost exactly the amount the Scala Milan receives. Covent Garden in London, according to figures published by the Arts Council of Great Britain, receives an annual subsidy from the treasury which in American currency amounts to approximately \$700,000. Mind you, I have no intention of skating over that thin ice which I mentioned earlier and please do not think that I have come here to speak in behalf of government subsidy for opera in the United States. But one simply cannot avoid touching on this subject if one wishes to compare the operatio pictures in Europe and in America.

The Metropolitan Opera's operatic deficit for last season was about \$350,000. Of course, as you know, the Metropolitan in common

with every European opera house, enjoys tax exemption. Beyond the invaluable and indeed lifesaving exemption from the entertainment tax, the Metropolitan Opera Association has no kind of guaranteed subsidy: the only assistance we get, as I mentioned earlier, consists of donations by the public—individuals, organizations, and funds raised by groups allied with our company such as the Metropolitan Opera Guild and the Metropolitan's National Council.

A strange and often disheartening feature of our operatic picture lies in the fact that, while there is in the United States today an enormous wealth of operatic talent, there are so desperately few places where an opera singer can employ his or her talents. I go to Europe every summer and for many weeks, during which I do a great deal of traveling. I hear all kinds of singers both in perform-There are, of course, ance and in audition. still a respectable number of first-rate singers to be found in Europe who, growing up there, enjoy the inestimable benefit of a great tradition. But I do not mind stating that with very few exceptions everyone of them can be matched by an American talent. But where are those young American singers to test and develop their talents? What is the

answer to their quandary? I wish I knew. Within the present-day operatic picture here only a regrettably small number of them can make a living as professional performers in opera. True, television has offered a few additional possibilities, yet really not too many. Since as the mass medium par excellence television must at all times address itself to the greatest number, it has not as yet given to opera more than a cursory glance, for obviously opera is not as yet an attraction like Peter Pan that can deliver 60 million viewers in front of the television sets. Then there is an increasing number of more or less staged concert performances of opera, and this, in the absence of opera houses, is fine but again it is a stopgap, not a solution. It is certainly no solution for a young American singer who wants to be in opera but also must make a living. You can easily see that an occasional appearance in television opera and a few infrequent engagements to sing in a concert performance of opera are not enough by a long shot for a young singer to get along.
Of these singers, the Metropolitan can

absorb an exceedingly small number, especially since most of them, by definition, are beginners and the Metropolitan is really not a training ground where beginners can or should acquire their experience. Our stage ought to be reserved for mature artists but since, on the other hand, young singers can acquire artistic maturity only by performing before the public, in many parts, again and again, the question arises—where can they gain that experience? That question remains largely unanswered. In recent years, an increasing number of young American singers have found employment in Europe but of course chances there are limited toc. especially to foreigners. And then when those singers have spent a few years in an opera house, say in Germany, have gained the necessary experience, they come back to the United States and I am afraid 9 out of 10 will remain as unemployed as they were

If this looks like a rather discouraging picture for an ambitious American opera aspirant, this same picture—in which the absence of opera companies in this country is so prominent—in a curious fashion also aggravates the economic difficulties of the Metropolitan. Let me explain.

One of the reasons why the cost of running the Metropolitan is so high lies in the fact that we do have, and must have, a considerable number of what we call principal artists: in fact, we do have over 90 of them. Sometimes I am asked—why so many, especially when a tally at the end of the season quite

clearly shows that some of these singers do not appear in too many performances. The answer is simple. Whenever the curtain goes up in an opera house there must be two casts available: the one that sings and another one that doesn't sing but must be either in the theater or within quick reach, in case the singer of the first cast is suddenly ill or otherwise prevented from performing. It is easy enough to see that this is a heavy burden but one which, under present circumstances in the United States, cannot be avoided. This again is very different under European conditions. Let us say, for example, that I am in charge of the Berlin opera and that in the morning the tenor scheduled to sing that evening calls me up and assures me that he has a bad cold and cannot possibly sing tonight. Well, I go to the telephone, I will call my colleagues in the opera houses of Hamburg, Bremen, Leipzig. Dresden and a few others, all of which are less than an hour's flight away. In one of these I will find a tenor who knows the part, who is not busy tonight and who doesn't even have a coud. He will fly to Berlin. No need to elaborate on this further: any operatic manager who has this kind of reservoir within his reach does not need to have as full a company of solo singers as the Metropolitan.

Gentlemen, I am sure you will agree that I am making my point as regards the close interrelation between art and money in the opera house. The need to work with, as it were, both eyes constantly glued on the box office creates yet one more difficulty, and a very serious one at that. I am now referring to the choice of repertoire. Operatic publics everywhere are notoriously-and I add, depressingly-conservative, unenterprising and incurious. Most opera lovers love Only what they know by heart and one might almost say of them that unfamiliarity breeds contempt. All they ever want to hear are the Travlatas, the Aldas, the Carmens, and the Bohemes. What is a manager to do? If he knows what is good for him economically, he will bow to these rather narrowminded wishes of his audience, but if he does he will certainly betray his artistic misslon and in the long run his audiences will dry up at the roots. We all remember that that great perennial favorite, Carmen, was a flop when it first appeared on the Paris stage-and this is only one example. Nowhere does the battle between finances and art rage more bitterly than in the field of the repertoire. I personally have always felt that money should be the servant rather than the master of art, but maybe this is nothing more than an old-fashioned way of Wishful thinking. The fact remains that all too many of our artistic decisions today are dictated by material rather than by ideal consideration.

I must say it amuses me, although in a wry fashion, when I am blamed for presenting such unimaginative, old-fashioned programs to cities that the Metropolitan visits on its tour. What these critics do not know or, if they do know, conveniently choose to Overlook is that very often the local program is not chosen by the Metropolitan Opera management but rather by local committees, that the often staggering lack of adequate stage facilities prevents our putting the most important point—the stubborn conservatism of opera-going publics everywhere; it is only natural that any local committee or manager, faced with the inevitably enormous cost of importing the Metropolitan, must be eager to sell out the house which can be done With the standard works only-and let no one tell you differently. Our books are there to prove my case. We play certain cities where we can sell out such works as Carmen or Boheme to 10,000 people in one evening; yet when in some of these cities we played great but less well known works, such

as Mussorgsky's Borls Godunov or Verdi's La Forza del Destino, tickets went begging by the hundreds, not to say by the thousands.

This, may I suggest to you, is by far the worst aspect of this indissoluble marriage between art and finances. Once again, however, to be quite fair about it, I should add that this regrettable situation does by no means exist in this country alone. If anyone tells you that the operatic audiences of Milan, Paris or Vienna are only waiting to hear new works and are rushing to the box office whenever Stravinsky is performed, you can tell them-with my regards-that such is not What is the case is simply that a theater that has a guaranteed government subsidy has not only the possibility but indeed the obligation to present contemporary works and also the less popular works of the recognized masters.

Of course, gentlemen, an excellent point could be made for the thesis that despite all these overwhelming difficulties which our Government-unsubsidized opera life in this country has to face, we have not been doing too badly. I hear it often said by visitors from abroad that quite frequently one can see performances at the Metropolitan in a production and with a cast that could not be matched let alone be surpassed anywhere in the world today.

The topic of opera is a complex and complicated one. I hope I have given you some idea of the present operatic situation in the United States; if I have, you will agree with me that the field is strewn with question marks, and it would take more than an expert to find the answers.

Now in trying to sum up, maybe I should offer my own opinion as to how opera might develop in this country. If it is to develop at all, it must try to break out of its present isolation. Nothing can help opera except the playing of more operas, in more places, for more people. I often hear it said that the Metropolitan holds a rather monopolistic position today, and the usual implication is that we must be very proud of that. While the fact appears undeniable, I do not consider it any reason for pride or jubilation. If, within the next few decades, operatic culture in America could blossom to an extent where at least 10 or 12 important centers could have a permanent opera house where opera would be presented at least 6 months of every year, nobody would be happier about this than the management of the Metropolitan. How could this be done? It goes without saying that I am posing this question on the artistic level only. On that level I think one condition would be entirely indispensable and that is the creation and acceptance of local companies staffed by American talent without any reference to the singing roster of the Metropolitan Opera. It is very flattering to us that no professional company is ever willing to put on an opera performance without having at least one and preferably several names in the cast that can also be found in our programs. It is flattering but, may I add, it is also unsound. There are enough of the recognized great names about to go around and no real operatic culture can be built on an indifferent occasionally only half-amateur ensemble which is being embellished by putting some top star names into it, quite often, I understand, even without benefit of adequate rehearsals. This, I am afraid, is not the way to do it. If audiences are really fond of opera, they should be encouraged to enjoy a good performance even though no singer is in it whose face has ever graced the pages of a New York newspaper.

Here, I submit to you, is a field for important long-range education by the newspapers Discourage the star cult and encourage interest in young homegrown singers. Cities should learn to be proud if their young talent graduates to bigger cities and even-

tually arrives at one of the world's leading opera houses in New York. Today it is the other way around and the public will only come to hear the famous star from the Metropolitan—irrespective of whether he or she really still is a star.

Someone might say: "But how do you know that audiences could be found and educated in those cities?" I do not know. But neither does anybody know that they cannot be found until it has been tried. The millions of music lovers who listen to our broadcasts Saturday afternoons were not opera-minded say 20 years ago, before these broadcasts started. They did become opera lovers—at least lovers of the musical part of opera-by having opera offered to them, trying out that new experience, and in the end liking it. Radio, television, the ever-in-creasing number of fine operatic recordings, opera in colleges, opera in concerts-all that is fine and it certainly is beneficial to opera. Yet the real thing is a live opera in a real opera house equipped for the purpose of playing opera, not films-sung by a good ensemble to an audience which comes for art's sake rather than for just one more so-called

Interest in opera in the United States is great and, I believe, genuine. You have the singers, you have the orchestras, you have the production talent, and at least potentially there are enough young musicians around eager to become opera conductors if only there were any operas to conductors. To all of their problems and to the general problem of the future of opera in America there is only one answer: Opera must be spread across the country, there should be fine companies wherever sufficient audiences can be found or created and opera houses must be built for opera to thrive in. How this can be done I do not profess to know. That it should be done, I have no doubt.

Trinity River Project

EXTENSION OF REMARKS

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I desire to state that I have had a great amount of correspondence from California favoring a program which will save the taxpayers of our country untold millions of dollars in the construction and operation of the Trinity River project, should the same be authorized and constructed.

The Pacific Gas & Electric Co., now serving the greater part of the State of California, has submitted an offer to construct all of the power facilities and transmisson lines, and buy from the Federal Government falling water developed by the Trinity River project. Information I have received is that the power company would pay in the neighborhood of three and one-half million dollars per year for such falling water; also, they would be paying taxes which would be of great benefit to the local communities, the State, and Federal Governments.

I herewith submit a resolution from the Healdsburg Chamber of Commerce, which I ask be inserted with my remarks:

Whereas the board of directors of the Healdsburg Chamber of Crimmerce know that the Bureau of Reclamation has under study a plan to take water from the Trinity River by the building of tunnels; this water to be released into the Sacramento River and used for irrigation of the Sacramento and San Joaquin Valleys; and

Whereas the board of directors of the Healdsburg Chamber of Commerce believed that a study should be made of the plan presented to the Bureau of Reclamation by the Pacific Gas & Electric Co. in regard to the construction of power facilities in connection with this project: Now, therefore, be it

Resolved, That the board of directors of the Healdsburg Chamber of Commerce go on record as favoring the construction of all power facilities in this project by the Pacific Gas & Electric Co. of California, and urgently requests your support in this matter.

Respectfully submitted.

HEALDSBURG CHAMBER OF COMMERCE, GEROLD F. MILLER, President. MARGARET R. TOWLE,

Secretary-Manager.

Dated March 21, 1955.

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. MAILLIARD. Mr. Speaker, last year I sent out a questionnaire to every sixth voter registered in California's Fourth District, regardless of party affiliation. The response was so enthusiastic that I have again this year asked for voter opinions on matters of current interest. Twenty percent of the questionnaires have been returned, and they are still coming in.

I am very pleased with the interest shown by the voters of my district. It is, in my opinion, a reassuring example of representative government in action.

In the belief that other Members may be interested in the views expressed, I am inserting in the RECORD the following tabulation of replies:

	Yes	No	No opinion
1. Do you favor an increase in postage rates to reduce the operating deficit of the Post	Percent	Percent	Percent
Office Department?	67	31	
2. Do you favor lowering the voting age to 18?	35 75	64	
 Do you favor raising the present legal minimum hourly wage from 75 cents to 90 cents? To reduce the costly rapid turnover of military personnel, President Eisenhower has 	75	22	3
proposed pay raises and additional benefits for career servicemen. Do you approve? 5. Do you favor pay increases for Federal civil service and postal workers to bring their	76	21	2
wages in line with those paid by private industries? 6. After thorough study, a special commission recommends a substantial pay increase	76	21	1
for Federal judges and Members of Congress. Do you approve? 7. Do you believe a firm stand (backed by force if necessary) against further Communist	60	35	
aggression is our best approach to world peace? 8. The controversial Dixon-Yates contract permits private capital to construct power facilities to replace energy being withdrawn from TVA for atomic energy purposes, Should this contract be cancelled and the Federal Government assume the responsible to the contract of the co	85	10	
sibility with public funds? 9. H. R. 1 would extend the President's authority to enter into trade agreements for 3	34	56	10
years, with added authority to adjust tariffs. Do you favor enactment of this bill? 10. Do you favor further cuts in Federal taxes, even though this means an operating	66	25	
deficit and an increase in the national debt?	25	72	3

They Must Be Above Suspicion

EXTENSION OF REMARKS

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an editorial entitled "They Must Be Above Suspicion," which appeared in the March 20, 1955, issue of the Messenger and Inquirer, of Owensboro, Ky.

The editorial is as follows:

THEY MUST BE ABOVE SUSPICION

The President as the Chief Executive is responsible for the executive branch of the Government. Every department, every agency, every commission—unless otherwise defined by Congress—is an extension of his executive powers. Every employee is acting in his behalf, as his alternate.

Originally, this summation of the Execu-

Originally, this summation of the Executive was so true, that the President knew and could call by name almost every employee in his branch of government.

But as the country, and the Government grew, and more and more departments were created to carry out the executive powers, the President delegated them not to a handful he knew personally but through the heads of departments to tens of thousands he never heard of. Yet they still were in theory his alternates, they still carried out duties and responsibilities which are his.

Therefore, when the President set up procedures by which the loyalty of employees is evaluated, he was honor bound to give them fair hearings, but also he had to protect himself. For instance, he does not have to "continue in Government employment a person he reasonably suspects or else to reveal publicly the methods by which he detects disloyalty, and the names of any persons who may venture to assist him." That quotation is from an opinion of the Court of Appeals.

That opinion has been challenged in an appeal by Dr. John Punnett Peters, senior professor of medicine at Yale University, who was dismissed from a nonsensitive parttime Government job on the ground that there was reasonable doubt as to his loyalty. He asked for the right of confronting his accusers and the due process of law under protection of the fifth amendment.

The Supreme Court was split 4 to 4 on the decision quoted above. The Department of Justice is defending it on the ground that the right of the President to hire and dismiss Government employees is inherent in his constitutional powers and the judiclary cannot control them. The Peters decision will be a milestone in interpreting Presidential powers.

Cuts in Civil Defense Funds Ignore Facts of Atomic Age

EXTENSION OF REMARKS

HON, JAMES B. FRAZIER, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. FRAZIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article by Charles Bartlett which appeared in the Chattanooga Times of March 27, 1955.

This article should be of interest to every Member of Congress for it startlingly reveals what little attention Congress has displayed in civil defense in this atomic age:

CUTS IN CIVIL DEPENSE FUNDS IGNORE FACTS OF ATOMIC AGE

(By Charles Bartlett)

WASHINGTON, March 26.—Startling information developed by Senator Estes Kefauver in recent hearings suggests that if enemy air attacks come one day, it may well prove considerably healthier to be a member of the armed services than a mere civilian.

The military is planning and preparing against that day of attack at the rate of about \$40 billion a year but the Federal civil defense effort is still a vague blueprint against which only \$247 million have been applied in the last 5 years.

These preparations and the requests for appropriations, instead of increasing with partisan demonstrations of the H-bomb, have declined steadily since President Eisenhower took office. This year he is asking Congress to provide civil defense with a mere \$59 million, less than any prior request in recent years, only one-tenth of the Truman request of 1952, and one-tenth of 1 percent of the total budgeted for national security in 1956.

FALLOUT NEW PROBLEMS

The President has reiterated repeatedly that civil defense is primarily a State and local problem but the March 1954 demonstration of the H-bomb with its evidence that 7,000 square miles around the target may be contaminated by radioactive fallout has convinced many that the problem is too great for the States to handle individually. The predominantly rural membership of State legislatures has shown no inclination to take the initiative and city and State officials have been hobbled in their efforts by a limited concept of the problems that atomic attack would present.

Val Peterson, the ex-Governor of Nebraska who is Civil Defense Administrator, stated the situation succinctly when he told Kerauver's subcommittee, "the people and the Government have not accepted the general concept that the Nation must live under the threat of atomic attack."

Mayor Joseph Clark, of Philadelphia, was more direct in declaring, "Public apathy and inadequate appropriations constitute a vicious circle which in my judgment only leadership from the President can break."

The military mind, focused on the stratagems of warfare, does not shift readily to the less venturous problem of civilian protection and to date the only representation that Peterson has been able to obtain in the Pentagon has been that provided by a single colonel on the staff of the Secretary of Defense. Kefauver's hearing brought forth proposals that Civilian Defense should rate a secretary with rank coequal to that of the Secretaries of the various armed services of at the very least an Assistant Secretary of Defense.

BANISHED TO MICHIGAN

Peterson has seen his organization banlahed by the frugal Budget Bureau to the limbo of Battle Creek, Mich., where exists the only office space that the Government would make available to it. From that distance the staff must maintain contact and pressure upon the various Government agencies whose voluntary assistance is essential to the planning program. Having thus impeded the agency by forcing a move that required the better part of 6 months and took it 600 miles out of its sphere of operations, the Budget Bureau turned the screws, tighter by cutting 30 percent from the 1956 budget.

This leaves the country in the peculiar position of providing its Air Force with billions of dollars to establish three aircraft warning rings at considerable distances from the continent while its civil defense is making no effective preparation for the evacuation of target areas when the alarm goes off.

Individual cities such as Mobile, Ala., have run evacuation tests which indicate that a city as big as Atlanta can be cleared of human beings in about 2 hours but there has been no Federal effort to develop an aid program that will assist the cities in bridge-widening and other construction to facilitate excess.

No one in the Federal Government appears to be facing squarely up to the facts that the roads out of some cities lead only to other target areas, that the fallout problem will require roadside shelters of enormous proportions, and that there must be some arrangements in the rural areas for accommodating the evacuees.

The theory of evacuation is a recent byproduct of the hydrogen bomb and complete answers to these complex problems cannot be expected immediately but civil defense thinking, as reflected in the Kefauver hearings, has gone little further than Peterson's blunt warning. "If you don't evacuate an area of complete blast, you're dead."

A loyal Republican Governor, Christian Herter, of Massachusetts, lamented to the Kefauver group that the governors of the States have not yet even been told how long they can expect to retain the services of local National Guard units after an attack. Peterson confirmed the uncertainty that exists on this subject by reporting that the National Guard is bitterly fighting all suggestions that it be adapted to a home guard in the event of a bombing. A swift summoning of the guard to armed service duties in these circumstances could make impossible the effective establishment of military law in emergency areas.

Whatever their responsibilities are to be in such a crisis, the National Guard units have not been provided even with the instruments which are the only means of detecting the lethal presence of radiation. An effort is being made to mass produce these counters at a reasonable price but in the meantime

no distribution is being made.

In the face of bombs capable of the complete destruction of areas up to 50 square miles, it might be assumed that advanced thinking was underway on the problem of the dispersal of industry. However, defense mobilizer Arthur Flemming advised the Kefauver subcommittee that there have been no developments beyond a single directive by the Secretary of Defense. "Dispersal is not going to be pursued vigorously," he warned "until the legislative branch unites with the executive branch in expressing their joint conviction that such a search must be undertaken and likewise unite in establishing the broad framework of policies within which such a search is to take place."

The legislative branch is as responsible as the executive for the sizable lag in civil defense planning. Kepauver's hearings on the Program this month were the first called by any Member of Congress on the subject since some were held by the Tennessee Senator in late 1951. There has been testimony before the appropriations subcommittee but this has been so little noted as to result in the elmination by Congress of 86 percent of the funds requested by the Budget Bureau for civil defense since 1951.

The Congress has not even succeeded in enacting legislation to establish its own prompt succession in the event that a majority of its membership is destroyed by enemy action. This possibility has not given rise to much concern in the National Legislature, which is still appropriating six times as much money for the Washington zoo as for the civil defense program of the District of Columbia.

The apathy to date has been general. It is possible that the American people may prove insensitive to atomic fears but it is equally possible that great fear and recriminations may sweep the country at some later date if the basic steps toward a defense of the civilian population are not taken soon.

Unemployment

EXTENSION OF REMARKS

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include a statement which I made last week during my appearance before a subcommittee of the Senate Committee on Education and Labor. My statement emphasizes the fact that present trade policies are contributing to growing unemployment in West Virginia and other industrial areas.

The statement follows:

STATEMENT BY HON. ROBERT C. BYRD, OF SIXTH DISTRICT OF WEST VIRGINIA

Mr. Chairman, although I was not a Member of Congress when you conducted hearings in 1950 on the subject of unemployment and its causes, I was very much interested in your investigation and followed closely the newspaper accounts of testimony presented at that time.

In 1950, I was a resident of Raleigh County, which, as you know, is perennially among the top five coal-producing counties of the State of West Virginia. Every resident of every coal community is only too well aware of any serious drop in production at the mines. The businessman sees it in dwindling receipts. The school teacher detects it soon enough when children are not getting proper nourishment, and the pastor of the church finds his income drastically reduced when the mines are not working regularly.

These are the tangible evidences of economic imbalance. Certainly no less distressing is the profound effect of business decline on the attitude and outlook of a people who, through the years, have been outstanding Americans and willing and industrious workers.

When I look back to that time 5 years ago, I must acknowledge that probably none of us in the mining region had any perception whatsoever of the long struggle that was ahead. While we were not braced for such an acute blow to our economy, we nevertheless were able to understand that certain dislocations are inevitable in a readjustment from a war to an era of peace. What is more—largely through the splendid efforts of the chairman of this committee—it was established beyond doubt that the impinge-

ment upon coal's markets was the product of a foreign-trade policy that had been designed and put into practice under circumstances that were entirely different from those existing in 1950. We naturally assumed that existing inequities would be quickly corrected, especially since the entire case was established without equivocation.

Mr. Chairman, your investigation proved beyond question that foreign residual oil was responsible for much of the unemployment in our part of the State and throughout the mining areas of West Virginia. I have heard it said since coming to Washington that, as a consequence of the bipartisan concurrence of the committee's members, proper action would have been taken by the Congress to place a quota restriction on residual oil imports after the issuance of your report, had it not been for the unforeseen developments in Korea.

As we all know, coal is necessary to make the steel which goes into tanks, airplanes, ships, ammunition, and all other implements of war, so it was only natural that the demand for this vital fuel would turn upward as soon as military operations were undertaken. Consequently, "work today" whistles were heard more often in our commanities, more of our miners returned to work, rall-roads called back scores of their men, and there was a general rise in business throughout our area.

Unfortunately, however, as the eyes of the Nation turned toward the Far East, more and more tankers from foreign countries were rushed into the ports along the Atlantic Seaboard carrying more and more oil to displace coal produced by American workers. Your committee had shown that a total of 75 million barrels of residual oil entered our markets in 1949 and that this foreign product was definitely injurious to the national econ-When these facts were presented to executives of the importing companies who appeared before your committee, they informed you that whatever realignment was necessary could be achieved through the voluntary restrictions of residual oil imports. Yet, as soon as Congress turned from the oil import issue in order to face the situation in Korea, those companies immediately undertook to accelerate importations, and by the end of 1950 a tabulation by the United States Bureau of Mines showed that 120 million barrels of foreign residual oil had entered our markets-an increase of 60 percent in a single year.

National coal production fell from a high of 613 million tons in 1947 to less than 400 million last year. Employment in the mines has been cut in half-dropping from 400,-000 men 6 years ago to no more than 200,000 now. Throughout the coal fields in my State, and of Pennsylvania, Kentucky, and all the other great producers, are idle tipples, idle railroad cars, deserted shafts, and mine after mine closed down. During the past 3 years, at least 150 commercial mines have closed in the State of West Virginia, idling thousands of miners. Add to these the thousands who depend on coal for a livelihoodrailroad workers, storekeepers, service station owners, and a host of others, and we begin to get some picture of a real depression in coal-producing areas.

I have been following these hearings closely, Mr. Chairman, and I realize that you have already received voluminous statistics in reference to unemployment and surplus commodity distribution in the State of West Virginia. Mr. Walter R. Thurmond, secretary of the Southern Coal Producers Association, who was the first witness when you opened hearings on March 7, is a resident of the district which I have the honor to represent. As you know, he is one of the best-informed coal men in the country. His lucid testimony included statewide tabulations that require no expansion on my part. George J. Titler, president of district No. 29

of the United Mine Workers of America, who also is a resident of my constituency, provided further evidence of the reasons for the depressed economy of our State, and Gov. William C. Marland also offered invaluable You have testimony to this committee. heard other West Virginians and, no doubt, additional representatives of government, industry, and labor from our State will appear later. I shall, therefore, refrain from imposing upon your time with the statistics which I have developed, except for some pertinent data reflecting conditions in my own district. I want to say at this time that the cooperation which I have received throughout my tenure in office from various State agencies has been excellent. I am especially indebted to the West Virginia Department of Mines, the Department of Employment Security, and to the West Virginia Chamber of Commerce.

Perhaps the most effective testimony which can be produced to depict the serious economic dilemma confronting us is shown in the number of persons who are receiving Government surplus commodities. In my four counties-Boone, Kanawha, Logan, and Raleigh, which have a population of 446,-466-there are a total of 85,829 men, women, and children for whom surplus commodities constitute the principal source of food supply. To me, Mr. Chairman, the fact that almost 20 percent of the entire population of our countles has been forced to qualify for this assistance is a serious indictment of

Government policy.

Of a certainty, there is no economic elixir that overnight would enable all of our breadwinners to get back on the job and earn their livelihood instead of having to depend upon Government food distribution programs. But we very definitely do know that a great proportion of our jobless men could be returned to work very quickly if only the Federal Government would enact a quota limitation on residual oil imports. Perhaps this formula may sound too simple for the skeptical to accept, but you and I know that many fuel markets would return to coal immediately if a sensible restriction on foreign oil were imposed. Give us a chance to get back some of the electric utility markets along our east coast, and you will see a lot of the mines right in my congressional district resume operations just as soon as they can be reactivated. will see the railroads calling back many of their operating crews, maintenance men, shop workers, and office employees. Our people who have had no income for many months will finally be able to again start buying clothing for themselves and their children, with the result that our merchants will be able to put their business establishments back on a normal operating basis. Needless to say, more coal production would also have an immediate beneficial effect on business in grocery stores and meat markets, and our whole economy would be stimulated.

Our people have had no respite from economic distress for many, many months. As I have said, we had naturally assumed that Congress would exercise its sworn duty to protect the jobs of American workers taking the necessary steps to stem the tide of foreign residual oil that has engulfed our rightful markets. Instead, however, the international oil companies have been permitted to make their own rules, and conditions in coal communities have steadily worsened. Let me read to you one para-graph from a report which I have received from the West Virginia Department of Employment Security:

"Employment in the Logan area slid from 20,300 to 17,700-2,600 or 13 percent from August 1953 to August 1954. The employment loss in the area's major industry, bituminous coal mining, has been underway for several years but the drop of 2,550 or 22

percent during the year was very severe. The 3,500 persons unemployed in August represented 16 percent of the labor force. Nearly all of the area's very substantial labor surplus has accumulated from layoffs in the coal industry. Due to the growth of the labor surplus, this area was classified by the United States Department of Labor as a group IV area in March 1953. With more than 16 percent of the area's labor force being unemployed, the area is currently classified in group IV-B (very substantial labor sur-

Last year, 25 mines in my district were closed down and many more cut back opera-

tions to 1, 2, or 3 days.

How our national administration can sit back and permit these conditions to continue is beyond my power of understanding. I want you to know, Mr. Chairman, that I am a firm believer in trade policies that permit and encourage the maximum interchange of goods, so long as there is no threat to the economy and security of the United States of America. When a foreign-trade program reacts to the disadvantage of domestic industry and labor, then comes the time for reappraisal and readjustment. Unfortunately, however, some international interests insist in pursuing a course that brings only disaster to certain industrial areas.

Coal is not the only industry which has been harmed by illogical trade policies. Advocates of all-out liberalization of our tariffs have actually stated that we should be willing to sacrifice segments of our glass and chemical industries if foreign nations are able to supply our markets at lower prices. Obviously, a country with modern industrial equipment and which pays to its workers only a small portion of the earnings of Americans is going to be able to keep its production costs far below United States levels. Like coal, chemicals and glass are vital to the national defense, and I insist that it is inimical to the security of this Nation to permit any of these vital industries to go downhill, particularly at this crucial period.

Last Wednesday, Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, said that war could come about "almost any place,

any time."

So long as such a situation persists, it is incumbent upon this Government to use every means possible to protect our vital industries. But administration recommendations regarding our trade policy would, in fact, intensify the depressed conditions of many of these industries upon which we would have to depend in the event of an emergency. I have time and again asked the White House to arrange for me to see the President that I might be able to give him first-hand information of conditions in my district. Thus far the palace guard has shown no inclination to permit me an audience. Meanwhile, however, practically all of the Cabinet members have shuttled between their offices and Capitol Hill to plead the administration's case in the matter of further liberation of our tariff policies. When a Member of Congress takes up the problem of residual oil, he usually gets the standard administration answer: "It is true that foreign residual oil is depriving coal of an opportunity to enter certain markets in this country, but for diplomatic reasons any legislative restrictions are undesirable." tary of State Dulles, during hearings before the House Ways and Means Committee in January of this year, made the statement that Venezuela-from which most of the residual oil flooding the east coast originates-is one of the many countries not having any appreciable industry of their own which must export raw materials in order to prosper. I do not question the fact that by using our east coast as a dumping ground for residual oil, it has had a effervescent effect on Venezuela's prosperity; my contention is that it is a violation of the rights of

American citizens to take away their jobs for the sake of perpetuating an economic boom elsewhere in the world.

There are other aspects, too, of the damaging impact of foreign residual. Coal mining and railroading are as essential to the conduct of a mobilization program as are aircraft industries, munitions works, and shipbuilding. Coal mines and railroads cannot survive under a system which demands that they operate like a stop-and-go traffic lighton again, off again, on again, gone again, The caution light is now burning and, unless the rail and coal industries are given consideration in the immediate future, the red light may be on when this Nation's security is in jeopardy and these great basic industries are called upon once more to deliver the goods.

Mr. Chairman, I conclude my testimony with the hope that Congress will act to place a quota limitation on oil imports and to provide adequate protection for our basic domestic industries. I want you to know that the people of West Virginia are most appreciative of your efforts in the conduct of these hearings, which are doing so very much to bring to the attention of the American people and of the Congress itself the reason why there is so much unemployment in West Virginia and in other producing

areas today.

Paul V. McNutt

EXTENSION OF REMARKS OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. MADDEN. Mr. Speaker, Indiana lost one of its most outstanding native Hoosiers when former Gov. Paul V. McNutt passed away at New York last Thursday.

Paul V. McNutt revealed his outstanding ability and talents as a student and lawyer shortly after graduating from the Indiana University Law School. In 1917, a few years after graduation, he joined the law faculty at Indiana University. He became dean of the Indiana Law School in 1925 at the age of 34, the youngest dean ever to hold that position at the university. A few months after assuming this position, he entered the military service in World War I and rose up in the ranks until he became a major in the field artillery. He was an in-structor in an officers' training camp and then commanding officer of three, separate units of field artillery. While stationed at San Antonio, Tex., he met Miss Kathleen Timloat, whom he married in 1918. After the war he returned to Indiana University and there organized an American Legion in his home city. He was elected commander of his post and later State commander of the Department of Indiana. In 1928 Paul V. McNutt was elevated to the high post of national commander of the American Legion. As the national head of the American Legion, he traveled throughout the country and successfully initiated outstanding legislative Legion policies and accomplished more successful results for the World War I veteran than any other national commander up to that time. In 1932, primarily at the request

of the veterans of Indiana, Paul V. Mc-Nutt became a candidate for Governor. He was elected and in January 1933 took over the highest executive office in his home State. The depression was at its lowest ebb when he became Governor, but by reason of his great executive ability reorganized the State government, reduced taxes, and inaugurated fiscal policies which during his 4-year administration erased a \$7-million deficit and replaced it by a \$10-million surplus.

Paul V. McNutt was appointed by President Franklin D. Roosevelt as High Commissioner to the Philippines and served in this capacity from 1937 to 1939. In 1945 and 1946 he was appointed the first American Ambassador to the Philippines, after the islands gained their independence. It was Commissioner Mc-Nutt who lowered the American flag at the Philippines Independence Day ceremony in 1946. During World War II, Governor McNutt served as Federal Security Administrator, Director of Defense, Health, and Welfare Services, and Chairman of the War Manpower Commission. His services won him a Medal of Merit from President Harry S. Truman. In 1947 Governor McNutt again entered the practice of law in New York City and Washington. At the time of his death his firm enjoyed an extensive corporation practice.

Indiana is indeed proud of the outstanding accomplishments of Gov. Paul V. McNutt in the various capacities in which he served his State and Nation during his adult life. His host of friends, not only in Indiana but throughout the Nation and in the Philippine Islands, will

mourn his passing.

I wish to extend to his wife and daughter, Louise, my deepest sympathy in their hour of bereavement over the loss of a beloved husband and father.

Let Us Raise Minimum Wage

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following communication I received from the Honorable Dennis J. Roberts, Governor, State of Rhode Island and Providence Plantations, urging action on legislation providing for an increase in the Federal minimum wage:

STATE OF RHODE ISLAND AND

Providence Plantations, Providence, March 16, 1955.

The Honorable Thomas J. Lane,

Chairman, Liaison Committee of the New England Congressional Delegation,

House Office Building.

Washington, D. C.

Dear Mr. Lane: The New England Goverhor's Conference, which met in Boston,
March 15, 1955, asked me to make known to
you and the other New England Representatives the interest which the Governors have
in securing action raising the Federal mini-

mum wage as soon as possible. The New England Governors feel that action on this measure is important in strengthening the economy of New England and improving the region's competitive position.

Sincerely yours,

DENNIS J. ROBERTS,

We Must Rebuild America

EXTENSION OF REMARKS

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the text of an address entitled "We Must Rebuild America," delivered by me before the National Society of New England Women in New York on January 24, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WE MUST REBUILD AMERICA

(Address by Hon. WILLIAM E. JENNER, of Indiana, before National Society, New England Women, New York City, January 24, 1955)

A great many people come to see me and say, "Our country is lost. There is no use fighting any more." They tell me how deeply the enemies of our liberty have penetrated into our Government. I agree with them. They tell me how widespread is the influence of the discreet collectivists in our press and magazines, and on radio and television. I agree with them. They tell me how Communists and pro-Communists are moving into every field of American life—business, labor, finance, schools, churches, women's clubs. I have to agree with them.

Those are not the worst dangers. People also tell me how many Americans who would never accept the Communist ideology, will make deals with the Communists for gain—for a few votes, or a few contracts, or some cheap publicity. Again I have to agree with them.

They tell me how Communists and pro-Communists are trying to surround and construct our military forces, as they succeeded in capturing our foreign policy in the forties. I have to agree with them. Most dangerous of all, they tell how it is

Most dangerous of all, they tell how it is now the fashion for supporters of communism to make themselves a record as anti-Communists. That protects them and keeps us hopelessly confused.

The Communists insist on leading the anti-Communists procession. They have the loudest bands and the prancingest majorettes. They try to draw all eyes, to fill all ears, to drown out the words of the true anti-Communists, if they have not driven them from public life. I have to agree.

Never in all our history has the danger to our country been so great as it was in 1954. Never was the despair of patriots so intense.

In the month of February, when the Berlin conference opened, with the Red Chinese installed in full panoply, while our Korean allies were left out in the cold, it was obvious that our country was being led into a trap from which there might be no escape. At Geneva, the balance turned even more completely in favor of the Soviet Union and its Chinese satellite.

While our eyes were fastened on Europe, the Red Chinese made their long-planned drive against Indochina. In the beautifullyplanned confusion, we talked of entering the Indochina war, and we talked against entering the war, but it was all nonsense, because it was too late for us to enter the war, too late, that is, unless someone hoped to keep our fighting men bogged down in another Korean campaign, while the legal control of our Armed Forces was subtly transferred to U.N.

After the dismal retreat at Geneva, we saw the full orchestration of the theme of coexistence. The Soviet Government had planned their peace drive long before, when it contrived the Stockholm peace petition to save it from overwhelming defeat in Korea. Patriots watched the Soviet theme of coexistence, perfectly designed to booby-trap the innocent, the unthinking, the impractical, the cautious, as it spread and took new hold in the minds of men with no lovalty to communism. We watched it take hold among our leaders, who picked up the Soviet theme for our destruction, and repeated it in accents that were pure American. Never has a plan been devised so apparently simple, so subtle, so innocent-looking and so deadly, as the campaign for coexistence. it seemed more hopeless to decide how we could resist, where we could take our stand, and what arguments we could use against so noble and beautiful a word as peace.

But, my friends, there is one important fact on our side—our people were not fooled. The Communists have not ceased to fight for coexistence. They will come up with new schemes. But so far, they have not fooled our people. The subtlest, cleverest, best-concealed propaganda campaign ever devised did not succeeed.

Without any apparent organization or leadership or counter-propaganda, the American people broke the spell. Many of our leaders now see clearly the jaws of the trap. Coexistence is clearly recognized as the anesthetic the Soviet leaders counted on, to put us to sleep before they struck the final blow.

So, my friends and acquaintances, who say all is lost, are wrong. They forget one thing. We face a mortal challenge to our way of life. There is no answer, short of a new birth of freedom, as complete as that which gave birth to Magna Carta, or the Declaration of Independence. It is a law of life that all new birth comes from pain, weariness, and even danger of death. We cannot give up the fight when the hour of new birth may be close at hand.

We are living in times that try men's souls. We are also living in times that try men's minds.

The breakdown in our society began long before the Communists came to power. It shakes our society and our political order to its very foundations. In the face of such a challenge to men's creative powers, we must go down into the valley of the shadow of death, and yet not despair. We cannot know whether we shall ultimately win, or not. We cannot know whether we shall have the wisdom, the creative power, and the courage to build a new Jerusalem. But we do know we must continue to fight.

Americans, when they wish to remind themselves of true courage and devotion, think first, perhaps, of Valley Forge. But we have many other noble images of self-sacrifice and great heartedness. In trying to understand these men who solved other crises, we must remember one thing. We know the end. We know their cause triumphed. They did not know, but they fought on. The soldiers in ragged uniforms for the soldiers in ragged uniforms of valley Forge were suffering from something more cruel than the cold. They knew that while they watched and waited in bitter discomfort, other men who should have fought by their side were living in comfort, or even doing business, as usual, with the British.

Politicians were squabbling, generals were disagreeing, diplomats were conniving. The

men at Valley Forge with Washington, could not know recruits would come, the Continental Congress would vote the money they needed, and the young Lafayette would be followed by French ships and fighting men, and in a few short years the haughty redcoats would be surrounded and defeated at Vorktown.

I love a story from an old children's history book, of the night watchmen who used to go through the streets of the cities and ring a bell and say "Midnight. All's well." On October 19, 1781, they went their rounds saying, "Midnight. All's well, and Cornwallis is taken." That little story tells us all we need to know about the long wait and the gnawing doubt with which the Colonists paid for our independence.

With your love of New England you will think at once of the Pilgrims landing on the stormy coast of Massachusetts, of the first winter of hunger, or of the brave settlers who kept moving out to the wilderness frontier, knowing well the massacre of women and children by the Indians at Deerfield.

We can recall other victors over doubt or despair—the men who fought year after year in the war between the States, while they sang at night:

"Camping tonight on the old campgrounds. Wishing that the war would cease. Camping tonight on the old campgrounds.

Waiting for the dawn of peace."

We have in our time not only troubles as deep as the troubles of the colonists and the people of the Civil War years, but we have our own heroes as magnificent as they. The men who fought their way up from Australia and New Guinea never saw the fleets of planes which we had at the end of the war. They fought only with the few outdated planes which the administration of that day was willing to spare from the armadas of airships it was sending to England and the Soviet Union.

The men who stormed ashore at Tarawa and Iwo Jima did not know whether they would ever hear the shouts of victory, or see our fiag planted on the islands they were risking their lives to win

risking their lives to win.

In every great fight that has ever been fought, the end was uncertain, and victory only a distant hope on the horizon.

The men who marched north to the Yalu, to flush out the armed hordes of Red China, and who executed the magnificent march to the rear in the ice and snow amid the hall of enemy bullets, had no one to assure them of the success of their struggle. They had only their own inner sense that they must keep up the fight, however dark the scene. They had the courage that comes from knowing that good men were fighting by their side, ready, as they were, to give their all.

It would not be honest or fair of me to give you a falsely optimistic picture of where we are today. I shall certainly not try. We are, I believe, in a conflict that is truly a life-and-death matter for us, and our kind of government. Our enemy is able, ruthless, infinitely cunning, and skilled in every form of disguise.

I do not say the struggle will be easy, and I do not say victory is assured. I say that all true Americans must keep up the struggle because honorable men and women are made that way.

And I tell you, you are not fighting alone. On every side other brave and patriotic Americans are as determined as you are, that, while they live, our country will be free. You are with them, and they are with you, whether you see them or not.

Brave and loyal Americans come to see me who say to me—and not without reason—the struggle is hopeless. But other men and women come to see me with quite a different story.

We have heard a great deal about the Communists in our Government and the subversive forces at work. We have not heard enough about the brave armies of unknown Americans, who with no leaders, no commanding officers, no bands, and no banners, have fought the Communists where they stood, and tried to shut at least one door, or bar their advance down one narrow corridor. We have not heard about them, but their name is legion.

We know the names of many of the men in our foreign policymaking who betrayed our country—Alger Hiss and Harry White, Harold Glasser, Victor Perlo, and the rest. But who knows the names of the men who blocked their progress again and again, patriots who were forced out of their jobs, or sent to departmental Siberias where their patriotism would not block the traitors?

For myself, I would far rather know the names of the anti-Communist resistance than I would the names of the perjurers and traitors. We need to know what the Communist agents are doing to destroy us, but we ought to want to know the names of the brave Americans who have tried to stop them. They are the minutemen of today. They stand at a Bunker Hill and a Lexington we cannot see. I am reminded of this unknown band of heroes—in our Government, in writing and publishing, in the moving-picture industry, and in the unions, because I have recently been learning about some men of the same mold in our Armed Forces.

Every time the Communists and those who have made a deal with them, try to tighten the net about our Armed Forces, young men risk their careers and their peace of mind, to set up a bit of resistance, wherever they are—in the ranks, in the training courses, in communications, on foreign duty, in military intelligence, in every branch of the Army, Navy, Marines, and Air Force. Many of these men think they are alone, that no one else sees the danger. They are willing to fight alone, with no thanks and no reward, if it will save our country. But they are not alone.

Americans have the deepest confidence that we can trust our professional military men to be truly loyal to our system of government. Probably no nation has ever had a more magnificent type of military leader—with the highest professional competence and the deepest devotion to freedom—than we have in Admiral Radford and Admiral Joy, General MacArthur, Generals Van Fleet, Stratemeyer, Mark Clark, and Almond, and others whose names are omitted from no lack of admiration for their truly American achievements.

What is, if possible, more heartening is the fact that our younger men are of the same breed. Of course, there are time-servers and bootlickers, and trimmers. They are as ever present as crabgrass. The important point is that we have among our young officers and men in the Armed Forces, Americans whose courageous defense of our liberties, is as great as Gen. George Washington could have asked for.

We all know the forces that have been at work in our schools, in our press and elsewhere, trying to shape our young people in the collectivist mold. But there is something stronger at work, something deeply American, which seems to convert these outside pressures to make the best of our young men more American than ever.

I am not saying—nor do you say—that we must be bombastic about what we call the American way. Other people have made great contributions to the world. They have every reason to be proud. But we love our way. We love the system of political liberty worked out for us by the constitutional convention. We love the self-reliance worked out for us by the early seafarers and the pioneers. We love the habit of living together in mutual trust and freedom which more recent generations have preserved under mounting pressures.

We do not intend to let any alien-minded intellecturals or power seekers take our freedom and fair dealing from us, and substitute another system based on ruthless power. We certainly do not intend to let them take our liberty from us, in secret without a struggle. We know our people, young or old, important or unimportant, soldiers or civilians, will give all they have and are, to keep that freedom, and to keep it bright.

You asked me to discuss what you can do. Well, you probably know that far better than I do.

But I have a special angle of visions, from the Senate of the United States. I can tell you what we have, and what we need, from that observatory.

First. I wish to congratulate you on the splendid things you are already doing. We have survived against all the schemes of the Soviet leaders and their cunning agents in the highest places because our patriotic citizens and patriotic organizations have worked hard and have worked intelligently.

You have not merely worried or complained about collectivist schemes to entwine our foreign and military policies with U. N., or our commercial enterprise with GATT, or our Bills of Rights with the U. N. Declaration of Human Rights, which adheres so closely to the Soviet constitution.

You have collected documents, you have analyzed bills and charters, you have read the fine print. You have rewritten the gobbledegook in plain English and mailed thousands of documents to your friends and fellow members so that they, too, could be informed.

You have been volunteer committees of correspondence, like those which helped win the Revolution. I cannot tell you how to do that task better than you are doing it now. I can only say, "Keep up the good work." We in Congress need the help of every patriot who will serve as you are serving.

While we are fighting the battle of the mimeograph machines, we must be winning another, more difficult struggle. For over 20 years, the erosion of collectivist government has eaten away at the foundations of our national life. We can go back only as the farmer whose land is eaten away by erosion can bring back his green and pleasant fields. We must go back the hard way. We must rebuild weak places in our foundations. We must change our habits of plowing, plant new grasses, raise a shelter belt of trees, and work and watch and wait until the damage is repaired by healthy new growth.

The simple things are the most important. Most important of all, I would say is, "strengthen the grass roots."

This country will not be saved or destroyed in Washington. It will be saved or destroyed in the country. I say to you, "Rebuild where you are. Strengthen and revitalize America where you have responsibility."

Many of the young men in our Armed Forces are, today, guarding some door the Communists want to open, and doing it alone, without help, because they came from a good American home, where they learned the meaning of our country at their parents' knee.

Your children bring home a text book bought and paid for by your local board of education, but it is a difficult and tedious job to find out where the material in that text book really came from—whether, perhaps, the discussion of social security or foreign policy came from a propagnda agency in Washington, or a slanted fifth columnist on one of the college faculties, or from the Paris office of UNESCO.

Every American has influence on church organizations, on clubs, on schools, in the role of parent, alumnus, or taxpayer, on press and radio. If everyone of us would use the influence we possess at this moment—to its fullest extent—we could achieve a miracle in almost no time.

Don't make the mistake of thinking I propose something easy. That is an illusion. It is much easier to drift along and get all excited about elections, just before election day, than it is to get up extra early one morning, when no one else cares, and go out to vote in the primaries where the real power lies.

For over 20 years we have been taught to keep our sights fixed on Washington, where a magnificent pageant was being presented before our eyes, showing us what the Government in Washington was doing to solve our local problems for us.

But what were the agents of the brave new world doing while we gazed entranced at their spectacles? They were working in your town or city, checking public opinion, sending back political reports to Washington, organizing committees for this, and committees for this, and committees for this, sending the names of local leaders to Washington, so that trusting citizens could be invited by the Government spending agencies to go on a political Cook's tour, a sort of "intourist" visit to foreign parts, and come home and tell their neighbors what wonderful projects they had been allowed to see.

It is true as some of you will say, that you cannot repel a Communist attack by having a strong, truly American PTA. But it will not make the slightest difference how many billions of taxes you give for military weapons, if you have a weakened and corrupted local community which sends to Washington, Senators or Representatives who are soft on communism.

First, I say, build up your local community. Then I say, "Call your money back." Recall it from the Federal Government, from extravagent local governments from overhead organizations in every field. Let us not be sentimental about money. Money is power. It is the power to command the labor of others.

When we give the Federal Government hearly a quarter of our earnings, we give it the power to command nearly one-quarter of the labor power of our Nation—skilled workers, unskilled workers, teachers, physicians, writers, business managers, moving picture directors. Any government which controls almost one-fourth of the labor power of the Nation, will exert a commanding power over the rest.

Control of money gives control of the material aspect of everything in life. You cannot control your schools, your libraries, your public and private welfare, your chance for medical care; you cannot preserve freedom of the press, and the American belief in nonpolitical religious bodies, if you give your money to the Government.

Let us be serious about this business of cutting taxes. The colonists did not demand no taxation without representation to keep a few coins in their pockets, although there is nothing wrong with that. They wanted to hold taxes down, so the control of their lives would be wholly in their own hands, and not in that of a distant bureaucracy. The colonists knew the power to tax is the power to enslave.

Diversion of American productive power from private concerns to Government, will mean the certain end of liberty. We do not, as Americans, have a right to let the Federal Government do one thing that State and local governments or private concerns and organizations can do.

Again you will say, we cannot cut taxes when there is danger of war. I say, we can always examine our tax payments and we can always find waste and overcentralization.

I have not made up my mind about the cuts in the Armed Forces recently recom-

mended to Congress. Our committees are giving these proposals a most thorough investigation. But as a working rule, I am certain the armed services are better off with fewer men, properly organized, than with a surplus of men stepping on each other's toes. Furthermore, I am confident that the top Communist strategists are deliberately using an excess of personnel to keep our Army well below its peak performance. We need every man our military leaders need for fighting forces. But we should look skeptically at plans to increase the personnel of the Army, or its civilian staffs, for any other reason.

I said in a Senate speech on August 15 that too much of our military policymaking is already in the hands of international-minded lawyers, who can graft one-world ideas onto our military policies, as they did to our foreign policy.

I keep hearing of mountains of paperwork which must be prepared by the military services for cost accountants who are trying to distribute the cost of every mimeograph machine or mile of travel among their fancy categories. We need solid accounting of any Government spending, but we do not need fancy accounting which serves no useful purpose, and could be a means of planned confusion and sabotage through paperwork.

I am not criticizing the accountants as such. They may be able and working hard to accomplish something, when that something is not worth undertaking at all.

Americans will give our Armed Forces all the money they need for military purposes, and to provide their men with what they deserve. But we should approve no item of spending and taxation because it is labeled "Defense."

To strengthen the local community and help our people keep more of their own money, one kind of political action is all-important. We need vigorous efforts in every congressional district to prevent the nomination of pro-Communists or those who make a deal with communism, in either party. That is the minimum political step for security of the United States.

But we must go further. We must work to elect men who are vigorously devoted to our country, who believe in strengthening the local community above the Colossus on the Potomac, and who will vote, till it hurts, to keep our money at home.

Your Congressmen and Senators speak for you in the national councils. If you elect men who believe in colossal government, you will get it. If you work hard to elect men who believe our strength lies in our local communities, and not, like an empire, in its imperial capital, then we can once again become a nation of strong, independent citizens, with no overshadowing central government to rob them of their strength.

We must resist with all our strength, the rapid spread of the Communist plague. While we are deep in that struggle—we must also rebuild America. In that task, we have architect's designs of which we are all so proud, the designs left us by the founders of this Nation.

The design in living things cannot be imposed from without. Good seeds must be replanted and allowed to grow again. Our duty is to clear the soil, remove the debris, the weeds, the bad seeds, replant good seeds, and have faith.

If we perservere, I believe we shall one day look back upon the Communist threat as the evil which forced us to reach to the deepest wells of our faith, and so preserved us from the drift to imperial power. We cannot win against the Communists unless we can regain the spiritual vigor on which our liberty was founded. If we meet the challenge, we shall also preserve the Republic of our fathers for generations yet unborn.

Soft Spots in the Economy

EXTENSION OF REMARKS

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. UDALL. Mr. Speaker, there is growing concern in many quarters at the huge increases in home mortgage and consumer debt. I share this alarm, and therefore I was particularly interested in a recent column by Sylvia Porter, the syndicated writer on economic problems, which discussed this question in straightforward fashion. This column follows:

Two potentially explosive forces—forces which in the future could blow up in our faces like ecnomic rockets were hardly touched upon by the Senate Banking Committee during its investigation into the stock market.

Possibly an explanation is that with a few exceptions, neither the witnesses nor the Senators dared risk analyzing or condemning in public what they must know is going on.

The forces are:

 The frenzied upspiral in home mortgage debt—particularly in no-down-paymenttake-a-lifetime-to-pay mortgages on homes that will fall apart long before the debts are paid off.

We're taking on mortgages now at a pace that tops anything ever before seen. And the total of credit being extended to us against our home dwarfs into significance the total of credit being extended to us against stocks.

2. The equally furious upswing in all forms of consumer debt—in installment loans to finance everything from furniture to TV sets, in automobile loans, in personal loans, etc.

We're also taking on this type of debt at an increasingly rapid rate. And again, although stock credit was a key issue at the Senate hearings, the credit extended to us on cars, appliances, furniture, etc., makes credit in Wall street look picayune.

The real dangers lie in the Government's lack of control over mortgage or consumer debt, emphasized two of the witnesses before the committee—Marriner Eccles, for 14 years chairman of the Federal Reserve Board under Presidents Roosevelt and Truman, and John McCloy, chairman of the Chase National Bank. While these two bankers usually are on directly opposite sides of any fence, on this they agreed.

Eccles warned, "A point of saturation is fast approaching" in this type of debt; Mc-Cloy called debts of this sort "soft spots."

But the Senators who tore into the question of the money we're borrowing to buy stocks backed away from home or installment loans.

Why? Because the subject is irrelevant? Oh, no. A basis for the stock market boom has been the boom in our economy; the major reason the economy has been stronger has been the upsurge in the building and automobile industries; a key reason for the strength in these industries has been the super-easy credit available. Let these industries falter or credit here go bad and there'll be no doubt about the stock market's direction. It'll be down.

Why? Because the witnesses weren't qualified to talk? Once more, no. In private conversations I had with many of them after they testified, they stressed their concern was

more over mortgage and consumer debt than overborrowing in the stock market.

You don't have to be a cynic Why then? to suggest a reason could be because a debate about possible curbs on building or installment credit well might not add to a

Senator's popularity.

The facts, nevertheless, are clear.

In 1954 alone, we added over \$9 billion to our home mortgage debts and they're now approaching the incomprehensible total of \$80 billion. Houses now are being built at twice the rate that new families are being formed; no down payment mortgages are being taken out by GI's who easily could afford to put down some cash.

At the end of 1954, our consumer debts were at the all-time high of \$30.1 billion, Car loan terms now are being stretched out now to 30 and 36 months; many are buying

new cars before they pay off the old.

We don't know if these debts are rising too fast. We don't know if the totals right now are too high. We don't know whether new controls are needed at once. But we should at least try to find out.

A logical sequel to this stock market probe would be a friendly investigation in these areas. Maybe we'll get it—if our Senators get up courage to tackle the issues on the basis that what's best for America is best for its politicians.

Trombone Choir at Easter Sunrise

EXTENSION OF REMARKS

HON, FRANK T. BOW OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. BOW. Mr. Speaker, in the April issue of the Ford Times, I have noticed an interesting article on Americana which concerns an Easter service in my district of Gnadenhütten. This article, written by Mrs. Twila Carman, of Minerva, Ohio, tells the story of a historic Easter sunrise service at the John Heckwelder Memorial Moravian Church in Gnadenhütten, which is the second oldest Ohio settlement, having been first settled by Moravians in 1772. This story, Trombone Choir at Easter Sunrise, is particularly of interest at this time and for that reason, Mr. Speaker, I include it as part of my remarks so that my colleagues may have an opportunity to read this interesting bit of Americana:

TROMBONE CHOIR AT EASTER SUNRISE (By Twila Carman)

In the belfry of the oldest church in Ohio, a trombone choir heralds the sunrise each Easter Sunday in a 200-year-old ceremony. The service originates in the John Heckwelder Memorial Moravian Church in the town of Gnadenhütten, about 40 miles south of Canton, Ohio, on United States Highway 36. This is the site of the birth of the Christian religion in the State.

Although the trombone has special significance in the Moravian religion, its music is prized by the Ohio group for still another reason: It is credited with having saved the village from an attack by the Indians.

Back in the dawn of Easter 1756, the Indians had planned an early morning inva-But on hearing the strange, sweet sounds of Easter carols played by the trombone choir, they surmised that some unearthly power was guarding the town, and crept silently back into the hills.

More than 60 years before Martin Luther posted his 95 theses, natives of Bohemia and Moravia had united in protest against the sale of indulgences. These people were intensely musical, making daily rites of vocal and instrumental music. It is still customary to announce events by a trombone salute from the church belfry.

In the present band, trombones of all sizes

are assembled. The largest, a bass instru-ment, is so long that the slide is operated by a lever. It was made in Germany in 1789. When the trombone choir sounds its first notes at Easter sunrise this year, one of the original instruments will respond in the antiphonal group in one of the State's oldest services.

Heart Big Problem

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. FOGARTY. Mr. Speaker under leave to extend my remarks, I include an article from the Providence Journal of February 28, 1955. This article is by Theodore R. Van Dellen, M. D., and is entitled "Heart Big Problem. I believe that Dr. Van Dellen's comments are well worth reading and commend them to all of my colleagues.

How To KEEP WELL

(By Theodore R. Van Dellen, M. D.) HEART BIG PROBLEM

At the turn of the century, out of every 1,000 babies that survived birth, 162 could be expected to die before reaching the first birthday. Nowadays, less than 30 succumb in the same circumstances. The figures are less startling when adults are included in any group of 1,000 persons. In 1900, 17 of this number passed away, whereas today the death rate is less than 9.

The control of infections in childhood and young adulthood can be given credit for this remarkable change. As a result, more people are living to middle and old age. But there is a catch to it. The longer we live, the more we are subjected to disorders of the heart and blood vessels.

What are we going to do about heart disease? Our heart associations are trying to find the answer to this question, but there may be some consolation in realizing it is better to face the risk of a heart attack at 55 or 65 than to be dead of pneumonia or

tuberculosis before age 25.

These infections were our most consistent killers in days gone by; not many worried too much about today's big killer—heart disease-because few lived long enough to develop it. But with the advent of the sulfonamides and penicillin the death rate from pneumonia fell from 152 per 100,000 to 12 and mortality from other infections followed suit.

The high-school student of today thinks of cholera, yellow fever, smallpox, and plague as long-forgotten diseases, not realizing that, if we let down the bars, these pestilences would return in a jiffy. Diphtheria, scarlet fever, typhoid, typhus, and tetanus mean more to these teenagers because they were rife in grandfather's time.

Pest houses were overcrowded decades ago, but today many of our contagious-disease hospitals are empty for lack of patients. Not long ago, in Florida, I rode past a beautiful tuberculosis sanatorium and predicted it might not last long if the antituberculosis drugs-PAS, streptomycin, and isoniazidcontinue to work so satisfactorily.

At present disorders of the heart and

arteries kill 4 times as many persons annually as does cancer, 6 times as many as accidents, 8 times as many as tuberculosis, and 500 times as many as polio.

Research on cardiovascular problems pays for itself over and over again because any progress made in these conditions will do more than affect the death rate. The problem is not only to prolong life, but to make it more comfortable for oldsters.

We are beginning to realize that arteriosclerosis is not a normal or natural part of aging but an illness of metabolic or glandular origin. How can it be prevented or at least delayed? This is what our researchers are trying to find out, but they still have a long way to go.

Banning Nuclear Tests

EXTENSION OF REMARKS OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include herewith an editorial entitled "Banning Nuclear Tests," which appeared in the March 23, 1955, issue of the Park City Daily News, of Bowling Green, Ky.

The editorial is as follows:

BANNING NUCLEAR TESTS Every time we detonate a test A-bomb in

Nevada some of our friends abroad react with such anguish as to suggest their next day's breakfast has been contaminated by the radioactive fallout.

Urgings are heard again and again that the tests be halted, and that this be a first step toward some sort of negotiated peace settlement with the Soviet Union.

The elements in this argument need to be carefully sifted.

First, scientists differ widely as to the effects on humans of the radioactive fallout from recent and current nuclear experiments. None argues that these inflict physical harm on the present generation of humans. The debate centers on what radioactivity may have done or be doing to future generations through its possible effect on the body's reproductive materials.

Some say the present level and scale of tests is not serious. Others contend enough radioactive substance already is affoat in the atmosphere to do some human damage in the generations to come.

Our Government specialists evidently hold that the danger is not serious, else the tests would not go on. But certainly there is some doubt, and men could reasonably listen to the opposing arguments.

Yet the urgings from many quarters do not seem to recognize any reasonableness in those who doubt the danger. The antitesters assume all experiment is a menace. They want no more of it. They wish there had never been any. They appear to regard the experimental explosion of a nuclear device as a virtual act of war.

Now, as Admiral Strauss noted in his comprehensive report on the Pacific H-bomb tests, if there had been none we could not possibly know the real size of the world's The horror the antitest people decry (and who does not?) is something they could only have guessed at wildly without the tests. They and all of us might well have understated the danger. The tests measured our plight, and underlined the importance of preserving the peace.

Furthermore, we cannot easily halt the tests so long as we assume—as we must in the interest of the free world's safety-that Russia is trying its best to develop more and more advanced nuclear weapons.

Should it then be asserted that the Russians, too, will be called on to stop their tests, the question arises as to how we may be assured of their compliance. Large atomic or hydrogen blasts can be detected outside Russia by measuring the atmosphere's radioactivity. But how do we prevent the blasts from occurring at all?

Obviously, enforcement of a ban on tests, like all disarmament proposals with real teeth, requires a system of rigid inspection. Russia has been cool to that idea from the start. Moreover, such a plan would have to be a subject for negotiation. And the antitest group has been saying the ban should come first, with negotiations on a broad front

afterward. As anyone knows who pays any attention to our tests, they are seasonal. There is plenty of time between each series of experiments for discussion of disarmament or any other reasonable proposal to end world tensions. All it takes is a sincere Soviet wish for a settlement.

Meantime, there's no point in the United States clamping a ban on nuclear tests when it has no assurance whatsoever that the Russians would follow suit in good faith.

Socialistic Seed Bears Fruit

EXTENSION OF REMARKS

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 23, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Brookville (Pa.) Jeffersonian Democrat:

SOCIALISTIC SEED BEARS FRUIT

"Great oaks from little acorns grow," says the old adage. That is certainly true of the

Tennessee Valley Authority.

The roots lie in the old Muscle Shoals plant for the production of agricultural fertilizer. Then when TVA itself was legislated into life it was officially explained that it was to develop river navigation, improve the land, and conserve natural resources. Hydroelectric power production, it was further explained, would simply be a relatively unimportant byproduct. At that time, of course, nobody said anything about TVA going into the steam power business, which has nothing Whatever to do with conservation of resources or any other noncommercial purpose.

How times have changed. Power production is not only the dominant TVA activity, overshadowing all other functions to the Point of oblivion, but in the fiscal year that ended last June 30 TVA's steam plants actually produced more power than its hydroplants. And steam's relative importance is going to grow. For, at that time TVA had steam plants with an estimated cost of \$273,877,000 under construction, but not a single dam.

It's a long way from a fertilizer manufacturing enterprise to this gigantic tax-subsidized and largely tax-free power monopoly. It shows how socialism, once it gains a foothold, can wax fat at the expense of all the rest of us, and how all-powerful centralized government can come to be the undisputed boss of a great region.

Envoy in Ireland

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I include an article from the Providence Sunday Journal of March 27, 1955, entitled "Taft Wins Many Friends as United States Envoy in Ireland." Ambassador Taft is doing an admirable job as our country's representative to the Emerald Isle. His interest in the country is genuine and he has been received by the Irish people with open arms. The subject article will give some indication of his diplomatic efforts and I commend it to the attention of all my colleagues.

The article follows:

TAFT WINS MANY FRIENDS AS UNITED STATES ENVOY IN IRELAND

(By Ernest Hill)

DUBLIN, EIRE.-William Howard Taft III, son of the late Senator from Ohio and grandson of the former President, is making diplomatic history in Ireland as American Ambassador to the Emerald Isle.
Young Taft has become a sort of a cross

between the all-American boy and the young Abraham Lincoln to the people of Ireland.

Anything but a cookie pusher hound, Taft spends a good part of his time out in the country meeting the people on their home grounds.

He leaves the Embassy Chrysler, his chauffeur, and his striped pants at home when he goes visiting. He folds his lank figure into a pocket-sized Fiat and chugs the country roads alone.

He is liable to show up any place, emerge from his midget scooter, and introduce himself as the American Ambassador.

THE IRISH LIKE HIM

The Irish, having a healthy disdain for stuffed shirts and pomposity, think young Bill Taft is just about the greatest thing that ever came out of Washington.

He speaks English or Erse, the language of Ireland, which is more than a lot of the city Irish can do.

An expert on Ireland, young Taft is more Interested in the country's farm problems than he is in high-level politics. After all, Ireland is largely an agricultural country and the loss of population from the farms is hurting production and proving a national problem.

We have discovered that there is about \$18 million left over from ECA. Taft told me. We are planning to earmark about \$6 million of this to establish an agricultural institute. The Irish would provide the staff and maintain it once we get it started.

The country badly needs such an institute where graduate study can be carried out. Improved farm methods will benefit the country. Testing of cattle for tuberculosis is needed because Ireland exports beef and bullocks to England.

Taft is now averaging two speeches weekly to various groups in all parts of Ireland. He rarely turns down an invitation to address a group no matter how small or how far away.

BORN IN NEW ENGLAND

The 39-year-old Taft was an English instructor at Yale University from 1945 to 1948 and considers himself more of a scholar than a diplomat or politician.

He was born in Bar Harbor, Maine, and attended public school in Cincinnati, and the Taft School in Watertown, Conn. Taft has degrees from Yale and Princeton.

In Dublin with ECA, Taft became a serious student of Ireland. He did research work in the old and middle Irish languages.

He is married to the former Barbara Bradfield, of Grand Rapids, Mich., and they have four children.

In case there's any doubt about the authenticity of Taft's interest in Ireland, he dispelled that when his last son was born. He named him Sean Thomas, which could not be more Irish. Sean Thomas was born in Ireland in 1950. Taft's first son is William Howard Taft IV.

An Irish newspaper editor told me that his countrymen considered young Taft the finest representative and friend of Ireland the United States has ever sent to Dublin.

We feel, he said, that this is more than just another job for him. He is in Ireland because it is his great interest.

Tenth Anniversary of Polish Incarceration

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Polish-American Congress on the 10th anniversary of the arrest and subsequent trial or the 16 Polish underground leaders in Moscow. The arrest took place on March 28, 1945, and the trial of these brave Polish patriots took place in June 1945. The fate and whereabouts of four of these leaders, still in Soviet Russia, is unknown. The balance have been returned to Poland and have been submitted to new ordeals by the Moscowsponsored regime there.

The letter follows:

In accordance with the Yalta agreement the Moscow-sponsored provisional government of Poland had to be reorganized on a broader basis with the inclusion of lead-"from Poland itself and from Poles abroad."

Mr. Molotov and the Ambassadors of the United States and Great Britain, residing in Moscow, were entrusted with the task to cooperate in the forming of a new government along above lines.

It was assumed from the very beginning by the American and British Governments that the most prominent leaders of the Polish underground, at that time hiding in Poland, would eventually enter the coalition. During the war they had fought in close cooperation with the Polish Government in London, a bitter struggle against the Nazi occupants and thus had largely contributed to the Allied war effort.

At the request of the British Secretary of State, the Polish Government in London disclosed for transmission to the committee in Moscow the names and whereabouts of the Polish Vice Premier and Government Delegate for the Homeland, and of the three members of the Home Council of Ministers. The Allied Governments gave assurance that they would do everything possible to ensure the safety of the Polish underground leaders.

A short time after the Polish Vice Premier, Mr. Jankowski, and the last commander of the disbanded home army, General Okulicki, were approached by Colonel Pimenow of the Soviet NKVD, with a request to attend a meeting with Colonel General Ivanov, a representative of the high command of the 1st White Russian front. This invitation was confirmed by letter, on March 10, to Mr. Jankowski and General Okulicki. The purpose of the meeting, in Colonel Pimenov's own words, was: "The clarification of the atmosphere and the coming into the open of the democratic Polish parties in order that they may take part in the general current of the democratic forces of Independent Poland." Although absolute personal safety was granted by the Soviet representative, the 16 Polish underground leaders, when they arrived on March 28, 1945, at the meeting place were arrested and flown to Moscow and imprisoned there.

The Soviets committed in cold blood another act of shameless felony. It was only on May 5, 1945, that the official Soviet agency Tass announced the arrest of the Polish leaders. This happened during the San Francisco Conference, and Molotov himself

confirmed the news.

The British and the United States Secretaries of State expressed grave concern to Mr. Molotov and asked for full explanation. Their intervention remained, nevertheless, without response, and on June 18, 1945, a trial of the Polish leaders was held in Moscow by the Military Collegium of the Supreme Court of the U. S. S. R.

Following sentences were passed:

 Maj. Gen. Leopold Okulicki, born 1898, commander of the Polish Home Army, succeeding Gen. T. Bor-Komorowski after the Warsaw rising, 10 years' prison.

2. Jan Stanislaw Jankowski, born 1882, member of the Christian Labor Party and Vice Premier of the Polish Government in London, appointed delegate in Poland, 8 years' prison.

3. Adam Bien, born 1899, member of the underground government, Peasant Party, 5

years' prison.

4. Stanislaw Jasiukowicz, born 1832, National Party, member of underground government, 5 years' prison.

 Kazimierz Puzak, born 1883, leader of Socialist Party and speaker of underground parliament, 18 months' prison.

6. Alexander Zwierzynski, born 1880, National Party, deputy speaker, 8 months'

tional Party, deputy speaker, 8 months' prison.
7. Kazimierz Baginski, born 1890, Peasant

Party, deputy speaker, 6 months' prison. 8. Stanislaw Mierzwa, born 1905, Peasant

Party, 4 months' prison.

9. Zbigniew Stypulkowski, born 1904, lead-

er of Democratic Party, 4 months' prison.

10. Eugeniusz Czarnowski, born 1904, leader of Democratic Party, 4 months' prison.

 Jozef Chacinski, born 1889, leader of Christian Labor Party, 4 months' prison.
 Franciszek Urbanski, born 1891, secre-

12. Franciszek Urbanski, born 1891, secretary of underground parliament, Christian Labor Party, 4 months' prison.

13. Stanislaw Michalowski, born 1903,

13. Stanislaw Michalowski, born 1903, Democratic Party, proved innocent.

Kazimierz Kobylanski, born 1892, National Party, proved innocent.

15. Jozef Stemler-Dabski, born 1892, interpreter of Polish delegation proved innocent.

16. Antoni Pajdak, member of Socialist Party and of underground parliament, was not tried in public, and the sentence in his case was not disclosed.

It is to be noted that in accordance with Soviet procedure the penal sentence is counted, as from the day of arrest.

General Okulicki, Jankowski, Jasiukowlez, and Pajdak did not yet return to Poland. Okulicki should be released on March 28, 1955. Jankowski should have been freed on March 28, 1953, and Jasiukowicz on March 28, 1950. According to information, Pajdak was sentenced by administrative decree to 5 years, and if so had to be freed on March 28, 1950. It should be stressed that the fate of these 4 prisoners remaining in Soviet Russia is still unknown.

The remaining leaders were brought back to Poland after the period of their detention in Soviet jails had elapsed. Puzak and Mierzwa were rearrested in Poland, sentenced, and Puzak died in prison. Czarnowski, Urbanski and Chacinski died in Poland. The fate of Bien is not known, as well as of Zwierzynski and Stemler-Dabski. Michalowski and Kobylanski, acquitted during the Moscow trial, were again arrested in Poland and are detained in prison. Stypulkowski is in England and K. Baginski lives in the United States of America.

In connection with the 10th anniversary of this shameless act perpetrated on March 28, 1945, against the 16 polish underground leaders, steps should be taken to—

1. Ask for full information as to the fate and whereabouts of those four leaders still

kept in Soviet Russia.

2. Demand their release from prison.
3. Insist on the liberation of the underground leaders who have been submitted to new ordeals by the Moscow-sponsored regime in Poland after their return from Russia.

Italy Is Dawdling

EXTENSION OF REMARKS

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 23, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of March 17, 1955:

ITALY IS DAWDLING
(By Ludwell Denny)

ROME, March 17.—Italy is doing little about basic reforms to make herself self-supporting, despite some temporary gains and grandiose plans.

American aid, amounting to \$5,500,000,000, has been used mainly for emergency purposes. It has provided food and jobs for the hungry and restored war-devastated areas.

To that extent it has slowed the growth of communism. But it has not been permitted to help out much in constructive reform of Italy's grossly inefficient economic system and evil social conditions.

As a result, destructive revolutionary forces—communism on one side and fascism on the other—now are reaching dangerous proportions. State socialism is spreading and so is the welfare state. The evils of an unproductive tax on unused and misused land, high interest rates, low productivity and high production costs barely have been touched.

Excess labor on payrolls and inability of employers to dismiss idle workers still destroy incentive and boost costs to a point where many products neither can compete in foreign markets nor be sold to the poverty-stricken home consumer.

Though national income has increased 45 percent in 7 years and industrial production is 70 percent above prewar, unemployment of more than 2 million remains the same and per capita annual income is only \$370.

The national birth rate is lower than the West European average and much less than the United States, but it's still so high in the illiterate south that neither new jobs nor waning emigration can check Italy's insidious overpopulation.

One-fourth of the population still lives in substandard conditions, unable to afford meat or sugar. A million or more live in caves and hovels. There is a shortage of 3 million dwellings and 12 million rooms.

Land reform—one of the few basic measures attempted—has distributed 1 million unused or misused acres to 70,000 peasants. But 1 percent of the landowners still own 40 percent of Italy's total productive area and more than half the private holdings are plots under an acre and a half.

Communism is making its biggest gains among landless peasants, many of whom live

an animal-like existence.

Despite tax reform, the system remains one of the worst in the world. Direct taxation provides only 14 percent (or 19 percent including temporary levies) of total Government revenues, compared with 80 percent in the United States.

Regardless of all the talk about free enterprise, there's more Government participation in business here than any place outside the Iron Curtain.

The cancer of state socialism is spreading. Firms controlled by the state holding company, Irl, represent 80 percent of the total shipbuilding, 75 percent of the pigiron industry, 61 percent of all telephones, 50 percent of steel and rolling stock, and from 25 to 45 percent of truck and bus lines, radios and electronic equipment, and prime movers—plus many others.

Another Government company, Enl, controls 95 percent of the natural gas production and 25 percent of the country's gasoline distribution. It has monopoly exploration rights in the Po River Valley area.

Most state socialism firms are inefficient, uneconomic monuments to Mussolini's folly and the present Government's lack of courage for reform.

A Tribute to Hamden (Conn.) High School

EXTENSION OF REMARKS

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1955

Mr. CRETELLA. Mr. Speaker, it is with great pride that I point out the magnificent victory of the Hamden (Conn.) High School hockey team in winning the New England high-school championship for the second successive year at the Rhode Island State Auditorium at Providence on March 19. Following are excerpts of an article from the New Haven Evening Register:

The Hamden win was a team effort, although sparked by the boys who have been performing in an outstanding fashion all season. Butch Ives played terrific hockey in the final game to come back, despite his injuries, to play the type of hockey he had exhibited all year in Connecticut. Joe Barile turned in a tremendous performance throughout the playoffs, as did Paul Gauthier in the Hamden goal. Don Goldberg was a key figure on defense and his partner, Dick Kennedy, was an iron man, playing through the tourney without rest. Ives was voted the most valuable player of the tourney award, and he and Barile were unanimous selections for the all-tourney team.

Congratulations are also very much in order for team members Doherty, Dietter, Ferrie, Batson, and Molloy, for their efforts in this game against St. Dominics, of Lewiston, Maine.

The Hamden High School, in the Third District of Connecticut, which I represent, has come to turn out perennially powerful and formidable hockey teams in the last several years. I commend the spirit displayed by the team, as well as their fine sportsmanship and the strong support given by the student body of Hamden, the citizens of the area, and all those who have taken a part in making this hockey team the best in the New England high-school circuit.

Greek Independence

EXTENSION OF REMARKS

HON, JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. ROOSEVELT. Mr. Speaker, we celebrate today the 134th anniversary of Greek independence. It was on March 25, 1921, that Greek patriots, led by Archbishop Germanos, revolted against their Turkish overlords and, in so doing, touched off the flame of rebellion against oppressors which circled the earth to mark the 19th century as the era of liberation.

In thus renewing man's age-old struggle for freedom and independence, Greece was true to its history. Greece has always stood in the forefront of the defenders of democracy; indeed Greece gave birth to both the word and the idea in the days of its ancient glory.

And that this inner urge—this drive—on the part of the Greeks toward liberty, not only for themselves but for all peoples, has not diminished with the passage of time is amply demonstrated by their record in these later days.

Mussolini's Fascist spears were blunted and broken on the rock of Greek resistance. Hitler's legions overran Greece only through an all-out air, sea, and land offensive by vastly superior forces—and then only temporarily. The Stalinbacked drive against Greek independence was smashed with United States aid, and when the black flag of totalitarianism was raised in faraway Korea, Greece sent soldiers halfway around the world to aid in the battle against the new menace.

As is fitting to nations in whose life streams the urge to freedom runs so strongly, the United States and Greece have a long history of friendship; a friendship that runs from President Monroe, who hearkened to the appeal of the Greek Senate in its earliest days of being, to President Truman, who gave decisive aid against the Communist aggressor.

Nor did our interest stop with the determined support of Greek aspirations that we gave under the Truman doctrine, for, after that, there was the Marshall plan, the ECA, and point 4 technical assistance.

But there is another aid that we must give to the people of this ancient cradle of democracy—a gift that is perhaps as much spiritual as material. We must put an end to the degrading discrimination against our Greek brethren that is written into our immigration laws.

Greece is overpopulated; it is impoverished by its excess population; yet, under our present immigration quotas, we restrict Greek immigration to a mere trickle. This is a shame to us and a crime against the brave Greeks whose independence day we commemorate today.

Let us make this commemoration meaningful. Let us resolve today that all this shall be changed; that we will make unused quota numbers available to countries that desperately need them, like Greece.

We join our Greek allies in striking over and over at the shackles of inhumanity.

Address by Hon. William E. Jenner, of Indiana, Before Indiana State Bottlers Association, Indianapolis, March 14, 1955

EXTENSION OF REMARKS

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a speech delivered by me before the Indiana State Bottlers Association in Indianapolis on March 14, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Address of Hon. William E. Jenner, of Indiana, Before State Convention Indiana State Bottlers' Association, Indianapolis, Ind., March 14, 1955

You have many problems before you at this meeting and you should have time for fun. Why then do you add politics to the list of matters to consider in your limited

The answer is obvious. If you wish to have freedom to run your business, you are of necessity in politics. Nothing quivers with the political winds more than a balance sheet.

You and your organization are the embodiment of free enterprise. Many of you started your own businesses. You enjoy the combination of responsibility and freedom. The headaches are headaches you chose yourselves as the price of managing your own affairs.

You may not think about it, but your right to run your own business is a political right. It is the right to have a Government which operates within limits. When your Government has broken the bonds which hold it within fixed limits, when the executive branch has undreamed of amounts of money, broad legislative powers through directives, and even the judicial power to decide appeals from its edicts, it is no longer limited Government.

When the Government controls minimum wages, or wages in Government contracts, or collective bargaining obligations, or trade union organizations or dividends and depreciation allowances, "free enterprise" is on a

leash. It is becoming an obedient satellite of big Government, no longer is each enterprise an independent Republic, as our private agencies used to be.

Many Americans are aware of this growing danger, but they cannot get a clear idea of what to do about it.

Some of them cherished the innocent hope that a change of parties or a change of candidates would halt the growth of the new Leviathan. Now we know the remedy is not so simple as that. A few people are tempted to give up the fight.

Today, big Government operates through so many diverse activities that it seems almost hopeless to oppose its growth. But all those operations are controlled by a few key switches. If we can find the master switches, we can stop the growth of big Government and cut down the colossus on the Potomac. THE MASTER SWITCH OF GOVERNMENT POWER

I want to tell you what is the most hopeful fact in our political dilemma today. The master switch is taxes. If the American people will put their minds on taxes, they can quickly master their domestic problems.

A few days ago I read in the morning paper that the Federal Government had garnisheed the salary of an employee who owed back taxes. The story said that the Government had withheld the entire salary of the employee for the current month, and intended to continue withholding every penny of his earnings until all the back taxes were paid.

I do not know the individual case. The employee may have been shiftless. He may have had illness or other personal troubles, or he may have had a dispute with the income-tax people over what he owed.

What disturbed me was the shocking sad-

What disturbed me was the shocking sadism of taking every penny of an employee's income at once—his rent, his food, his carfare—when it would have been just as easy to collect 10 percent of his salary over a longer period of time. If the trouble had been illness or other mishap, the trail of further breakdown or heavy debts to the moneylenders was only too clear.

I tell this story because Americans of today do not yet know what the Colonists knew. All tax collections are cruel. Our tax-collecting agencies have so far been very tactful, and they have been working in a period when the American economy had plenty of fat. The tax knives have just begun to cut to the quick. We are just beginning to know, what every age before us has seen clearly, that tax-collection is a cruel and ruthless business, which will bring hatred and sadism into our country such as we have never known in all our history.

The taxgatherer is the most hated man in popular story. The publican was despised and hated in the days of Christ. Rudyard Kipling tells us of the princely states of India where the tax-gatherers waited at the farm until the kid was born, so they could take the farmer's only hope of more income, for taxes to pay for the prince's follies.

I am going to talk about taxes. But let us never think taxes are cold statistics. Taxes are a gigantic screw which turns and turns, and squeezes more and more blood from the helpless embittered farmer or worker or businessman to pay for the Government's foliles.

THE FOLLIES OF GOVERNMENT SPENDING

We do not have time to discuss the follies of Government spending but let me refresh your memories.

I have before me a memorandum that we have just allocated \$23 million to Egypt. A few days ago it was Yugoslavia. The latest allotment to Egypt is to be used for construction, by American engineers, of a highway between Cairo and Alexandria, for improvement of the water supply in the Nile, for improvement of the port of Alexandria, and for a new workshop for the Egyptian Minister of Public Roads.

At the same time, the State of Israel received \$316 million for equipment, and Pakistan the same for chemical supplies,

These are all worthy projects, but why should an American workingman have his entire salary garnisheed, to pay for Government programs in Egypt or Israel or Pakistan?

THE STORY OF TAXES

Now, let us go back to taxes.

In the fiscal year 1932, which was the lowest point of the great depression, the Federal Government collected the record total of \$2 billion in taxes. In that year, however, the Government, through RFC, was shoring up the banks, the farms, and State emergency relief expenditures.

In 1939, after 7 years of the great experiment in making America over, Federal taxgatherers were collecting over \$5 billions a year, an increase of over 250 percent over the worst year of the depression.

Then came the most destructive war in history. The United States was turned into

an arsenal filling pipelines, pouring rivers of food and equipment to every continent. By the war's end Federal tax collections had climbed to an unheard of \$46 billions.

But war is the great destroyer. We had an Armed Force of over 10 millions consuming gasoline, ammunition, tanks, planes, ships, shoes, steaks, and everything else. We were also giving billions to scores of other Nations in the coalition against the Nazis. The U. S. S. R. alone was given some \$12 billions.

How much is the Federal Government collecting from us today? If 2 billions were enough for the depression, if 5 billions were enough for all spending of the socialist planners, if \$46 billion were enough at the peak of a devastating war, how much are we giving the Government today, with no war and no depression? Not 1 billion, not 5 billion, not \$46 billion, but \$73 billion were taken from the American people in fiscal year 1954.

Let me give you a few more figures.

In 1932 the interest on the public debt was \$600 million. Herbert Hoover was bitterly denounced for such extravagance. 1953 the interest burden alone was 61/2 billion. Remember that as long as we do not pay that interest, but add it to the public debt, we will go on paying for it not 1 year but every year for generations yet to come. We have already paid interest for 21 years on the debt the Government incurred for NRA, AAA, and relief in the first year of the New Deal, and no one knows how long this waste will go on.

It is estimated that the deficit for the year 1934 alone, which was \$760 million, has already cost us \$483 million more, in interest payments, with no end in sight.

What can we do about it-if we are serious and want to do something?

WHAT NOT TO EXPECT

First, let me tell you what will not help. I am not interested in the conversation about a balanced budget. Once upon a time a balanced budget was a restraint upon executive power. That was true when it was hard to raise taxes, when our people resisted tax increases as vigorously as the colonists did. "Taxes" used to be a fighting word to Americans.

Taxes were the anchor which held down spending as soon as the budget was balanced. But our Government spenders put a jet engine on the old anchor. They learned that it was easy to raise taxes if they spent part of the money for the Government's propaganda machine. You remember the phrase, Tax and tax, spend and spend, elect and

The spenders realized years ago that an unbalanced budget was the road to higher taxes. Congress raised taxes in the pious hope the budget would be balanced, but the spenders quietly sent spending up higher than ever, while the propaganda machines told the people what to think. The fetish of a balanced budget is now the palace guard's best instrument for collecting in peacetime far more taxes than they dared collect in war. The problem is not to fit taxes to spending but to cut taxes first and fit spending to a much lower income.

I can tell you another hope that will not materialize. That is waiting for Congress

alone to cut spending.

The administration has about 2½ million employees. Congress has a staff of 4,700 peo-

That gives you a picture of the unbalance between the executive and the legislative branches. It is a hopeless contest for a Congress with 4 700 assistants to cut the evpenditures of an executive branch with millions of fulltime professional workers whose first responsibility is to keep spending high.

CONGRESS MUST HAVE HELP

Now, is there a remedy? Yes, and a simple

The key to our present shocking tax burden is the tax increase that was put through in 1951 under cover of the fighting in Korea. The war that was not a war was a fine ex-

cuse for a big new tax bill.

The Government did not need that huge increase in taxes in 1951. I knew how much fat there was in the budget. I knew extra taxes would be money down the drain. I did not vote for the bill, but I did not try to build opposition to it. Why? Because no one could hope to defeat the Government's propaganda machine without support from the taxpayers. They still believed in fairy tales. What, then, can we do?

Congressman Hatton Summers, of Texas, wrote an article for Reader's Digest in 1945. He had been the distinguished chairman of the House Judiciary Committee, and a vigorous opponent of the unconstitutional growth of executive power. Judge Sumners said Congress would never be able to attend to its own proper business, until it gave back to the States and local organizations, the responsibilities which belonged to them under the Constitution.

The first responsibilities of Congress are foreign policy and military policy. It is not the business of Congress to legislate on cancer, lunches for schoolchildren, depreciation reserves for new machinery, corporate divi-dend payments, giving or withholding Federal funds for private school buses, collective bargaining, or making up the cost of unbalanced budgets in France.

REVIVAL OF STATES RIGHTS

Congress has become involved in all this busy work because the spenders wanted Congress kept too busy to think. And how well they have succeeded.

I say to you that the first business before Congress is to cut out the busy work. need a congressional commission to determine what powers and duties Congress should release at once, and what taxes it should reserve to State and local agencies so they can pay for what they need.

The Congress should have established such a commission in 1953, but it hesitated. The executive branch established a special commission under Dean Clarence Manion, a very able man for the job, but he was retired. and Congress has no more information today than it had in 1952.

Where do you come in? Well, a pitcher cannot win the game unless there are also a few good catchers on the team. Congress cannot rid itself of the incubus of deciding on State and private matters, unless the States and local agencies are as eager to uphold their rights as Congress is to adhere to the principles of a Federal Republic.

Are our State and local leaders ready to demand the powers the Constitution guaranteed to them forever?

Too many of our governors have been bewitched, bothered, and beguiled, by the colossus on the Potomac. They hope that, by deference to the powers that be, they can share in the apparently endless streams of wealth which Federal officials can spend. But where does that wealth come from? It comes from the billions which were collected from the people of Indiana and the other States.

Do you see why I said recently I did not want to see the governors of our sovereign States going to Washington with a tincup in their hands, to ask the Federal Government to please give them back a little bit of their own money?

We are going to have to face this question very soon in the issue of Federal aid for

school buildings.

There is a growing school population, but there is not the slightest particle of evidence that our States and cities cannot supply their own children with all the buildings they need. Watch the stories in the newspapers about a report of the Committee on Intergovernmental Relations which apparently says, "We have been unable to find a State which cannot afford * * * to support an adequate school system." That report has been suppressed. Why?

You will tell me it is hard for the legislature of Indiana to pay more taxes. Of course, it is hard. In Indiana we meant to make it hard for governments to spend. The Con-stitutional Convention meant to make it hard for the Federal Government to spend. If Indiana does not supply its own school buildings, it is asking Congress to use printing-press money, and raise still higher a Federal debt which is already close to \$280

billion and rising.

For once we have a problem where the line of action is clear and simple. We can solve the problems of big spending, growth of centralized control, and the withering away of the States, if we return to two principles of our Founding Fathers-low taxes and

Congress cannot function, and the Constitution cannot be preserved, if the spenders in both parties make our States into lackey States and our governors into servitors milling about the palace guard.

CONGRESS AND THE STATES CAN RESTORE THE REPUBLIC

Congress can function, the Constitution can be preserved, and we can free our energies to meet all our foreign problems, if the people of our country will unite with Congress in an irresistible demand for tax cuts and States rights.

It is my hope that, in this rededication to the principles of our founding, the people of Indiana will lead the way.

Giveaway Business

EXTENSION OF REMARKS OF

HON, LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 23, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following editorial from the St. Marys (Pa.) Daily Press of March 26, 1955:

GIVEAWAY BUSINESS

The American Legion magazine for April has outlined in bold relief the giveaway program that has been featured by American Government officials while neglect for Americans persists here at home.

We will quote direct from that publication as follows:

The Nation was shocked to its depths not long ago when Ira Hayes, one of the marines who raised the flag at Iwo Jima was found dead near Phoenix, Ariz. For years he had been destitute and in distress, and his death followed by only a few weeks his appearance in Washington, where with other marines from Iwo he was applauded as a hero. Ira Haves was an American Indian, one of the 343,000 Americans of Indian Blood whose welfare is the accepted responsibility of our Government.

We are not meeting that responsibility very One of the familiar and pathetic sights at the capital is that of tribal heads asking Congress to give the reservation Indians a better deal. The usual reply is the cold answer that Uncle Sam has no more

money to give them.

The situation has a grim irony when we observe that while there never seems to be enough money for our own native wards, Washington has a bottomless purse for needy foreigners. - The answer to Ira Hayes' Indians is usually "no." but when Nehru needs money for his Indians he can count on an emphatic "yes" from Washington. In the last 31/2 years, Nehru's Indians, who are lined up against us in a neutral and unfriendly corner in our logical foreign-aid policy, there is nothing surprising in all this. Our aid program bristles with such incongruities.

How often veterans, for instance, have encountered niggardliness and we-haven't-gotthe-money attitudes in Washington while observing wryly the unquestioned out-go of

multi-billions abroad.

At last tallying, 59 foreign countries have been on the American dole since the end of World War II. Including colonies and dependencies, the number reaches 90. The aggregate amount which Congress has appropriated for the handouts, in various categories, since 1945 is \$52,067,651,495. In other words our national economy has taken a \$52 billion beating in the name of foreign Bid.

Another deferred security program of unimaginable importance to the American people is project Lincoln, which was worked out by scientists at the Massachusetts Institute of Technology in 1952 to provide a screen of protection for the North American Continent against air attack by the polar route. Project Lincoln, whose details are still a defense top secret, proposed a defense in depth against approaching bombers which would be as automatic as a railway-signal system. In the event of atomic attack, the existence of such system, while not affording absolute protection, would cut down the casualty lists in our greater cities by millions of persons.

The catch is that such a radar and defense screen would be staggeringly costly. Some estimates of the cost of project Lincoln have been as high as \$20 billion, although spokesmen of the project have protested that it could be built for much less.

However, project Lincoln is the actual answer to our A- and H-bomb defense needs, \$20 billion would not be an excessive bill for the protection it would give to American citizens. As Senator Bamges has pointed out, the destruction of a single target area, such as Detroit, in the event an H-bomb got through, could be as high as \$14 billion. The loss of life would run into the millions. Certainly, a United States which could give \$31,-808,879,000 to a single country, Great Britain, in the 13-year period from 1940 to 1953, would be niggling to refuse a much smaller sum which might well save the lives of millions of Americans.

And yet, under the inverted logic of foreign aid, we gave the billions to Britain but e are still reluctant to spend needed money for the security of Americans.

Other projects—better hospitals and clinics for low-income Americans, more mentalhygiene facilities, improved nursing, geriatric research, rural housing, reforestation, rehabilitation of declining industries (coal mining is a distressing example), decentralization of our industries-are on the waiting list because they cannot be financed. The noble objectives of foreign aid seem less noble when we realize that the American people are paying such a price for its continuance.

It is difficult to escape the conclusion that United States simply cannot afford to continue the giveaways if it is to continue to play fair with its own people. Paradoxically, the man who has pronounced the most devastating indictment of the whole foreign-aid program is Dwight D. Eisenhower. In his address to the Nation's editors, on June 23. 1954, he declared:

"The United States cannot * * * by its financial sacrifices carry all other nations of the world on its shoulders, and we should stop giveaway programs. Now this is very You could not keep any other country in the world free merely by money. You can't buy or import a heart, or a soul, or a determination to remain free. Consequently, the statement that American so-called giveaway programs are not going to keep the world free is absolutely true."

Sometime, the giving must stop, if we are to avoid national disaster. That time should be now, and not in some vague, distant

tomorrow.

UMWA Criticizes President's Report as Too General

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following press release of the UMWA charging that the President's Report on Energy Supplies and Resources is too generalized and fails "to meet squarely the realities facing the coal industry":

UMWA CRITICIZES PRESIDENT'S ENERGY REPORT AS TOO GENERAL

WASHINGTON, D. C., March 13, 1955 .- The United Mine Workers of America charged today that the Presidential Committee Report on Energy Supplies and Resources Policy is too generalized and fails "to meet squarely the realities facing the coal industry.

The UMWA statement, issued by Thomas Kennedy, international vice president of the union, goes into a careful analysis of the so-called Flemming committee report (the Presidential committee was headed by Dr. Arthur Flemming, Director, Office of Defense Mobilization) and is sharply critical of the lack of specific recommendations. The Flemming report was issued by the White House on February 26 following several months of study by a select Cabinet committee.

The UMWA statement is particularily critical of the report's "head in the sand, ostrich approach" on the problem of foreign residual (waste) oil and natural gas importation and dumping.

On the question of discrminatory freight rates by the railroads on coal, the UMWA found the report to be general and stated that "vigorous, compulsory action by the

Interstate Commerce Commission is necessarv and urgent.'

The report by the union also criticizes the general recommendations on coal exports and calls for the initiation of a vigorous program by the Government.

The text of the UMWA statement follows: "The recent release by the White House of the Report on Energy Supplies and Resources Policy, as the United Mine Workers of America view it, includes many generalities and few specific recommendations, all bearing on the broad problems involved but failing to meet squarely the realities facing the coal industry-both anthracite and bituminous.

"The section of the report dealing with natural gas regulation in net effect condemns the Supreme Court decision in the Phillips case. The question of rate fixing jurisdiction over sales of natural gas by producers and gatherers to interstate pipelines is complicated and many legal considerations are involved. Therefore the mine workers take no position on this section of the report pending further study.

Under the section Sales Below Cost by Interstate Pipeline Companies the general recommendations have substantial if affirmatively implemented by congressional legislation. The widespread practice of the gas pipeline companies in sales below actual cost is so ruthless and devastating in its effects upon the coal industry that it, upon its face, constitutes unfair competition and is inimical to a sound fuels economy. As an illustration, a quick look at the practice of using natural gas as raw boiler fuel makes this inferior use of an irreplacable and rapidly diminishing natural resource stand out like a sore thumb. As stated in the Paley report in 1952, it must be clear (although the present report does not specifically treat the subject)

" "The desirability of eliminating low value general uses (such as boiler fuel at points distant from the fields) as rapidly as possible is universally recognized.'

"In the face of this universally recognized fact, the Feleral Power Commission continues to allow and the pipeline companies continues to dump gas for raw boiler fuel purposes at an ever-increasing rate. While no definite distinction (from facts presently at hand) can be absolutely drawn between boiler fuel use and what may be some justifiable uses in industry, there is available a pretty fair guide as to what is happening. According to a Bureau of Mines Mineral Yearbook, the total industrial consumption of natural gas in 1940 was in excess of 995 billion cubic feet. In 1952 this had increased to approximately 31/2 trillion cubic In 1940 elecfeet, or a 246 percent increase. tric utilities reporting to the Federal Power Commission used approximately 183 billion cubic feet of natural gas as boiler fuel. In 1953 this had increased to over 1 trillion cubic feet, an increase of 446 percent. can be no question as to the need of conserving natural gas in this country, so surely some way should be found to put a curb on the extravagant and wasteful use of this gas as boiler fuel. Certainly this practice of the gas lines should be hibited, for its continuance is unquestionably unfair competition and is ruinous in its effects on the anthracite and bituminous coal industry .

"We directly and completely disagree with the section of the report dealing with Crude Oil Imports and Residual Fuel Oil Imports. The record is complete on the enormous quantities of foreign crude and residual oil imports and their devastating effect on all segments of the coal industry and other interrelated business enterprises. For the Presidential commission now (in the face of this record) to recommend a mere freezing of imports on a 1954 basis and suggesting import limitations by but 'voluntary and individual action' is the height of absurdity and but a head in the sand, ostrich attitude.

Measures should be taken to correct and bring into balance the unduly privileged tax position now enjoyed by the natural-gas industry. A broad active program and generous appropriation to support it should be immediately instituted to promote a research and development program for coal.

'Coal freight rates recommendations are general. Vigorous compulsory action by the Interstate Commerce Commission and other governmental agencies is necessary and urgent to 'remove the excessive and disproportionate contribution that coal rates are making to meet the cost of other unprofitable services of the railroad industry.

"The general recommendations on coal exports and mobilization requirements for coke can be actively implemented if the national administration and existing governmental agencies would but courageously use existing means and measures now available to them. They should initiate and vigorously pursue

a foreign coal export program.

"Most of the recommendations under the section Government Fuel Purchasing Policy are worth while. There undoubtedly is a crying need for a minimum wage order determination in the coal industry under the Walsh-Healey Act. It is to be hoped that the Secretary of Labor will move expeditiously to that end now that the month-long public hearings on this matter have been termin-

"Another of the sections under Government Fuel Purchasing Policy directing that 'all coal suppliers to the Government, regardless of size, should comply with the Federal Coal Mine Safety Act' has the most vigorous support of the mine workers and we urge the Secretary of Labor, with the au-thority granted under the Walsh-Healey Act, to see that this policy be rigidly enforced.

"The Importation of natural gas from foreign countries poises a dagger at the heart all the coal industry-anthracite and bituminous-and threatens to disrupt in a grave way a very broad segment of the American national economy. The threat comes from both our northern neighbor-Canadaand our neighbor to the south-Mexico. Current figures are not immediately avail-

"It is generally estimated, however, that in the Province of Alberta, Canada, alone the recoverable natural gas subject to export from the Province (less estimated reserves for its own use) exceeds 10 trillion cubic feet. In addition, gas is being discovered in Alberta at the presently estimated rate of 1.5 trillion cubic feet a year. This alone would add 15 trillion cubic feet in 10 years to the amount already available for export.

"Within the past 2 years natural gas has been discovered in northeastern British Columbia and it is presently estimated that approximately 3 trillion cubic feet of gas have been proven in that Province. Discoveries are continuing at a rapid rate in the Northwest Territory and the Bush Country. Discoveries have been made in Saskatchewan and in southwest Manitoba and substantial reserves in these provinces are being added every month.

"The proposed trans-Canada pipeline, already holding Provincial export permits and merely awaiting Dominion permits, proposes to export 365 million cubic feet of gas a day from Alberta to the east, it being a 30-inch pipeline more htan 2,000 miles long, with an estimated final capacity (with additional compressor engines) of 553 million cubic feet a day. If this line sought to serve only Canadian markets (even though it would displace 221/2 million tons of bituminous and approximately 11/2 million tons of anthracite coal now being shipped annually from the United States into Canada) perhaps it could still be considered solely a Canadian problem. The fact of the matter however, is that there is included in this proposal the construction of a branch line from the vicinity of Winnipeg to the in-ternational border in northern Minnesota, where approximately 200 million cubic feet of natural gas a day will be sold to the Northern Natural Gas Co. for sale and distribution in the United States. It is claimed that this and other United States sales are necessary (particularly in the early days of the operation of the Canadian line) to of the operation of the Canadian line) to make the line to Montreal economically feasible, it being estimated to cost over \$300 million. If this gas is imported into the United States at the high-load factor that is proposed by the Trans-Canada and the Northern Natural Gas Co., it would bring into our country gas equivalent to more than 2 million tons of bituminous coal per year.

Coupled with this, Federal Power Commission has already approved a plan whereby Tennessee Gas Transmission Co. export 60 billion cubic feet of gas a year into the Toronto area, and the Niagara Transmission Co., Ltd., of Canada, is constructing a connecting line from Toronto to the Niagara River, conditioned upon the agreement of the parties that the gas will be used to build up the markets in the Toronto area until such time as Trans-Canada completes its line to that city, which is estimated to occur in 1956. This arrangement is but a further step in strengthening the economic feasibility of the Trans-Canada line by having a readymade market to absorb Canadian gas to a substantial extent as soon as the Canadian line is able to deliver it. It is then proposed, and generally understood, that the flow of the line will be reversed from Ontario to bring natural gas into the United States in the vicinity of Buffalo. The line will have a capacity upward of 125 million cubic feet per day.

"In addition, in 1952, the Federal Power Commission improvidently issued a certifi-cate to Montana Power Co., allowing the importation from Alberta into Montana of 10 billion cubic feet a year for 5 years, and the Federal Power Commission now under present consideration an application by the same company to increase its gas imports to 20 billion cubic feet annually for a

period of 20 years.

Other applications are pending before the Federal Power Commission for certificates to serve the Pacific Northwest area with volumes of gas ranging up to approximately 90 billion cubic feet per year. This would be an equivalent of 4 million tons of bituminous coal per year. Such applications pose a constant and continuing threat to the entire coal-producing areas and markets of the western part of the United States.

"In connection with these Canadian gas imports, it should be noted furthermore that, with respect to coal, every ton of coal shipped into Canada from the United States must pay an import duty of 50 cents per ton, while Canadian gas comes into the United States absolutely tax free.

"The Texas and Ohio Gas Co. since 1951 has been seeking authority to econstruct a gas line from the Rio Grande River in Hidalgo County, Tex., to the State of West Virginia and as part of its gas supply relies upon obtaining 200 million cubic feet of gas per day from the Republic of Mexico. In addition news dispatches quote the head of the Mexican Government's oil- and gasproducing agency—the Penex Co.—as having stated that 300 million cubic feet of gas per day can be produced in the Rio Grande fields near Reynosa to be exported to the United States. By bringing this gas a short distance across the Rio Grande into southern Texas it would be readily available for any one or more of the large long distance transmission lines already servicing the Appalachian area and the eastern seaboard. tention should be directed to the fact that this natural gas would be imported absolutely duty free whereas any coal that is shipped into Mexico is burdened with an import tax of 30 to 40 cents per ton depending on the money value of the coal.

'In the 83d Congress 1st session the late Senator Hunt, of Wyoming, introduced and public hearings were held on S. 1287 which sought to amend section 3 of the Natural Gas Act pertaining to the issuance of permits for the importation or exportation of natural gas. Such a bill would not establish a legislative embargo upon natural gas imports but would merely amend the act and establish appropriate legal criteria for the Federal Power Commission to follow in carrying out its present power. Domestic fuels are wholly adequate to meet any and all needs of the fuel markets of the United It is therefore entirely appropriate that proper standards and criteria be set up to guide the Federal Power Commission in its decisions on the question of foreign gas imports into this country. We attach a modified version of the Hunt bill and urge its early introduction and speedy enactment:

" 'PROPOSED REVISED AMENDMENT TO NATURAL GAS ACT TO LIMIT IMPORTS

"'Section 3 of the Natural Gas Act is amended by inserting between the second and third sentence thereof a new sentence as follows, viz:

""It shall not be deemed to be consistent with the public interest to authorize the exportation or importation of natural gas in any case where the Commission finds that such exportation or importation will result in economic dislocation unemployment or injury to competing fuel industries of the United States unless compelling reasons in the public interest require such authorization or there is an inadequate supply of all domestic fuels to serve a specific geographic area."

Federal Regulation of Natural Gas Rates

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend and revise my remarks. I wish to insert in the RECORD a resolution adopted by the West Allis, Wis., Common Council in opposition to legislation to exempt from Federal regulation the rates charged by producers and gatherers of natural gas made for interstate commerce.

Following is a letter from George A. Schmus, city attorney for West Allis, and

a copy of the resolution:

WEST ALLIS, Wis., March 25, 1955. Hon. LESTER R. JOHNSON,

Representative in Congress, Washington, D. C.

DEAR SIR: We respectfully urge your opposition to H. R. 4560, which would exempt from Federal regulation the rates charged by producers and gatherers of natural gas on sales they make in interstate commerce.

Enclosed is a certified copy of a resolution adopted by the Common Council of the City of West Allis on March 22, 1955.

Sincerely.

GEORGE A. SCHMUS. City Attorney.

Whereas certain legislation is pending before the Congress of the United States, in-cluding the so-called Harris bill which would amend the Natural Gas Act of 1938 and exempt from rate regulation of the Federal Power Commission those companies producing and supplying natural gas for sale in Interstate commerce; and

Whereas it appears that passage of such legislation would result in increased gas rates to the consumers of West Allis; and

Whereas it appears regulation of natural gas rates at the wellhead is required to protect the public because of limited competition and concentration of ownership in a few companies; and

Whereas the League of Wisconsin Municipalities and the National Institute of Municipal Law Officers have already gone on record in opposition to such legislation: Now, therefore, be it

Resolved, That the Common Council of the City of West Allis hereby records its opposition to any Federal legislation which would eliminate Federal regulation of natural gas rates at the wellhead, and calls upon the Members of Congress to defeat any such legislation, including the Harris bill.

Let a certified copy of this resolution go forward to President Eisenhower, to both Senators and all Congressmen from the State of Wisconsin.

Adopted March 22, 1955.

PHIL. ELLIOTT,

City Clerk.

Approved:

ARNOLD H. KLENTZ,

Mayor.

MARCH 24, 1955.

Propriety of Debating in Colleges the Recognition of Red China by the United States

> EXTENSION OF REMARKS OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES Monday, March 28, 1955

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement issued by me in reply to an inquiry received from a college professor with regard to the propriety of debating in the colleges the recognition of Red China by the United States.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DEBATING RECOGNITION OF RED CHINA

DECEMBER 6, 1954.

DEAR PROFESSOR: I am glad to give you my Opinion of the question whether college students should debate the question of diplomatic recognition of Red China.

If this were only an academic issue, a topic chosen strictly for its academic value, I should, of course, say there is no reason why it should not be debated. Is it, however, purely an academic issue?

In hearings before the Internal Security Subcommittee John Powell and William Howard Hinton testified that they had remained voluntarily in Red China after the Red Chinese made war on us in Korea. Powell edited one of the magazines used most extensively in brainwashing our men held captive by the Communists.

Hinton and Powell both refused to answer questions before our subcommittee on their

present activities in this country. They are both here now on speaking tours at which they give forth the propaganda line in favor of Red China-peace, trade, and coexistence. Hinton brought in a large amount of printed which was confiscated by the United States customs.

I have no doubt that a carefully planned campaign is being carried on to propagandize for Red China among students, teachers, church people, farmers, labor unions, and business groups.

Many innocent people are helping to further it without realizing the purpose of the propaganda. This campaign is timed to coincide with moves in our Government and in U. N. for softening our attitude to Red China.

The Communists know that constant discussion helps to keep the issue in the public eye, accustoms people to accept a strange, unpleasant idea without thinking, and otherwise makes recognition palatable. It is the old story of drops of water wearing away a stone.

The propaganda is probably timed to coincide with publication of a crop of books and articles on Communist China, putting the propaganda line in many most enticing

That was the technique used after 1943 through the IPR and other public and private agencies to persuade Americans that the Chinese Reds were simple agrarian reformers. This is how they persuaded some people that the United States must insist the Chinese establish a coalition government with Mao Tse-tung.

We obtained full proof of the collusion between American pro-Communists and those in Soviet countries through the IPR hearings years too late to stop the damage. We obtained full proof of the collusion in the Korean peace settlement through the hearings on General MacArthur and other testimony under oath, but it came too late. We shall have formal legal proof of the campaign to whitewash Red China, but not while the political decisions are being made.

Nevertheless, nothing is gained by opposing the use of this topic in college debates. Instead, I think American students and teachers should get into the argument with everything they have—read every book and article, debate every issue, marshal all the evidence, clarify their understanding, and hold on with fierce determination until every student and teacher who has been exposed to Communist propaganda (however skillfully disguised) has a chance to learn the full story. If the Communists want a de-bate on Red China, they should get it. If they want to propagandize for Red China, we can prove we know how to work even harder to spread the truth, so that not a single student or teacher in American colleges or high schools will be uncertain where he stands.

Meeting this issue will give American students excellent training in one of the techniques of cold war. The Communists never use logic as western cizilization uses it, following the standard set by the Greeks. They choose their propaganda slogans and their subtle camouflage for purposes of deception, and then dress them up with scholarly references, statistics, maps, and other apparatus of learning.

Such arguments cannot be answered with logic, but we must all learn to answer them. They can be answered only by the clearest understanding of what the Communists are trying to do, and how well they are disguising it; and then by clear and vivid presentation of the idea or image which will most effectively counteract the suggestion technique of the Reds.

I am having prepared a brief bibliography of references which may be left out of the usual reference lists. We also have available copies of the hearings before our subcommittee dealing with Hinton and Powell,

and including testimony of the American fighting men who spent long periods in Red Chinese prisoner-of-war camps. We have also a new series on Strategy and Tactics of World Communism. I shall take special pleasure in sending copies to you and your students, and, obviously, to any other instructors or students or citizens who are interested in the debate.

The Communists hope to hoodwink our teachers and scholars, to draw them into a subtle and carefully contrived propaganda boobytrap. Let us not try to meet the issue by censorship of the Communists. That is what they are playing for. Let us meet it by using this opportunity to give our young people the clearest understanding of the question, and the greatest possible skill in presenting the case for the side of freedom. senting the Sincerely yours, William E. Jenner.

FROM THE OFFICE OF SENATOR WILLIAM E. JENNER OF INDIANA, DECEMBER 14, 1954

The following books and reports have information of value in connection with discussion of recognition by the United States of the Communist regime in China.

This list is intended to be supplementary to standard lists, and not in place of them.

Food Packs and Marketing Methods

EXTENSION OF REMARKS

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Monday, March 28, 1955

Mr. THYE. Mr. President, I was present this morning at an official introduction program by the Secretary of Agriculture, Mr. Benson, of a pamphlet published by the Department of Agriculture dramatizing to the public the service the public is obtaining in the type of food packs and marketing methods which have been developed over the years by the food retailers. The program was conducted at the Department of Agriculture and was well attended by press, radio, and news cameras. I commend the Secretary of Agriculture, Mr. Benson, for having developed this excellent and informative bulletin on the foodpack question, and for dramatizing it as he did on the program this morning.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the brief address of the

Secretary on this program.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

I am very happy to welcome all of our distinguished visitors to the Department of Agriculture today. I believe we have here in the patio a message that will be of interest to each of you, and to all friends of agriculture.

For too many years, it seems to me, consumers have been bombarded with propaganda about the high cost of food.

The truth is that food today is a better

buy than ever before in history.

The material on exhibit is evidence of our intention here in the Department to present the full story of this better buy in food to the public-to consumers, businessmen, and farmers.

The war and postwar inflation resulted in higher incomes for consumers, higher prices for industrial goods, and higher food prices.

That much is true. It is also true, however, that our food prices today are well in

line with our incomes.

Today we are eating better than ever before. Our diets are much better than they were 30 years ago. The quality of foods is higher. We have a vastly wider selection. And our foods are available to us in convenient forms-many of them are ready mixed, ready dressed, and ready to serve. Yet we spend no greater share of our income for food than we did 30 years ago. Actually, we would spend much less if we were content to go back to the food habits of the

The full story is one of phenomenal service to consumers-on the farm, in our food factories, and in the distributive trades. It is a story that we must tell the American people, and tell it so it will be clearly understood.

Our friend Earl Butz has been going around the country trying to set people straight on this matter. He has been pointing out that despite the many improvements in variety of foods available, in nutritional quality, and convenience of preparation, American consumers today spend the same share of their income for food as was spent as far back as 30 years ago. If you bring it down to what an hour's labor will buy, the picture is even clearer. An hour of labor today will buy almost twice as many loaves of bread, twice as many quarts of milk, and twice as many pounds of steak or chicken, as it did 30 years ago.

Some of us in the Department decided that these facts should be dramatized. We therefore prepared the little booklet that is available here this morning, called More and Better Foods From Today's Pay Check. This booklet tells a story that every well-informed citizens ought to know. The exhibit which we are opening today is an elaboration of the booklet, and we hope that each of you will take a few minutes to study these exhibit panels and the message that they tell.

Several of our friends have already asked what we intend to do with this booklet and this exhibit. I am happy to an-nounce that we have already received orders for over 200,000 copies of the booklet, and more are coming in every day. Some of the leaders in the food processing and mark-keting field plan to buy the plates from which this booklet was made and reproduce large quantities for their own distribution. I will not be surprised if more than a million copies of the booklet are distributed in this way.

The exhibit will be made available to our cooperators at the State agriculture colleges and in that way we hope its message will be carried clear across the country.

We are also preparing special programs for radio and television stations throughout the country, and of course the booklet has already been released to the press. We hope through these media to get the message to many people who would not otherwise hear about it.

Along with these wholesale methods of distribution, we want to get this story to key people, who themselves will pass it on to That is the reason for inviting you here today. We would appreciate your suggestions on how to present this story to all consumers. We also plan to invite other groups here for this purpose.

We are honored to have the Representatives from the Congress with us this morning. Your presence here denotes your interest and concern in the well-being American farmers and American agriculture as a whole. We hope you will agree that this story is one that needs to be told, and that you will help us in telling it.

Tariff on Textiles From Japan

EXTENSION OF REMARKS

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES Monday, March 28, 1955

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Don't Place Burden of 'Saving' Japan on Textile People Alone," which was published in the Anderson (S. C.) Independent of March 24, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

DON'T PLACE BURDEN OF "SAVING" JAPAN ON TEXTILE PEOPLE ALONE

One argument advanced in favor of lowering the tariff on textile goods is that the Japanese must sell their textiles to the United States or else engage in trade with Red China and Russia.

Such trade, we are told, would lead to closer ties between the Japanese and the Reds and eventual loss of Japan to communism.

We are also told that so long as Japan can't trade freely the United States must subsidize them at heavy cost.

Such subsidy can relieve the economic pressure upon the Japanese and discourage trade with the Red world. This subsidizing of the Japanese is a burden that is spread among all Americans.

What is proposed is that the subsidy, in effect, be paid by the textile people-workers and owners-in Anderson, in South Carolina, in the South.

To enable the Japanese to sell their goods, southern mills would be forced to curtail or shut down, thousands would be thrown out of jobs or placed on mere subsistence, and southern economy would be knocked

winding.

That would be the result of making one region bear a nation's whole burden so that some other industry, such as steel, could trade with the Japs.

If the choice must be between lowered tariffs that would wreck the American textile industry or continued outlay of Government money to prop up the Japanese economy, let it be the latter.

The textile industry shouldn't be called upon to bear the whole burden of saving the Japs from communism.

THE MARBLE MAKERS DELIVER PROTEST

The Japanese, it seems, not only are threatening the United States textile industry but the Nation's marble-making indus-

try as well. Seven factories in the United States; 6 in West Virginia and 1 in Illinois, manufacture marbles that little boys shouldn't "play keeps" for, but have, for generations.

The marble manufacturers say they're going to be driven out of business unless something is done about the Japanese monopoly.

In brief, let the Japs pick up their marbles and stay home.

Domestic and Foreign Phases of the Dope Problem

EXTENSION OF REMARKS

OF HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, March 28, 1955

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement summarizing a very interesting luncheon which a number of Senators and I held Monday afternoon, March 28, relative to domestic and foreign aspects of the international narcotics problem.

There being no objection, the statement was ordered to be printed in the

RECORD, as follows:

STATEMENT BY SENATOR WILLY

Few problems have more aroused American public opinion that that of narcotics addiction among many of our people, particularly many young Americans.

Every Senator who has come in contact in the course of his legislative work with this serious problem has, I know, felt a keen sense of obligation to try to stamp out the insidious narcotics menace.

Each Senator has felt, as I have felt, the need for a continued, determined antiaddiction drive on a sound, carefully planned Each Senator has felt the need for accurate reporting of the problem, accurate. I emphasize, not sensationalized reporting. but rather down-to-earth, factual analyses of the situation as it really exists.

I personally have come in contact with the narcotics evil on many fronts. I have confronted it as a former member of the Kefauver Senate Crime Investigating Committee; as a current member of the Senate Judiciary Subcommittee on Juvenile Delinquency; as a former chairman of the Senate Foreign Relations Subcommittee on the International Opium Protocol, and in other

connections.

ORIGIN OF LUNCHEON MEETING

I felt that it would be helpful, therefore, to sit down and confer with the Government official most familiar with the problem, Commissioner Harry Anslinger of the Narcotics Bureau of the Treasury Department, and to have present other Senators who are likewise interested in the problem, as well as representatives of America's medical and pharmaceutical professions.

And, so I arranged for the meeting on Monday afternoon.

MANY SENATORS PRESENT

We had a splendid turnout of Senators in spite of a crowded Senate calendar and other meetings.

My colleagues present included Senator PRICE DANIEL, of Texas, who is chairman of the Senate Judiciary subcommittee which is going to make a comprehensive review of the narcotics statutes:

Senator HERMAN WELKER, of Idaho, and Senator Joseph O'Mahoney, of Wyoming, who are members of the Daniels Subcommit-

tee on the Narcotics Code.

Other Senators present included Senators MANSFIELD, of Montana; SPARKMAN, of Alabama; MURRAY, of Montana; Kuchel of Califorian; HICKENLOOPER, of Iowa; DWORSHAK, of Idaho; Martin of Pennsylvania; KEFAUVER, of Tennessee; Green, of Rhode Island; WIL-LIAMS, of Delaware; HAYDEN, of Arizona; and HUMPHREY, of Minnesota.

PRIVATE REPRESENTATIVES PRESENT

We had an outstanding representation of, members of the medical and pharmaceutical

Mr. Frank Kuehl, general counsel, American Medical Association; Dr. Theodore G. Klumpp, president, Winthrop-Stearns Co. (also president of National Pharmaceutical Council and chairman of Medical Services Task Force, Hoover Commission); Dr. R. P. Fischells, executive secretary, American Pharmaceutical Association; Mr. George H. Frates, Washington representative, the Na-Association of Retail Druggists; Dr. J. O'Neil Closs, executive vice president, American Pharmaceutical Manufacturers' Association; Dr. Karl Bambach, executive vice president and secretary, American Drug Manufacturers Association; Dr. John Worley, general counsel, American Drug Manufacturers' Association.

OTHERS PRESENT

Also present were Dr. Frank Berry, Assistant Secretary of Defense, who commented on the problem as viewed by the Defense Establishment; Mr. George Cunningham, Assistant to Commissioner Anslinger, of the Narcotics Bureau; Mr. Merton Henry, legislative assistant to Senator Frederick Payne, of Maine (author of Senate Joint Resolution 19-to tighten the narcotics laws); and Mr. Julius N. Cahn, counsel of the Senate Committee on Foreign Relations, who had helped

me set up the meeting.

The luncheon today happened to coincide with a White House luncheon for Prime Min-Ister Mario Scelba, of Italy, and I had to leave after making certain introductory re-

I am delighted to say, however, that my colleague, Senator Daniel, very graciously offered to serve as chairman in my absence, and from all reports, he did an outstanding Job, as I had fully expected.

MAJOR POINTS STRESSED

I will not attempt to cover all of the important points which were made in the course of of the informal luncheon discussion. I think, however, that some of the following points were notable:

- 1. Commissioner Anslinger stressed the importance of halting the narcotics traffic at its foreign source, rather than waiting to try to intercept the dope at ports of the United States, which is extremely difficult, or inside the United States which is infinitely more difficult.
- 2. He stressed the importance of stiff penalties being meted out by judges in order to dry up the illicit narcotics traffic.

He cited several dramatic instances where, in particular communities when judges started handing down stiff sentences for repeated trafficker-offenders, the local drug problem tended to dry up.

3. At the same time, Commissioner Anslinger emphasized the importance of very carefully writing and administering the narcotics laws so that it is the professional trafficker who feels the full brunt of those laws, while other offenders-technical violators, individuals who may get accidentally enmeshed, one-time offenders, addicts, and others, are handled in a careful, firm, yet understanding way.

4. Dr. Klumpp spoke briefly and praised Commissioner Anslinger as the greatest single bulwark against the illicit narcotics traf-

fic throughout the world.

He emphasized the splendid working relations which the medical and pharmaceutical professions have always had with the Narcotics Bureau.

5. Many of those present emphasized that in their judgment, the Narcotics Bureau should definitely be retained in the United

States Treasury Department.

They pointed out that to attempt to transfer the Bureau might endanger the constitutionality of present narcotics laws (which are predicated in major part upon the administration of tax statutes). A transfer might also seriously disturb long established working relationships between the Bureau and the medical and pharmaceutical indus-

6. Commissioner Anslinger stated that the postwar upsurge in narcotics addiction could in no way be traced to the medical or pharmaceutical professions. He commented that both professions have handled their public responsibilities in an outstandingly com-mendable way and have always given him complete cooperation.

7. Dr. Berry commented upon the problem as encountered by the Armed Forces in the Far East. He stated that the level of addiction among some of our troops was lower last year than in 1953 and he believes that it will be lower this year than it was last

8. The question of the proposed transfer of units of the U. N. Narcotics Division from U. N., headquarters in New York, to Geneva came up. It was the consensus of those present that the proposed transfer is extremely unwise.

It was felt that there is a tremendous value in keeping the U. N. narcotics work centered in the United States where the fullest force of world public opinion can be mobilized against any offender nations, such as Red Commissioner Anslinger cited how, thanks to constructive activity on the part of the U. N. Narcotics Commission, several countries took effective action against dope factories which have been running full scale. As a result, these countries ceased to be centers of illicit narcotics production. Regrettably Red China continues to violate the conscience of the world.

9. In response to a Senator's question, Commissioner Anslinger mentioned that there are available in the Narcotics Bureau 250 agents. By contrast, the two principal local narcotics squads available to two major metropolitan police forces number 200 in New York and 80 in Los Angeles alone.

Several of the Senators present stated that in their judgment, sympathetic consideration should be given to expand appropriations for the Narcotics Bureau in order to carry on its vital work.

10. It was stressed that the medical and pharmaceutical industries have an indispensable need for narcotics supply in the course of their regular work.

The general public may not realize what an essential role is played by legitimate narcotics, as for example, to relieve shock in emergency cases, as well as for innumerable other medical and scientific purposes.

Such bonafide use is, of course, completely in contrast to the use of a terrible narcotic such as heroin-which is so dangerous a drug that it has been literally outlawed by the United States and virtually every civilized country in the world, with but five unfortunate exceptions.

CONCLUSION

11. It was stated that President Eisenhower's Inter-Departmental Cabinet Committee on Narcotics is now hard at work in formulating various proposals and future action.

Senator Daniel concluded by inviting the cooperation of all of the participants present in contributing to the work of his subcommittee, whose opening hearings will be announced at an early date.

Submarginal Farm Lands in Dust Bowl Areas

EXTENSION OF REMARKS OF

HON, EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Monday, March 28, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Denver Post dealing not only with dust storms but also with land that might well be put back to grass.

Apparently the editorial was inspired by the bill dealing with this subject which I introduced sometime ago.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

(From the Denver Post of March 10, 1955) SETTLING THE DUST

Senator THYE, of Minnesota, is pushing a bill to direct the Secretary of Agriculture, under authority granted by title III of the Bankhead-Jones Farm Tenant Act to acquire and permanently retire from cultivation submarginal farm lands in Dust Bowl areas, including those in southeastern Colorado, southwestern Kansas, western Texas, and eastern New Mexico.

He argues, and with some merit, that this

would be a practical method of dealing with two serious farm problems, drought and crop surpluses.

In the light of experience Senator THYE'S proposal deserves serious consideration. Under this title III authority, the Secretary of Agriculture during the period 1934 to 1942 purchased for the Government and took out of cultivation 10,086,000 acres of land in arid and semiarid regions which never should have been plowed up.

These lands, which are administered by the Forest Service, have been converted to grass. In 1953, 6,440,731 acres were used for grazing.

The first point made by Senator THYE is that the land he would retire from culti-vation is not needed for the production of farm crops. His plan would bring about an orderly reduction of crops now in surplus. His second point is that Government ownership and leasing of these dry lands "would provide an example of proper utilization for surrounding landowners, and make it feasible for them to convert from cropping to stockraising .

Over a period of years, the Federal Government could purchase and take out of cultivation a considerable dustbowl acreage for what it now spends on drought relief for these areas. It might even make payments in lieu of taxes to the countles and school districts in which it acquires land.

There isn't any question that many thousands of acres in arid areas of Colorado and other Western States never should have been plowed up. True, they produce a big wheat crop in a year when moisture conditions are favorable. But those years are infrequent. And the Nation has such a big wheat surplus their production is not needed.

Under the title III authority which Senator Thyz would invoke, submarginal lands which are acquired by the Government cannot be sold. His bill would not change that. After being converted to grass they can be leased. Naturally, there are people who would like to buy them since they have become valuable for grazing purposes. But the Government is right in holding onto them.

The Civilian Conservation Corps After 22 Years

EXTENSION OF REMARKS

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement prepared by the Legislative Reference Service of the Library of Congress concerning the Civilian Conservation Corps, which was set up 22 years ago in April as an emergency measure to meet some of the difficulties of many of our people. The results of the program are still visible through the millions of acres of land cleared and forests planted by members of the CCC.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE CIVILIAN CONSERVATION CORPS AFTER 22 YEARS

Many whose memories go back a quarter of a century, or more, recall Franklin D. Roosevelt's dramatic flight to Chicago on July 2, 1932, and perhaps something of what he said when he accepted the Presidential nomination tendered by the Democratic Party, then in session. This Nation was in the depression following the stock market crash of 1929. Men were out of work and a foreboding sense of uncertainty was everywhere. It was natural, therefore, that a wave of hope followed the voicing of a plan for a great public-works project of forest and land restoration for relief of the unemployment that plagued the country. The idea gripped the imagination and proved dynamic.

The President lost little time before he laid the plan before Congress. Ten days later, on March 31, 1933, the President signed the Emergency Conservation Act which authorized him to establish a nationwide chain of camps where unemployed young men could engage in various forms of forest and land improvement.

The first Civilian Conservation Corps camp was established on April 17, in the George Washington National Forest near Luray, Va. It was appropriately called Camp Roosevelt. By July of that year, there were 1,500 camps on mountain side and meadow from the Atlantic to the Pacific and from the Canadian border to the Gulf of Mexico. Others were and Alaska, Hawaii, Puerto Rico, and the Virgin Islands, to the number of 2,600.

The boys came from all parts of the Nation, but most of them were from the cities. Many were undernourished, discouraged, and filled Their education and their experience were largely limited to what was available in a life confined to city buildings and paved streets. After enrollment they were in the midst of a new environment. Out in the open, surrounded by nature, they built camps, hewed trails, laid roads, strung telephone lines, constructed bridges, airplane landing fields, dug drainage ditches, fought forest fires, and faced a thousand tasks, such as had never entered their wildest dreams. All were volunteers. Their life and their responsibilities were conducted without military obligations or implications. More than that, an enthusiasm carried them through their daily duties, such as warranted the judgment that the CCC had provided a moral equivalent for war.

For a little more than 9 years, Civilian Conservation Corps camps and their leaders helped young men to find themselves. Few maintained their enrollment for more than a year and at no time were more than 385,000 in the camps. But during those years the CCC gave health, purpose, and self-respect to 3 million young men.

Much of their work is still visible. Millions of acres are prosperous today because of what they did. Three million acres are growing trees because they planted them. More than 4 million acres of forest have cleaner and straighter trees because those boys cut out the crooked and diseased ones. Another 8 million acres are in good condition because their crews stopped the spread of insect pests and tree diseases, and countless acres are green because they fought forest fires on them. Other millions of acres of grassland were saved from erosion because they built check dams and dispersed the prairie dogs. As part of all this, millions of people can thank the CCC boys for the picnic spots and the camping areas they enjoy, for ponds in which to fish and for better environment for a large portion of our wildlife.

All this was done for the earth, the trees, the watercourses, and the wildlife. It is as nothing, however, compared with the benefits received by those young men and their dependents. Added to the good food and healthful surroundings provided by the camps, was the individual stimulus and discipline always present when young men are thrown together. Much credit for this can be given the young officers and technicians who lived and worked with them. But these men, in turn, gained experience in managing camps and directing men that paid big dividends when the Nation faced the crisis created by the attack on Pearl Harbor. Thereafter, the Armed Forces had priority.

Being no longer necessary, the Civilian Conservation Corps was ended on June 30, 1942. It will long be remembered as a successful effort of a democratic nation to help meet some of the difficulties of its people.

Results of December Facts Forum Public-Opinion Poll

EXTENSION OF REMARKS

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a poll on public affairs conducted by Facts Forum,

of Dallas, Tex., during the month of December last. In my judgment, it is an accurate poll of public opinion on the questions involved, and I think the organization is doing a very fine public service.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

Dallas, Tex., December 6, 1954.—The results of the December Facts Forum publicopinion poll were announced today by its president, Robert H. Dedman, who explained that the difference between 100 percent and the percentage shown represents the percentage voting "no."

Yes (percent) Has the Communist-world conspiracy gained ground in 1954?__ Is United States public being subjected to propaganda to popularize U. N.? __. Should the Government crack down on big industrial mergers?___ Are both major parties being influenced by Communists? _____Are socialistic trends weakening Ameriica's backbone, private enterprise?... Are schools doing a better job of teaching three-R's today than 20 years Should the public be told who promoted and honorably discharged Peress?. Has Eisenhower given Americans the change he promised in 1952?_____ 47 If import tariffs were lowered would American-wage scales suffer?_ Is Tito's communism any different from Soviet communism?_ Should Pearl Harbor disaster be rein-vestigated in light of recent disclosures? _ Should we increase our technical assistance to countries like India? Should a U. N. employee put loyalty to U. N. before that to his country? Should the President's Cabinet meetings be televised?___

The Yalta Conference and United States Foreign Policy

EXTENSION OF REMARKS

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the column entitled "What of the Day?" written by Father John Doran, and published in the Arizona Register of Friday, March 25, 1955.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

WHAT OF THE DAY?

I suppose any columnist would be completely out of the swim of things this week if he did not write about Yalta. Just what is the purpose of finally revealing the documents at this late date I do not know. The Democrats will howl smear and the Republicans will shout sanctimoniously that they are but being true to history. It really does not matter; the thing that matters is the whole Yalta Conference and the fact that a President of the United States (be he Democratic or Republican) can have the power to do what was done at that conference.

"Power corrupts; absolute power corrupts absolutely." It seems that there is so very much truth in that statement, or rather that it is true of so very many. Take the case of Roosevelt at Yalta. He was a man who had been handed again and again (sic) the highest trust within the giving of the American people. He was a man who spoke nobly not only at home but even abroad as in the four freedoms, to which he got the reluctant Churchill to subscribe. He was the man who wrote to our present Holy Father to ask him to allow a personal envoy of the President to be sent to the Vatican so that they both might work together through this man for the peace of the world. Power, such tremendous power was put into Roosevelt's hands, the nearest approach to absolute power which any American President has ever had.

What was his final use of that power is evidenced by Yalta. Either through his own thinking, or relying excessively on that of Hopkins, he took it upon himself to transfer lands and peoples into the Communist orbit on the gay gamble that the surfeited Josef Stalin would prove more tractable than did the lean one. No wonder little nations doubt if they can trust us when twice within the lifetime of a man not vet old the Presidents of the United States have taken upon themselves this power of determining the placement of peoples. How can the world trust us when we cannot trust our own leaders? How can the world believe us, when we cannot believe the President of the United States when he makes a report to the Senate? If in the green wood we do these things, what shall be done in the dry?

In the light of all this Yalta talk it was interesting to read for the first time I have read it in the secular press, though years ago I read it in the Catholic papers, that when Japan sought to work out a surrender through the Vatican, this same politician who had talked so delightfully to the Pope about their mutual aims of peace, had the temerity to decide that the American people would rather continue the war than work out a surrender through the Pope. As the Ari-Zona Republic (March 18th) remarks: "Apparently he (Roosevelt) trusted Stalin ahead of the Pope.'

It is undoubtedly true that Roosevelt was to many a demigod. I suppose to many he will so remain. But would it not be well for all of us to realize that no man is to be trusted with the fate of nations. I, who was rather strongly for the Bricker amendment last year, am madly for it now.

Father JOHN DORAN.

Our Fathers' God. to Thee-An Easter Message for Americans

EXTENSION OF REMARKS OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES Monday, March 28, 1955

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a message entitled "Our Fathers' God, to Thee, Written by E. Merrill Root, of Indiana, and published in the bulletin of For America, a patriotic organization having headquarters at 208 South LaSalle Street, Chicago, and which is dedicated to the restoration of the United States Constitution.

There being no objection, the message was ordered to be printed in the RECORD. as follows:

OUR FATHERS' GOD, TO THEE (By E. Merrill Root)

At this Easter of the stone rolled away, of the empty tomb, and of the risen Christ, what does religion mean for America, as the way, the truth, and the light? It is fitting that all who consecrate themselves to serve their country should gravely pause to contemplate the fact of God and to ponder the reality of religion in relation to the America we love.

In this crucial hour of time, we who stand for America must build steadfastly on eternity. For we wrestle, as St. Paul says, not with flesh and blood but with principalities and powers, with the rulers of the darkness of this world, with spiritual wickedness in high places. Ours is the old, the ever new, the eternal war of good against evil, of light against darkness, of reality against nihilism. And since the basis of all good, all light, all reality, lies in God, we cannot fight the good fight unless we ourselves are the soldiers of God.

To often we Americans forget the essential basis of the contemporary war of two worlds; the adversary, however, never forgets. The Communists, who are our most realistic and bluntly drastic enemies, say openly that their fundamental war is against God. God, they say, if He did exist, would have to be liquidated; and since He does still exist at least as a credulity in the mind of man, they plan a great purge of God [a Moscow trial of God]. God (who, they believe, does not exist as a fact) must publicly be shot as an "idea," or exiled to some Siberian corrective labor camp as a "superstition." And the very mind of man must be brainwashed of even the gray lingering ghost of God. For the Communists well know that their world of the Towers of Babel-of man crucifying men in the name of "progress"-of truth as of the most convenient lie-of mass slavery and murder incorporated-cannot continue in the same world as the living God. They know that if God is. He will loose the fateful lightings of His terrible swift sword, He will sound the trumpet that shall never call retreat, and the world of Lucifer and his wrecked angels building the narrow kingdom of man on the quicksand of nihilism, will fall again as it has fallen before.

And even the suaver, less realistic Fabian Socialists and liberals—the gentler collectivists of the center-know this too, though they soft pedal it with a dishonest "hush, hush." Socialism, like communism, would build not the Kingdom of God but the kingdom of man.

All collectivists essentially tend to be men of this one world of time and this one life of mortality. They base morality upon public utility and social sanctions. They see bread and circuses, here and now, as the good of man, and they deny the immortal crown. They think this one world and life the be-all and the end-all-the only reality there is. They possess intellectual cleverness without basic wisdom.

And since men cannot live without some absolute, they lift the State ("that coldest of all cold monsters") up to be the "the mortal god" of man's idolatry. Thus they turn the many mansions of the world into a bleak house of spiritual nihilism.

Whittaker Chambers has seen this most deeply and said this most powerfully, in Witness: "It is (i. e. communism) the vision of man's mind displacing God as the creative intelligence of the world. It is the vision of man's liberated mind, by the sole force of its rational intelligence, redirecting man's destiny and reorganizing man's life and the world. It is the vision of man, once

more the central figure of the Creation, not because God made man in His image, but because man's mind makes him the most intelligent of the animals."

And in this vision of man become Lucifer, all that exists is what we can weigh and measure with this world's coarse thumb. Immortality, the stone rolled away and the Christ forever risen, are not only false (they say) but evil.

Their world is this world only, this world, period. Their good life consists of the State feeding and clothing men here in the little flicker of futility which they call life, stuff-ing them with bread and amusing them with circuses, as convicts are feasted and privileged before they are led into the gas

chamber.
Such is the world of collectivism. As such, it is necessarily not only a false world but, like all things based upon a lie, an evil world. In such a world-time based, relativistic, void of eternal sanctions-a world of the Towers of Babel built upon the quicksands of nihilism—it is only a step * * * an inevitable step * * * to the belief that the good end justifies any means: that to perfect man we may rightly torture men: that it is expedient that one (or many) die for the people; that it is justifiable to invade the private heart and to brainwash the inviolable individual mind in order to establish the hive and the heap.

Within God, man becomes the measure of all things; then, in his pride as man and in his glib self-measurement, he has no higher standard and no inexorable judge to prevent him from wreaking the malice of his whims upon other men. No divine judge, no higher law seems to be there to rebuke his finite and ferocious ego.

Wisdom could have predicated from the beginning the kind of world we would get if we followed the premises and axioms of collectivism; a world of cruelty rampant, of negativism militant, of the conformity of the hive and the heap, of "brotherhood" predicated on the restoration of human slavery, of a "humanism" that accepts inhumanity as the proper escalator of progress. And our adversary knows well that in order to make the world safe for collectivism, he must first make sure that—at least in men's hearts and minds-God is dead.

For if God lives-as He does-the first Isaiah has seen and said what will inevitably happen at last to the secular nihilists:

"How art thou fallen from Heaven, O Lucifer, son of the morning! How art thou cut down to the ground, Which didst weaken the nations! For thou didst say in thine heart, 'I will

ascend into Heaven, will exalt my throne above the stars of

I will sit also upon the mount of the congregation,

In the sides of the north:

I will ascend above the heights of the clouds; I will be like the most High."

Yet thou shalt be brought down to Hell. To the sides of the pit.

They that see thee shall narrowly look upon

And shall consider thee, saying,

'Is this the man that made the earth to tremble,

That did shake kingdoms:

That made the world as a wilderness, and destroyed the cities thereof;

That opened not the house of his prisoners?

AUTHOR OF LIBERTY

Our original American Revolution and the Constitutional Republic that is founded, are the opposite of this man made world of secular nihilism. For America was founded on the fact of God. And while it remains so founded, and only so long, will it continue to be man's bastion of liberty. For the glory of our original American Revolution is that our Founding Fathers repudiated the world of mere man and based our Constitutional Republic firmly upon God.

Thomas Paine, the Deist, is sometimes called by those who should know better, an atheist. He is also sometimes falsely claimed by our adversaries as a happy fellow citizen in their barbed wire paradise. But it was Thomas Paine who in the very beginning of our Nation, saw the total state as no "mortal god" but a mortal devil, and who wrote of it: "for so unlimited a power can belong only to God." So all our Founding Fathers felt and said. Washington, Jefferson, Franklin, and all the wise and great who created our Republic, regarded God not as an object of faith but as the fact on which all objects stand. The words of Genesis about the creation of the world can be spoken of our America also. "In the beginning God."

In a recent great speech before the Law School of Yale University, sponsored by the Conservative Club of that school, Dr. Clarence Manion made this clear. He said:

"The Founding Fathers did not categorically declare that these truths are self-evident. They said, 'We hold that they are self-evident.' Such was the nature of their faith that they postulated these declarations as self-evident truth.

"No. 1: There is a God. All men are created. The position of an Almight Creator in the universe was thus stated in the Declaration of Independence, not as a matter of faith, but as a matter of fact. God exists, and then No. 2. All men are created equal—created equal. All men are not born equal. All men are not born equal. All men are not physically or materially equal; neither are the women. But according, to this declaration, people are equal in the sight of God."

These bold true words clarify for us the basis of our original American Revolution—the most profound, and unique revolution in the history of the world; and they clarify equally the basis of our resolve to ensure the conservation of that Revolution against the reaction called collectivism. The essence that divides the American Revolution from collectivist reaction is, first of all, not economic, political, sociological. All these differences in effect and practice grow from the root of a deeper war of two worlds—a war between a world based on man and world based on God.

The collectivists say that man is an accidental phenomenon of matter, yet that he is the measure of all things, who can create a good world out of his own pride of brains. We Americans say that man is a son of God, often weak and erring, but potentially only a little lower than the angels, who must measure himself against divine standards and eternal laws, and who is here to do God's will and serve God's glory, thus raising himself by God's grace to regain the blissful seat of Eden. Between two such worlds there can be no peace: It is the eternal and fundamental war between Lucifer and God.

DYNAMITE FOR DICTATORS

Every slightest practical fact of the good life which is the American way stems from this root of God. No slightest good thing in our freedom to live and to pursue happiness can long cohere and endure if it is divorced from God. Our Founding Fathers knew this. They based our natural rights where alone they can be based-on the fact of God. Our Founding Fathers based natural rights not on any material fact, or on any social expediency, or on any greatest good to the greatest number, but wise and holy will of a personal God. Natural rights, they knew, are never just granted by governments as a condescension or a bonus. They are never created or established by governments. Governments always tend to seek the might to suspend the right, and

only God—above the state, superior to man, creator of reality itself—can be the mighty fortress and the unfalling bulwark of the natural rights which He established in His constitution of the cosmos.

Government, our Founding Fathers believed, is there not to lay its hands on men but only to see that men keep hands off their fellowmen. "To secure these rights" (that is, to conserve and defend them) "governments are instituted." Thus at the root of America there lies the unique political idea that the right to life, liberty, and the pursuit of happines is factually there, graven in star and stone, in the constitution of the cosmos. It is there by no accident of the atoms: it was created there by a personal God. Thus our natural rights precede the State—and even man: They are coeternal with the mind of God. And since man is a son of God, gifted with reason to answer the Reason that moves the sun in heaven and all the stars, these rights are "self-evident."

And, in the American way, this which begins in philosophy and principle, ends in the practical desires and decisions of our individual lives. Men want bread, to be sure, and must have it; they need circuses (or at least television) too, if they wish. But if they substitute the gift of bread and circuses, unearned, for the natural rights to life, liberty, and the pursuit of happiness, they will soon have only a neat and tidy brave new world, wrapped and packaged in cellophane (often blood-red), and guaranteed to be delivered about 1984.

The real freedoms of life-to take the job you like or to refuse the job you dislike, to loaf like Huckleberry Finn or to own your acres, to sit under your own vine and fig tree and turn thumbs down on the orchards of the collectivist state, to be a gypsy of the open road or to toil in a bank, to seek as a poet the beaded bubbles winking at the brim of life and the magic casements opening on the foam to affirm with Emerson "the infinitude of the private man" and to declare even in Moscow that 2 plus 2 still make 4, or to be any other "wondrous thing 'twixt ape and Plato"-are possible only when the natural rights of man, founded in God, protect us with the laissez-faire of their "Hands off!" Thus God is the great dynamite to blow up dictatorships and the great dynamo to establish liberty.

THIS IS AMERICA

Eventually and essentially, our Republic is the final, so far, and finest fruit of the long Jugeo-Christian tradition. That tradition, because it is based on God, sees the world not as an unprofitable, disturbing episode, nor as a discord of chaos, nor as the brief flare of a single match in a huge and thoughtless night. It is a world that has rhythm and melody and pattern; it is a work of art and of reason which has meaning, quality, value. Our souls vibrate to the King James Bible that nobly speaks such a world in deathless words: "O that I but knew where I might find Him. * * * Though He slay me, yet will I trust in Him. * The heavens declare the glory of God; and the firmament showeth His handiwork. * * * Yea, though I walk through the valley of the shadow of death, I will fear no evil. The grass withereth, the flower fadeth; but the word of our God shall stand forever.

* * Now we see as in a glass darkly, but then face to face. * * * Heaven and earth shall pass away, but one of my words shall not pass away. * * Before Abraham was I am. * * Lo, I am with you always, even unto the end of the world. * * * I am alpha · · I am alpha and omega, the beginning and the end." Such is the anthology of the grandeur, the anthology of God, that is our heritage. All that is good in America must live and move and have its being in the realm of such words become deeds. The purge, the firing squad, the concentration camp, the state become "the mortal god," wither in the breath

of such words. But in the glory of such words the patriot dream flourishes, and the alabaster cities that shall yet gleam undimmed by human tears.

These words and the world which they create predicate immortality. For only in such a world do men really dare and love and grow and live and build. When we have immortal longings in us, we fashion the cathedrals of Rouen and Chartres, we write the Divine Comedy, we compose fugues of Bach and the oratorios of Handel. The things that are limited by mortality in the narrow kingdom of man are always tidy and cruel and petty and mean-the purges, the MVD, the corrective labor camp, the party line, the collectivized farms, the horrible apartment houses punched out with a cookie cutter, the mono-colored shirts, the ration books, the endless state-control forms you fill out before you can eat the egg from your own hen.

The great things of this world are always arrows of longing for heaven—the Parthenon and the dialogs of Piato, the noble anguish of Michael Angelo, the Hebrew Bible, the symphonies of Beethoven. And the reality of this strife for immortality must strike the proud commissars and show them that we are all children building sand castles upon an infinite shore where the mighty waters of God roll. So America must live, humble under the shadow of the Almighty.

Today we look about us, and rub our eyes, and say: "Is this America?" Our temporal politics are fallen on evil days. Our so-called leaders are men who do not even know that, to walk, they need sceing-eye dogs. We falter and palter, we cringe from expediency to expediency, we no longer listen for the trumpet that shall never call retreat. If we heard it, our souls would not be swift to answer, nor would our feet be jubilant. We dwell in the valley of dry bones, and, like, Ezekiel, we hear the Voice say: "Son of man, can these bones live?"

These bones can live only if we waken again to eternity, if we find again the terrible and holy will be the living God; and if ye find the living God, the words of Isalah will come true.

will come true.

"He giveth power to the faint:

And to them that have no might he increaseth strength.

Even the youth shall faint and be weary, And the young men shall utterly fall: But they that wait upon the Lord shall

renew their strength;
They shall mount up with wings as eagles;
They shall run, and not be weary;
And they shall walk, and not faint."

It is Easter once more. Again the stone is rolled away, the tomb is empty, the Christ is risen. It may be so of America also; from her too the stone may be rolled away, and her deathless dream may rise once more to live and rule.

Appointment of Harold E. Stassen as Special Assistant to the President

EXTENSION OF REMARKS

HON, EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial published in the Duluth News-Tribune, dealing with the recent appointment of Mr. Stassen as a special assistant to the President.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DISARMAMENT POST STASSEN'S OPPORTUNITY

Harold E. Stassen is now special assistant to the President. He will work on policy concerning world disarmament proposals. For the time being the former Governor of Minnesota will continue as Chief of the Foreign Operations Administration.

Creation of a post for this purpose, with full Cabinet rank, appears to have no precedent in world history. It gives needed and deserved recognition to the importance of disarmament in any long-time plan for a saner world. And it shows a combination of idealism, imagination, and practical politics. The announcement takes the initiative away from the Communists in one of their favorite propaganda drives.

Stassen will confer with American military men, civilians, and Federal officials and with foreign governments. He starts out with some clear directions from the President. We are not going to try one-sided disarmament. No recommendations will become national policy until they have been approved by the President and the National Security Council. Before any specific action or pronouncement of policy, concurrences will be secured from Congress.

Here is a challenge such as few men have ever encountered. At the moment the odds against even modest success seem overwhelming. In today's world nations place most reliance on their ability to strike back, or an ally's ability. This is vastly more secure than a vague hope that some leaders are not as aggressive as they sound—the system prevailing up to 1939. But it is fiendishly expensive, even with plans held to a disputed minimum for effectiveness. The ability to deal a death blow at another civilization after suffering a frightful wound to our own provides a grim kind of security for the next few years. It does not represent our highest hopes.

President Eisenhower, a soldier by profession, sees a possibility, however, remote, and puts one of his ablest assistants to work. Only a few weeks ago another lifetime soldier, General MacArthur, said, "There must always be one to lead, and we should be that one. We should now proclaim our readiness to abolish war in concert with the great powers of the world. The result might be magical."

We aren't going that far, just yet. We are showing that we take disarmament seriously, as a possible escape from the trap in which the world finds itself. Harold E. Stassen has a unique opportunity to save civilization.

"I Want To Cry"

EXTENSION OF REMARKS

HON, WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. BRAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include this editorial from the Indianapolis Star of March 26:

"I WANT TO CRY"

Another exponent of the run, hide, fear, and cry school of thought has now been heard from. Val Peterson, Civil Defense Director, says that the Government is planning to evacuate 70 million Americans in case of atomic war. This, he says, is the reason we must have a costly, hasty, ill-

conceived, unsoundly financed, and overcentralized highway-building program.

Now there may be some sound reasons for supporting the President's \$101 billion State-Federal highway program—although we have not heard any with which we agree. But we are getting mighty sick and tired of this fearful waving of the atomic bomb over every proposal made in Washington to increase spending, to increase the power of the Federal Government over the State and the people of this country.

This run, hide, fear, and cry philosophy is an alien and phony thing for Americans, It has no place here. Yet all around us we hear crybaby sons (Go On and Cry), and dire predictions of doom and disaster. We hear darkly foreboding fears about the future of the greatest, most powerful nation on earth. Where are the American voices of confidence, courage, faith, and calm? If we start thinking like frightened rabbits, we will become frightened rabbits.

To all these harbingers of doom we recommend the familiar childhood sneer, "Crybaby, cry, stick your finger in your eye." And further this wise quotation from Thomas Carlyle, "The first duty of man is that of subduing fear. We must get rid of fear; we cannot act at all till them. A man's acts are slavish, not true but specious; his very thoughts are false; he thinks, too, as a slave and a coward, till he have got fear under his feet."

The Arming of Germany

EXTENSION OF REMARKS

HON, HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article written by Clarence Streit, entitled "To Speed Arming Germany in Freedom's Defense," appearing in the March 1955 issue of Freedom & Union.

There being no objection, the article was ordered to be printed in the Record, as follows:

TO SPEED ARMING GERMANY IN FREEDOM'S DEFENSE

(By Clarence K. Streit)

State Department influence is largely responsible for the fact that the sponsorship of the resolution for a convention to explore Atlantic union (S. Con. Res. 12; H. Con. Res. 73-80) is so predominantly Democratic. Many Republicans who privately say they favor this resolution have declined to sponsor it "at this time," in deference to a fear in State Department quarters that even this doubtful hint of administration support for it would delay European ratification of the London-Paris accords for German rearmament,

This is a mild continuation of the previous strategy of the Department, which sought to hasten ratification of the European Defense Community by insisting that the United States would consider no alternative to it. Since this policy ended instead in French rejection of the EDC, after 2 years had been wasted, one would have expected the Department to have changed its strategy.

The "no alternative" road to failure was taken from the start of the Eisenhower administration. At that time a top policy-maker in the State Department told me he feared that if the Atlantic Convention reso-

lution were reintroduced in Congress then with the backing of Republican Senators this would kill the hopes of ratification of the EDC "because the French would much prefer an Atlantic union with us."

I replied that my own talks with French leaders (some of whom I have known for 25 years) confirmed the premise that the French preferred Atlantic Union, but led me to the opposite conclusion. Pigeonholing the Atlantic Convention resolution in Washington, I held, would end in French rejection of the EDC, whereas its adoption by Congress could be handled by the administration in such a way as to assure previous ratification of the EDC.

THE FRENCH VIEWPOINT

The French leaders were not only aware of the great progress the Atlantic Convention resolution had made in the previous session of Congress; they knew that John Foster Dulles himself had endorsed it publicly, in writing, when he was a candidate for Senator in 1949. The French Committee for Atlantic Union had been careful to inform them of this, and had also sent them a translation of Mr. Dulles' Introduction to Our New Federalist which he had written in 1950 and in which he had favored exploring Atlantic Union. I knew they knew these facts for in 1951 I had personally talked with Auriol, Herriot, Bidault, Pleven, de Gaulle, Reynaud, Billotte, Maurice Schumann, Mollet, Bonnefous, and others. I had also had many accasions to learn in the previous 30 years how deep a scar Senate rejection of the League of Nations had left on French political thinking, and how much they associated the Republican Party with isolationism.

In these circumstances, it seemed clear to me that the "no alternative" strategy was bound to awaken the worst fears of the French regarding the Republicans. To them this strategy would mean that once the Republicans gained power, even Mr. Dulles quickly forgot about the Atlantic Convention alternative, and even the talk of strengthening NATO faded out of the picture then. It would mean to them the elimination of all hint of the one thing—hope of an eventual Atlantic Union—which my policymaking friend himself believed would most serve to reconcile the French to German rearmament.

By this strategy the administration deliberately killed even the frail hope that might be awakened in France by a few Republican Senators continuing to ask for exploration of Atlantic Union, as they had in the previous Congress. How could such a strategy help but convince such key men as Herrlot that if the French ratified the EDC the United States would then withdraw and leave them alone with the Germans—just as it had done after Clemenceau had renounced his Rhineland policy when Wilson signed the treaty guaranteeing France against German attack?

For such reasons, I forecast the failure of the administration's strategy and urged a policy of linking the Atlantic Convention resolution in Washington with ratification of the EDC in Paris, so that the two would advance together, step-in-step, through the several stages in the legislative process which both faced.

Later I put my thoughts on this subject in a memorandum, which I sent to Secretary Dulles on February 26, 1953. When the Department decided to continue with its "no alternative" strategy, Senator Kefauver and the other Atlantic Union leaders stood aside and did nothing to interfere with it; the Atlantic Convention resolution was not even introduced in the 83d Congress.

That strategy has thus already had a fair trial. Far from speeding Germany's entry into the Atlantic defense picture, it has already delayed it 2 years. In these pages I have long recognized the need of hastening to harness German military might to western defense, while warning that only through

Atlantic Union could this be done without the present danger of German rearmament turning later against the cause of freedom.

Now the administration is seeking hasten ratification of the London-Paris accords by what I have called a mild version of its previous strategy. Happily, it does not talk publicly now of "no alternative" to the present alternative, and there is evidence that it does not mean to wait more than a few months for ratification of the London-Paris accords. Indeed, there is even some cause for hope that, whether or not they are ratified in Europe within a few months, the administration will then look with a more kindly eye on the proposed Atlantic Convention.

Meanwhile, however, the State Department still clings to the fallacy that any indication of administration support of the Atlantic Convention resolution will retard German rearmament. It does this at a time when its own Formosa policy, and Khrushchev's rise in the Kremlin to which this policy contributed, have seriously endangered the Lon-don-Paris accords. To hasten their ratification now, Washington needs more than ever to give Western Europeans the new incentive to ratify which they would have if the administration gave a green light to the Atlantic Convention resolution-even on a step-in-step basis that made its adoption depend on European ratification of the accords.

In these circumstances it seems to me that I would let the public judge for itself whether the State Department's strategy, or the views I put before it in my 1953 memo. have best met the test of time, and best meet the present need. I publish that memo now in the special hope that Republicans in general, and administration leaders in particular, will take a new look at this whole problem, and if their present strategy fails to produce the desired results by the time this appears, persist in it no longer but try instead the alternative I urged in 1953.

To make the following memo apply to the present problem, the reader need only sub-"London-Paris accords" for EDC" wherever that term appears.

Minimum Wage Legislation

EXTENSION OF REMARKS OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. HOLTZMAN. Mr. Speaker, today I am introducing a bill which will provide for an increase in the minimum wage to \$1.25 per hour, reduce the maximum workweek, and extend the coverage of the Fair Labor Standards Act. This measure is identical with the one I introduced in the House of Representatives during the 83d Congress.

The Presidenth has recently urged the Congress to increase the minimum wage to 90 cents per hour. Such a recommendation is inadequate at the present time in view of the continuing rapid rise of living costs, and certainly does not take into consideration increased worker productivity. There is no question about the fact that since 1938 the minimum wage has failed to keep up with the cost of living. The unemployment figures for 1954 are shocking, and with a steadily increasing labor force each year, it is imperative that the Federal Government take concrete action to improve the economic plight of thousands of low-wage earners, who are unable to maintain themselves and their families during times of economic adjustment.

Recently in New York a conference of shop stewards-representing some 500,-000 CIO members in New York City-was held to take action for the passage in Congress of bills introduced to increase the hourly minimum wage to \$1.25.

Two resolutions were adopted unanimously at that conference; one calling for the enactment of legislation to increase the Federal minimum wage to \$1.25 per hour, and the other calling for the extension of minmum wage coverage to the retail industry.

A \$1.25 hourly minimum wage would put a realistic floor beneath current wage levels, and would prevent the exploitation of substandard, seasonal, and lowwage workers. In addition, it would bolster our national economy by creating more purchasing power, bettering our standard of living ,and contributing to full employment.

I urge my colleagues to consider this legislation seriously, and to work for its early enactment.

Decline in Farm Incomes

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, March 28, 1955

Mr. JOHNSON of Texas. Mr. President. I ask unanimous consent to have printed in the RECORD a statement by the distinguished junior Senator from Michigan [Mr. McNamara] on the subject Michigan Farmers Await Action by Congress To Combat Declines in Farm

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MICHIGAN FARMERS AWAIT ACTION BY CON-GRESS TO COMBAT DECLINES IN FARM INCOME (Statement by Senator McNamara)

The farmers of Michigan are waiting for message of hope from Washington.

For many of our smaller farmers, who nationally account for 98 percent of our farms, the continued drop in farm income means hardship and sacrifice. This is particularly true when lower farm income has to be shared with unemployed workers, forced by unemployment to return to the farms from their city jobs.

For city workers, the drop in farm income means fewer customers, at a time when more and better customers are needed for the growing production of our factories and For them, it means unemployment and wasted opportunities.

In the interests of all of us, Congress must not dawdle. We must act quickly to protect our farm families directly, and through them all of us.

According to the Department of Commerce. farm income in January of this year (the latest figures available at this time) was at a rate of slightly more than \$15 billion per year. This is the lowest figure for any January since the end of World War II. It is the annual rate that is almost \$2 billion lower than in January a year ago.

This decline in income does not hit all farmers the same way. It does not mean the same thing for those few who own the biggest farms as it does for the great majority.

My concern however is with the majority, the men and women who work the smaller farms which make up 98 percent of the farms in America. For them, a cut in farm income may mean an immediate sacrifice of something the family needs and has planned for. It means giving up a hoped-for improvement in family living, perhaps even some family necessity

In 1953, when the decline in farm income had begun to draw serious attention to itself. staff people at Michigan State College interviewed Michigan farmers to find out what changes in their plans were being forced on them. Here is part of what these interviews

Fifty-three percent of those interviewed were planning to spend less for new farm machinery.

Many others were cutting expenditures for second hand machinery.

A third of those answering the questionnaire were planning to spend less on new buildings and on overhaul jobs.

There was less interest in proper farm methods, such as applications of lime, purchases of good seed, and improvement of stock than in the past.

Other studies made at the same time showed that farmers were postponing purchases of furniture, automobiles, and freezers as well as other household appliances.

In my opinion, the most regrettable fact revealed by these studies was that many farm children were not going to get the educations that had been planned for them.

What new postponements and new sacrifices are being dictated by the continued declines in farm income I can only guess, since I can find no recent studies that tell what they are.

The fact of these sacrifices is underlined by the decline in income per capita. According to the Department of Agriculture realized farm income per capita in 1954 was \$903, a drop of \$46 per capita of farm population since 1953.

The drop in per capita income might not have been so great if the usual number of farm people had been able to move to the However, with unemployfor jobs. ment in the cities, many who would have left the farm stayed home, and many who had been laid off in the cities went back home. And these people were taken in and cared for, whether they brought with them a proportionate increase in farm income or not.

During the worst of the unemployment in Michigan last year, the labor force in Detroit declined by more than 40,000 workers. There is no doubt in my mind that a great many of these workers took their families back to the farms of America. If these workers and other thousands like them escaped from acknowledged unemployment in the cities, they added to the concealed unemployment and the underemployment on our farms.

Those of us who have spent our lives in the great cities are deeply concerned with this problem of farm income. We are concerned as neighbors have always been concerned with each other in America. know also that whatever hurts the farm dweller immediately hurts us. Unless farm and city move forward vigorously together, we share the aches and pains of uncertainty and economic stagnation. For these reasons, we stand ready to help as soon as the necessary leadership is forthcoming and & challenging program has been offered.

I know that there are bills before this Congress to establish farm policy which would assist those who most need assistance to create machinery for getting surplus farm

products to those who need them, to create additional buying power among city and farm people. I have the honor to be among the sponsors of some of the proposals.

I hope that these proposals, and whatever additional plans are needed will soon get the vigorous and earnest attention from this administration that they require. The administration may rest assured that, regardless of party label, the members of this body are prepared to do whatever the welfare of the farm family dictates.

It may be that some of the steps that must be taken will require the present Republican administration to support plans very much like some that previous Democratic administration proposed. There is already evidence that this will be necessary. However, I am sure that this will not stand in the way when the facts show what action must be taken, We must, all of us, work together if this great problem is to be adequately met.

Woman's Place Outside the Home

EXTENSION OF REMARKS

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered at Missoula, Mont., on March 27, 1955, by one of the most distinguished lady representatives in the United States, the Honorable Maurine Neuberger, of the State House of Representatives in Oregon. Representative Neuberger honored the Montana State University by making the main address at the annual Matrix Table banquet. There is much that is worth while in what she had to say.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WOMAN'S PLACE OUTSIDE THE HOME

(Address of State Representative Maurine Neuberger, of Oregon, at annual Matrix Table banquet at University of Montana, in Missoula, on March 27, 1985)

This is my third visit to Missoula. I hope it won't be my last, because each trip I have made here has been filled with nothing but pleasant experiences. However, the first visit was the most auspicious, even though I am extremely complimented at being asked to be your speaker at this annual Matrix Table event.

I came to Missoula on December 20, 1945, to get married, and from that day to this there has never been a dull moment. Neither Drck nor I had ever been here before, so it wasn't for sentimental reasons such as memories of a trysting place or epoch in our courtship—merely the fact that our car was here.

The car had been driven out by a friend in Washington, who was coming before the winter snows. Drok had to await his Army discharge, which didn't come until later, so it just seemed expedient to go where the car was.

Trip No. 2 occurred when I came with Dick to attend the meeting of regional writers sponsored by the University of Montana. We arrived to find that the Outdoor Writers of America were convening at the same time, so we dubbed ourselvs the Indoor Writers but discovered that we spent more time outside than did the Outside Writers.

The folks here planned so many nice picnics and we have memories of good times on those occasions—also on the great Lolo

OUR TIES TO MONTANA ARE MANY

When Grace Martell called me in Salem and proffered the invitation to make trip No. 3, I hesitated. I knew the legislature would be in full swing at this time and I thought discretion might be the better part of valor and I should refuse. She gave me time to mull it over and I thought my sisters in Theta Sigma Phi would regard it as an honor for our chapter to have me go; I am sort of bored with State legislation this year because my thoughts wander to the big assembly on Capitol Hill in Washington-it would be nice to get away from committee hearings for awhile: and I did a little soul searching and decided that I wasn't the indispensable woman and probably the affairs of state would get along at about the same clip without me

I have a particular interest and affection for Montana because of our many friends in your State—Jim Vessey and Bud Moore, of the Forest Service; the late Elers Koch, who knew the Lewis and Clark trail so well; Lyle Watts, now of Oregon, who once headed your regional foresters; Dr. H. G. Merriam, your distinguished professor of literature, who taught for a time in Oregon; and K. Ross Toole, who is doing such a splendid job with the Montana State Historical Society—a feat which we in Oregon envy.

Nor can I come here without mentioning my husband's admiration for your State's two outstanding Members of the United States Senate. When DICK arrives in Oregon and Washington State for Hells Canyon hearings early next month, it will be under the distinguished chairmanship of Montana's senior Senator, James E. Murray, of the Senate Interior Committee. Senator Murray, a veteran, has been more than kind to DICK, in guiding a new Senator in his major committee assignment.

MIKE MANSFIELD means a lot to DICK and me because he helped us get our marriage license when he was a Member of the House. Greater love hath no Congressman. Today, MIKE is DICK'S weathervane on foreign affairs. DICK respects MIKE's vast knowledge of the Orient, for he knows that MIKE has vast knowledge, both from personal experience and out of books—of this cockpit of the world. Furthermore, DICK and MIKE have a special bond, because both are married to girls named "Maurine," although Maureen Mansfield and Maurine Neuberger have slightly different spellings of their first names.

I chose as my topic, "Woman's Place Outside the Home," because it is appropriate to my own experience and because many of you as Theta Sig's are career women, probably working in some field relating to your journalistic training. If you are observing the more traditional occupation of "woman's place at home," you may be looking toward the day when the children are self-sufficient and you can write a novel, work part time on a copy desk, or do an occasional editorial or magazine article, or even fill a full-time position in advertising or public relations.

Let me say, at the outset, that I don't consider myself a feminist. I think women have shown that they take their places in various activities because of the contribution that they make. We can all think of instances where the cartoonist's picture of the women's club meeting is apropos, but the hundreds of thousands of women in organizations contradict the old picture of the top-heavy fe-

male uttering nonentities.

A woman does have a place at home, so does the man for that matter. It is an axiom old as time. Yet when action by legislation can determine what sort of water, meat, milk, and ideas flow into a home, perhaps

the place of American women is in legislative halls too.

Yet, I was the only woman elected to public office in Oregon in 1950, the year I first ran for the legislature. That has changed and this year I have three other women serving with me in the House of Representatives.

During my campaign for office and during my legislative experience, I stuck to a few issues which interested women particularly. Such things as legalizing colored margarine, support of legislation to improve our schools, lower consumer milk prices, statewide meat inspection dominated my time. I informed myself completely on these questions, so that I could stand my ground under severe committee questioning or heated debate on the floor. I refused to be switched from my goal by extraneous issues. I learned to keep my temper when people baited me from the audience. A man may be able to fly off the handle, but an indignant woman wins very few supporters or votes.

Since women are expected to talk too much, I decided to show them that I would only talk on issues that were my forte and to try to be terse and emphatic. I know that I can accomplish more in that way and I feel that I have won the respect of the hardy males I work with.

FIFTY-TWO PERCENT OF POPULATION BUT ONLY
5 PERCENT OF LEGISLATURE

Oregon is among the States where females are in the ascendancy in numbers. But although women make up 52 percent of the population in our State, they form less than 5 percent of the membership of the legislature.

I often look around me at the rows of bearded faces and think of all the outstanding women I know who should be casting yea-and-nay votes on rollcalls which decide such important issues as the pay of schoolteachers, and safety standards in stores and industrial plants.

Consider the question of meat inspection, a bill on which my husband and I have long worked when he was a member of the State legislature with me. Oregon desperately needs a valid meat-inspection law. Women are more aware of this than men. They buy the family's pot roast and veal cutlets. They flutter over the children's health, Kitchen and refrigerator are their domain. But the legislature had not enough women to scatter around the State and tell the story—to lobby, if you will, this bill to final passage. I believe that a few more women might have made the difference in bringing this bill from the committee. We have revived it again this session and seem to be getting much better public support.

I fear that many women abstain from public life because they regard it as a man's realm. Perish the thought. They are as equally qualified for public responsibilities as a large number of the men I serve with. I honestly believe that the hardest part of being a politician is the campaign for office. It goes against the grain for us to ask people to vote for us. The thing you need is assurance that you have a platform and a plan of procedure that you hope coincides with the voter.

A WOMAN CANDIDATE EVEN CAN WEAR A BATHING SUIT

My faith in people is great. I think a woman candidate with integrity and a few ideas can go far in government and politics, although she may come from a humble family, lack a college degree, and even be seen on a public beach or fashion show in a bathing suit, as once happened to me to the horror of friends who were eager to have me go far with a political career.

Of course, after you get elected, you have different problems, not all of them concerned with whether to vote yea or nay. Every person who voted for you tends to feel that he has a prior claim on your services, to get his nephew a job, to investigate his old-

age pension, to get the highway department to put up a sign advantageous to his business, to abolish gambling, to solve the State's

finances by having gambling.

Speaking of favors reminds me of a story of a leader of Tammany Hall. He was asked to help an employee on trial for serious charges. His investigation satisfied him the man should not be helped. Later the political leader got a phone call and the voice yelled: "You and your influence! They convicted my brother—did you see his rogue's gallery picture in tonight's paper?" "Yes," replied the Tammany man, "and did you notice the nice low number I got him?"

During one of Franklin Roosevelt's campaign trips, he was accompanied by Jim Farley, then Democratic national chairman. The car was speeding along through rows of Boy Scouts, local constabulary, and police, all saluting the fast-moving car. Farley turned to F. D. R. and said, "Do we have to drive so fast?" Roosevelt tossed his head and replied, "Oh, they all know who's in the car." "I know that," laughed Farley, "but would you slow up a bit so they can see who's with you?"

Of course, when you run for public office, you must always keep the idea in front of you, "I might not be elected." One must not be a pessimist, but one must be prepared to take defeat, and take it graciously.

There was a fellow who ran for sheriff and received only 8 votes to his opponent's 325. The next morning the defeated candidate walked down the street with two large revolvers strapped to his sides. A puzzled citizen said to him: "What right have you to carry those guns—you haven't been elected sheriff." "I know it," said the other, "but anybody as unpopular as I am has got to carry them."

BE WARY OF PRESSURE AND SPECIAL PRIVILEGE GROUPS

In public life, you will find yourself subject to pressure by all kinds of selfish groups. These groups do not give a hoot about the public interest. All they want is some special privilege granted by Government. You can best stand up to these pressure lobbies if you know that politics is not your whole life. And that is where women usually have it over their male colleagues.

There is a thrill incomparable to any other in seeing some pet project on which you have labored come to fruition. In the daily grind of politicking there are many frustrations, but a successful measure becoming law makes all the losses and defeats fade into oblivion.

These are some of the advantages and rewards, but I must confess that my idea of heaven after the past 12 months of total devotion to my husband's campaign and my own career is a full day and an evening at home. To let the telephone jingle on and on and just thumb my nose at it, to clean out a closet, to set a batch of sourdough bread, and to run out in the garden and see what is peeking out on vine, bush, and border.

BACK TO THE KITCHEN SOON-I HOPE

My good friends and close neighbors have all but become strangers to me, and I used to be a good cook and able to "throw a dinner" for a dozen in no time. I pall now at the idea of my ability to get a complete meal organized although I am going to have to do that very thing in a couple of weeks when my husband comes out to the Pacific Northwest for hearings of his committee regarding the Hell's Canyon project.

I have stressed the importance of women in just one line of endeavor outside the home. It is the area I know best, but I also know of women in Theta Sigma Phi, in business and professional clubs, and in retail credit, who are doing a commendable job and are considered not for their sex, but for their job.

The old saying "a woman's place is in the home" may be replaced, in the days of our granddaughters, with "a mother's place is in the office."

The Government Under the Republican Administration

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record excerpts of remarks made by Mr. Victor G. Reuther, assistant to the president of the Congress of Industrial Organizations, before the Americans for Democratic Action convention on March 19, 1955.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS OF REMARKS BY VICTOR G. REUTHER, ASSISTANT TO THE PRESIDENT, CONGRESS OF INDUSTRIAL ORGANIZATIONS, BEFORE THE AMERICANS FOR DEMOCRATIC ACTION CON-VENTION, SHOREHAM HOTEL, MARCH 19, 1955

"Go it alone" in world affairs, "Do it yourself" on the home front—this is the deplorable level of leadership to which our Government has fallen under the Republican administration.

Internationally we are isolating ourselves more and more from our friends and our allies. On matters of high national policy in domestic affairs, the administration's answer again and again has been to offer the States "do it yourself" kits, in place of constructive national programs.

Release of the Yaita documents underscores the tragic shortcomings of a foreign policy that is tuned more to the expediences of domestic political warfare than to the grave and urgent responsibilities of world leadership, confronted, as it is today, with the dangers of a devastating, exterminating, and final war.

Judging by the reaction of European and south Asian capitals, release of the Yalta documents by the Secretary of State looks more like an act of "massive retaliation" against our friends and allies than an act of responsible statesmanship. While it appears that Dulles, the Republican, will score few, if any, net political gains from these documents, it is abundantly clear that he as Secretary of State (and unfortunately, the free world as well) will reap a harvest of confusion, division, and further demoralization

Also disturbing to us is the question of how the uncommitted peoples of the world, in Asia, the Middle East, and Africa, the people who meet next month at Bandung, will view the recent casual announcement by President Eisenhower that atomic weapons are now routine, that we shall "of course" use atomic bombs against military targets just as we use bullets. Will not the net effect of this serve as a massive psychological offensive against our friends and potential allies in every corner of the world? Will this not create the impression of closing the door on the prayers and hopes of people all over the world, including the people of our own country, that atomic war may yet be avoided?

To a world weary of war and destruction, and which desperately hopes for a way toward peace, do we not tend more and more to isolate ourselves from the free world community when our world programs of assistance emphasize so heavily the military aspects and so little the economic help which people desperately need?

As the Asians and the Africans meet next month at Bandung, with the Chinese Communists present as participants, they shall read of what has been put forth in America as a bold new program of aid to Asia. It is 60 percent military, and allots only \$115 million a year for 8 years to economic aid, an unspecified part of which will be spent primarily for economic developments related directly to military defense.

Time is rapidly running out on the opportunity that has been given to our country to demonstrate to the "have-not" peoples of the world that their economic and political and cultural advancement is a matter of real importance to us, the greatest of the "have" nations of the world. It is time for a truly bold approach on our part to the tensions and hostilities that grow out of the increas-ing gap between the "have" and "have-not" nations. Our immediate and wholehearted endorsement of the SUNFED program in the United Nations, inadequate though it may be in scope, is the obvious first step to be taken in joining with other "have" nations to build the essential economic groundwork for improved living standards in underdeveloped countries.

Perhaps it is too much to expect an administration which has been so insensitive and lacking in understanding of the needs of other peoples to demonstrate any greater appreciation of the needs of our own people here on the home front.

The extent of responsibility recognized by the administration on one domestic issue after another has been to formulate sweeping, eye-catching proposals, leaving all or a major part of the performance, including the cost thereof, to the States and local communities.

These do-it-yourself kits have been wrapped up and mailed out on aid to school construction, aid to highway construction, soil conservation, proposals to improve standards of unemployment and compensation as well as right-to-work legislation.

The administration's aid-to-school-construction bill committed the Federal Government to an outlay of less than \$70 million a year for 3 years, but it was headlined as a \$7 billion program. It was, providing the States and communities can find the \$7 billion, which they most certainly cannot.

The \$101 billion highway program proposed by the President would cost the States and local communities \$70 billion. The Federal Government's share of \$31 billion would be financed to the extent of \$20 billion by revenue bonds on which the consumers would shoulder the financial burden through the gasoline taxes which they pay.

The Secretary of Labor speaks out against right-to-work laws which some States have passed to try to cripple labor unions. But he will not recommend that Congress amend the Taft-Hartley Act to accomplish what he declares to be his purpose.

The President proposes to bring unemployment benefits up to date and extend their duration by sending the States a doit-yourself kit of improved standards. For competitive reasons, the States will not build better laws with these kits and the President will not ask Congress to do the job.

Defending the President's inadequate recommendation of a 90-cent minimum wage, an Assistant Secretary of Labor says that States have the ultimate responsibility for better labor standards. He should know that there would be no minimum wage in more than half the States if left to their discretion, since they have enacted no minimum-wage laws.

When, however, the administration's purpose has been to enrich the few at the expense of the many, it has had more than kits to offer. It has offered and sought to deliver, billions upon billions of dollars. In the submerged-oil and mineral lands offshore, in the Tennessee Valley, in the Pacific Northwest, at Niagara Falls, it has offered private interests priceless public resources to be converted to their own use and profit. For the most part these plans to plunder the public's domain have been slowed down and perhaps blocked. But the effort continues. A promise of patents and profits to private monopolies on peaceful applications of the atom is the most recent and most alarming of the plans to expropriate the public's wealth for private gain.

The few profited at the expense of the many again through \$7 billion of tax reductions in 1954, 90 percent of which went to corporations and to families on the upper side of the income scale. The administration fought for this as vigorously in 1954 as this year it fought and defeated an attempt to redress the balance with a small tax reduction for families with incomes under

\$5,000.

Policy of the administration toward maintenance of full employment has been consistent with its bias toward those at the top. Banker control of its economic policies promptly throttled the prosperity of early 1953 and generated a recession in which job losses and short working hours reached the equivalent of 5 million totally unemployed.

With a moderate but highly precarious recovery underway over the past few months, the administration cheerfully, but without caution, predicts satisfactory production and employment conditions for the current year. But the bankers in high office already are applying brakes to the recovery, although nearly 31/2 million are totally unemployed. and national output is running some \$40 billion below where it would be if prosperity and normal growth had not been stifled by 2 years of incompetent and misguided government.

Trying and difficult as the times are at home, and dark as the current outlook is for our leadership in world affairs, nevertheless, there has been real evidence that the citizens of America, informed of the facts and given a choice, will rise to their responsibility.

Unity of the two great labor federations will give a new impetus toward the enlargement of human rights. It will provide a powerful ally to all the many brave groups of people who have never faltered in their fight to place people first in their programs for America.

Johnny on the Spot

EXTENSION OF REMARKS OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. HALLECK. Mr. Speaker, the Indianapolis Star magazine of March 27, 1955, contained a human-interest story about an individual who has become something of an institution in the House of Representatives-Johnny McCabe.

The author, Ben Cole, of the Star Washington Bureau, has done an excellent job of portraying the part Johnny McCabe has played in the lives of so many Members through the years.

I well recall what a great help Johnny was to me when I first came to this Chamber in 1935 as a green freshman, after a special election in the Second Congressional District of Indiana. This was a lonesome place for me, as the only Republican Member from Indiana, and deeply appreciated the many things Johnny McCabe did to make those early months easier. I know many other Members could attest to the same ex-

Johnny McCabe has devoted many, many years of helpful service to the Members of this House and I am happy to offer Mr. Cole's article in recognition of that service:

JOHNNY ON THE SPOT

(By Ben Cole, the Star Washington Bureau) "Mali Janko" is Slovak for Little John.

It was the happy greeting that used to be flung at the little man who strolled the streets of Whiting, Ind., before 1919.

Standing in the sumptuous lobby of the House of Representatives, little John McCabe looks out the tall windows sometimes and sights.

"Not many there remember Mali Janko anymore," he says.

Since 1919, the 4-foot 10-inch John Mc-Cabe's home has been the United States House of Representatives. Its 435 Members

have been his family. The little Hoosier came here under the

former Congressman Will sponsorship of Wood, of Lafayette. He has remainded, many times longer than some of the lawmakers who arrived here after him.

Just what are his duties? He makes himself useful and helpful to Republican

Congress Members.

If you visit the House, you will see his stubby figure moving among the seats on the Republican side of the House. Or he may take a vacant seat near the cloakroom and read a paper, or even doze a bit.

On very cold mornings, you may see him huddled in his overcoat-hatlessacross the Capitol plaza from his hotel to his job. And, unless you know who he is, you will find yourself thinking, "If he was my boy, he'd be wearing a hat.

Practically everybody on Capitol Hill knows little Johnny McCabe. But not many know

his story.

It is the life adventure of a little fellow who has always looked up, even to normally stubby humans. He weighed in light for life's battle but he took it as it came.

McCabe could retire on a Federal employee's pension right now if he chose. But he won't because it would mean for him loneliness.

Johnny was born October 6, 1890, on Chicago's south side. His mother, Margaret McCabe, died soon after, leaving her three boys in the care of a well-meaning father who found the job too big.

James McCabe tried for a time to keep his little family together. Johnny, the baby, got in a year or so at Oliver Wendell Holmes School in Chicago; but eventually the family broke up.

The boys went out onto the street. James McCabe went West. When Johnny was 9 years old, he learned his father had been killed in a railroad accident; but he never learned the details.

Little Johnny's wanderings eventually to a farm in Morocco, Ind. There he happened to meet George Collins, a saloonkeeper from Whiting, who happened to come down for a visit one weekend.

The tiny orphan from Chicago and the hearty, laughing Collins from deaty, busy Whiting became a team, instantly, busy Whiting became a team, instantly, he When Collins went back to his saloon, he

took with him the little boy from the farm. Collins educated the lad, gave him things to do around the saloon.

A little fellow, Johnny had to put up with a great deal.

I had to work twice as hard as bigger boys," he says. "People would say, pay Johnnny half as much because he's only half as big.'

It was the gaslight era, 1903-1904. Collins, a 35-year-old childless widower, and his tiny friend took life pretty much as they found it.

The abrasive days gave Johnny McCabe two philosophies that he recites almost daily:

"I like everybody; everybody likes me." And: "I always keep my nose clean."

Nobody lives his philosophies more scrupulously. The capitol dome would totter if Johnny McCabe ever spoke ill of a living soul. And the polished mace of the House of Representatives might well rust away before Johnnny McCabe would be caught in political knavery.
As a boy—a very little boy—Johnny got

shoved around a lot; but it didn't matter

He was strong for his size, and healthy. "We had three good lakes to swim in when we were boys around Whiting," he remembers. "But we swam in the dirty old Calumet River, because it was more fun to dive off the boxcars."

Later, Johnny's prowess as a swimmer stood him in good stead. He was in the West Indies last year when he hired a native boat to take him to his ship in the bay. Halfway out, the bottom of the local taxi boat simply fell away. Everybody was dumped into the water. Little Johnny paddled around contentedly until he was res-

"I'd have drowned if I couldn't swim," he

says simply.

When Johnny grew into manhood, he was still a boy in size.

"There was a law in Chicago against children appearing on the stage. They were giving the Squaw Man at the old Calumet Theater. There was a part for a little kid, but they couldn't get one. Somebody said, 'Why not get little Johnny McCabe over at Whiting.'"

The director summoned the young man from Whiting. His size was right. His voice was right.

"But this kid is liable to blow his lines and start cussing right in the middle of the scene," the director objected.

Johnny told him, "No, I won't. I won't

The leading man stuck up for Johnny's purity of speech; and the little man was hired. He finished the Squaw Man and played several other roles around Chicago the next 2 years.

Eventually, he met State Senator James Nejdl, of Lake County. Nejdl took McCabe to Indianapolis as an employee of the Indiana

If the State senator's idea was to have a sort of watch-fob employee, Johnny missed the point.

"Everybody was kind to me," he says.

In Indianapolis, McCabe worked in the engrossing room as a messenger. General assembly bills were still hand engrossed in those days.

It was because of his Indiana senate job that McCabe came to Washington. His friends in the State senate wrote numerous letters to Congressman Wood asking him to get the youth from Whiting a job.

He was invited to come here and take a \$120-a-month job as a House attendant. He had been making \$75 a month in the State senate. It was wealth undreamed of.

McCabe still goes back to Whiting on election day. He follows the events of his hometown with meticulous care.

Nowadays he watches the obituary notices with care and an occasional sigh. Because "I always had an inferiority com-

Because "I always had an inferiority complex," Johnny never married, never had a family of his own.

The Congress is his family, his home.
It's no longer "Hello Mali Janko." There
probably aren't more than 2 or 3 Members
of Congress who ever heard the words.

But a cheery, "Hello, Johnny," greets him everywhere he goes; a little gnomelike guy with a host of friends to kind of help rub away the loneliness that has been such a big part of his life.

New Accord With Canada on Basic Foreign Policy Issues Is Important Forward Step

EXTENSION OF REMARKS

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

NEW Accord With Canada Feather in Dulles' Cap

(By Edgar Ansel Mowrer)

John Foster Dulles' achievements as Secretary of State are far greater than he gets credit for.

The commotion over his publishing the minutes of the Yalta Conference has obscured his latest great contribution to the free world's cause—achievement of a sort of reconciliation of United States policy with that of Canada, our neighbor and closest ally.

Not that there had been a quarrel. But during the last few years Canada has tended to follow London in looking upon the Communist danger in Asia as somehow different and smaller than the Soviet threat to Europe.

Canada's Secretary for External Affairs, Lester Pearson, seemed at times to be suggesting that Canada would go its own sweet way if the United States insisted on using force to stop further aggression by Red China.

MODIFIES VIEW

Then, just before Mr. Dulles' visit to Ottawa, Mr. Pearson reversed—or at least, modified—his previous position in a public speech. In a somewhat labored explanation of his previous view that the "days of relatively easy and automatic (Canadian) relatively easy and automatic (Canadian) relations with the United States were over", the Minister admitted that "the neutrality of either of us, if the other were engaged in a major war in which its very existence were at stake, would be unthinkable."

Since, as things now stand, the United States and not Canada is pushing a policy of Asian defense, this is tantamount to saying that should our defense of the Formosa Strait lead to a war with Red Russia as well as with Red China, Canada would come in on our side.

DIVIDED OPINION

This important admission, whose great importance has been overlooked in the United States, seems to have divided public opinion in Canada.

Canadian Socialists claim to have been horrified at Mr. Dulles' "calm acceptance of

the possibility of a world war over islands that are inconsequential"—Matsu and the Quemoys. (They must know that the issue in the Formosa Strait is no more the little islands than it was the city of Danzing in World War II. It is simply whether or not Communist aggression is to be stopped. Where it is stopped is of secondary importance.)

SHIFT TO DETERMINATION

On the other hand, the experienced editor of the Montreal weekly Ensign, Robert Keyserling, in a striking editorial, notes that Mr. Pearson's statement represents a shift from "London's appeasement" to "Washington's measured determination."

Mr. Keyserling attributes this shift—by inference—to three things: Mr. Dulles' visit to Canada, the pro-American attitude of Australia and New Zealand, and the anti-Communist views of the "vast majority of Canadians."

But whatever the cause, to have brought about this needed clarification in the attitude of the Canadian Government is no small feather in the cap of our Secretary of State.

Progress of South Carolina Schools in Last Decade

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article by Jesse T. Anderson, State superintendent of education, headed "South Carolina Schools Have Made Biggest Progress in Last Decade—Average Annual Salary for Teachers Doubled." The article was published in the Columbia Record, Columbia, S. C.

There being no objection, the article was ordered to be printed in the Record, as follows:

SOUTH CAROLINA SCHOOLS HAVE MADE BIGGEST FROGRESS IN LAST DECADE—AVERAGE ANNUAL SALARIES FOR TEACHERS DOUBLED—VALUE OF BUILDINGS MAKES JUMP FROM \$58 TO \$100 MILLION—ENROLLMENT OVER HALF MILLION—DAILY ATTENDANCE UP—INSTRUCTION IS IMPROVED

(By Jesse T. Anderson, State superintendent of education)

In the 10-year period from 1944 to 1954, there was probably more educational progress made in South Carolina than in any other comparable period since the establishment of our present public school system.

The value of school buildings has increased from \$58 million in 1944-45 to more than \$190 million at the present time. Approximately \$100 million of this increase took place between 1951 and 1955. The average salary of teachers has gone from \$1.055 to \$2.803. School enrollments have grown by 100.000 pupils to a staggering 550.000, and average daily attendance has increased from around 80 percent to almost 85 percent. The instructional program has shown many improvements since the 12-year program was introduced into the public schools in 1945.

COMMISSION ESTABLISHED

The greatest visible sign of progress has occurred in the 4 years since 1951, when the general assembly enacted legislation establishing a 3 percent sales tax, pledged for edu-

cation, and setting up the Educational Finance Commission to administer State-supported building and transportation programs.

More than \$125 million has been allocated for school buildings since 1951; 273 new buildings and additions have been completed, several hundred old buildings have been renovated, and other buildings are under construction or funds have been allocated for them.

Construction has been under the direction of architects and our new schools are the most modern and up to date that it is possible to have. A clear picture of the building program is given in a bulletin entitled "Educational Revolution," published by the office of our distinguished past governor, James F. Byrnes.

Eighteen States in the Nation have more schoolchildren than South Carolina, but only 3—New York, Pennsylvania, and Texas—built more classrooms than did South Carolina in 1952-53. Although these States topped South Carolina in number of classrooms constructed, the ratio of new classrooms to schoolchildren was smaller in all of them than in South Carolina.

PEWER SMALL SCHOOLS

One result of the construction of so many fine school buildings has been the reduction in the number of small, inadequate schools in our State. There were 3.623 schools operating in South Carolina in 1944-45; by 1950-51 the number had been reduced through consolidation and reorganization to 3,162. In 1953-54 only 2,136 schools were being operated and possibly 500 more will be closed as soon as allocated funds have been used for construction.

The administration of our schools has shown marked improvement as school district reorganization has moved forward. As recently as 1948, when a general survey of our schools was made, there were 1,680 school districts in South Carolina. In 1949 in many counties of the State plans were set in motion which by 1951 had reduced our administrative units to 1,220. Under the 1951 school law, the county boards of education and the educational finance commission further consolidated these districts into 103 administrative units.

FINANCING, SERVICES IMPROVED

The fact that units are larger has made it possible to finance better supervisory programs, to expand instructional offerings as school sizes expanded, to increase services to children and adults in the communities, and to organize better record-keeping methods. The districts have been so organized and consolidated that there are now enough pupils of each race to warrant one or more accredited high schools per race in each district.

The per pupil expenditure in South Carolina has increased from \$66 in 1944-45 to \$173 in 1954-55, but South Carolina still ranks 43d in per pupil expenditures.

It is interesting to note that in school construction our State stands near the top, but 42 States spend more per child, for operation of the schools, than South Carolina. The 5 States spending less per pupil are all in the South.

The State spending the smallest amount per pupil is Mississippi with \$103, while the highest State is New York, which spends \$356 per pupil. The national average is \$247 per pupil.

It can easily be seen that South Carolina has spent during these years a larger percentage of the school dollar in buildings than most of the other States of the Nation. This was necessary, in order that equal facilities might be provided in South Carolina at once and that facilities might be adequate for all of the children.

INCREASE IN STATE SUPPORT

The increase in State support for public schools has not been limited to school construction and transportation. The appro-

priation for operation of the schools, including teachers' salaries, was \$9 million in 1944, \$29 million in 1949, and \$45 million in 1954. The total appropriation on the State level for the current year is more than \$60 million, of which approximately \$15½ million goes into the building and transportation programs.

School transportation is now completely financed by the State. During the 1953-54 school year, 4,000 State-owned buses transported 232,000 children to and from school each day, almost half of those enrolled.

In 1943-44, there were only 1,528 buses being operated, most of these owned by the districts, and less than 75,000 students of the total 450,000 enrolled were transported.

The number of buses and of pupils transported has practically doubled since 1951 when the State began paying the total cost of transportation.

Today the Educational Finance Commission supervises the transportation program and the State Highway Department has charge of the servicing of the buses and the training of the drivers.

NEW CERTIFICATION

In 1945 the new certification program for teachers was inaugurated and since that time teachers' qualifications have steadily gone up. The State-adopted salary schedule, with increments for experience and for higher qualifications, has encouraged teachers to take up graduate studies and raise their certificate levels. It is safe to say that the teachers in our schools today are better qualified than those of any previous period. Our great problem is the shortage of these qualified persons.

In spite of the increases in State aid for teachers' salaries, and in spite of the fact that many districts supplement the State aid, the average salary (\$2,803) is still too low to attract our most promising young

people into the profession.

This is a problem that the layman can help solve. Everyone wants good teachers for his child, but few parents encourage their children to enter the teaching profession. There are many advantages in the teaching profession, not the smallest of which is the satisfaction that comes from being a teacher, from rendering a great service, and from gaining the affection and respect of growing children.

STATE'S TEACHER LOAD

The shortage of teachers is partly responsible for another problem—the teacher load. The teacher-pupil ratio in South Carolina has been criticized because many teachers have 40 to 50 pupils in a classroom. Our average teacher load is only 26 pupils as compared to North Carolina's 29.

South Carolina does not provide in the salary schedule or law for principals, supervisors, or special teachers to receive State aid unless they are counted against the enrollment; and some schools may overload their classrooms in order for special teachers to

qualify for State aid.

We believe in special teachers and feel that the solution of this problem can partially be accomplpished by the State's allowing State aid for nonteaching principals and special teachers such as music and art teachers and supervisors.

It has been proposed to the legislature in our budget request that one special teacher or nonteaching principal or supervisor be allowed for every 20 teachers in a school system and that our enrollment requirement per teacher for State aid in large elementary schools be reduced from 36 to an average enrollment of 34. It is our opinion that this would help solve some of the crowded classroom conditions,

QUALITY OF INSTRUCTION

All of the improvements and problems we have mentioned thus far have their roots and their reasons for existence in one central

idea—that we might have the best instruction for all our children.

The instructional program is the heart of education; for buildings, transportation facilities, funds for operating, and the training of teachers would have no purpose if there were no instructional program.

It is somewhat more difficult, however, to pinpoint imprpovements in instruction than in other areas, for obviously one cannot quote a statistic to show that children are being taught better than they were some years ago. There are indications other than statistics, however, pointing to improvements in instruction.

MORE GRADUATING

One of these is the fact that more children are staying in school until graduation, indicating that instructional programs are more nearly meeting their needs. Dropouts have been steadily decreasing.

Of the class which enrolled in the first grade in 1933, only about 10 percent were enrolled in the 11th grade in 1943. (There was no 12th grade at that time.) However, of the class which enrolled in the first grade in 1943, more than 22 percent were enrolled in the 11th grade in 1953.

Although not all of these will remain in school until graduation, approximately 19½ percent of the original first grade is eurolled in the 12th grade of 1954-55. We are still losing too many children from school before graduation, but these figures indicate we are making progress in this field.

Another indication of improvement in the instructional program is the keen interest on the part of teachers and administrators

in professional organizations.

They are not only joining but are participating in, to an increased degree, such organizations as the National Education Association, the Association for Childhood Education, the State education associations, the State school board association, the National Association of School Administrators, and so on.

Through participation in such organizations on the State, regional, and national levels, educational leaders get new ideas, a broader concept of the total task of education, and a valuable knowledge of successes and failures in other areas.

TEACHING MATERIALS

Teachers are continually seeking materials that will help them do a better job of instruction. In this area, the State Department of Education is assisting by directing the writing and publishing of curriculum guides in several fields.

Already outlines of courses of study in the field of social studies has almost been completed. Being prepared are outlines for physical education, health, and citizenship. A number of other instructional materials have also been published by the State Department of Education.

Two publications of the Department are specifically designed to help improve the school programs. One of these, The Story of a Good School, shows pictorially what makes a good school program. The second publication, How Good Is Our School, is similar to a check list and is designed to help educators and laymen study the school program in order to make long-range plans for improvement.

Still another indication of improvement in instruction is the broadening of the curriculum made possible with the coming of the 12-year program.

Boys and girls now receive more guidance and counseling than formerly; more vocational training is offered; there is time for such courses as driver training, home and family living, physical education, special training for the handicapped, and so on. Children have far broader understandings and breadth of knowledge than children of 15 or even 10 years ago and much of this is due to the 12-year program.

TRAINING OF DRIVERS

Driver training is proving a valuable course in helping to teach safety. The State department of education has for a number of years encouraged the teaching of this course, and some time ago the State board of education implemented the work of the department by recommending that at least the classroom phase of this training be offered in all high schools.

As they become able financially the schools are offering the behind-the-wheel

training also.

The classroom instruction in driver training in the eighth grade, begun only recently, apparently will be quite successful since students in that grade are normally just reaching the legal driving age of 14.

CITIZENSHIP TRAINING

The citizenship training being offered the boys and girls in today's schools is of a high caliber and extends throughout the grades.

While we have quite adequate textbooks in this field and while several courses in our high schools are built around citizenship training (9th-grade civics, 11th-grade American history, 12th-grade citizenship), all through the grades, from the 1st to the 12th, the students are having experiences in citizenship.

They hold school elections, they work in committees on school problems, they serve as officers of school organizations and as safe-ty-patrolmen, and in every class they have opportunities to gain a wholesome and rich respect for American ideals and institutions,

There is much more that we could say about improvements in our schools, but the best evidence is to be found in the schools themselves. We cordially invite laymen to visit the schools in their communities and compare them with those of 15 or 20 years ago.

There is now widespread interest in education on the part of laymen. This is a healthy sign, for the growing complexity of school problems demands the best thinking of everyone; members of the profession cannot solve all these problems alone.

As the total population comes to recognize the value of education for the future advancement of our State, we shall see continued improvement in the education program of South Carolina.

New Program To Meet New Perils

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article on civil defense written by James K. Sparkman which appeared in the March 19, 1955, issue of the Christian Science Monitor.

I commend it to the attention of the Senate and renew my request that the most effective way for Congress to full-fill its responsibilities in this vital area is to establish a joint committee on civil defense along the lines of the proposed bill, Senate Concurrent Resolution 11, submitted by the Senator from Missouri [Mr. Symington] and myself.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIVIL DEFENSE—NEW PROGRAM TO MEET NEW PERILS

(By James K. Sparkman)

Development of hydrogen bombs and startling disclosure of the scope of H-bomb radioactive fallout are forcing civil defense planning along a new course of prodiglous proportions.

How intricate and formidable the massive task of defending American cities has become and how urgently defense measures are being weighed by engineers and national planners were pinpointed here this week in a meeting of the National Advisory Council of the Federal Civid Defense Administration.

In one of a series of meetings scheduled monthly to keep pace with quickening defense measures committee members heard an outline of the national plan for H-bomb civil defense:

"A new determination to evacuate as thoroughly and quickly as possible every major city threatened by air attack.

"A new program to counter fallout peril by moving small-town citizens from areas downwind of possible target cities, or alerting them to take shelter for hours—or even days—after any thermonuclear attack."

The advisory committee, a small group of governors, mayors, and others closely informed on the problems facing civil defense teams, acts both as an impartial board to appraise proposed Civil Defense Administration moves and, as individuals, directly concerned with defense of cities and citizens, to suggest additional measures for consideration by the President and the FCDA.

At this Nation's top citizens' defense headquarters—moved here from Washington as one step to physical dispersal of the Federal Government—committee members, cleared by the Atomic Energy Commission, left the meeting room solemn faced after 2 days of brisk discussion of the unprecedented problems facing urban, suburban, and rural defense.

The committee members were officially briefed on improvements completed in the joint United States-Canada radar chains that are across the northern plains and tundra. They heard of recent changes in the mechanics for bringing an air alert down from these outposts for distribution to the individual States and relay to the cities (now a 15-minute task). In detail, they considered proposed delegation of FCDA powers to the United States Weather Bureau for defense against fallout and plans for intensifying the radiological monitoring program in all areas within possible fallout zones.

AWARENESS IS SLOW

Today's defense task, Val Peterson, PCDA Administrator, has stated openly, "staggers the imagination," but is not impossible with full citizen cooperation. Yet the warnings he and his staff put forward cannot be minimized.

Unless temporary steps are taken and unless long-range measures are begun now to hedge against future weapons developments, they state calmly, the loss of American lives and property could be catastrophic and, at worst, possibly overwhelming to the Nation and its way of life.

That the majority of Americans, including many officials, are only now becoming aware of the challenge of the defense problem is not, this correspondent believes on the basis of 5 years' coverage of the subject, indicative that the problems have been unknown. A devoted nucleus of patriotic defense workers in almost every city has known of the capabilities of atomic warfare all too well.

Now it is the changing nature of the atomwar threat that is commanding public attention, alerting the Nation's cities to a degree impossible before.

Five years ago, in the days when A-bombs were only 2 to 10 times bigger than those exploded over Hiroshima and Nagasaki, American city dwellers were advised to duck for cover when sirens sounded. They were told that the centers of concrete multistory buildings would offer a measure of protection against blast and substantial shielding against A-bomb radiation unless they happened to be squarely below the point of explosion.

The general reaction to this data was "business as usual," despite defense wardens' caution that large areas of many older cities simply do not have modern, blast-resistant buildings. Many city dwellers concluded that they would worry about shelter when the time came—just as many look for exit signs only after the fire warning is sounded.

Civil-defense leaders knew that evacuation would offer far greater safety, but the lack of an adequate radar detection system and warning network made the possibility of evacuation slim.

In appeals for aircraft spotters to supplement the then-existing radar stations in the northern tier of stations, defense officials openly admitted that one Minnesota housewife, for instance, might be all the would stand between a flight of bombers from the Arctic and a complete surprise attack on Chicago. Without her telephone call to the Ground Observer Corps station, bombers might reach the city with no more than 5 minutes' alarm; even with such a call, the time would be likely be too little for evacuation.

Today the situation has shifted—though not enough to make any early civil-defense efforts waste. Campaigns to plan shelters, to reduce neighborhood fires, or to train rescue or life-saving personnel are now equally or more important.

With construction of the pine tree and DEW (distant early warning) radar lines circling across Canada, American and Canadian centers of production have been given additional hours in which to evacuate.

And with the construction of hydrogen bombs this warning has been made possible none too soon. As defense planners now see it, the stark fact stands that there is simply no shelter in a target area.

EVACUATION PLAN

A bomb, AEC test shots indicate, capable of vaporizing sand and coral in a 175-foot deep and mile-wide crater, will obliterate even the stoutest of building in its primordial heat and astronomical pressures.

It is doubtful whether underground shelters of any depth would be adequate in the target area unless a series of massive airlock doors were set far below the earth's surface, engineers believe. Only the strongest shelters might be sufficient 3 to 7 miles from the blast; substantial destruction could be expected 10 miles out or more.

Space—emptying a city in a matter of hours—is, defense planners believe, the sole answer today. They believe cities have not one instant to spare in developing an iron-clad plan for removing every possible man, woman, and child from the densely settled areas of cities out to points 15 to 20 miles from the edge of the metropolis.

An intense traffic study made in Milwaukee last fall has shown that this can be done. Tentative plans in St. Louis, Mobile, Ala., San Francisco, Detroit, Washington, Philadelphia, Minneapolis, and a few other cities have proved of immense value in spotlighting other phases of the problems involved—mass feeding, housing, and others.

In all these plans the family automobile becomes the workhorse, since it, rather than

fixed public transportation, is versatile enough to be steered clear of fallout areas and be routed clear of temporary bottlenecks. Trucks and buses would be equally usable.

From the Milwaukee study it is clear that every major city should be giving priority attention to the question of evacuation highways. Such modest measures (costing not more than \$300,000) as widening a few streets, widening one bridge and building another, and prohibiting longtime parking on 8 streets (so that owners, presumably, would be near) are estimated to raise the Milwaukee escape rate 20,000 or more persons an hour. A \$6 million investment, it is estimated, would cut the evacuation time from 8 to 7 hours; freeways leading into the downtown area might reduce it to 4.

SCENE OF THE WEEK

Smalltown residents, defense chiefs here believe, must couple fallout possibilities with the local weather reports. Or, suggests Mr. Peterson, "they can build a simple shelter in the backyard, stock it with food and water, and forget about the Russians."

In years to come only the gradual dispersal of industry—spreading the Nation's production eggs into so many baskets that striking them will be an impossible task even for intercontinental rockets—can offer increased safety against supersonic, earth-circling missiles keymen here believe.

Factories, they say, need not be moved to Texas or the hills of Tennessee. Simply building the new expansion 10 or 20 miles away—outside the radius of 1 hit or pattern of hits—will drastically reduce the vulnerability of industry. Eventually a knockout blow might become too difficult to attempt.

None of these measures, dedicated civildefense workers insist, should be taken to detract from the most basic rule, stated succinctly in the preface to the Milwaukee traffic study report:

The best civil defense is peace.

Assembly of Captive European Nations

EXTENSION OF REMARKS

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address by Dr. Vince Nagy, former Minister of the Interior in Hungary, and now Vice President of the Hungarian National Council.

The address was delivered at a plenary meeting of the Assembly of Captive European Nations in New York, and was forwarded to me by Mr. William A. Fuzy, of East Chicago, Ind., an outstanding representative in Indiana of Hungarian-American citizens. The address by Dr. Nagy includes a resolution acted upon by the assembly.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, members of the assembly, the solemn declarations signed by the exiled leaders from behind the Iron Curtain in Philadelphia and Williamsburg in 1951 and 1952 can be considered as the first documents eventually leading to the foundation

of our Assembly of Captive European Nations, even though the idea was not conceived until later. In these declarations we have pledged our determination and good will advocate the federal idea to the neighboring central and east European nations after the liberation of our countries.

Indeed, in the Assembly of Captive European Nations we have already realized while in emigration this cooperation based on the federal idea. We have achieved this federal cooperation here, on the free soil of the United States of America, whose history, institutions, and constitutional structure are the most eloquent examples of the federal idea in practice and its well-proven success.

We believe that we can justly claim-without falling into the mistake of self-complacency-that our assembly has done a good job despite the short period of time that has elapsed since its foundation. The facts alone that we have achieved genuine cooperation, that the fate of our peoples suffering under the same tyrannical power, were extensively and repeatedly discussed by us, that we had instructive arguments and were able to reach sober compromises, all contributed significantly to prepare our nations and ourselves for the great tasks to be solved after the liberation, notably the reconstruction and rehabilitation of everything that has been destroyed in our countries in the legal, political, and economic field, and the laying down of the foundations for a brotherly cooperation between the neighboring nations.

I am deeply convinced that our nations will be able to hold their ground in the raging worldwide economic competition only if they are united in one or several federal units. There seems to be little doubt about it that the large economic units will be able to secure the greatest prosperity to their respective populations. Without federation, the small states of central and east Europe would again face national disaster.

We, the exiled leaders of our enslaved nations, have the sublime task of preparing the future of those nations. Here on the free soil of the democracy, we have the right and every opportunity to form and mold the future of our nations and that of entire Europe.

Yes, ladies and gentlemen; I sald Europe. Because we are not only central and east Europeans. This labeling, this political regimentation, was created only by the existence of the Iron Curtain. Before the Iron Curtain rolled down on our nations we were all Europeans, without any adjectives: Europeans not only by force of geography, of our vast, unbroken territory, but also by force of our deep roots in European culture. Our nations were not only the beneficiaries and recipients, but also most constructive elements of the magnificent European culture. which eventually served as the basis of American culture and progress also. Our Hungarian universities and other cultural institutions, our Hungarian scientists, writers, artists, and composers as well as those of the other Central and East European nations all have contributed innumerable outstanding achievements to the culture of Europe and mankind in general. Yes; we were Europeans and not simply East Europeans, whom Moscow's agents would now like to sever from the body of Europe with the Iron Curtain, turning us into part of Asia with a large-scale social, political, and economical operation.

We are deeply convinced that this tyrannical and insane experiment will not succeed. Just as there are physical and mathematical impossibilities, there are psychical impossibilities also. One of these is to eliminate from man all his inborn spiritual and moral yearnings. It is for example impossible to deprive man of his desire for spiritual, cultural, and moral betterment in addition to fulfilling his physical, material needs. These

desires exist in the Russian people too, although the Russian man had little opportunity even during the Tzarist rule to satisfy them. Consequently they can hardly com-pare the good and the bad, the favorable and the detrimental in this case as in many others, too. Our nations, on the other hand, were in full possession on these blessings: the achievements of democracy and culture, even if not always to the same extent. nationals behind the Iron Curtain were thrust from a high economic and cultural standard into the depths of Bolshevik rule, where the heartwarming and indispensable light of humanitarian ideas, moral truth, right and freedom is obscured and where the hammer and sickle inflict severe wounds on our brethren's bodies and souls. As a consequence our conationals burn with a not too well concealed, genuine desire and determination to change their situation. No tyrannical power, no hypocritical tactics can ever make them believers in communism. Thousands and hundred thousands of Malenkovs and Mitsurins and thousands of Russian generals will never be able to turn our compatriots into determined Communists, ready to work until exhaustion or even die for Moscow's plans for world domination.

In their courageous stand our nations need help. The Iron Curtain will certainly not crumble at mere words. Our nations, 100 million enslaved people expect the word of encouragement from the leaders of the free nations; than that, they expect determined, energetic, but peaceful action against their oppressors.

The resolution submitted here contains our demands. Our peoples expect and hope the realization of these demands from the free nations.

We demand free elections in the Iron Curtain countries and, as a natural precondition, the creation of adequate circumstances warranting such elections. Only under those circumstances can it be hoped that our nations regain their national sovereignty and the freedom to elect their own parliamentary representatives and governments.

By requesting the free nations to adopt the resolution submitted by us, we do not wish to induce the governments of the free world and the United Nations to present such demands to the Soviet Union, against which the latter could raise objections as unheard of, unprecedented, or illegal demands which interfere with the internal affairs of independent states. On the contrary, in the Yalta agreement the Soviet Union herself pledged to respect the independence and the sovereignty of our nations and the Communist puppet governments of the Iron Curtain countries obliged themselves in the separate peace treaties to give and secure the people the human rights, freedom of speech, freedom of the press and freedom to as-

For 9 years now the Soviet Union has misused her military power. Every hour of every day during these 9 years, the Soviet Union has violated and trampled the Yalta agreement, as well as the peace treaties signed with our nations, under the terms of which the Soviets were bound to respect the human rights and the freedom of our nations.

The time has come for the free nations represented in the United Nations organization to take an energetic action against the Soviet Union and its puppet governments. The representatives of the free nations in the United Nations shall declare:

"We had enough of hypocrisy. For 9 years we numbly watched the frivolous play the Soviets pursued with 100 million people, with human beings created in the image of God, all the while preaching democracy, human rights, freedom, economic progress, but in reality turning 9 countries into prisons and 1 vast slave-labor camp, depriving the citizens of all human liberties and driving once proud and independent peoples to slave labor

with methods overshadowing those of the Pharos and the trars. The goods produced at the sweat of their brow and the Communist armament unparalleled in history will be used to expand the dictatorial rule of a handful of audacious men all over the world."

Let the delegates of the free nations lay down the rule to the Soviets:

"We had enough of the games played at the United Nations during the past 9 years. We want to see that the Yalta agreement is carried out at least: let the Soviet Army evacuate the central and eastern European countries and restore the liberty to these peoples so they may finally again be able to rule their own countries."

Mr. President, the resolution introduced here comprises our wishes and demands. In the name of the Hungarian delegation, I am in favor of the resolution,

Prize-Winning Essays on the Subject, What Are My Opportunities and Responsibilities Under Freedom?

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD 2 very fine prize-winning speeches written and delivered by 2 outstanding young Minnesotans. These young men, Dennis Barnaal, of Renville County, Minn., and Thomas Stephani, of Beltrami County, Minn., were the 2 prizewinners in the Minnesota 4-H radio public-speaking contest sponsored by the Minnesota Jewish Council and held in cooperation with the University of Minnesota. More than 850 boys and girls from the ages of 18 to 21 in 84 of our Minnesota counties participated in the contest. The two prizewinners can indeed be proud of their accomplishments, just as I am proud of their fine contribution to the subject. What Are My Opportunities and Responsibilities Under Freedom?

I want to commend all those associated with the rewarding and stimulating constructive thinking by our young people in the area of citizenship responsibility.

I call these excellent speeches to the attention of my colleagues because they indicate, to my mind, the faith in the institutions of freedom which not only the young should have, but also those of more senior years.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

WHAT ARE MY OPPORTUNITIES AND RESPONSI-BILITIES UNDER FREEDOM?

(By Dennis Barnaal, Renville County, Sacred Heart, Minn.)

An American officer was stationed in north Africa during World War II. Each day he drove between the village of LaMarsa and Tunis, and he traveled this route 2 or 3 times a day for several weeks before learning the road passed through the ancient site of Carthage. A million people once lived there, But the Romans settled their dispute with Carthage by destroying it completely. Ac-

cording to our history books, every building was leveled to the ground, all the population killed or sold into slavery, the land plowed up, and the furrows sowed with salt. Then followed the Carthaginian peace. Peace, to be sure, but such a deathly peace—the kind of peace I'm certain we would want no part of.

But now we stand face to face with just such a dark conclusion to civilization. The death struggle between freedom and communism is looming large. Even now it threatens to destroy all that man has worked for through the ages. A hydrogen bomb could destroy a city the size of Carthage in a fraction of a second. Even more dreadful bombs could lay waste an entire nation within days.

Is this the opportunity we have under freedom—to perish in the colossal climax of all wars—to be destroyed with the entire world?

I would like to contrast for you a very different opportunity—an opportunity to live in the greatest world man has ever known, an opportunity to benefit by the marvelous advances of science through the ages, for under freedom, science has progressed so rapidly within a few years that it is difficult to comprehend. Scores of new industries have created opportunities man never dreamed of a few years ago. Why the average person today lives better than the royalty of a century ago, and because of marvelous medical work, he can also expect to live longer than they But this is only the beginning, the prelude to a great overture. Science is only gaining momentum. Think of the possibilities in the coming years! It challenges the imagination; yet there are the opportunities under freedom.

But now we come to the all-important question. Why do we face two pathways with such different endings? Is it only because of economic troubles or of forms of government? No. The cause goes much deeper—to the very nature of man. Science has outraced our minds in development. While science has risen to such great heights, we have not learned to live with it in a modern world. We are not yet capable of handling the new situation we are in. It's much like giving a 6-year-old boy a new chemistry set. He must understand how to use the equipment, and what precautions to take. If he doesn't, the story may well end in tragedy.

We are certainly left in a pressing situa-

We are certainly left in a pressing situation, a situation that demands action. Our two very different pathways or opportunities lead plainly to the second part of my subject, my responsibilities under freedom. Certainly we want to find what our responsibilities are that we may follow the pathway that leads to our wonderful opportunities.

My first responsibility is to recognize and understand the situation. Most of us know that we live in an age of peril. But we cannot solve our problem unless we become aware of the underlying causes. Our marvelous technical advancement should be used as a tool for the betterment of mankind, and we must learn how to put it to that use. Now I'm not saying there is an easy answer to our dilemma, for there isn't, but to arrive at any at all, we must study and inform ourselves.

Second, I believe that I must be willing to accept changes. This follows plainly from the statement of the gap between science and man. To mesh with the gears of development, we must develop new attitudes. We must not be afraid to accept new ideas in harmony with a changing world.

Third, I must recognize the role of freedom in this whole mechanism. Only under freedom can these opportunities build to the desirable end. Under freedom we can join hands with the other nations of the world; we can understand our key problem and conquer it. This means an all-important responsibility is to preserve freedom in America. The old, speech-worn proverbs of taking an interest in our Gov-

ernment and voting in the elections are, then, very important in this modern idea. For it was following the signing of the Constitution a lady asked Benjamin Franklin, "Mr. Franklin, what have you given us?" The wise man responded, "We have given you a republic," then the sage hesitated and concluded, "if you can keep it." And keep it we must.

Finally, I believe I must realize where the responsibility lies. Too often we talk of the duty as being in someone else's hands. "They" should do this, or "they" should do that. It's time we remembered "they" is really "we." For under freedom, we have the opportunity to shoulder the responsibility and create even greater opportunities, and not only for America, but for the entire world.

WHAT ARE MY OPPORTUNITIES AND RESPONSI-BILITIES UNDER FREEDOM?

(By Thomas Stephani, Beltrami County, Minn.)

The other day in the barbershop I heard a voice from under a steaming towel. "This country has sure got a weak Government when it allows a man like that to go around criticizing Congress." He went on to suggest other things wrong with letting people sound off. He was exercising one of his rights under freedom, but what he was failing to do was to recognize that along with the rights he had, he also had the responsibility of seeing that these rights were available to others.

Freedom is a two-way street. In exchange for the rights and privileges of freedom we receive, we have many obligations and responsibilities. America is a land of many freedoms. Suppose we take a good look at just two of our freedoms. These are man and his freedom in relation to God, and man's freedom in relation to his fellow man. We know these better as freedom of religion and freedom of speech and press. "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press." That's how they said it in the first amendment to the Federal Constitution. That's the base of the guaranty which is also preserved in all State constitutions.

Examining these freedoms one at a time, just what does freedom of religion mean in terms of everyday life? Well, first, it means that the Government cannot force anyone to support a religion, or religious instruction, or to attend a religious worship. Religious freedom includes the right to give money for religious purposes without first securing police permission, the right to distribute religious literature on streets, and the right to sell religious books and pamphlets without paying license fees required of other merchants and peddlers. It means that parents have the right to instruct, to guide children in religious training. It means that you and I, as American citizens, whether our skin is black or white, whether we are Protestant, Catholic, or Jew, may worship the way we desire.

But religious freedom is not an unlimited freedom. This guaranty does not operate to permit under guise of religious beliefs, the right to do things that may injure the health, safety, or morals of the public. The first amendment does not compel the Federal Government to exempt anyone from military duty, nor does it give a person the right to violate laws. Every American has the duty and responsibility of obeying the laws established by the Government to preserve his liberties, and should not use religion as a means for getting around these laws.

The Golden Rule reminds us of another of our responsibilities under freedom of religion. This is to treat others and their beliefs the way we expect to be treated in return. Some political leaders have not fol-

lowed this rule, and have deprived man of his free relation to God. Fortunately, this is not true in America. We are free to practice our religion in the manner we choose. But as American citizens we cannot take this freedom for granted. It is our responsibility to see that others in this country and throughout the world, for generations to come, will be able to practice and enjoy what every American knows as freedom of religion.

Along with freedom of religion comes freedom of speech and press. This might well be called freedom of discussion. Freedom of speech today means liberty to discuss publicly and truthfully, almost all matters of public concern without fear of punishment. Judges, superintendents of schools, and other such public officials may make political speeches or participate in political meetings. A private citizen may stand on a soapbox on a public street and peacefully deliver a speech which attacks his government. That's part of democracy.

Freedom of the press is the right to publish truth, whether it is about government or individuals. The press includes not only newspapers and periodicals, but also pamphlets and leaflets. And since the liberty applies to distribution as well as to publication, we have the right to distribute pamphlets from house to house, provided the householders do not object. Absolute freedom of the press to discuss public questions is a foundation stone of American liberty.

Freedom of speech and press is close to the central meaning of all liberty. Where men cannot freely convey their thoughts to one another, no other liberty is secure. Where freedom of expression exists, a free society is already present and a means is at hand for every extension of liberty. Free expression is therefore a protector and promoter of the others. In a dictatorship, speech and press are among the first objects to be seized because they play such an important role by protecting and promoting freedom in general.

Do we, as American citizens, have any responsibilities under freedom of speech and press? Wendell Willkie once said this about freedoms: "If we want to enjoy it and fight for it, we must be prepared to extend it to everyone, whether they are rich or poor, whether they agree with us or not, no matter what their race or the color of their skin."

Like religious freedom, freedom of speech and press is also a limited freedom. We cannot shout "fire" in a motion-picture theater because by doing so we may injure the health and safety of others. It is also our responsibility to say or print nothing to maliciously harm others. We have the responsibility of seeing that we use freedom of speech and press wisely, so that these rights are available to others. Our greatest responsibility is to see that we never lose our freedoms.

You and I are fortunate enough to live in a country that offers us more freedom than any other country in the world—a country which was founded on freedom. Freedom is not to limit, but to share, and freedom here should mean freedom everywhere.

World Veterans Federation and Peaceful Control of Atomic Energy

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 28, 1955

Mr. WILEY. Mr. President, on many occasions I have commented on the crit-

ical problem of harnessing the atom for peaceful purposes.

I expect to remark on this very important question on future occasions as Well

I was interested to read in the current issue of the magazine the World Veteran, published by the World Veterans Federation, an editorial on the vital significance of utilizing atomic energy for Deace

Certainly, in all the world, no group has a higher stake in peaceful development of the atom than those who themselves bore the brunt of previous global conflict-those who know from firsthand experience what war can mean and has meant.

Last year, we sent to Vienna, to the fifth general assembly of the federation, a fine delegation of American ex-Servicemen. They joined with veterans of many other countries in passing upon issues of great importance to the peoples of the world.

I ask unanimous consent that the text of this federation magazine editorial be Printed in the Appendix of the RECORD, and that it be preceded by the masthead statement of the magazine describing the purposes and composition of the World Veterans Federation.

There being no objection, the masthead statement and editorial were ordered to be printed in the RECORD, as follows:

The World Veteran, is published monthly by the World Veterans Federation whose main aims are support of the United Nations and aid to disabled veterans. The WVF includes 121 veterans' and war victims' assoclations in 29 countries, with a combined membership of 18,100,000. Nations represented are Australia, Austria, Belgium, Brazil, Canada, Ceylon, Denmark, Egypt, Finland, France, the Federal Republic of Germany, the Gold Coast, Great Britain, Greece, India, Indonesia, Israel, Italy, Luxembourg, the Netherlands, New Zealand, Nigeria, Norway, Pakistan, the Philippines, Thalland, Turkey, the United States and Yugoslavia. WVF has consultative status with the United Nations Economic and Social Council and with the Council of Europe. As a member of the International Committee of Nongovernmental Organizations for the United Nations Children's Fund, it also has consultative status with UNICEF. Messages in support of WVF have been received from Queen Elizabeth of Great Britain; Queen Juliana of the Netherlands; the Grand Duchess Charlotte of Luxembourg; Presidents Theodor Koerner of Austria, Sir Ba U of Burma, Joso Cafe Filho of Brazil, René Coty of France, Theodor Heuss of the German Federal Republic, Izhak Ben-Zvi of Israel, Luigi Einaudi of Italy, Ramon Magsaysay of the Philippines, Celal Bayar of Turkey, Dwight D. Eisenhower of the United States, Marshal Josip Broz Tito of Yugoslavia; Governors General Sir Oliver Goonetilleke of Ceylon, Sir Charles Arden-Clarke of the Gold Coast and Ghulam Mohammed of Pakistan; Prime Ministers Robert Gordon Menzies of Australia, Achille van Acker of Belgium, Louis St-Laurent of Canada, Sir John Kotelawala of Ceylon, Hans Hedtoft of Denmark, Dr. Kwame Nkrumah of the Gold Coast, Sir Winston Churchill of Great Britain, Marshal Alexander Papagos of Greece, Pandit Jawaharlal Nehru of India, Ali Sastroamidof Indonesia, Nouri es Said of Iraq, Mario Scelba of Italy, Dr. Willem Dress of the Netherlands, Oscar Torp of Norway, Sidney J. Holland of New Zealand, Mohammed Ali of Pakistan and Phibul Songgram of Thailand; Dr. Eelco van Kleffens, president of the Ninth General Assembly of the U. N.; Dr. Dag Hammarskjöld, secretary general of the U. N.; Dr. Ralph Bunche, 1950 Nobel Peace Prize winner; David Ben Gurion, Mrs. Eleanor Roosevelt, Adlai Stevenson and other outstanding public figures.

WVF Executive Board: President, Albert Morel; secretary general, Curtis Campaigne, Jr.; treasurer general, W. Ch. J. M. van Lanschot; vice presidents, Gen. Miloje Milo-

jevitch and Pietro Ricci.

The World Veteran is the official publication of the World Veterans Federation. However, opinions expressed in articles signed by outside contributors are those of their authors and do not necessarily represent the viewpoint of WVF.

Editor, Curtis Campaigne, Jr.; managing editor, Mary Burnet; assistant editors, Jacques Boetsch, Roland Jauzan, Edgar

Office: 27, rue de la Michodière, Paris (2"), France. Tel.: Richelieu 88-06.

ATOMIC ENERGY FOR PEACE

On December 4 the General Assembly of the United Nations unanimously adopted a resolution recommending international cooperation in the peaceful use of atomic energy and envisaging a series of measures intended to help bring it about.

Recalling President Eisenhower's speech on the subject a year before, the resolution provided for the setting up of an international atomic energy agency and invited all members of the U. N. and its specialized agencies to attend a congress for that purpose in

August of this year. The conference will give particular attention to the production of energy and to the applications of discoveries in nuclear physics to medicine, biology, agriculture and industry. Preparations are already being made by an organizing committee consisting of representatives of Brazil, Canada, France, Great Britain, India, the Soviet Union and the United States.

Although Russia consented to take part in the work of the committee, the Soviet representative, Arkadi Sobolev, nevertheless let it be known that his vote in favor of the resolution was chiefly a token of encouragement. It did not imply, he said, that his government was abandoning the principles underlying the two Russian amendments that had been rejected in the discussion preceding the assembly vote. The effect of one of these amendments would have been to place the agency under the authority of the Security Council, thus introducing the principle of the veto, to which the Western powers were firmly opposed. On the other hand, since Mr. Sobolev made his statement the U. S. S. R. has proposed to make available to U. N. members full information about its atomic plant for producing electric power.

Whatever the result of the negotiations, the next few months will probably witness acceptance of the idea of pooling atomic knowledge for peaceful purposes, with or without the participation of the U.S.S.R. In the beginning, at least, the agency will perhaps be nothing more than a kind of 'clearing house" for the atom, organizing and directing the transfer of fissionable materials.

The United States has already offered 200 pounds of such material, and Great Britain has pledged 40 pounds. These figures are considerable. With 2 pounds of uranium a generating plant could produce enough electricity to furnish a city of 100,000 inhabitants with light and heat for a year and a half. Together, the United States and British contributions represent the equivalent of 300,000 tons of coal. In future years, the fission and fusion of the atom should help considerably to supply the growing need for energy throughout the world-

at a time when coal and oll reserves are be-

ginning to run low.

There is no need to fear a shortage of raw materials for atomic power production. It has been estimated that the known deposits of uranium alone can provide enough energy for 5,000 or 6,000 years. Meanwhile, there exist considerable stocks of fissionable materials immediately available in the form of atomic bombs. It is technically possible to reconvert them and to use their immense energy in developing industry and agriculture.

The next step is up to the statesmen. The atomic energy program involves infinitely more than itself. It involves all interna-tional relations. Its success would constitute a pledge of peace; its failure would rekindle the fear of world conflict, and of world conflict, and rightly so, for the history of the second half of the 20th century will be, in large part, the history of man's relations with the atom.

The World Veterans Federation has repeatedly pointed out that the atomic energy problem must be solved first if the world is to have a solid foundation for peace. Last fall, at its fifth general assembly in Vienna, it adopted a resolution urging implementation of the Eisenhower proposal. The resolution noted that the plan had already been endorsed by statesmen and other prominent personalities in numerous countries, and that "the test of hydrogen bombs has created a fear throughout the world" which makes it "even more imperative" to go forward with this or some similar plan-"in order that the stupendous force released by nuclear fission be utilized for the benefit instead of the destruction of mankind."

For while the great discovery of the 20th century can lead man to his ruin, it can also bring him prosperity, protect and prolong his life.

Views of National Council of Farmer Cooperatives With Reference to Position of United States Department of Agriculture on Trip Leasing

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. WOLVERTON. Mr. Speaker, the question of trip leasing is a subject of great interest to the farmers of this Nation. The House Committee on Interstate and Foreign Commerce last year held lengthy hearings on the subject. After careful consideration the committee reported favorably to the House a bill that in effect repealed a recent ruling of the Interstate Commerce Commission that was considered detrimental to the farming industry and harmful to our economy. The bill passed the House but was held up in the Senate without any action being taken. It is hoped, however, that a similar bill will be considered and passed at this session of Congress.

On March 4, 1955, Richard F. Mitchell, Chairman of the Interstate Commerce Commission, reported to the House Committee on Interstate and Foreign Commerce on the present status of the Commission's handling of the trip-leasing matter as involved in Ex Parte No. MC-43. When I received a copy of the Commission's report I immediately brought it to the attention of the farm organizations that had participated so earnestly last year in the effort to change the unsatisfactory order that had been made by the ICC and which so radically changed the trucking practices that previously had been the custom of farmers. In bringing the matter as presented in the recent report of the ICC to the attention of the farm organizations, I sought their viewpoint with reference to the same.

I am in receipt of the following letters which I include as part of my remarks:

NATIONAL COUNCIL OF FARMER COOPERATIVES,

Washington, D. C., March 21, 1955.
Re position of United States Department of
Agriculture on trip leasing.

Hon. CHARLES A. WOLVERTON,

House Office Building, Washington, D. C. Dear Mr. Wolverton: Supplementing my recent letter, we desire to call to your personal attention the enclosed copy of a letter which Mr. Brinkley, our executive vice president, has written Chairman Priest, with the view of preventing any misunderstanding as to the unequivocal position taken by the Secretary of Agriculture as to the need, in the interest of farmers, for the passage of tripleasing legislation such as was passed by your committee and the House of Representatives in the last session.

Sincerely yours,

L. James Harmanson, Jr., General Counsel.

NATIONAL COUNCIL OF FARMER COOPERATIVES, Washington, D. C., March 21, 1955. Hon. J. PERCY PRIEST,

Chairman, Committee on Interstate and Foreign Commerce, House of Representatives,

House of Representatives, Washington, D. C.

Re report of the Interstate Commerce Commission on status of the trip-leasing matter.

DEAR MR. PRIEST: My attention has been called to the communication dated March 4, 1955, from Richard F. Mitchell, Chairman, Interstate Commerce Commission, addressed to you, reporting by request of a member of your committee on the present status of the Commission's handling of the trip-leasing matter as involved in the proceeding exparte No. MC-43.

The purpose of this letter is to correct an erroneous impression which I believe a portion of the above-mentioned communication is likely to convey to you and the members of your committee. The portion to which I refer is the underlined sentence in the following passage of Commissioner Mitchell's letter:

"In examining the application of the 30day rule to the transportation of agricultural commodities the Commission became convinced that a change in the 30-day rule to meet the objections of the agricultural interests would have no serious effect on the objectives of its rules. Accordingly a series orders were entered, one of which permanently excepts vehicles used in the transportation of agricultural commodities from application of the 30-day rule. This permits an authorized carrier to lease for periods of less than 30 days motor vehicles with drivers after completion of a movement in which such equipment is exempt from regulation by this Commission except as to safety regulations. This modification was not a postponement of the effective date, but a change in the regulations so as to permit authorized carriers to trip lease agricultural vehicles following a trip with exempt commodities under all conditions having any relation to

the transportation of agricultural commodities. The modification in favor of agricultural haulers incorporated into this rule the language and terms suggested by the

Department of Agriculture."

The modification in the 30-day rule referred to by Commissioner Mitchell was contained in 1 of 3 orders issued in this proceeding by the Commission on November 30, 1953, after the passage of H. R. 3203 (tripleasing) by the House of Representatives on The import of the under-June 24, 1953. lined statement above is that the 30-day rule, as changed by the order of November 30, 1953, was considered adequate and satisfactory to the Department of Agriculture. The public record of the position of the Secretary of Agriculture, evidences otherwise. Such evidence is contained in the letter from the Secretary of Agriculture dated May 6, 1954, addressed to Hon. John W. Brick-er, as chairman of the Senate Interstate and Foreign Commerce Committee. A copy of the Secretary's letter, as incorporated in the printed record of hearings before a subcommittee of the Committee on Interstate and Foreign Commerce, United States Senate, 83d Congress, second session on H. R. 3203 (pt. 2), at pages 398 and 399, is enclosed for your ready reference.

Pertinent excerpts from the Secretary's letter evidencing his belief as to the inade-quacy of the 30-day rule, as amended by the Commission on November 30, 1953, are quoted

below

"The record of past hearings will indicate that a representative of this Department presented testimony before the House committee and before your subcommittee in support of this legislation. Since those hearings the Interstate Commerce Commission has issued several amendments and modifications to its orders in Ex parte MC-43, Lease and Interchange of Vehicles by Motor Carriers. Those orders of the Commission have, to some extent, alleviated the restrictions against shortterm leasing in connection with vehicles engaged primarily in the transportation of exempt agricultural commodities. We helieve, however, that the Commission's amended order does not restore the flexibility which Congress intended should accompany the exemptions set forth in section 203 (b), (4a), (5), and (6) of the Interstate Commerce Act. We wish, therefore, to express our continuing interest in and support of the legislation proposed by H. R.

"The flexible, efficient, and economic movement of exempt and processed agricultural commodities may not be adequately accomplished under the rules presently prescribed by the Commission.

"Under the proposed rules of the Commission, exempt carriers' leasing practices are severely restricted, except on return to the origin of exempt transportation. In order to best serve its purpose as an agricultural marketing facility, the exempt vehicle must enjoy such freedom of migration as the harvest season shall require.

"A great deal of confusion over a long period of time has resulted in growing uncertainties and conflicting opinions with respect to the matter of trip leasing. In order that all parties may be properly guided by the intent of Congress, it is our hope that H. R. 3203 will be enacted into law, thus removing the multiple uncertainties concerning the activities of vehicles embraced within the provisions of section 203 (b). (4a), (5), and (6) of the Interstate Commerce Act."

The Commission's latest extension to March 1, 1956, of the effective date of the 30-day rule, as amended, merely intensifies and prolongs the multiple uncertainties concerning the operation of trucks hauling agri-

cultural commodities. We agree fully with the hope of the Secretary of Agriculture that the Congress will move promptly to end these continuing uncertainties in the interest of farmers and the public generally by enacting legislation incorporating provisions such as were contained in H. R. 3203, favorably reported by your committee and passed overwhelmingly by the House of Representatives in the last session.

There are enclosed sufficient copies of this letter for individual distribution to the members of your committee.

Copies of this letter are also being sent direct to the Chairman of the Interstate Commerce Commission and the Secretary of Agriculture for their information.

Sincerely yours,

HOMER L. BRINKLEY. Executive Vice President.

(Copies to Hon. Richard F. Mitchell, Chairman, Interstate Commerce Commission; Hon. Ezra Taft Benson, Secretary of Agriculture.)

COPY OF LETTER FROM SECRETARY OF AGRICUL-TURE BENSON TO SENATOR JOHN W. BRICKER, CHAIRMAN, COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, DATED MAY 6, 1954, RELATIVE TO H. R. 3203 (TRIP-LEASING) 1

DEPARTMENT OF AGRICULTURE, Washington, D. C., May 6, 1954. Hon. John W. Bricker,

Chairman, Committee on Interstate and Foreign Commerce,

United States Senate.

DEAR SENATOR BRICKER: We have been informed that your committee is to hold further hearings in connection with H. R. 3203, a bill to amend the Interstate Commerce Act in order to prohibit the Interstate Commerce Commission from regulating the duration of certain leases for the use of equipment by motor carriers, and the amount of compensation paid for such use.

The record of past hearings will indicate that a representative of this Department presented testimony before the House committee and before your subcommittee in support of this legislation. Since those hearings, the Interstate Commerce Commission has issued several amendments and modifications to its orders in Ex Parte MC-43. Lease and Interchange of Vehicles by Motor Carriers. These orders of the Commission have, to some exalleviated the restrictions against short-term leasing in connection with vehicles engaged primarily in the transportation of exempt agricultural commodities. We believe, however, that the Commission's amended order does not restore the flexibility which Congress intended should accompany the exemptions set forth in section 203 (b) (4a) (5) and (6) of the Interstate Commerce Act. We wish, therefore, to express our continuing interest in, and support of, the legislation proposed by H. R. 3203.

The flexible, efficient, and economic movement of exempt and processed agricultural commodities may not be adequately accomplished under the rules presently prescribed by the Commission. In instances where vehicles are engaged in the transportation of exempt commodities, at the close of the harvesting season, it is necessary to the agricultural need that they be permitted a freedom to lease, for less than 30 days, for movement in any direction where a new peak harvesting season is beginning. Under the proposed rules of the Commission, exempt carriers' leasing practices are severely restricted, except on return to the origin of exempt transportation. In order to best serve its purpose as an agricultural marketing facility, the exempt vehicle must enjoy such freedom of migration as the harvest season shall require.

³ See pp. 398-399, pt. 2 of the printed hearings before a subcommittee of the Committee on Interstate and Foreign Commerce. U. S. Senate, 83d Cong., 2d sess., on H. R. 3203 (trip-leasing).

A vehicle moving an exempt commodity from Florida to New York City may not always be able to obtain a lease for return from New York City to Florida. Under the leasing rules, as presently prescribed by the Commission, such a vehicle being stranded in New York City, could not return empty to Philadelphia, Pa., and enter a single trip lease from that point to its Florida origin. It could lease from New York City to Albany, N. Y., or Boston, Mass., but at either of those points it would not be permitted to enter any lease for less than 30 days.

In addition to partially exempt transportation, it is highly desirable that private transportation of processed agricultural commodities also be permitted the flexibility and economic advantages derived from a freedom to lease for single return trips. This they may not do under the present status of the Commission's proposed rules. This freedom for private transportation would permit continuance of very desirable economies to the advantage of the agricultural producer and the consumer of processed agricultural commodities.

Many food processors, such as meatpackers and canners of agricultural products transport these processed commodities in their privately owned vehicles. Economies in the transportation are extremely important because it is but another link in the marketing chain between producer and consumer. Our concern for and recommendation relating to private transportation stems from continuing interest in lowering marketing costs of which transportation charges constitute an important part. We believe the greater flexibility and economy of movement of commodities handled by private transportation will contribute to this objective.

A great deal of confusion over a long period of time has resulted in growing uncertainties and conflicting opinions with respect to the matter of trip leasing in order that all parties may be properly guided by the intent of Congress, it is our hope that H. R. 3203 will be enacted into law, thus removing the multiple uncertainties concerning the activities of vehicles embraced within the provisions of section 203 (b) (4a) (5) and (6) of the Interstate Commerce Act.

If it should be the desire of the committee, a representative of this Department will appear to answer any questions which may arise with respect to our continued strong support of H. R. 3203.

Sincerely yours,

E. BENSON, Secretary.

Return to Policies of the Hoover Administration

EXTENSION OF REMARKS

HON, BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include editorials from the AFL News Reporter of March 18, 1955, and the March 19, 1955, issue of Labor. The News Reporter editorial follows:

BACK TO HOOVER

Former President Hoover is back. He's returned as a powerful influence in the present administration.

Syndicated Columnist Thomas L. Stokes Points out that the Hoover Commission, set up by former President Truman to help eliminate duplication and promote efficiency in the Government, has been turning more and more toward policy recommendations. Stokes said this would be made more clear in the Hoover Commission recommendations on Federal lending agencies, and in that on water resources—yet to come.

The Hoover lending recommendations would liquidate REA, FHA, FMA, and crop loans under the price-support system. It would take us back even before Hoover. In his zeal to repudiate the New Deal and justify himself, the former President would sacrifice even some of his own projects.

"If carried out, the recommendations in the Hoover report on Federal lending agencies would turn back credit control, with a nice profit, to the bankers," says Stokes.

In other ways, too, he says, this administration is taking on the colors and contours of a banker's administration.

"The bankers and big finance have been moving into position, as is manifest in such operations as bonds for schools and bonds for roads."

Here is the editorial in Labor: IKE SHOULD REPUBLIATE HOOVER'S BANKER BILLS

Just as "Mike and Ike" used to "look alike" in an old cartoon series, the Hoover Commission and the Eisenhower administration now seem not only to look alike but to think alike—to have the same policies and the same philosophy of government.

That adds to the significance of a report issued this week by the 12-man Commission, which is headed by former President Herbert Hoover. He and three other members were appointed by President Eisenhower. The other eight members were picked by Vice President Nixon and Congressman Joseph W. Martin, Republican, of Massachusetts when he was Speaker of the House.

Judging by the Commission's report to Congress, the bankers' bills proposed by the administration up to now were only warming-up practice for more and bigger such bills still to come.

In general, the report recommends: First, that Uncle Sam stop lending money at low interest rates to farmers, rural electric coops, small-business men, and other groups. Second, to let private bankers do all the lending, at higher interest rates than Uncle Sam now charges.

If Congress enacts that program, it would largely undo historic reforms and humanitarian legislation passed since 1913. in the Woodrow Wilson administration, even in Hoover's administration, and particularly during the New Deal and Fair Deal years.

For example, farmers could no longer get Government loans to tide them over periods of low farm product prices. Farm mortgages would be turned over to the tender mercies of the bankers from whom Uncle Sam rescued debt-crushed farmers in the depression 1930's. The low-interest loans which help farmers get cheap electric power through their REA systems would end, and control be handed back to the bankers and the Power Trust.

All sorts of housing loans would be stopped, particularly the public-housing loans which help poor families get decent homes at rents they can afford. Uncle Sam would still assume the risk of slum-clearance loans, but bankers would get all the profit. War veterans' housing programs would be allowed to die as soon as possible.

Those are only a few boiled down samples of the 48 recommendations in the report. Mixed in with them are some proposals which would end a few of the "private profit at public risk" schemes which labor has been pointing out and criticizing. In these cases, however, bankers would get more control and bigger profits in return for giving up Government "guaranties."

Four members of the Hoover Commission dissented on a few of the recommendations, particularly one which would reduce Government "short term" loans to exporters, and leave this foreign trade field exclusively to bankers.

The only member who registered a sweeping dissent was Congressman Cher Holiffeld, liberal California Democrat. He acknowledged that some of the report's proposals "may have merit," but then added this:

"By and large, the recommendations would make it harder for American citizens to buy homes or to get loans for their farms or businesses. The recommendations would tighten agricultural credit, slow down housing construction, restrict rural electrification, and limit aids provided by the Federal Government.

"These programs intimately concern the affairs and well-being of millions of Americans and the strength of the Nation's economy."

"Congress created the Hoover Commission to study the organization of the Government. I do not believe Congress wanted advice from the commission on public policies of every sort. This report indicates that the commission is willing to roam far and wide in the field of public policy."

Holifield pointed out that the Hoover Commission—while charging that Uncle Sam's loans are "subsidizing" ordinary people—made not a single proposal to end the multi-billion-dollar Government subsidies to "manufacturers, publishing firms, ship operators, airline companies and other big business interests."

The California Congressman recalled that "Congress has authorized subsidies throughout our history, to develop the Nation and keep it strong. The Hoover Commission made no systematic study of the whole subject of subsidies. It complains only of "subsidies" which bring widespread benefits to all the American people, particularly those of modest means."

Labor hopes President Elsenhower will make it clear to Congress just which parts of the Hoover report he approves and disapproves. Hoover left the White House as the most discredited President in American history. No President can afford to have the country think the policies of his administration are being dictated by Hoover.

Face the Nation Broadcast

EXTENSION OF REMARKS

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. FOGARTY. Mr. Speaker, under permission to extend my remarks, I include questions asked of and answers made by the gentleman from Massachusetts [Mr. McCormack] over the Columbia Broadcasting System television network and Columbia Broadcasting System radio network on the program Face the Nation on Sunday, March 20, 1955. The panel consisted of William H. Lawrence, of the New York Times; John Madigan, of Newsweek; Al Friendly, of the Washington Post and Times Herald; the moderator, Ted Koop, CBS Washington director of news and public affairs; and the producer, Theodore Ayers,

Mr. Koop. How do you do, and welcome to Face the Nation.

Congressman McCorMack, as one who has held the post of majority leader in the House of Representatives longer than any other many in American history, you are frequently called upon as spokesman for the Democratic Party to defend or defeat bills in Congress.

At this session, you have fought for the Eisenhower administration in supporting the President's reciprocal-trade program, which

you put through the House.

On the other hand, you have fought against the Eisenhower administration in supporting a \$20 tax cut, the final outcome of which is still quite in doubt.

On the eve of your 14th successful congressional campaign in Massachusetts last fall, you referred to the Republican leadership as "faulty, confused, and inept."

Now that the Democrats are running things on Capitol Hill, millions of Americans are wondering whether the new congressional leadership is there for better or for worse.

To direct their questions to you today, here is our panel of newsmen: John Madigan, of the Washington staff of Newsweek; William H. Lawrence, national correspondent for the New York Times; and Alfred Friendly, assistant managing editor of the Washington Post and Times Herald.

Now, for the first question, Mr. Madigan. Mr. MADIGAN. Mr. McCORMACK, will the Democrats in the House stand firm for a \$20-per-person tax cut?

Mr. McCormack. That's the intention.

Mr. Madigan. When does the conference begin, sir, with the Senate conferees?

Mr. McCormack. I understand that is going to start next Wednesday.

Mr. Madigan. Would you hold out indefi-

nitely in that conference?

Mr. McCormack. Well, there has got to be final action, Mr. Madigan. We've got to be practical before April 1, because the excise taxes expire on that date, and-responsible leadership would not undertake any steps, I think, certainly responsible leadership should not, that would result in a loss of at least a billion dollars in revenue to the Government.

Mr. Madigan. May in interpret that to mean, sir, that on the eve of April 1, your Democratic conferees are ready to withdraw

on their demands?

Mr. McCormack. Well, I would not admit that, but I would say this: That responsible leadership would call for a conference report that would be acted upon before April which is the termination date of the excise We could go beyond that on the corporate taxes, because they could be made retroactive, but you can't make retroactive excise taxes that have expired.

Mr. Madigan. Secretary of the Treasury Humphrey, on this show 2 weeks ago, sir, was asked what he thought would happen in the conference, and he said, "I believe it will be defeated in the Senate, and then I think there's a good chance that the House will agree to it;" by that he means killing

any income-tax cut at this time.

Mr. McCormack. Well, of course, Mr. Humphrey is-is entitled to his own opinion. He was many presumptious views which he has expressed, which he'd be much better off, as Secretary of the Treasury, if he had not expressed them. He is an aggravating circumstance, and his diplomacy in dealing with Congress is lacking sadly.

Mr. LAWRENCE. Mr. MCCORMACK, it seems to me that this problem points up one of issues confronting the country now, with a Republican administration, a Republican executive, and a Democratic Congress.

Does this tax bill offer any means of compromise? Is there any way that you compromise? Is there any way that you and the President can talk this thing out?

Mr. McCormack, Frankly answering your question, Mr. Lawrence, I would doubt it very much.

Mr. LAWRENCE. Do you see the Presidentor, does the leadership of the Congress see the President at all?

Mr. McCormack, You mean the Democratic leadership?

Mr. LAWRENCE. I mean the leadership of the Congress, which is, of course, Democratic, as distinguished from the minority.

Mr. McCormack. Well, the majority leadership in the House, I have not seen the President since Congress met in January. So far as I know, Speaker RAYBURN has not; as of 10 days ago he had not, and if he had in the past 10 days. I think I would know: and as of 10 days ago. I know the chairman of the House Committee on Foreign Affairs, Congressman RICHARDS, of South Carolina, that's a very responsible position, had not seen the President.

Whether or not he has in the last 10 days, I do not know, but if he did, I am sure I would know.

Mr. LAWRENCE. Is this a failure to cooperate, then, in your opinion?

Mr. McCormack. I will let you draw your own inference.

Mr. LAWRENCE. I remember right after that the President did say he planned to consult with the Democrats frequently, and he seemed at that time to be speaking more on foreign-policy issues, but I take it that you haven't had even any conferences on foreign policy since this _____ Mr. McCormack. We have not had a con-

ference at all.

Mr. LAWRENCE. None at all?

Mr. McCormack. On anything, foreign or domestic, since this Congress-this particular session of this Congress-started.

Mr. LAWRENCE. Where would the initiative for such a conference come from?

Mr. McCormack. It would have to come

from the White House. Mr. LAWRENCE. Have to come from the

White House? Mr. McCormack. Certainly it should. can't impose ourselves upon a President; he

shouldn't expect us to. Mr. Koop. When you say you haven't seen the President, does that include telephone

conversations, too? Mr. McCormack. I have not talked with the President. It's within his rights, if he desires to do so; I don't feel any way personally offended except that people might

think it strange for its effect upon the country.

Mr. FRIENDLY. Was there a considerably deeper, tighter liaison in previous administrations; I mean particularly in the 80th Congress when you had a Republican majority of Congress, did the President see that majority leadership more often than at present?

Mr. McCormack. Well, I was the Democratic whip at that time, and I'm unable to answer that question. I think on foreign affairs there was constant conferences, I know I participated in a number of conferences-foreign-affairs conferences.

Now, on domestic affairs, I am unable to

Mr. MADIGAN. Mr. McCORMACK, I'm not quite clear in your response right here on this \$20 tax possibility compromise.

Secretary Humphrey, again on this show 2 weeks ago, was asked if he thought a compromise was possible, and he said, "When I think I am right, I don't compromise," which would indicate the Senate would stick by those views.

Now, are you going to-effect a compro-

mise or are you not?
Mr. McCormack. We are going to do everything we can from the House side, to try and convince the Senate conferees, that is, our conferees are, to recede and accept the \$20 tax credit which went through the House, which should be, because it's based on equity.

On the other hand, if the Senate stays put, why, then, there must be a complete regard for the fact that at least a billion dollars in revenue will expire in the nature of taxes on April 1; and I imagine, I have strong convictions, expressing my personal views, that there will be an agreement by the conferees.

Mr. Madigan. On what basis, sir? Could you give us some sort of an outline? How could you possibly get an agreement when you are poles apart?

Mr. McCormack. Well, I am unable to state now. There may be an agreement on something less than a straight \$20 tax credit. The Senate could recede and concur in the

Senate amendment. I doubt that very much.
Mr. FRIENDLY. Congressman, assuming either way that there is a compromise or that the \$20 tax bill is lost, do you think the Democrats will get any political mileage

out of this proposal?

Mr. McCormack. Oh, I think that this, the tax bill, has conveyed to the people of the country as pointedly as possibly could be conveyed, Mr. Friendly, the basic differences between the Democratic Party and the Republican Party. It has shown that the Democratic Party is the party of the people of America, and the Republican Party is the party of a select few.

Furthermore, it clearly shows that this administration is controlled by certain big

business interests in the country.

Mr. FRIENDLY. And yet, Congressman Mc-CORMACK, what justification can you argue for a tax cut at this time? You, yourself were saying we should have a larger expenditure for national defense, and we are already in a deficit situation.

Mr. McCormack. Well, now, Mr. Friendly, you have to have in mind that the Repub licans put through a tax bill last year a \$3 billion reduction. As a matter of fact, it's much more than that because we are now discovering that one of the-of the hidden legislative larcenies was contained in section 462, as a result of which the Government is going to lose anyways from a billion and a half to five billion dollars.

Mr. Koop. What does that section provide? Mr. McCormack. That enables them, a corporation, to take deductions for estimated reserve—reserve estimated expenses for the next year of their business, accrual year of their business in addition to the actual year, and that means that-everyone admits there is going to be a loss of revenue of at least a billion and a half dollars, and that's a lot of money, and when that matter was before the Ways and Means Committee last year, Secretary Humphrey and the Treasury Department representatives said that the loss of revenue on that section would be negligible.

We now know there are 70 other mistakes made.

Mr. Madigan. Is it not a fact, though, Mr. McCormack, that Secretary Humphrey has admitted this and called it to the attention of the Congress, and is willing to have it changed?

Mr. McCormack. Oh, very reluctantly. It

was first exposed by the Democrats.

Last year, he said, the Treasury testified the loss of revenue, Mr. Madigan, would be negligible-now, get that. This year, when it was called to his attention, when he was before the Ways and Means Committee, on the tax bill extending the corporate and excise taxes, he said he didn't know anything about It. He went back to the Treasury. and then he wrote a letter to-to Congressman Cooper, in which he said that there are indications, the Treasury had been lookink into it, there are indications that they would have to ask for a repeal, although he said the amount of loss was grossly exaggerated.

Mr. MADIGAN. Mr. McCormack-

Mr. McCormack. Congressman Mills said the loss would be a billion dollars.

We now know it's going to be well over a billion dollars, and here's his letter, a later letter, on March 7, in which he urgently recommends the repeal of that section and of

another section because of the large loss of

Mr. Madigan. Were there any explanations, sir, why you did not discover this last year during the committee hearings on the bill,

you people in Congress?

Mr. McCormack. Well, Mr. Madigan, you, if you followed the consideration of the bill last year, you will know there was no bill before the Committee on Ways and Means; that the bill was only brought in, in executive session; the Democratic members never saw any parts of the bill until it was given to them in the morning of a meeting, and usually 50 to 100 pages, typewritten pages of parts of the bill were given, thrown at them, no ability to study them, and they Were adopted that day by the majority, the 15 Republican members of the committee, and driven through the committee.

Mr. Madigan. Doesn't the House jealously

guard its taxwriting authority?

Mr. McCormack. Then there was a closed rule.

Mr. Madigan. You're the ones who write the taxes-

Mr. McCormack. Oh. no: that was written by the Republican Party, the Republicans in control of the Ways and Means Committee last year.

Mr. Madigan. There were Democrats on that committee, were there not, sir?

Mr. McCormack. Yes, but they were not given any opportunity to see any bill until there was parts of it brought in each morning, and then it was driven through by the votes of the Republican members.

Mr. Madigan, Did the Democrats vote for the bill containing this measure?

Mr. McCormack, Well, some of them didn't.

Mr. MADIGAN. Some did.

Mr. McCormack. But there was no opportunity to carefully go into all of the provisions of the bill.

But we do know that on this particular provision, the Treasury, Mr. Humphrey and the Treasury said there'd be a negligible loss. We now know it's well over a billion dollars,

and nobody knows how much more.

Mr. Lawrence. Mr. McCormack, taking this tax thing in a general way, it's been suggested around this town that this is in some way a political maneuver to prevent the Republicans from putting through their own tax cut next year just on the eve of elections. Is that true?

Mr. McCormack. Well, no; it is not a political maneuver, but anything any party does in Washington has a political connota-

tion.

Now, politics was not the intent. We saw the lower income tax groups denied justice last year in the Republican tax bill. We saw over \$3 billion, outside of this-other grave mistake which benefits corporations, going to less than 10 percent of the taxpayers and to the big corporations.

We tried to increase the exemption from \$600 to \$700 last year, and the Republicans defeated is We made every effort to bring about an equitable reduction in taxes last year, which the Republicans prevented.

Now it's very clear they are going to undertake to do something next year, and it would be poor leadership, it would be faulty leadership, it would be wrong leadership on our part if we didn't try to do something this year that would protect the low-income tax groups next year.
Mr. LAWRENCE, But even then—

Mr. McCormack. And that was the intent. Of course, there's politics in connection with any legislation comes up in Congress.

Mr. LAWRENCE. Well, again speaking broadly, sir, not with reference to specific things, isn't it true that at this time of a period of peak prosperity, that this is the time to start paying the national debt, and how are you ever going to do that if you are going to keep on reducing taxes?

Mr. McCormack. Well, the Republicans didn't think of that last year, did they?

Mr. LAWRENCE. Well, I'm not talking about the Republicans or Democrats, sir; I'm talking about the national interests, irregardless, regardless of party.
Mr. McCormack, Well, now, Mister-

President Eisenhower had sent a recommendation to Congress to increase our military strength, which should be done in the light of the world today, and then recommended increased taxes, I have every confidence in the people of America that they'd make the sacrifices necessary; but last year, with an unbalanced budget, the Republicans reduced the taxes \$3 billion. They did it, and they are going to do it next year, and knowing that, it would be faulty leadership on the part of the Democratic Party if we did not undertake to take—to do something to bring justice to the low-income-tax groups of the country.

Mr. LAWRENCE. The mere fact that they did it last year, and you think it was wrong, doesn't make it any better now to go ahead and cut some more, does it? Let's pay off the national debt.

Mr. McCormack. Well, I agree with you that the logical thing to do would be-to see that the taxes are imposed that would meet-prevent any deficit and make a contribution toward reducing the national debt, but the Republicans made that promise of a balanced budget, which they haven't kept, they made the promise of reducing the national debt, which they haven't kept, and as a matter of fact they have, under the Republicans it's been increased temporarily \$6 billion, and with the knowledge of what is going to happen, it would be faulty leadership, it would be wrong leadership on the part of the Democratic Party if we did not undertake to bring justice to the low-in-come-tax groups of this country, when we have the history of what the Republican has done. Republicans have done for the select few.

Mr. FRIENDLY. Well, Mr. McCORMACK, a minute ago you said that if President Eisenhower proposed a larger defense expenditure, and asked for taxes to pay it, you think that it would go through, and that would be an expression-

Mr. McCormack. I said I think the American people would make the sacrifices in the world of today.

Mr. FRIENDLY. Well, let me state the proposition then in reverse: If the House Majority Leader proposes, as we understand he may, a higher expenditure by a couple of billion dollars for continental defense, is his vote to reduce the taxes consistent and logical?

Mr. McCormack. Well, of course the Majority Leader feels that our continental defense should be increased, but it happens I am not going to propose that, because within-that's the duty and the responsibility of the President.

Furthermore, if Congress increased appropriations for continental defense, there's nothing to stop the President from freezing

Mr. Koop. Mr. Madigan.

Mr. MADIGAN. Did I interpret your reply to Mr. Lawrence before, agreeing with him in balancing the budget, that you feel we should now invoke new taxes to bring in more revenue?

Mr. MCCORMACK. Now?

Mr. MADIGAN. Yes.

Mr. McCormack. In the light of the history of the Republican Party, no, I believe we should bring justice to the low income tax groups, knowing what happened last year, and knowing what the Republicans intend to do next year.

Mr. Madigan. That wasn't my question, Mr. McCormack. You agreed with Mr. Lawrence that we should probably introduce sufficient taxes to balance the budget.

Mr. McCormack. Responsible leadership in the White House would undertake to increase our national defense and at the same time recommend any additional taxes necessary to bear the burden, and I said if that was done, if two things were linked to-

Mr. Madigan. Are you for—
Mr. McCormack. The American people would make the sacrifices necessary, that, at least that's my opinion.

Mr. Madigan. You are for new taxes right now, then?

Mr. McCormack. If it's coupled with increasing our national defense.

Mr. LAWRENCE. Well, Mr. McCormack, we've been talking here about what the Republicans have done, which has something to do with your attitude on taxes.

Last week the State Department entered the foreign policy field with the approach that this is what the Democrats did, so they made public the Yalta documents.

What was your reaction to all that?

Mr. McCormack. Well, that's their responsibility, Mr. Lawrence. What the results might be from the angle of foreign affairs, time will only tell. What is might-what effect it might have on future conferences, time will only tell.

So far as I am personally concerned, and expressing my own views as a Democrat, I was not disturbed with their making the Yalta papers public, but I was very much disturbed with the manner in which they made them public, because it was purely

politics.

The State Department, as you remember. very neatly concocted the scheme that they would send the copies up to about 30 or 40 Members of Congress, marked "Secret," with the security seal upon them, as if there is any secrecy there, knowing there would be a leak, because as a matter of fact one newspaper man telephoned me, which was the first I knew about it, and he frankly told me that he was told in the State Department that it was sent up for the purpose of leaking.

Then, they changed their minds, then they said that the committees asked for it, know ing that the committees are controlled by

the Democrats.

Then, they changed their minds, and they made them public, we know the reasons why they were made public. The whole thing was political on the part of the Republican Party, and it's the first time in many years, what disturbs me is, that the State Department, as such, was brought into the field of partisan domestic politics.

Mr. LAWRENCE. What effect is this going to

have on bipartisan cooperation?

Mr. McCormack. Well, the effect is, as for as I am concerned, I am going to be sus-picious of the present constituted State Department as long as the persons who are responsible for this disgraceful episode being in the Department. I've got to be very guarded in any dealings I have with men who will employ methods like that-

Mr. Madigan. The Democrats-

Mr. McCormack (continuing). Particularly where the national interest of our country is involved.

Mr. Madigan. The Democrats promised cooperation with the administration on a nonpartisan basis-

Mr. McCormack. And we have been giving 14

Mr. Madigan (continuing). In our foreign affairs.

Mr. McCormack. We have been giving it. Mr. Madigan. Will you continue to do so, now that you are so mad about the release of the Yalta papers?

Mr. McCormack. I would never do anything, Mr. Madigan, and I could not conceive any responsible, any Democrat doing anything that would be inconsistent with the national interest of our country, because no matter what our personal feelings might be, the national interest of the country that each and every one of us loves is paramount and supersedes every other human consideration.

Mr. FRIENDLY. What would be your reaction, Mr. McCormack, to a continued series of releases of other conferences?

Mr. McCormack. That's the responsibility

of the State Department.

And, by the way it's the responsibility of President Eisenhower. I was very much interested when I read in the paper that his press secretary said the President knew nothing about those releases. That's very strange, that the President of the United States, and the leader of the Republican Party, didn't know anything about those papers being released.

I accept the statement made by the press secretary, but it's very strange that anybody in the State Department would be so presumptuous as to release those papers with-out letting the President of the United States know, and to me, as an American, it shows a marked weakness in the executive branch of the Government, and the mere fact that the President says he didn't know, or through his press secretary, that doesn't mean that he's not responsible for what might flow therefrom.

Mr. Koop. As a general practice, Mr. Mc-CORMACK, do you favor the early release of

documents of secret conferences?

Mr. McCormack. That's entirely up to the State Department, and this administration. They have to consider what the effect might be in the light of the national interest of our country, that's a question for them to determine.

As a matter of fact, the release of these papers have brushed aside a lot of false and malicious rumors and stories and lies that have been circulated around for years. been a political dud, so far as the Republican Party is concerned, but the thing that concerns me, gentlemen, is the manner in which those papers were released.

Mr. Madigan. Why do you think-

Mr. McCormack. And the injection of the State Department into politics.

Mr. Madigan. Why do you think they were released?

Mr. McCormack. Purely political, Mr. Lawrence, You still think it was a dud?

Mr. McCormack. Pardon?

Mr. Lawrence. You think it was a dud?

Mr. McCormack. Yes; they didn't intend it to be a dud, they didn't think it would be a dud.

Mr. FRIENDLY. What did they think would be in it that would be politically advantageous to them?

Mr. McCormack. I don't know, I can't read their minds.

Mr. FRIENDLY. Do you see anything— Mr. McCormack. I'm not going to under-

take to read their minds.

Mr. FRIENDLY. Do you see anything in it that will be damaging to the Democratic

Party?

Mr. McCormack. Of course, the people have got to realize that Yalta took place over 10 years ago. The world of 10-and these papers in connection with those meetings have got to be construed in the light of the world conditions of 10 years ago, which are different than 1955. We were then faced with going into Japan, and the Joint Chiefs of Staff had said there would be a million casualties among American troops alone, in an invasion of Japan. There were broad questions then. We were in a war that had to be considered by responsible persons, and you have got to construe any of these meetings in the light of the

time they took place, not in the light of

Furthermore, the world of 10 years ago is an entirely different world today; we are now in the atomic world, the hydrogen world, the cobalt world. Who knows, the world, gentlemen, of 10 years ago is-might fust as well be-a world of, or culture or civilization, thousands of years ago so far as the impact upon human beings is concerned.

Mr. LAWRENCE. Do you have any Poles in

your congressional district?

Mr. McCormack. Americans of Polish blood?

Mr. LAWRENCE. Yes.

Mr. McCormack. I always like to refer to any racial origin as Americans of-

Mr. LAWRENCE. I don't mean to offend you or them, Congressman.

Mr. McCormack. Yes; and they are very good citizens, and very fine people.

Mr. LAWRENCE. Do you anticipate any trouble as a result of the Yalta documents and their references to Poland?

Mr. McCormack. Well, most people overlook the fact that-that while there are some parts of the Yalta agreement that we would disagree with, that the reason that the parts that we agree were not carried out was because Stalin wouldn't keep his promises, and in order to have him keep his promises we had to go to war again.

Mr. MADIGAN. Mr. McCORMACK, could I turn to another matter on the Hill, a legislative

This week the Democrats will attempt to restore rigid price supports in substitution for the President's flexible price-support program for farms. Republican leadership claims you don't have the strength to put it through. What do you think?

Mr. McCormack. Well, I am frank in stat-

ing that I can't answer that question now. We are having a poll taken; whether or not, what the poll shows I am unable to state now because it is not complete.

Mr. Madigan. A poll of your Democratic

members?

Mr. McCormack. Exactly.

Mr. MADIGAN. The purpose of that is to what, to-

Mr. McCormack. To find out what the views of the Democratic members are for

the benefit of the leadership. Mr. MADIGAN. If the results should show

that you could not put it through, would you then give up the fight?

Mr. McCormack. Well I'm not prepared to say that, Mr. Madigan, because again that's a matter of consultation with the chairman of the committee. I would say from the early reports that I have received, that there is a reasonable chance of it going through, because you want to remember, we picked up some new members last, as a result of the last election, which will bring a change, there is 12 or 13 votes among new members that we didn't have in the last Congress, and then there's other considerations.

It will be a hard fight. I am frank in stating that, but the early reports that we—the leadership has received indicates pretty good

strength among the Democrats.

Mr. KOOP. Mr. McCORMACK, on this program we frequently ask our guest to get out his crystal ball and look ahead to the 1956 elections.

Who do you think the Democrats will nominate for President next year?

Mr. McCormack. Well, we have a number of good candidates, Mr. Koop. Who they will nominate, I wouldn't want to undertake to look at my crystal ball today in relation to that.

We have Governor Stevenson, we've got Stuart Symington, we've got Averill Harriman, we've got Governor Lausche, we've got Governor Williams, we've got Schator Lyndon Johnson, we've got Senator Russell, we've got Senator Kefauver, we've got Governor Leader, we've got Governor Meyner, and last

but not least, I don't know what his views are. because I haven't talked with him, we've got that greatest Democrat of all in active pub-

lic service, that's Sam RAYBURN.
Now, I haven't talked with the Speaker, but he is the greatest Democrat in active public service today, and one of the greatest Americans in active public service.

Mr. Madigan. Do you think Adlai Stevenson should announce his intentions now?

Mr. McCormack. I think anyone who is seeking the—I don't know about now— Mr. Madigan. Well, when do you think he

should announce?

Mr. McCormack. I don't know. I'm not passing on that, but I say that I think that anyone who, among the Democrats, who has the ambition to be nominated as President at some time or another should go out and make an active campaign.

Mr. Friendly, May I ask a quickie on the

Republican side?

Do you think that Mr. Nixon could be elected President on the Republican ticket? Mr. McCormack. Well, you are assuming

that President Eisenhower is not a candidate?

Mr. FRIENDLY, Right.

Mr. McCormack. Well, I would say that Nixon, Vice President Nixon would have very little chance of being elected President of the United States.

Mr. Koop. Would you add Mr. McCormack to the list of your Democratic candidates?
Mr. McCormack. I'd be happy to.

Oh, me? Oh, no, no. I haven't got—I didn't quite get your question, Mr. Koop. No, that's far, that's far removed from my thoughts.

Mr. Koop. Thank you, Congressman Mc-CORMACK, for Facing the Nation, and answering the questions being asked today by our panel of correspondents: John Madigan, of Newsweek; William H. Lawrence, of the New York Times; and Alfred Friendly, of the Washington Post and Times Herald.

Enforcement of Law by States in the Indian Country

EXTENSION OF REMARKS OF

HON, USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. BURDICK. Mr. Speaker, Civil and criminal jurisdiction over Indians by States has worked well, but provision must be made to have State and county subdivisions reimbursed for this extra load of court and police work. The Government can well afford to favor this reimbursement, as local authorities where Indians reside know more about the situation than does the Indian Bureau in Washington, and the Government should not be allowed to shirk its responsibility to its Indian wards, who were put in that position by the United States Government without their consent. The duty of the Government to the Indians has never been terminated.

The Legislature of the State of North Dakota passed at the session just ended the following resolution:

House Concurrent Resolution Q-1

Concurrent resolution relating to law enforcement problems upon Indian reserva-

Whereas Public Law 280 has authorized the various States of the Union, including

North Dakota, to assume criminal and civil jurisdiction in Indian country within their boundaries by appropriate resolutions or constitutional amendments; and

Whereas no provision is now made whereby the Federal Government will reimburse States and local political subdivisions for the necessary expenditures upon the assumption of such jurisdiction over territory under the absolute control of the Congress of the United States; and

Whereas the State of North Dakota is desirous of seeing that Indian people within its boundaries receive the same impartial protection of effective law enforcement as is enjoyed by non-Indian residents; and

Whereas a recent investigation by the Senate Subcommittee on Juvenile Delinquency has disclosed and made public the deplorable lack of effective law enforcement in said Indian country as the same affects juveniles and adults, residents of said Indian country; and

Whereas the solution of said problem and the improvement of the condition of said residents of said Indian country requires that adequate provisions be made for the reimbursement of State and political subdivisions before the assumption of said jurisdiction:

Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakota (the Senate concurring therein), That the North Da-kota delegation in Congress, working with the delegations of other States having Indian populations, is hereby urged and requested to provide a means whereby it will be feasible for the State of North Dakota to offer its facilities for the correction of the presently existing deplorable conditions.

That the legislative research committee is hereby authorized and directed to study such matters and to appoint a subcommittee to give detailed consideration to the financial aspects of such readjustment of historic responsibility and such subcommittee is hereby authorized to confer with the executive and legislative branches of the Federal Government in arriving at an equitable solution to such problems, and the legislative research committee is further directed, upon the completion of such study and said conferences, to publish its findings and recommendations, and to make its report to the 35th legislative assembly in such form as it may deem expedient: Be it further

Resolved, That copies of this resolution be forwarded to each Member of the North Dakota congressional delegation, to the Secretary of the Interior, and to all other persons

interested in said matter.

K. W. FITCH, Speaker of the House. KENNETH L. MORGAN, Chief Clerk of the House. C. P. DAHL, President of the Senate. EDWARD LENO, Secretary of the Senate.

An Address by Our Ambassador to Italy

EXTENSION OF REMARKS OF

HON, ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. MORANO. Mr. Speaker, under leave to extend my remarks, I wish to call the attention of my colleagues to the text of an address delivered by the Honorable Clare Boothe Luce, United States Ambassador to Italy, at the

Founders Day convocation at Georgetown University on March 25.

The address follows:

Father President and friends of Georgetown, this venerable and significant costume Western civilization-the scholar's cap and gown-is one that I have rarely been called on to don. But never have I done so with keener pleasure or more pride.

Strangely enough, this is the second time within a month that I have worn it. A short while ago, as your Ambassador to Italy, I took part in a significant ceremony at the University of Bologna. That ancient edifice of Western Christian scholarship was inaugurating a new addition to its curriculm—the Johns Hopkins University Center of Advanced International Studies, the first American graduate school to be established in Europe.

Bologna's roots were put down in the Middle Ages; yours, in the 18th century. But Georgetown's roots, like Bologna's, and like those of all the other venerable universities of the West, were nourished by the same waters—the ever-fresh fountain of the Greek and Roman, Jewish and Christian tradition as it was interpreted, synthesized and articulated by Christian theologians and philoso-

And I was reminded in Bologna, as I am here today, that all the great universities and seats of learning founded in the West in the first 1800 years of Western culture could properly have put above their portals that splendid, simple legend which is the motto of Oxford University: "Dominus IIluminatio Mea," the Lord is my Light.

I am deeply conscious that here at Georgetown on Founders Day you reaffirm that this one pure Light is still your illumination. This, I know, is the day on which Georgetown University recollects its traditions, reviews its purposes, and resolves anew that they shall continue and prevail.

Perhaps, then, I shall not be presumptuous, but rather in the spirit of the occasion, if I, also, do reverence to Georgetown's past, and propose one resolution for its future.

More exactly, in the light of a special and pressing problem that confronts America today, I should like to do reverence to one aspect of Georgetown's continuity with its own past, and to suggest to you a relevant resolution.

The problem today is the very urgent one of renewing the public philosophy out of which the American constitutional commonwealth was born, and in which alone it can

find the sources of enduring life.

The first principle of this public philosophy is the cardinal issue in today's world conflict. For this first principle answers the first two questions of politics: Who ultimately is the sovereign--God or man? And whence comes the law, ultimately—from God or from man? Upon a people's answers to these two questions will depend their whole concept of the structure of politics, of its goals, its processes, methods, and techniques.

We may well begin our discussion of today's problem by doing reverence to the past—to John Carroll, and to the idea on which he founded Georgetown in 1789. This foundation has grown and changed in many ways, as do all human things. But the changes in the institution only bear witness to the permanence of its ideas. How many ideas, philosophies, institutions, governments, nations, have crumbled or been destroyed in our own lifetime. It is no small tribute to say that after more than a century and a half, Georgetown still stands. What is more, it is still faithful to the philosophy that inspired its founder, still true to the inner principle that first gave it life.

What was this inner principle? It seems to me that it can best be expressed in a sentence from Archbishop Carroll's eulogy of George Washington, delivered on February 22, 1800. Speaking of Washington's youth, he said: "At that early period he began what persisted in through life-to associate motives of public utility with magnanimous undertakings."

Carroll might well have been speaking of himself. Certainly a similar purpose burned in his own heart when he founded Georgetown, saying: "On this academy is built all my hope of permanency and success."

For him Georgetown was a magnanimous undertaking first because it was undertaken for the church: Its purpose was to transmit to generations of Americans the ancient heritage of the church, her faith and her philosophy. But the undertaking was also magnanimous because Carroll was impelled to it by motives of the public utility. He wished his institution to transmit American heritage-the democratic faith, and the public philosophy which, in the very year of Georgetown's final foundation, has guided the Founding Fathers to the conclusion of their work in the constitutional convention.

Carroll's high hope was set on the permanency and success of the church in America, but for this very reason he also set his hope on the permanency and success of free government in America. After his devotion to the faith of his fathers, nearest to his heart stood his allegiance to what he called that excellent Constitution which is-and may it long continue to be-our pride and happi-

Let us recall that, in his own time, Carroll also saw that "excellent Constitution" menaced. He followed with anxiety and foreboding the sanguinary events in his beloved France, where he had spent his youth and early manhood. He saw the French Revolution develop-from the regicide in 1793, through the terror and the directory, into the Napoleonic wars that began in And he feared that the high enterprise begun in the name of justice and freedom on the tennis court at Versailles in 1789 was turning into a genuine revolution, a real rupture with the Christian past, a repudiation of the traditional public philosophy of the West.

He knew that men in great numbers were beginning to say that man, not God, was the ultimate sovereign; that the laws made by men, not the laws given by God, are the final norms of human social life. Therefore, Carroll's insight told him that a radically new tradition of politics was being inaugurated. The best historical scholarship of our own day has confirmed Carroll's insight.

With equally profound insight, John Carroll understood that the American constitutional commonwealth had kept continuity with the great Western tradition of civilty with which the leftwing revolutionaries the Jacobins-had broken. He once wrote to a friend of the reassurance he felt because his hero, George Washington, "has far other principles of the necessity of religion than (these) superficial French theorists of government." And he added: "I am fearful for this country when he is no longer the head of it, to overawe the sowers of sedition and wild democracy."

In Carroll's close paraphrase of Washington's Farewell Address, the first principle of the American public philosophy asserted that "nations and individuals are under the moral government of an infinitely wise and just providence; that the foundations of their happiness are morality and religion; and their union among themselves (is) their rock of safety." Let us never forget that on this first principle America's Founding Fathers, those farsighted and valiant men who framed the excellent Constitution which is our political guaranty of life, liberty, and the pursuit of happiness, were of one mind with

John Carroll-of one sure, strong, unflinching mind.

In the whole Revolutionary and constitutional periods there was in America hardly a dissenting voice to the proposition that the laws which men make are not the ultimate law. Americans then believed that all human laws must find their sanction in, and come under the judgment of, the immutable laws by himself or for himself alone; he must discover them in the two laws that God has given him-the law of nature and the law of the Gospel.

After the constitutional period many more generations of Americans came and went who also believed in this. In his own day of tragic national dissension, Abraham Lincoln spoke with the authentic voice of America's Founding Fathers, when he said: "This Na-tion under God * * *."

And in our own day, that is experiencing in its spirit and even in its flesh an ominous crisis in world history, President Eisenhower, in conscious continuity with our Founding Fathers, gave forthright and impressive testimony to the contemporary affirmation of the public philosophy of America when he said in his inaugural address: "At such a time in history we who are free must proclaim anew our faith. This faith is the abiding creed of our fathers. It is our faith in the deathless dignity of man, governed eternal moral and natural laws. faith defines our full view of life. It establishes, beyond debate, those gifts of the Creator that are man's inalienable rights, and that make all men equal in His sight."

The two propositions-that God is ultimately the sovereign and that ultimately the law comes from God-are the primary affirmations of the great tradition of Western It was on the premise of these two affirmations that the public philosophy of America was articulated in a body of principles and institutions, which are sometimes called, perhaps too loosely, the American way.

The idea of government as limited by law: the ideas of freedom, justice, order and human welfare as the moral goals of the political community, the idea of natural rights and of civil and procedural rights; the ideas of representation and consent; the institutions of popular election, majority rule, free speech, voluntary association, and private property; the idea of freedom of religion as a political freedom, and the idea of separation of Church and State as a practical rule in a pluralist society-all these ideas and institutions make sense only because they were made in the sense of the natural law and the Sovereignty of God.

As we know, John Carroll was fearful in his own day of the fate that would overtake far-off Europe in consequence of the radically new Jacobin philosophy. How much the more would he have feared for his beloved America if he had thought that the day might ever come when the public philosophy of the Founding Fathers would no longer inform the minds of his countrymen, and no longer direct that living action which is the maintenance of public order at home, and consequently the safeguard of our se curity from foreign enemies. Surely he would have said that, if that evil day ever dawned. democracy would go wild, and the sowers of sedition would have a free field for the planting of their cruel harvest, which is tyranny.

Has that dark hour begun to dawn?

There are those who answer-Yes. A man whose scholarship in the field of American politics and foreign affairs commands attention, Mr. Walter Lippmann, has recently spoken for them in a slim and certainly challenging volume, Essays in the Public Philosophy. Mr. Lippmann says: "In our time the institutions built upon the foundations of the public philosophy still stand. But they are used by a public who are not being taught, and no longer adhere to the philosophy. Increasingly, the people are alienated from the inner principles of their institutions."

Other students of contemporary trends incline to agree with Mr. Lippmann. They find that important segments of the American people-including many in the community of intellectuals-have succumbed to what John Carroll called "delusive, ruinous theories of government."

The theories are delusive because they divorce the order of human law from the order of divine law, and in so doing they delude man into thinking that he is himself the Divine Majesty. The theories are ruinous because in releasing man from the rule of a moral law which is not of his own making they put into his hands an inherently unlimited power-a power to tyrannize.

Like John Carroll, I am not myself a learned political philosopher. But I have, I think enough commonsense to see one thing: if the power that fashions the order of human law is not subject to any objective standards of truth and justice, there must soon be an end to the rule of law and to the rights of man in the traditional sense. And, of course, in the American sense. If there is no higher law, there is no human freedom. Nothing remains but force.

Our forefathers rejected the rule of force. They believed in the rule of law. They be-lieved that government is under God and under the law. This was the inner principle

of our American institutions.

Only in virtue of this inner principle can be rightly called free institutions, institutions that make for freedom. If this inner principle is ever lost, if the American are ever allenated from it, then the institutions themselves will inevitably crumble or collapse, or be changed by demagogues or adventurers into monstrous and tyrannical forms. Indeed, the whole democratic process itself will make for the worst of all tyrannies, the tyranny which is ushered in as the rule of the masses, and is always shortly thereafter stabilized as ruthless dictatorship over everyone.

I cannot myself presume to judge how far the eclipse and decay of the public philosophy of America's Founding Fathers has progressed. But I am quite sure of one thing: that our constitutional commonwealth is not an intelligible form of government, and it cannot be made to work, except by a people who possess the philosophy that presided over its foundations.

Therefore, I believe that Mr. Lippmann has put to the American people a most serious question when he says: "The question is whether and how this alienation (of the American people from the inner principles of their institutions) can be overcome, and the rupture of the traditions of civilty repaired.

Upon our success in giving an effective answer to this question, upon our success in reviving and renewing the public philosophy of America, where it may have decayed, will depend the survival of our excellent Constitution, our form of free government.

But there is an ever wider issue, that deeply concerns me as an American working in our diplomatic service. It is a commonly accepted-and I believe, a rightly acceptedproposition that the survival of other free governments throughout the world will depend in large part upon the survival of our

For example, in Italy, the country to which I have the honor to be accredited, the great majority of the people take it for granted that their government is based on the once commonly accepted public philosophy of western Christian civilization. Nevertheless. today, that ancient country's new democracy is facing, in severely adverse psychological, political, and economic conditions, the crucial problem of maintaining a free govern-ment while one-third of its own Parliament-the pro-Cominform left, the direct descendant of the Jacobin left-repudiates the philosophy that alone makes free government intelligible and workable.

Surely, here is a challenge to America as well as to Italy. In these latter years the American people and their Government have spared no effort, on the level of material assistance, to advance and sustain the cause of free government everywhere, against the Communist enemy. Our record of economic, military, and diplomatic cooperation with other free peoples is, I think, a record of generosity and honest purpose.

But now a new cooperative effort, in a higher level, is urgently needed. I shall call it an intellectual and spiritual cooperation toward the renewal and reenforcement, everywhere in the Western World, of the public philosophy that alone offers to the peoples of the world the stable hope of a common temporal salvation, under God and

under the law.

In putting forth this effort we shall be paying an international debt. For our American public philosophy came to us as a her-Itage. We owed its leading principles to the British constitutional tradition. But we also owed them to the philosophers of Athens, to the jurists of Italy, to the doomsmen of the Germanic tribes, to the great thinkers of Paris and Salamanca.

Now in the hour of our Nation's new greatness, shall we not be mindful of our debt? The tradition of civilty was committed to the custody of our Founding Fathers. They honored the trust that history reposed in them by enshrining the tradition in our excellent Constitution.

Now we, their descendants, have to ask ourselves the question: Have we been faithful custodians of our public philosophy? We also have to ask the further question: Are we prepared to pay our debt to those from whom we received our philosophy, by striving to make this philosophy the basic bond of our union with all those peoples who, like us, love freedom and justice?

I am convinced that, in proportion as we ourselves consciously possess the tradition of civility that is our heritage, we shall be able to assist others to find, with ourselves, the path to that unity which is called peace. The full possession of this heritage will enable us to contribute to, and cooperate toward, the constitution of a new "concert of the west." And it will furnish us and our allies with the inner spiritual strength that will overthrow the reign of those ruinous and delusive theories of government that today so monstrously threaten the dignity of man

And now may I again turn to Georgetown University—to its directors, faculty, students, alumni? This institution has remained faithful to the inner principle of its foundation as a university. Here on this campus, here within these walls, the public philosophy of America, the tradition of natural law, has been kept in precious custody.

But today, as I have suggested, custody is The problem is communicanot enough. tion. The problem is to know how your high tradition and indispensable philosophy can be restated for the American people, recovered by them, renewed within them, so that it may once again become the richly activating inner principle of our national life; so that it may again be made what once it was-the inner principle of international unity.

I have presumed to present this problem to you on this day of recollection and resolve, because I know that an important contribution to its solution can be made by this university-by its college of arts and sciences, by its graduate and professional schools, and in a particular way by its school of foreign service and its school of lan-guage and linguistics. The students whom you send forth from all these schools are ordained, as it were, to be examples and exponents of the public philosophy.

They will need to make strong alliance with all men of religious faith, intelligence, and good will, both here in America and abroad, who likewise hold to the public philosophy. They will need to strike a covenant with the broad reaches of the people for whom President Eisenhower spoke in his inaugural address; and with the important group of intellectuals for whom Mr. Lippmann has spoken.

Then all these covenanted men together will reaffirm and renew the inner principles of free government, the high concept of the public philosophy that is our western

heritage.

Here, I suggest, is the magnanimous undertaking proper to the hour. Here is the decisive task to which the men of Georgetown are summoned by all the motives of public utility that inspired Georgetown's founder and the founders of America.

Floating Bases for Defense Installations Will Save Chicago's Jackson Park

EXTENSION OF REMARKS

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. O'HARA of Illinois. Mr. Speaker, I have been much concerned over the plans of the War Department to destroy beautiful Jackson Park. First, it was proposed to take Wooded Island as the site for a military installation. That was stopped in the very nick of time. But no sooner were we freed of this menace to Wooded Island than the War Department announced that it was to take over the promontory, or at least a portion of that spot so dear to the people of the community that I have the honor to represent in this body.

The tragedy is that these spots of beauty and of sentiment, once taken over, can never be reclaimed. If it is necessary for the proper national defense, no one would object. But the only excuse offered is that it would be too expensive to put this site elsewhere than in Jackson Park. It is merely a matter of saving money, and to save money the sites will be located in beautiful Jackson Park and where, from the military standpoint, they will be least effective. I have presented as best I could the feeling of our people in Chicago and have been assured by the War Department that the matter is being given further consideration.

I am directing the attention of my colleagues to the plan under consideration for the construction of a chain of mid-Atlantic and mid-Pacific bases to strengthen United States defenses against atomic attack. If this plan be feasible, in the oceans of the Atlantic and the Pacific, why should it not be followed in the Great Lakes?

Instead of tearing up Jackson Park, and placing military installations in the place where children play and adults go for relaxation and recreation, why should not these installations be placed on floating bases in Lake Michigan? This, it seems to me, is the one and only answer. I trust that the War Department will so

decide and that the Congress will give the necessary authorization and appropriation. It is a matter which should interest every Member of this body who represents a district in the Great Lakes area.

Bank Mergers

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Independent Bankers Association at the new Willard Hotel, Washington, D. C., Friday, March 25, 1955:

BANK MERGERS

Bank mergers are in the news. Big news for the big banks, but what of the smaller, independent banker? These mergers are not new. They have been continuing throughout the Nation at a gallop and the sound of heavy hoofs are heard through the land.

In New York City alone, in the last 7 years, there have been 17 bank mergers. Since the first of this year that area has experienced, in terms of total deposits, the three largest bank mergers in the history of our country. First, the Chase National Bank announced its merger with the Bank of the Manhattan Co. and the Bronx County Trust Co. merger, if approved, will make the Chase Manhattan Bank the second largest bank in the United States and it will control over 22 percent of all of New York City's commercial deposits. That it will be approved, I have little doubt, despite my protest to the superintendent of banks of the State of New York, who in this instance is the approving officer. He and I do not agree-for reasons best known to himself. Then, hardly before the ink was dry on that agreement, the Bankers Trust Co., which has been gobling up competitors in huge bites for several years, announced plans to acquire the Public National Bank. Note that in the last 4 years, since 1950, the Bankers Trust has absorbed such substantial banking institutions as Title Guarantee & Trust Co., Lawyers Trust Co., Flushing National Bank, the Commercial National Bank & Trust Co., the Bayside National Bank, and now the Public National All of these were strong, substantial institutions, ably managed, with adequate capital, earning a healthy, competitive profit.

This month, the Nation's second largest bank, the National City Bank of New York, announced plans to take over the First National Bank of New York, thus eliminating another vigorous, independent, competitive banking enterprise from the list.

As I said, I wrote the Superintendent of Banks of the State of New York, and also the United States Comptroller of the Currency, and the Federal Reserve Board, urging them to give the closest scrutiny to these mergers and do all that was within their power to prevent them. I pointed out that New York City had 127 commercial banks at the opening of the century, today only 62 remain. Almost as if to punctuate my protestations, the Franklin National Bank and the Meadowbrook National Bank, both of nearby Nassau County, Long Island, announced consolidation, respectively, with the Roslyn National Bank and the Baldwin National Bank. In addition, the Franklin National Bank announced plans to take over

three other banks in Nassau County. Not to be outdone, the Meadowbrook National Bank entered into consolidation agreements with another group of three banks in that area. Between them, these 2 banks will control over 60 percent of all bank deposits, savings as well as commercial, in Nassau County, N. Y. I firmly believe the Franklin-Meadowbrook mergers are flaunting the underlying philosophy of the Celler, Anti-Merger Act and our entire antirust principles. To my mind, the approval of these mergers by these responsible officials sharply outline the necessity for Federal legislation to limit such possible abuses of their discretion.

So strong has been the "urge to merge" that in the short period since the end of World War II more than 600 of the country's commercial banks have disappeared by way of merger or consolidation. The result—an alarming concentration of financial power in the hands of a few banks. The 100 largest banks in the United States now hold more than 48 percent of the Nation's bank deposits. Unless the present unrelenting merger trend is stopped, the financial banking structure of the United States will soon resemble that of Great Britain, Germany, and other countries in which all private financing resources are controlled by a mere handful of interlocking giant banks.

In England the so-called Big Five control 75 percent of all deposits. In Germany the Big Four, the so-called 4 D banks, controlled over 90 percent of the total banking assets in that country. In France there are no accurate statistics, but again four large banks are known to control an overwhelming proportion of that country's banking. It is no wonder that in each of these countries the Government found it easy to nationalize one

wonder that in each of these countries the Government found it easy to nationalize one or more of these giant banks, at one time or another. Such concentration throttles competition and depresses the Nation's economy.

DECREASE IN NUMBER OF BANKS

During the last 35 years, the number of banks has been reduced by more than half. In 1921, there were over 30,000 banks serving the Nation's commercial borrowers and creditors. At the end of June 1954 less than 15,000 banks remained in operation. to 1921 and between the years 1915 and 1921, the average number of new banks which yearly entered into the business totaled approximately 500. Contrasted to these figures is the cold, hard fact that since 1950 less than 20 new banks a year on the average have been granted national charters. the Nation's banks were hit hard by the depression and the lean years which followed, we must note that the decline in the total number of our banks set in more than 5 years before the crash of 1929. According to Federal Reserve figures, the number of banks doing business had already declined from the high of over 30,000 in 1921 to 24,000 in 1929, a total of some 6,000 banks. Between the years 1929 and 1933, some 9,000 banks were forced to clear their doors. By 1943 the total number of banks had dropped to 14,579. Yet, despite the unprecedented postwar boom—despite the 286 percent growth in bank assets—despite the new high levels of loans and deposits-despite the greatly increased use made of banking services spite the enormous growth in the number of depositors, the total number of banks in 1953 reached a new low of 14.538.

Even in New York State, which is widely recognized as the financial capital of the world, the number of State-chartered banks has dropped. In 1926 the number of State-chartered banks in New York was 611. The State's banking structure weathered the depression with the loss of less than 100 banks. Yet the number of banks kept decreasing until by 1954 there were 380, a loss more severe than the loss suffered in the depres-

sion years.

What is significant is the contrasting rise in the number of bank branches operated by existing banking houses. I think that branch banking is an evil to itself, and I shall discuss it later. Suffice to say, at the moment, that by the end of 1954 branch banks accounted for 25 percent of the banking offices in the country. Lest this figure tend, however, to give too optimistic an appraisal of our present banking facilities, it should be remembered that there were, in 1921, more than 31,000 independent banks serving depositors. At that time there were only half as many customers with less than one-third the volume of present deposits.

MERGER AND CONSOLIDATION OF BANKS

This raises the question of why, even in the face of unequalled economic prosperity, do we hear the death rattles of so many The reasons for the failure of banks during the depression and in earlier periods no longer exist. Since 1945 agriculture has been prosperous and the deposits of country been prosperous and the deposits of codimy banks have burgeoned. The Federal Deposit Insurance Corporation has liberated the economy from the destructive effects of "bank runs" and "money panics." Bank "bank runs" and "money panics." Bank management has become a skilled profession. New Deal banking legislation has made savings and deposits in banks today safe and sound for even the smallest and humblest depositor. We now have a healthy system of strong banks. Why, then, the continuing decrease in their number? There is no longer a serious problem of weak banks, with inadequate capital, undiversified loans, subject to special local risks or limitations. If we look, we will find the answer in this movement toward consolidation, absorption, and merger. In the years 1945 through 1951 there were 581 consolidations and absorptions among the Nation's commercial banks. In the first 3 months of the present year, 52 of the Nation's banks were consolidated or absorbed by other banking institutions. It is high time that this cartelization of banks was stopped. Among the many banks which have gone by way of merger within the past few years are such illustrious concerns as the Lawyers Trust Co., Title Guarantee & Trust Co., the Corn Exchange Trust Co., Brooklyn Trust Co., Commercial National Bank and Trust Co., Continental Bank and Trust Co .- all legendary institutions in the chronicles of New York's financial historyall have served the community long and

I emphasize that mergers involving large banks are in no way a local phenomena confined or peculiar to the city of New York. Within the last 4 years more than 7 large sized banks, with assets exceeding \$100 million have been absorbed by other competing banking institutions in various areas of the country. In Philadelphia the Girard Trust Co., one of the 100 largest banks in the United States, was merged in 1951 with the Corn Exchange National Bank and Trust Co., another leading bank, to form an entity with assets of more than \$500 million. Delaware's two largest banks, Equitable Trust Co. and Security Trust Co. were merged in 1952, and in the same year, the Mansfield Savings Trust Bank of Ohio and the Citizens National Bank and Trust Co. were merged. In Pittsburgh the Mellon National Bank and Trust Co. acquired the Farmers Deposit National Bank, one of the Nation's largest banks, with assets exceeding \$100 million and deposits of over \$140

The competitive structure of banking in this country must not be destroyed. While some mergers were the result of an effort to avoid financial collapse on the part of one of the combining institutions, such cause has not been a significant factor since the end of hostilities of World War II in 1945. It is my belief, and I think I share it

as common knowledge with most other men with an interest in the banking field, that more subtle factors underlie this trend of bank mergers. For a good many years the stocks of many banking houses have been selling on the open market well beneath their book value. To illustrate this point by way of concrete example, as of June 1950 the book value of the Central Hanover Bank & Trust Co. was \$131 per share, yet the bank stock could be purchased on the open market for \$99.50, reflecting a discount of 24 percent. In September 1954 stocks of such banks as Chase National, Irving Trust, New York Trust, and J. P. Morgan Co. were all selling in the market for at least 20 percent below book value. This kind of situation, of course, has been giving rise to merger agreements because mergers have proved to be an attractive device for marking up the price of bank securities. Shareholders, under merger agreements, have been able to obtain the book valuation of their holdings in place of the price set in the open market. A bank and its securities, in many instances, are worth more to the stockholders as a corpse than as a going concern. I have heard it said among bankers that many banks in the United States are worth more dead than alive.

A good illustration of how low-market evaluation of bank shares tend to inspire mergers is the consolidation of the Brooklyn Trust Co. with Manufacturers Trust Co. in 1950. In December 1949 while the book value of Brooklyn Trust stock was \$194.96 per share, its market value was only \$148 per share. Upon merger, the shareholders of Brooklyn Trust were given \$183 in cash for each share of stock and also a share of Manufacturers Trust Co., Itself worth approximately \$55 per share. As a result, the shareholders of Brooklyn Trust Co. were able to realize more than the book value of their shares. On the other hand, as a going concern, the stockholders would not have been able to dispose of their securities in the market without incurring substantial loss.

But perhaps the principal reason behind the merger activities of our rapidly expanding banking system is passion for size as the symbol of success. The Manufacturers the symbol of success. The Manufacturers Trust Co. is today the fourth largest bank in the United States, due largely as the result, over the years, of some 80 acquisitions and mergers. It operates a branch banking system of 112 offices in the greater New York area. Another illustration is the Mellon National Bank & Trust Co. of Pittsburgh. In 1941 the Mellon Bank ranked 23d highest among the Nation's banks in order of de-By 1954 it had risen to 12th place. In the interim period, it had acquired many small independent banks in the Pittsburgh area, so that today it operates over 40 banking offices therein. In the years between 1928 and 1948 more than 37 percent of that bank's increase in loans and 30 percent of its increase in deposits could be attributed to assets acquired through other banks.

CONCENTRATION OF BRANCHES

Today, instead of seeing new, independent banking institutions on the horizon, we see only branch banks. The large State of Pennsylvania has had only three formal applications for charters since 1933. In the last 10 years only formal application for a charter has been filed in the State of Connecticut. Delaware has had none in the last 10 years. What does this mean? It means simply-or not so simply-that whereas before we had new and independent banks entering the banking field each year, we now have no new banks, but only big banks growing bigger. Take, for example, the two recent giant mergers of the Chemical Bank & Trust Co. with the Corn Exchange Bank and the Chase-Manhattan Bank merger. In each case, the prime motive of the bigger bank was to extend itself from the confines

of Wall Street and into the neighborhood banking field.

The Chemical Bank had been largely a Wall Street banker's bank. The Corn Exchange, on the other hand, had a network of branches throughout New York City. By joining hands with the smaller bank, the Chemical was able to get into the neighborhood banking business in a big way.

ing business in a big way.

It is the same with the Chase merger. To become a real neighborhood bank, the Chase realized, it would need branches outside the Wall Street area. The Bank of Manhattan, with which it merged, had plenty of branches—55 branches, in fact, throughout New York City. So, instead of going out and establishing new branches in competition with the Bank of Manhattan, it combined with it and in one fell swoop, it acquired well-established branches and buildings, a highly developed business with a built-up clientele, and, what is more important, it was eliminating an large competitor.

Out of the 572 commercal banking offices now operated by 62 banks in New York City, 4 banks control 313 of those offices, or 54 percent of all the banking offices in the city. Among them they control 51 percent of the commercial deposits. If the Chase-Manhattan merger is approved it will add 58 branches to this all powerful oligopoly and give to them 64 percent of all banking offices and 56 percent of the commercial deposits. Is this not cause for concern? Where will it lead? Assuredly small independent banks will find the going rougher and rougher. Local merchants and local industrialists will be at the mercy of far away banking tycoons and far distant panjandrums.

It is, of course, avoiding the issue to say that none of these recent mergers in New York will result in a decrease in banking locations now available to the depositors. The question is not whether there will be a diminution of banking facilities but whether these mergers will tend to unduly lessen competition in that area. The second largest bank in New York City, for example, does not need the banking offices of one of its largest competitors, to render to the public the service for which it was organized. The principal value obtained by one of our largest banks acquiring a large competing bank and merging with it is the elimination of the competitor, and, in the case of the presently pending mergers, the strengthening of the already all-powerful position of large banking institutions. For the borrower it means less avenues of credit. No matter how many bank branches exist, the borrower faces the same borrowing conditions set by the home office. My strictures are applicable not only to New York but practically every important area of the Nation.

The impact of mergers in eliminating the competition of smaller banks and strengthening the financial resources of large banks has not been considered in recent Federal legislation dealing with bank consolidations. This is a defect we must remedy. At present, approval of certain mergers must tained from the Comptroller of the Currency, the Federal Deposit Insurance Corporation, or the Federal Reserve Board. But none of the statutory provisions relating to mergers contain any express requirement to study the effects on competition. In fact, even the requisite of official approval can be avoided if the acquiring bank increases its capital stock and surplus so that it exceeds that of the merging institutions combined.

The very purpose of our antimonopoly policies established under the Clayton Act and the Sherman Act is to increase instead of lessen competition. I secured the passage of the Celler Anti-Merger Act which prohibits the merger of corporations under the jurisdiction of the Federal Trade Commission where such consolidations would "tend to substantially lessen competition in any section of the country."

However, while these laws outline our public policy, they do not contain provisions dealing specifically with bank mergers in all their phases and are therefore inadequate to protect the public interest against the elimination of competition in banking and the centralization of financial power.

In order to remedy this situation and to plug the loophole in our Federal law I have introduced a bill, H. R. 2115, which will subject all bank mergers and consolidations to the scrutiny of Federal bank officials. In determining whether or not to approve a merger the officials, under the terms of the bill, would be obliged to determine whether the effect of such a merger might "unduly tend to lessen competition or tend to create a monopoly, in the field of banking, contrary to our public policy favoring local ownership and control of banks."

I am sure all reasonable and prudent men will agree that we need strong, independent, efficient, vigorously competitive banks. would not quarrel with the reduction in the number of independent banks, if thereby only weak banks were eliminated or, as the result of consolidation, the public would receive superior service. But the mergers which worry me and must worry you are the recently announced ones which are eliminating, precisely the kind of strong, independent bank which has so ably served this country.

I am in favor of any influence which will strengthen our banks and our banking system. But I am against the paralysis which occurs when monopoly takes over a vigorous competing banking system and when signs of socialism loom large on the horizon.

I believe you and I are in the same battle together. I will welcome any suggestions you wish to make, for our mutual purpose is to keep American economy free and strong.

Burning Daylight in Asia

EXTENSION OF REMARKS OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. UDALL. Mr. Speaker, in its lead editorial yesterday the New York Times called for a new Formosa Strait declaration and demanded new leadership by the President in this crisis. This forthright editorial should be of interest to all of our colleagues:

BURNING DAYLIGHT IN ASIA

Readers of this newspaper may well have been startled by a Washington dispatch from Anthony Leviero, published yesterday. Their minds will not be relieved by James Reston's article on the Far Eastern situation today. Mr. Reston quotes Senator Walter F. George, of Georgia, chairman of the Foreign Relations Committee. Mr. George was facing the problem of what to do if the Chinese Communists invaded the Quemoy and Matsu islands lying off their coast. He knew, as the Pentagon knows, and as the White House knows, that there is grave danger that the islands will be invaded some time during the months of April and May. Sena-tor George said: "We are burning daylight." The darkness is coming on in the Far East."

Senator George at 77, in the twilight of his own career and in his 33d year in the Senate, has the courage and is in a position to speak out. Mr. Reston gives this interpretation of the opinions of some other Senators who have not spoken out: "We are drifting into a war over Matsu and Quemoy.

The administration is reconciling itself to the idea that this issue now rests not with Washington but with Peiping." So we have, as today's news describes it, a situation in which a certain kind of logic—the logic, perhaps, of death and widespread destructiongoes from the defense of Quemoy and Matsu to an all-out atomic attack on the industrial potential of Communist China. What this logic means in cost of human life and perhaps in a vast destruction of cities far outside China, the citizen may ponder.

It is clear that the resolution authorizing the President to take whatever steps are necessary to defend Formosa gave a choice only between rejecting the administration's foreign policy in the Far East, or accepting with it an ambiguous phrase that might justify an all-out defense of the Quemoy and Matsu islands. Everyone in this country, certainly including the President, would be happier if the Quemoy and Matsu islands did not exist or if our national prestige and honor had not somehow seemed to be in-volved in their defense. If we had been able to persuade our Nationalist Chinese friends to pull out of them, when they abandoned the Tachen islands, we would all be easier in

There is the further argument, which we find reiterated in today's dispatches from Taipei on Formosa, that the morale of Chiang Kai-shek's troops and people would collapse if the islands were abandoned or lost. There is a curious paradox in the fact that while Senator George and many others in this country fear involvement over the islands some persons on Formosa suspect that we are making a quiet deal with the mainland Chinese to abandon them.

Here is a dilemma that can easily be understood. Whether a greater wisdom on the part of the State Department and the administration would have avoided it we do not

know. The fact is we face it.

There may, however, be one way out that has not been fully explored and exploited. From Japan to Canada and all around the circle of our allies and potential allies there is strong opposition to joining us in any hostilities brought on by attempts to hold the Quemoy and Matsu Islands. There is not the same opposition toward the defense of Formosa, which is a keystone in guarding the frontiers of all the free nations of Southeast Asia, including the Philippines.

This newspaper believes that the time is ripe for a new Formosa Strait declaration. We believe that that declaration should make it plain that we will put all we have into a defense of Formosa and the Pescadores Islands, which are essential to such a The Seventh Fleet is already a formidable obstacle to an attack on Formosa. It might be possible to throw at least a token force of American ground troops into the island to assist in repelling attack.

What this situation calls out for above everything else is precision. The enemy ought to know just what he can do and just what he cannot do without meeting resistance from us. If he learns that he can take the Quemoy and Matsu Islands without provoking a major war, that fact may be tragic. Nevertheless, there are small tragedies and vast tragedies. A vast tragedy would be stumbling into war against the intention and the wishes of the majority of our people and our allies. A still vaster tragedy would be a loss of freedom through repeated retreats.

It is time that the fire eaters in Washington, whether in the Pentagon or elsewhere, went into silence. We need calmness and This newspaper hopes and believes wisdom. that President Elsenhower, hating war, as we know he does, and realizing, as he said he did, that one cannot see where a war will take us, will exercise his leadership during this coming critical week to save this country and the world from irretrievable disaster. A Report on Red Strength

EXTENSION OF REMARKS OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. EDMONDSON. Mr. Speaker, Jim G. Lucas, the Scripps-Howard war correspondent who has seen more armed conflict that any other American newspaperman to my knowledge, has just performed a great public service by painting a detailed picture of Soviet armed strength in last Friday's Washington Daily News.

The report is not offered for this record with any intention to alarm or terrify, but rather to provide a factual reminder of the need for eternal American vigilance in the field of preparedness.

Certainly, there is cause in these facts for sober second thought over administration proposals for continued reduction in America's standard fighting forces such as the Army Ground Forces, the United States Marines, and the

In the light of Russian strength in orthodox weapons, and the always-present possibility that an efficient defense might be developed against atomic attack from the air, can we honestly afford further stripping of our regular fighting forces?

Mr. Lucas' article follows:

RUSSIA, SATELLITES, AND CHINA HAVE 9,000,000 IN ARMIES-HERE'S A BREAKDOWN OF SOVIET STRENGTH

(By Jim G. Lucas)

How big is the Soviet war machine Russia says it is willing to reduce?

Here's what the Kremlin would start with in any plan to limit conventional armaments, as suggested by Soviet Deputy Foreign Minister Andrei Gromyko over Moscow radio last night:

A 2,500,000-man army in 175 divisions. Back of that, 400,000 public security (NKVD) troops and 80 East Europe satellite divisions.

(The United States Joint Chiefs of Staff list this as the second largest land army in the world. The Chinese Communists, with 2 million regulars and 1 million uniformed public security troops attached to the army, is rated the largest.)

A 600,000-man air force with 20,000 planes.

An 885,000-man navy.

The Russians have held to 175 divisions for several years. But the firepower and mobility of these divisions have grown each year since 1945. Equipment constantly is being modernized. They have 65 tank and mechanized divisions and 40,000 new tanks. (We have 16 divisions of all kinds.) divisions have been motorized and beefed with tanks and heavy artillery. They have 40 new airborne divisions.

Russia and her European satellites bave 6 million men under arms. The North Atlantic Treaty Organization (NATO) estimates they can field 400 divisions within 30 days after the outbreak of war.

AIR FORCE MODERNIZED

NATO says there has been a very considerable modernization of the Red air force recently. At the outbreak of the Korean war, 20 percent of Russia's fighters were jets. Since 1954, all have been jets. The number

of TU-4 (B-29 type) bombers in combat units has been doubled. These are now giving way to jet bombers, including one reportedly in a class with our B-52.

Russia's 360 aircraft factories work around the clock. Among other items, they turn out a small rocket-driven intercepter which can climb 15,000 feet a minute at takeoff and 39,000 feet a minute above 20,000 feet; a double delta-wing plane which can climb straight up; a MIG-17 comparable to our F-100 and a bulkier MIG-19; an experimental jet escort comparable to our F-101; a tailless fighter carried by a TU-4 mother ship which has been seen holding its own in mock combat with a MIG-17, and a 4-engined turboprop bomber which can fly 7,650 miles nonstop. That's enough to reach the United States from East Russia.

In 4 years, the number of major Red air force bases in Europe and Asia has quadrupled. Construction still is being pushed.

The Red air force combines three commands:

Long-range bombers.

Home defense.

Tactical air.

Home defense operates 3,000 planes, principally MIG-15's. Tactical air has 12,000, including MIG-17's and MIG-19's.

Until recently, the Soviet navy wasn't much to worry about. Adm. Robert B. Carney, United States Chief of Naval Opera-tions, says Russia now has world's second largest navy. According to NATO, it includes 350 submarines in service, hundreds more under construction, 3 battleships, 24 cruisers, 150 destroyers, "hundreds" of minelayers and minesweepers.

MORE SUBS

The Red navy beats ours in two fieldssubmarines and cruisers. Its 350 undersea craft include long-range patrol classes, minelayers, and two small classes for coastal defense.

Russia bases her naval construction program on ours-she builds what we don't. that way, she seeks to obtain superiority in a limited field. Russia has ignored plane carriers and concentrated on cruisers. We have not built a new cruiser since the war; Russia has built 20-the biggest cruiser-building program of any nation. Her new Sverdlov class cruiser is listed by the British as "quite formidable."

Admiral Carney says the Russians are "using their own shippards to build new cruisers, destroyers, submarines, and smaller vessels. They are buying ever increasing numbers of merchant ships from our allies and our friends. They are strengthening

their naval aviation."

THREE THOUSAND NAVY PLANES

Russia's naval air arm is entirely shorebased. But it contains 2,500 to 3,000 fighters, the majority jet. It also includes several thousand troop-carrying helicopters for am-

phibious landing operations.

Russia's naval strategy is to guard the Baltic and Black seas and defend her interests in the seas of Okhotak and Japan; to block American and British approaches to Europe; to attack trans-Atlantic and cross-channel supply lines, and to starve out Britain and Japan by mines and submarine attack.

In all her forces, a British report says, the Russians are training manpower at a far faster rate than the free world. They have access to more. Russians are liable for military service until they are 50. Russia can tap 900,000 new men each year.

Finally, according to NATO, Russia made "remarkable progress in the fields of atomic, chemical and biological warfare and in gulded missiles." She has the H-bomb and is spending heavily on atomic weapons.

LARGEST BUDGET EVER

The 1955 Soviet military budget buys the largest peace-time force Russia has had. Its 112 billion rubles is slightly less than the previous high, 113,800,000,000 rubles in 1952. But a lower price level gives it more pur-Translated into dollars, it chasing power. comes to \$28 billion. But military price tags in Russia are arbitrarily low. The ruble equivalent of \$28 billion gives her a force which would cost us \$100 billion.

Russia, of course, has her problems. Chief among them are transportation and food. While war industry has increased 10 times, agriculture production has increased only 30 percent in 25 years. Grain production is now at its 1928 level. The Soviet Union has a poorer diet than many underdeveloped nonindustrial countries.

Her transportation has not yet recovered from World War II. Two years ago her railroads carried the same amount of freight as in 1940. Trucking, river boating and ocean

shipping lag.

Nevertheless, Russia is pushing two new rail links with Red China. The Chinese-Russian defense pact can be evoked by either party. Ostensibly, these two new railroads are meant to help the Chinese. But they serve Russia as well. They give her an outlet on the China Sea and they enable her to tap China's vast mineral resources.

Russia's forces are spread from Man-churia to Berlin, from Leningrad to the Iranian border. But she has one uncon-tested advantage. The initiative is hers. She knows we won't start a war. Therefore, she can maneuver her forces at will, applying pressure where it best serves her interests. So far, she has played it cozy. She has let others do her fighting.

What the Judge Said in the Recent Lightfoot Case at Chicago

EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. DOYLE, Mr. Speaker, by unanimous consent heretofore granted me so to do, I am pleased to be able to herewith call to your attention and every Member of this great legislative body the text of a recent decision by Hon. Philip L. Sullivan, judge of the United States district court, Chicago, Ill., in what is commonly known as the Lightfoot case.

As you know, I serve on the House Un-American Activities Committee as well as a member of the Armed Services

I, having read brief newspaper comment of this interesting and indicative decision, wrote the honorable judge for a copy thereof, and I herewith also present a copy of his letter to me enclosing the text of his memorandum in the Lightfoot case.

This case, and the decision therein, is of more than just ordinary interest because the defendant admitted and so did his legal counsel in the case that he was a member of the Communist Party. Not only was it admitted by the defendant himself and the legal counsel him. self, but it was established by formal

Also, Mr. Speaker, I especially call attention to the decision by the honorable judge of the United States Federal court, who forwarded me a copy of his decision, that said court made a finding "considering the documentary evidence, plus the testimony of the witnesses" that "there was evidence from which a reasonable mind could conclude beyond a reasonable doubt that the Communist Party was, during the indictment period, one which advocated the overthrow of the Government by force and violence as speedily as circumstances would permit."

Mr. Speaker, I especially call your attention to this paragraph of this significant decision for the reason, amongst others, that in my humble judgment most patriotic American citizens do not realize that there has frequently been uncontroverted evidence before our Federal courts in trials involving Communist Party members that said Communist Party in the United States was not only advocating the overthrow of government by force and violence but that there also has been ample evidence in many of these same trials make it crystal clear that this Communist Party in the United States not only advocated the overthrow of the Government by force and violence but advocated that this force and violence should be applied as speedily as circumstances would permit.

The letter and decision follow:

UNITED STATES DISTRICT COURT, Chicago, February 28, 1955. Congressman CLYDE DOYLE,

House of Representatives.

Washington, D. C.

DEAR CONGRESSMAN DOYLE: At your request I am mailing you a copy of my memorandum in the Lightfoot case

With kind regards I am, Sincerely yours,

PHILIP L. SULLIVAN.

DECISION OF JUDGE PHILIP L. SULLIVAN, UNITED STATES DISTRICT COURT, CHICAGO, IN THE LIGHTFOOT CASE

I have been keenly aware that this is not an ordinary criminal case; throughout the trial, I have been sensitive to the justice of defendant's contention that it would be difficult to secure a fair verdict on this issue; and I have been aware that many of us tend to discard our normal thinking and reactions when we hear the word "communism." these reasons, I wish to make an exhaustive study of the evidence submitted, with a view to using my power under rule 29 of the Federal Rules of Criminal Procedure to direct a judgment of acquittal if it should appear that the verdict of the jury was not supported by evidence from which a reasonable mind could conclude guilt beyond a reasonable doubt.

This study has convinced me that the verdict of the jury was supported by the required evidence.

The defendant was indicted under section 2 of the Smith Act (title 18, U. S. C. A.,

sec. 2385) which provides:
"Whoever organizes or helps or attempts to organize any society, group or assembly of persons who teach, advocate or encourage the overthrow or destruction of any such government by force or violence; or becomes or is a member of, or affiliates with, any such society. group or assembly of persons knowing the purposes thereof.'

The indictment charges that from on or about July 25, 1945, and continuously thereafter, up to and including the date of the indictment (May 14, 1954), the Communist Party was a society of persons advocating the overthrow of the Government of the United States by force and violence as speedily as circumstances would permit; and that the defendant was a member of that organization during the same period, knowing these purposes, and intending to bring about such overthrow by force and violence as speedily as circumstances would permit.

That defendant was a member of the Communist Party was admitted by himself as well as by his counsel and established by

formal proof.

The evidence of the Government tending to prove the advocacy of the party falls into

several categories:

First. There was evidence tending to show that: The party has secret members; in schools conducted by it, training was uniform and according to an established pattern; it is a highly organized group, built on well-defined administrative levels and maintaining discipline within its ranks. This evidence was of course significant as showing the deviation of the Communist Party from normal political parties, and an inference may fairly be drawn from it that

significant reasons for the deviation exist.

Second. There was evidence to show its teachings and beliefs. This evidence established that the Communist Party is a political party "basing itself on the principles of scientific socialism, Marxism-Leninism."

To prove the meaning of this term, there have been introduced a number of extracts from the books which have been described as the classics of Marxism-Leninism. A few of these works, on which it was testified the Communist Party relies, are: Communist Manifesto; Stalin, Foundations of Leninism; Lenin, Left Wing Communism, An Infantile Disorder; Stalin, Problems of Leninism.

The extracts show that from a stated belief in the principles of Marxism-Leninism, a reasonable mind could conclude beyond a reasonable doubt a corresponding belief in the use of force and violence for the overthrow of the Government of the United States. In fact, many courts have apparently so construed them.

I find that, considering the documentary evidence, plus the testimony of the witnesses, there was evidence from which a reasonable mind could conclude beyond a reasonable doubt that the Communist Party was, during the indictment period, one which advocated the overthrow of the Government by force and violence as speedily as circumstances would permit.

Having found upon ample evidence that the advocacy of the party was of the use of force and violence for the purposes described, the jury could hardly have found that the defendant did not have knowledge of this advocacy. Considering his writing in evidence, which call for a dedication to Marxism-Leninism, and all the testimony of all the witnesses, I find that there was evidence from which a reasonable mind could conclude beyond a reasonable doubt that the defendant knew that the Communist Party advocated the overthrow of the Government of the United States by force and violence, and that he intended to bring about such overthrow by force and violence.

Veterans' Administration Interest and Accomplishments in Cancer Research

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mrs. ROGERS of Massachusetts. Mr. speaker, under leave to extend my re-

marks in the RECORD, I include the following statement of the Veterans' Administration activities in the field of cancer research. I am sure it will be of interest to many persons:

VETERANS' ADMINISTRATION INTEREST AND AC-COMPLISHMENTS IN CANCER RESEARCH

As the veteran population ages, the incidence and mortality from various forms of cancer increases progressively. There has been a steadily increasing demand upon the Veterans' Administration to provide hospital care for veterans suffering from cancer. The medical research program of the Veterans' Administration has tried to keep pace with this growing problem by stimulating more research in the field of cancer and allied diseases.

From July 1952 through July 1954, 68 research studies concerned with all aspects of cancer were started in VA hospitals. Ten of these studies are concerned with diseases of the blood such as leukemia. In the course of these investigations, one of our doctors has demonstrated that certain forms of cancer and leukemia are caused by viruses and he has shown that these viruses may be transmitted from parent to offspring through the embryo. Although this work was performed in experimental animals, its implications for better understanding of human cancer and leukemia are quite obvious.

The Veterans' Administration medical research program is currently supporting the following types of research related to leukemia and cancer:

- (a) Investigations directed toward finding the cause of these diseases.
- (b) Investigations to provide earlier diagnosis of these diseases.
- (c) Investigations directed toward finding better treatment of these diseases.
- (d) Investigations concerned with the management of patients suffering from these diseases.

It should be pointed out that radioisotopes are used in many of our hospitals for diagnosis and treatment purposes. Through the use of radioisotopes certain forms of cancer have been localized in deep tissues of the body such as the liver and brain.

As early as 1948, the Medical Research Statistics Division reviewed the VA cancer experience and on the basis of this experience estimated the cancer incidence among the veteran population for the years 1947, 1950, and 1960. Table 2 of section II of this report reveals that there will be an expected annual incidence of cancer among veterans totaling 54,000 cases in 1960. This study also reveals that the incidence of cancer increases as the veteran population ages. This study provided estimates of the expected cancer morbidity among the veteran population which serves as a guide for determining the future VA requirements for trained medical specialists and technicians as well as the required diagnostic and therapeutic facilities for care of cancer patients.

In 1953 because of the great interest in the problem of the relationship of smoking to the development of cancer in the lung, the VA cooperated with the United States Public Health Service in initiating a study of VA records, designed to throw light on this question.

The Veterans' Administration is in a unique position to carry out clinical and laboratory investigations of cancer and other tumors. There are approximately 25,000 veterans hospitalized within VA hospitals each year with some form of cancer. With this wealth of clinical material and with the medical research and radioisotope laboratories available within the VA, we are in a unique position to provide information so badly needed for a better understanding of the cancer problem.

If There Had Been No Yalta

EXTENSION OF REMARKS

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. UDALL. Mr. Speaker, Ernest Lindley's column in the March 28 issue of Newsweek magazine is a sober analysis of the controversial Yalta agreements. It should appeal to persons who are interested in studying this matter calmly and unemotionally:

Washington Tides
(By Ernest K. Lindley)
IF THERE HAD BEEN NO YALTA

Suppose that there had been no Yalta agreements. Let us apply the test specifically to the three agreements which are said to have aggrandized the Soviet Union:

1. The declaration on Poland: The Russians had invaded the eastern part of the prewar Poland in 1939 and annexed it. When the Yalta Conference met they had liberated all the rest of Poland except a few pockets. Indeed, they had crossed the Oder and at one point were only 35 miles from Berlin. They had set up a Communist-controlled government.

In short, the Russians already had Poland. The primary objective of Roosevelt and Churchill was to prevent Russian control from becoming permanent. They managed to obtain Stalin's promise that the Communist puppet government would be reorganized to include other Polish democratic leaders, including some in exile. He agreed also to "free and unfettered elections * * * on the basis of universal suffrage and secret ballot." He pledged that in those elections all democratic and anti-Nazi parties shall have the right to take part and to put forward candidates."

2. Declaration on liberated Europe: At the time of Yalta, Rumania and Bulgaria already had been liberated. Budapest fell the day after the conference ended. In short, the Russians already controlled most of southeastern Europe. The western objective was to prevent the squatters rights of the Red army from becoming permanent. Stalin promised independence for those nations, through provisional governments representing all democratic elements and free elections.

The Yalta agreements did not give eastern Europe to the Russians. They control it in spite of the Yalta agreements, through flagrant violations of their pledges.

3. The Far Eastern agreement, under which Russia promised to go to war within 90 days of the German surrender: Roosevelt, it is true, was acting on the basis of a wrong military estimate that it would take 18 months after the German surrender to defeat Japan. The end of the 90-day period coincided approximately with the Japanese surrender.

The Far Eastern agreement granted Russia specified territories and rights, most of which had been taken from her by Japan 40 years earlier. At the same time, Stalin recognized Chinese sovereignty over Manchuria, subject to Russian rail and naval-base rights, and agreed to sign a treaty of friendship and alliance with the Nationalist Government of China.

Most comment on this agreement overlooks other obvious realities. What was granted to the Russians was much less than they had the power to take—and to take without contributing anything to the defeat of Japan. They could have waited until Japan was at

the point of collapse and then occupied all of Manchuria and Korea, and perhaps more. That possibility was not ignored in Washington. It could be prevented only by invading those countries with United States forces. We had none to spare. (We occupied lower Korea by an agreement made after the Japanese surrender.)

The Yalta agreement on the Far East did not give the Communist control of Manchuria, Korea, or China, or Southern Sakhalin. It defined and limited Russian gains to the Far East.

Valid arguments can be made against these and other Yalta agreements. The Far Eastern agreement was ambiguous on one point. Perhaps Roosevelt should have pressed harder for firmer commitments on joint control of Eastern Europe, as the State Department urged. As the Far Eastern agreement and, as to boundaries, the Polish agreement involved compromises with principle, it may be contended that they should not have been made at all. But they did not give the Russians anything which they did not already hold or could not easily seize. Most of the concessions were made by Stalin. He did not keep his word and we had no means except major force to obtain compliance. Those who blame these agreements, rather than Russian violations of them, for the plight of the world are excusing the Communists.

Alaska Statehood

EXTENSION OF REMARKS OF

HON, E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I would like to bring to the attention of the Members an excellent editorial in support of Alaska statehood which appeared in the March 21, 1955, issue of the Bellevue

(Ohio) Gazette:

The familiar, "All is not gold that glitters," may bring many things to mind for the leg-islators in Washington, but it doesn't seem to bring the subject of Statehood for Alaska to mind.

It should.

Alaska, while glittering, literally, snow many months of the year, also glitters with the lusty richness of new developments, and a promise of even greater prosperity in the years ahead.

Alaska glitters with the gold of the salmon industry, the wealth of its oil, and the shine from its deep mineral resources.

Still, with all of this, Alaska could hardly expect statehood on the basis of wealth, alone. Actually, its wealth, while an excellent talking point, is not its best argument.

Best reason for statehood for Alaska and its people is the net result of the struggles of early settler who founded this little America near the North Pole which is shaping broad, new frontiers for America.

Cities and towns have sprung up, industry is thriving, commerce and trade are strong and growing, families and homes have become permanent, Americanized, and settled.

even the most hardy of the present-Yet. day pioneers are laboring to overcome the present obstacle and attain the coveted status of residents of a State in the Union.

Why hasn't Congress seen fit to repay the efforts of thousands of Americans who have ventured into the unknown to establish the American way of life in a faraway

Today Alaska has schools, churches, and far more law and order than was found in the earlier frontier States when they were admitted to the Union a century ago.

Alaskans are citizens in every way. new land is filled with vigor, strength, and promise. It wants statehood.

Will Alaska have to wait as long as Ohio

Stassen's New Job

EXTENSION OF REMARKS OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Daily News of March 22, 1955, entitled "Stassen's New Job," and a column from the New York Daily News of March 22, 1955, entitled "Capitol Stuff," by John O'Donnell:

STASSEN'S NEW JOR

With much fanfare, President Eisenhower has made Harold E. Stassen a special Presidential assistant, of Cabinet rank, to work for world disarmament.

That's a tipoff as to what this administration actually thinks of the United Nations, as against what it says it thinks. Apparently the President has despaired of the U. N. as the effective peacemaker which he continually calls it.

We wish Stassen luck-though we feel that could name offhand a half-dozen men better qualified for this job. Certainly it would be fine if somebody somehow could get some binding agreements out of the big powers to taper off the piling up of weapons.

However, we hope Stassen's first step in preparing for his new assignment will be a careful reading of the story of the Washington disarmament powwow of 1921-22. At that conference the powers agreed on the famous 5-5-3 ratio of naval tonnages for the United States, Britain, and Japan. This country actually scrapped some fighting ships, while Britain and Japan thriftily scrapped only some blueprints for ships.

It was a grim joke on Uncle Sap. We hope that Stassen, whatever else he won't let the Nation in for a repetition of the 1921-22 flasco-and that Congress will insist on keeping careful tabs on everything he does about disarmament. He'll be playing with human lives, not with marbles.

CAPITOL STUFF

(By John O'Donnell)

Washington, March 21 .- It has been 20 rears since the onetime boy governor of Minnesota, Harold E. Stassen, started to run for the White House. Never, during that long stretch of political striving, has the seemingly tireless candidate received the encouraging boost to his ambitions that he has just had from President Eisenhower.

Stassen is now "Secretary for Peace" in the Eisenhower Cabinet. Politically, the title is solid gold for any candidate to wear in a war-weary, tax-ridden nation. Perhaps little real progress can be made in the next 12 months (that's when the presidential primaries start) by the President's newly appointed special assistant with Cabinet rank, charged with "developing . . * the broad studies, investigations, and conclusions which * * * will become basic policy * * * of disarmament." But from the political angle, the experts believe that Stassen has at last hit the jackpot.

Back in 1940, Stassen was just too young to enter the fight for the nomination against Willkie and Dewey. But he threw his weight around in the convention, made the keynote speech and then jumped on the Willkle bandwagon. In 1944 and 1948 he was in there fighting for ballots against Dewey, put on a good preconvention campaign but had no permanent public forum to win national stature. The same was true in 1952 and Stassen put on only a half-hearted campaign against Ike for the nomination. It was his own Minnesota delegation which took the lead in making the dramatic break which put Ike over on the first rollcall.

Now, as one seasoned observer noted sagely: "That Stassen card that Ike tossed out Saturday into the political poker game hit the table so hard that it sounded like the crack of doom to some of the GOP hope-

fuls.

RIVALS FEAR IKE WAS NAMING CROWN PRINCE

The hopefuls who were flabbergasted by the sudden move included such ambitious young Republicans as Vice President Rich-ARD NIXON and his fellow Californian, Senate Minority Leader WILLIAM KNOWLAND. the way down the Washington political line there seemed to be the belief that the move had all the earmarks of an Eisenhower blessing on a political crown prince-either for 1956 or 1960. After all, Stassen is still only 48 years old.

So far as Republican political history is concerned, no President has ever given anyone such a vigorous thrust toward throne since Teddy Roosevelt, back in 1908, named William Howard Taft as his suc-

cessor.

The recent shuffling of White House personnel takes on more significance in the light of the Stassen promotion. A little over a fortnight back, Stassen's 1952 national chairman, Bernard M. Shanley, of New Jersey, was appointed Secretary to the President. In that all-important post (there is only one Secretary to the President-the others are assistants to the President, deputy assistants, press secretaries, etc.) the dedicated Stassen supporter succeeded former Governor Dewey's political associate Thomas E. Stephens.

AMBASSADOR TO UN LODGE HAS A REAL BEEF

These developments have not been sitting comfortably in the crops of some very important forces within the party. So far as the followers of the late Senator Taft are concerned, New York's Dewey is the only leader more cordially disliked than Stassen.

Among the original '52 group of Eisenhower boosters, Ambassador to the UN Henry Cabot Lodge, Jr. can feel miffed at the new development. Lodge had the thankless and impossible job of carrying the disarmament ball in the UN against Commie opposition. Now he returns from a London "disarmament discussion" with nothing more than a zero in the way of accomplishment and finds that rival Stassen has grabbed off a cabinet seat. There he can sit at ease until the '56 national convention with a halo of peace on his brow and a warm spotlight of national publicity which he can turn off and on at will.

But there is powerful opposition from Stassen's own Middle West to any move to build up the head of the Foreign Operations Administration (soon to expire) into White House stature. For one, Illinois' Senator EVERETT DIRKSEN will certainly throw his hat into the convention fight if for any reason Ike should decide to refuse the 1956 nomination.

DIRKSEN and Wisconsin's Senator McCar-THY have been loyal associates and time was when Stassen was in their camp. That was in 1948 when Stassen was battling Dowey in the fight for delegates.

FOA DUE TO DIE, BUT NOT THE SPENDING

In the Wisconsin primaries, thanks to the campaigning of the then freshman Senator McCarthy and the strategic guidance of Victor Johnston, a Taft lieutenant in 1952, Dewey failed to get a single Wisconsin delegate. Then Dewey knocked Stassen out of the race when he made mincemeat of the boy wonder in an Oregon debate on the question, "Shall we outlaw the Communist Party?" Dewey took the negative and argued that the Stassen proposal was a violation of the Constitution and the Bill of Rights.

Stassen's FOA will expire June 30. Confress certainly won't give it another lease on life, but it will be transferred as a semi-independent setup under the State Department. But if foreign beneficiaries fear not—the fountains of United States taxpayers' cash are already turned on by Stassen so that they will play higher and longer than

did the old Marshall plan.

In the 4 years under the Marshall plan we gave away roughly \$12.5 billions of tax money to foreigners. Stassen has just come up with an 8-year plan for Asia for which we kick in at the rate of \$2.1 billion a year.

Congress, however, noting that the voters are getting sick and tired of the Truman-Marshall-Acheson foreign aid, may quietly ditch the whole insane proposal.

Welcome for Scelba

EXTENSION OF REMARKS

HON, PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in the Newark (N. J.) Sunday News under date of March 27, 1955, entitled "Welcome for Scelba":

In Mario Scelba, Premier of Italy, official Washington entertains a political personality

of rare accomplishments.

Initially, as Interior Minister in postwar De Gasperi cabinets, Signor Scelba was a "tough cop" feared by the riotous, Red-ridden Italy of that unhappy era. Today, after little more than a year as chief of state, he is the skillful moderator who maintains the precarious balance of the center-party coalition.

Within the government, Signor Scelba has built a commendable record despite the wrangling between conservative Liberals and right-wing Socialists and the intra-party difference between right and left factions of the Christian Democratic Party.

Outside the government, of course, the Premier's progressive policies have been a target for Communists and Nenni-Socialists and for the Monarchists and neo-Fascists

on the far right.

In foreign affairs, Signor Scelba settled the Trieste dispute with Yugoslavia and thereby stiffened the southern flank of European defenses. He figured largely in Italy's guick acceptance of the Paris agreements rearming West Germany and setting up a Western European Union under the North Atlantic Treaty Organization.

At home, the Premier has waged an effective campaign against communism. Social and economic reforms are advancing despite opposition inside and outside the regime.

As a most effective influence for stability in Italy and a proven friend of the United States, Signor Scelba well merits the heartiest welcome this country can offer.

One Hundred and Thirty-Fourth Anniversary of Greek Independence

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, on Friday March 25, every American of Greek descent had cause for personal pride and happiness because this important day was the 134th anniversay of the independence of Greece. Americans of every nationality join with their brother citizens of Greek descent in this anniversary celebration of the freedom of the great and independent Greek nation. Under the leadership of Archbishop Germenos a long time ago, in 1821, the gallant and courageous Greek people rose against their enemy oppressors. Since that valiant strife 134 years ago, Greece has fought successfully to maintain freedom and

The ancient ancestors of modern Greece are also the ancestors of western civilization and culture. The immeasurable contributions of Aristotle, Demosthenes, Socrates, Plato, together with many, many other towering names of ancient Greece civilization laid the foundation of modern culture and molded the pattern for our culture and intellectual western civilization. In their search for truth, the ancient Greek scholars made possible the development of modern civilization—by their constant and progressive elimination of the frontiers of knowledge. In philosophy, science, art, literature, politics, architecture and government they profoundly influenced not only the life of their times but the development of the western world. It is in this sense that every American can join in the celebration of this anniversary of Greek independence.

The many years of the independence of Greece, however, have brought many challenges to the Greek people and their freedom. Within our time people all over the world marveled at the courageous stand of Greece against the Fascist and Nazi invader. The valiant fight and ultimate victory over communism of the Greek people has been a source of inspiration for millions of people dreaming and hoping for freedom but still bound and oppressed by the chains of communism.

From those early days of 1821 to the present time, the people of America have aided and assisted the Greek people in their struggles to maintain their independence. Moreover, the United States is fully conscious of the honor and the advantages of having a vigorous nation such as the Greeks by our side in the struggle against Russian communism. The fact that recent United States aid has been given to Greece without any territorial or material gains on our part indicates to the Greek people that there is no imperialistic intent on the part of the United States, but only a desire to assist in sustaining Greek independence.

On the 134th anniversary of Greek independence the noble spirit of the Greeks is perhaps best expressed in the words of their leader, King Paul, in an address delivered before the United Nations General Assembly, during a trip to the United States, when he said:

With internal political stability and possessing Armed Forces whose organization, fighting spirit, and reliability are universally recognized, Greece stands alert. Should the powers of destruction at any moment dare to interfere in an attempt to strangle the salutary work of the United Nations, Greece stands ready to throw herself at once into the struggle at the services of the world organization.

In my home city of Lowell we are very proud of our American citizens of Greek ancestry. Their family life represents the finest. They have contributed many to the learned professions. Lawyers, doctors, teachers, and the clergy cooperate together with Mr. Citizen to give the community a neighborly spirit. They have contributed greatly to the defense of our country. They are among my close friends and for many years I have been grateful to them for their loyalty and honorable spirit.

Throughout the Commonwealth of Massachusetts there are many Americans with the excellent and noble background of the culture of Greece. Our Commonwealth and our country is a much improved place for life and living, for the strength of our defense, for the sturdiness of our character, for genuine happiness because they are with us, a part of us, in the constant building of this America, the greatest Democracy on earth.

Statehood Now

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA .

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial which appeared in the March 20 issue of the Pittsburgh Sun-Telegraph on Alaska and Hawaii statehood and a letter which appeared in the March 24 issue of the same paper written by Mr. M. J. Molans, who has long been an ardent statehood advocate:

END THE ARGUMENT

Statehood for both Hawaii and Alaska is recommended in the formal report of the House Interior and Insular Affairs Committee.

There are compelling reasons for taking the two Territories into full partnership with the Union, and there are only political reasons for not doing so.

Both are vital to our defense. Both possess substantial populations and economies. Their citizens are Americans. They

pay taxes.

To continue, year after year, to deny them their proper status of statehood and representation is to deny American ideals and give fuel to Communist propaganda.

The interminable argument should be ended, this session of Congress, with state-hood for both.

Statehood for Alaska has had no stronger advocate among American newspapers than the Hearst publications. In Pittsburgh your paper, with the editorials and the powerful cartoons by Burris Jenkins, has consistently urged and promoted statehood for our "step child" Territory. Your recent editorial, End the Argument, tells in the most forceful manner and finest words "the compelling reasons for taking into full partnership both Alaska and Hawaii."

You will recall my campaigning for statehood as far back as 1942 and that one of your editorials—much of which I quoted in letters sent to the Insular and Interior Affairs Committee, with a copy to Representative E. L. BARTLETT-was inserted in the CONGRESSIONAL RECORD.

For my part, I want to express my thanks and gratification for this particular editorial. Keep up the good work in behalf of both Territories.

M. J. MOLANS.

PITTSBURGH.

The Independence Day of the Greeks

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. RODINO. Mr. Speaker, many peoples associate their origin with certain heroes who have saved them from extinction, or who have performed some epic deed which has been of vital significance to the preservation or glorification of the nation. These half real and half legendary heroes are often presented as the embodiment of the national spirit, as the champions of national independence, or as defenders of liberty. The history and mythology of the ancient Greeks are full of such heroes-some of them real, some of them only products of the fanciful imaginations of poets. What is important is that these ancient figures, representing the spirit of freedom or other noble ideals, were among the first symbols of many of our Western culture's finest concepts. Greek history, literature, and mythology they have entered the broad stream of the best traditions of the West. For this reason our debt to the Greeks is immense. That is one reason why the celebration of Greek Independence Day is of such meaningful significance to Americans.

After many long and glorious years of history, in the 15th century the Greeks came under the sway of the Turks. For about 400 years they were subjected to the Turk's alien and unwanted rule. During those years it was not possible for them, without effective outside aid, to free themselves. But early in the 19th century, they saw their chance, seized upon it, proclaimed their independence on March 25, 1821. waged a long and uphill fight against their oppressors, and finally, after many years of fighting and with the aid and encouragement of their friends abroad. they regained their national political independence. Since then Greece has been free. As we have witnessed during recent years. Greece has guarded her freedom with constant vigilance and is determined to defend it against all foes. In joining this celebration we wish the Greeks success and prosperity in the years to come, and we promise them, as our allies, support in the defense of their priceless possession, their national independence.

Interview With Bishop Cuthbert M. O'Gara

EXTENSION OF REMARKS

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. FEIGHAN. Mr. Speaker, a distinguished American who spent many years of his life helping the good people of China, and who was a victim of Communist tyranny in China, affords the unknowing an opportunity to know the truth.

In a recent interview with the press, he pointed out that the American retreat from victory was no accident. He points out that the present predicament in which we find ourselves today is a result of the deliberate efforts of a small group of pro-Communist pseudo-intellectuals who still maintain a stranglehold on our free institutions. Under leave to extend my remarks, I wish to include the remarks of Bishop Cuthbert M. O'Gara, which appeared in the Sunday Visitor of March 20 and urge everyone to give them a very careful reading:

"The people of the United States do not appreciate the magnitude of the defeat the west has suffered since 1945," said Bishop "It is incredible that such a small group of pro-Communists, pseudointellectuals, should have effected in so short a time one of the greatest turnovers in the history of mankind.

Bishop O'Gara said this defeat could not be blamed on stupidity. He charges that it was brought about with full deliberation.

"No group of Americans could be that stupid," he charged. "The deliberate throwing away of our victory after World War II is confirmed by the whole list of stupidities since V-J Day. And these stupidities are still going on. Someone is directing this sell-out.'

BIG LIE GROWS BIGGER

The bishop told of the hope and confidence felt in Hunan, his diocese, when the Japa-nese had been defeated. There the Chinese felt secure, certain that the United States would help keep China free.

"But America tossed the fruits of victory away. The Communists were permitted to pour in and take over," Bishop O'Gara reports. "The United States was beaten, the Commies claimed, and their first big lie gained credence.

"That lie gained strength as we backed down in Korea, backed down in Indochina, and backed down in the Tachen Islands. That lie grows and feeds on each United States retreat."

The bishop charges that American leaders are aiding the Communists by not allowing Chiang and the Nationalists to move against the Reds. The excuses given by Washington for yielding the Nationalist islands off the

coast of China will not stand up under close examination, he contends.

Bishop O'Gara declared that the latest series of United States retreats falls into the same pattern that started with the defamation of the Chiang government immediately after World War II. He admitted that there had been abuses in Nationalist Chinaeven as there was corruption in Washing-Whatecer abuses there may have been in Nanking, these were puny, he says, when compared to the crimes against our people and against our Christian tradition by the United States officials who betrayed their own people and changed the history of the world by traitorously giving atomic and military secrets to Russia.
"But," he went on, "the Nationalist gov-

ernment was being shaped in the western tradition and was friendly. The United States should have taken a strong hand in holding the Nationalists in the camp of the free world."

CHINA BETRAVED

"American leaders could have rid China of the bad elements," said the bishop. "Instead we threw over a nation of more than 500 million by giving the Communists their strongest propaganda argument; we protected the ill-gotten gains of a few and present-ed the continent of China to our avowed enemies, the Soviets, who boast that they are out to destroy us.

"In the days when the Nationalists were being harshly criticized by our pseudointellectuals, pro-Red apologists, pinks, and fellow travelers, the Chinese Communists were being built up as a group of high-minded

agrarian reformers.

I only wish I could get out of China some of the people of my diocese who were hung up by the thumbs and who spent days cooped up in rice bins, and who could give you a better appreciation than I can of the benefits of agrarian reform."

Bishop O'Gara says that by our continued retreats and by yielding to those who cry for more trade with Iron Curtain countries, we are building up the economy of our avowed enemy, who time and time again has declared that his objective is to eliminate the United

States as a world power.

"Why should we help keep the Communists in power? Every report we get from released victims of Red China indicates that a push in the right direction would encourage the people to rise up against their Red oppressors. Besides we get no credit for our lar-gesse. Anything the Reds get through trade with the West is labeled before distribution as coming from the Communist Peoples Gov-

"Support for trade with China, whether originating in Britain or in the United States. cannot be written off as mere stupidity. It is deliberate. No one could be so colossally stupid.

Some person or group of persons is pulling the strings. Sentiment for trade with China is a deliberate policy inspired by Communist sympathizers right here on the home That must be evident to anyone who reads the record."

RED CHINA AND THE U. N.

One of the most disastrous developments of the cold war, according to Bishop O'Gara, is "the amazing sympathy in many circles in America and Britain to the idea of a place in the United Nations for Red China.'

The bishop can't get over the gullibility of the American people who fall for the line of the "quasi-intellectuals who are sounding off on every opportunity in a concerted drive to win support for a Communist China seat in the U. N."

"Hundreds of Americans are still languishing in Red prisons-hostages in Mao tung's drive for a U. N. seat," says the bishop. One atrocity follows upon another; colossal lies are spread against the United Statesthe most monstrous being that of germ warfare which was driven down our throats in jail-and still our legislators in Washington talk of recognition.

"To accept Red China in the family of civilized nations is like doing business with a bandit who has kicked you, maligned you, beaten you, and robbed you. Would you invite such a bandit to dine with you?

"How Mr. Churchill and Mr. Dulles and other negotiators of lesser stature in the free world can contemplate dealings with these evil men who come to the conference table with hands reeking with the blood of our soldiers and missionaries is beyond comprehension. If Red China is admitted to the U. N., every self-respecting delegation should walk out.™

REAPPRAISAL NEEDED

According to Bishop O'Gara, we must face the facts of the present international situation with a sober mind and make "an agoniz-

ing reappraisal."

"We instituted a blockade," he said, "but it was ineffective because we did not follow through. When Britain in the days of her ascendency declared a blockade, any ship attempting to break through was searchedas Americans know to their humiliation. But when America blockaded the China coast, British ships plied the China Sea doing business with an enemy. Has any accounting ever been made of the American lives lost because of this very broad and accommodating policy of our distinguished ally?"

Bishop O'Gara says that every time the United Nations retreat and the Communists advance, there are great demonstrations throughout the length and breadth of China. Schools are emptied, victory parades staged, and floods of lies are spewed forth by expert Communist propagandists. Bishop O'Gara explained: "All of it is designed to make maximum use of the fact that the United States has backed down again, is nothing but the 'paper tiger' Red propa-ganda has always pictured her to be."

The appeal to national and racial prejudices is most effective on the young students,

the Bishop stressed.

"The Communists already have had con-trol of the youth of China for 6 years. In another decade, the present generation will be irrevocably theirs."

PERSECUTED BY REDS

Bishop O'Gara almost died during his imprisonment. In fact, his recovery is not yet complete. He spoke with feeling against United States efforts to use material or monetary aid in building the free world's bulwark against communism. He deplored the "fabulous giveaway programs of the United States and the U. N. Billions of dollars have been poured into nations that

today are solidly against us.

"Sending monetary aid all over the world gained not one single friend. We shall never Win the goodwill or friendship of Asiatic countries with blandishments and lavish handouts. True-they will always come back for more; but when the time comes to stand up and be counted, they'll be found on the side that is militarily stronger and politlcally more aggressive and successful. Gratitude is not in the Communist lexicon. There is but one virtue and that is obedience of mind and body to the Peoples' Govern-

"We have the brains to work out the me-chanics of the atom bomb," the Bishop said. "Why can't we produce the thinkers who will come up with ideas of how to sell American democracy to Europeans and Asiatics?

"We try to sell them a purely mechanical way of life and they give a deaf ear to promises of motorcars, radios, and TV sets. Our programs are crude and only insult the finer cultural instinct of peoples much older than we. Why don't our spokesmen for America make an honest, even scientific, effort to find out what these peoples upon whom we shower our billions in a futile effort to make them our friends, are really interested in and really do want?"

John T. Jones, Labor's Nonpartisan League Head. Dead at 66

EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF TILINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an article eulogizing Mr. John Thomas Jones, director of Labor's Nonpartisan League, who died March 3, 1955. The article appeared in the March 15 issue of United Mine Workers Journal:

JOHN T. JONES, LABOR'S NONPARTISAN LEAGUE HEAD, DEAD AT 66

John Thomas Jones, veteran UMWA executive and director of the international union's legislative department, Labor's Nonpartisan League, died at 5:35 p. m., Thursday, March 3, in Emergency Hospital, Washington, D. C. Immediate cause of death was a blood clot that formed following surgery. Mr. Jones was 66.

President John L. Lewis, Vice President Thomas Kennedy, and Secretary-Treasurer John Owens, all of whom had been closely associated with Mr. Jones for many years, issued the following statement on his passing:

"The death of John T. Jones is a tragic loss to the United Mine Workers of America and to working people both in this country and abroad. Mr. Jones devoted his entire lifetime, from the time he first went to work in the British mines at the age of 13, to the advancement of the cause of the mineworkers and all working people.

"His loyalty to the coal miners and to organized labor was unmatched. His integrity and honesty down through the years of his career in the labor movement were unchallenged. In this difficult assignment as the UMWA's top legislative representative, Mr. Jones won the respect and friendship of public officials in all branches of our government from the local to the national level. His untiring work in behalf of a free labor movement in all countries brought him, in addition, the admiration of union leaders throughout the democratic world.

'Free labor has lost a devoted servant." Mr. Jones was born in North Wales, Great Britain, on May 31, 1888, the son of a Welsh coal miner, Joseph Jones, and Ann Lea Jones. He came from a family of 9 children, 6 boys and 3 girls. He left school while in the fifth grade to go to work in the coal mines of Great Britain at the age of 13. He immediately became a member of the National Union of Mine Workers of Great Britain.

Later Mr. Jones served in the British Army, from which he was honorably discharged on April 9, 1907, at the age of 19. He migrated to Michel, British Columbia, Canada, in October 1907, where he went to work in the mines again. He transferred his membership from the British mineworkers' union to the United Mine Workers of America. He had been a union member for 53 years, including 48 years as a member of the UMWA.

Mr. Jones left Canada in October 1908 to move to Pittsburg, Ill., once again to work in the mines. It was shortly after this that he

became acquainted with President Lewis and a close personal relationship continued for the remaining 45 years of his life.

Mr. Jones' first official position with the UMWA was his election as teller in district 12 (Illinois) in 1916, an office he held for 2 years. He served as a member of the old-age pension commission of the district from 1923 to 1924. Subsequently he became president of subdistrict 9 of district 12 in June 1929, and secretary-treasurer of the district from October 1929 to 1931.

It was during these trying days for the international union that President Lewis' trust in his friend and longtime lieutenant was proved. "John T.", as he was affectionately known in the organization, was selected by President Lewis as one of the stalwarts, wearing pit shoes, to take over the then maladministered district 12 organization that had been torn asunder by its leaders in their frenzied efforts to seize control of the international union.

Mr. Jones, as president of subdistrict 9 of district 12, with headquarters at West Frankfort, was in the midst of the intraunion battle. Later as secretary-treasurer of the district he fought for the international union against the dual movement of the

Illinois insurgents.

Following this experience in Illinois, Mr. Jones became one of the leading troubleshooters for the international union in the soft-coal fields. He went to district 19 in 1931, as international representative to work in Bell and "Bloody Harlan" Counties, Ky. He moved on to Washington as legislative representative in 1932 until 1933. May 1933, he was assigned to special organizing work in district 2 in central Pennsylvania. From there he moved to the Beckley field of West Virginia in district 17. In October 1934, he became president of district 16 (Maryland and part of northern West Virginia), a post that he held at the time of his death.

John T. became a member of the international executive board in August 1942. He was director of Labor's Nonpartisan League from July 1940 until his passing.

He played an important role on major committees in many international union conventions and was temporary chairman of the 1938 convention and introduced President Lewis to the delegates.

He served for many years as secretary of the National Bituminous Coal Wage Conference which negotiates agreements in the soft-coal industry. From December 1947 to April 1950 he was contract enforcement officer of the UMWA Welfare and Retirement Fund.

During the period when the UMWA was in the CIO, Mr. Jones served as president of the Maryland and District of Columbia Industrial Union Council, from 1937 to 1941.

In 1939 he was named by the Governor of Maryland as a labor representative on the commission to survey and revise the State's industrial accident commission laws. was a member of the advisory committee of the Bituminous Coal Division, United States Department of the Interior in 1941. During the same year he served as a member of the advisory group on Federal coal mine inspec-tions of the Interior Department.

In the international field, Mr. Jones repsented the UMWA at conferences of the Miners International Federation and the International Labor Organization, an agency of the United Nations. He attended the first conference of the ILO's coal mines commission in 1945.

Funeral services were held at the Hines Puneral Home, Washington, on Saturday, March 5. The services weer conducted by Dr. Frederick Brown Harris, Chaplain of the United States Senate and pastor of Mr. Jones' church, the Foundry Methodist Church, Washington. Dr. Harris was assisted by the Reverend F. Norman Van Brunt, associate pastor.

Hundreds of Mr. Jones' friends, including State and National Government officials, executives of the coal industry, the international-union officers, department heads and headquarters staff representatives of district 50, UMWA, and the welfare and retirement fund and several members of local union 6465, Mr. Jones' local in western Maryland, packed the flower-decked chapel in final tribute.

Among those in attendance were Senators MATTHEW M. NEELY, Democrat, West Virginia; HARLEY KILGORE, Democrat, West Virginia; ESTES KEFAUVER, Democrat, Tennessee; and Representatives ELIZABETH KEE, Democrat, West Virginia; and HARLEY O. STAGGERS, Democrat, West Virginia. STAGGERS inserted a special tribute in the Congressional Record on March 8 and Mrs. Kee extended her remarks in the Record to include the funeral sermon of Dr. Harris.

Others in attendance included Miss Josephine Roche, director, welfare and retirement fund; A. D. Lewis, president, district 50; Joseph T. Kennedy, secretary of mines for Pennsylvania; Harry M. Moses, president, Bituminous Coal Operators Association; Harry Gandy and Don Sullivan, representing the National Coal Association, and Arnold Levy, attorney, Indiana Coal Operators Association;

The commission representing the international union at the services included John Kmetz, district 1 international executive board member, chairman; John Ghizzoni, district 2 international excutive board member: William Hynes, district 4 international executive board member; Samuel Caddy, district 30 president; Hugh White, district 12 president; Ed Morgan, district 23 president; Louis Austin, district 11 international executive board member; Joseph Yablonski, district 5 international executive board member: John Busarello, district 5 president; Joseph Shannon, district 12 international district 7 international executive board member, and John J. Mates, district 9 international executive board member and assistant to President Lewis.

Mrs. Lee Meredith, a friend of Mr. Jones and member of his church, sang his two favorite songs at the service: The Lost Chord and In the Garden.

Burial rites were held in Indianapolis on Monday, March 7, at the Royster-Askin Funeral Home with the Reverend Dr. Ozzie D. Pruitt, of the First Baptist Church, and the Reverend Harvey J. Keiser, of the Washington Street Methodist Church, both of Indianapolis officiating.

anapolis, officiating.

Pallbearers were Ghizzoni, Hynes, Busarello, Yablonski, Stevens, and Austin. Honorary pallbearers were Kmetz, Morgan, White, Caddy, Shannon, James Miller, district 8 president; Robert Anderson, district 11 president; Ralph Day, district 11 secretary-treasurer; Bart B. Bloomer, district 30 representative; John Belcher, of district 12; Leon Yablonski, John McAlpin, L. H. Bell, and John J. Reld, international representatives.

In addition to being an active member of the Foundry Methodist Church, Mr. Jones was a member of the official board of the church and a member of the national lay committee of the National Council of Churches of Christ in America. He also was a member of the board of trustees of Westminster Choir College, of the Masons, and of the Congressional Country Club.

Mr. Jones is survived by his widow, Mrs. Esther Cossel Jones, assistant to Secretary-Treasurer Owens; a nephew, John T. Jones, of Falls Church, Va.; two sisters, Mrs. Mary Cumberlidge, of Langley, England; Mrs. Elizabeth Green of North Staffordshire, England; and a brother, Albert Jones, of Langton, England.

Illinois Honors the Late Dr. William J. Hickson, Founder of the Psychopathic Institute of the Municipal Court of Chicago

EXTENSION OF REMARKS

HON, RICHARD W. HOFFMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

HOFFMAN of Illinois. Mr. Mr. Speaker, under leave to extend my remarks, I desire to call to the attention of my colleagues the address delivered by Henry Goldstein, a distinguished member of the Illinois bar, at ceremonies honoring the late Dr. William J. Hickson, the founder of the psychiatric institute of the Chicago Municipal Court. In a day when the psychiatric causes of crime are receiving so much attention, it is most interesting to note that this was the beginning of the medical jurisprudence of psychopathic crime, and that this work was commenced a little over 40 years ago.

The address follows:

Distinguished members of the bench, the bar, the medical profession, the armed services, ladies and gentlemen, it is with a sense of profound affection to the memory of a great man that I am privileged to say these words of commendation. For a number of years, we who were privileged to have known and loved Dr. William James Hickson have kept alive in our hearts the memory of this great and beloved friend.

Chicago, the greatest medical center in the world, the home of the American Medical Association and the greatest institutions of medical learning and research, as well as nuclear sciences, at long last pays due homage to our departed friend and extend our thanks and deep appreciation to his distinguished wife and collaborator, Mrs. Marie K. Hickson. Thus, we have assembled here today.

As a young lawyer early in 1914, it was my good fortune to have been intimately acquainted with Chief Justice Harry Olson of the Municipal Court of Chicago. I was present at a meeting of the Judges of that Court while he was attempting to induce them to institute an innovation never tried in any court of record theretofore—a psychopathic laboratory to work in conjunction with the judges in the handling a cases in which the judges may see in the conduct of certain defendants, evidences of mental disturbances or deficiency, as in cases involving minors, delinquency, bastardy and such other causes that properly came before the judges in their respective courts.

He proposed that Dr. William James Hickson of the Vineland, New Jersey Feeble Minded Institute be retained on the recommendations of the American Medical Association and other legal medical authorities and kindred organizations.

Judge Olson foresaw the controversial issues that would necessarily follow, but, nevertheless, after many meetings and conferences all of the judges unanimously voted to retain Dr. Hickson and to have him proceed to set up the laboratory as an experiment. Of the 30 judges, all but 4 have gone to their reward. Those presently among us are: Judge Bernard P. Barasa, now residing in Florida; Judge John F. Haas, recently retired from the superior court of Cook County; Judge Edmund K. Jarecki, who recently re-

tired as Judge of the county court of Cook County and that distinguished Nestor of the bar, who is still sitting as a jurist in the circuit court of Cook County, the Honorable Harry M. Fisher. The elected clerk of the court, Frank P. Danisch has passed on, and the distinguished bailiff, at that time the Honorable Anton J. Cermak, was felled by an assassin's bullet, aimed at our late President, Franklin Delano Roosevelt.

Dr. Hickson was also a doctor of jurisprudence, having graduated from the Law School of Northwestern University and was thoroughly well grounded in the fundamentals of the law. He had stated, as it had often been said, that the main reason that social science—if there is such a thing—lags be-hind the physical sciences is because it can have no laboratory. You cannot put a government nor a section of human society into a test tube, but it is clearly possible to study the behavior of large numbers of human beings, to state uniformity of conduct among them, and to make accurate predictions as to the actions of these individuals under given conditions. This is clearly within the realm of empirical science—that is, science based upon experience and observation. It is the ultimate forerunner of rational science, which explains not only how but why things happen.

In this sense it was possible to use the laboratory methods in the study of human relationships—barring the obvious limitations in applying experimental methods in the study of human material; and, for this reason, Dr. Hickson believed that the psychopathic laboratory of the municipal court of Chicago had great social significance. It was the first public effort to apply scientific methods to the study of crime over long periods of time. Today, it is the largest crime clinic and clinic of abnormal psychol-

ogy in the world.

The medical profession was not prepared to accept Dr. Hickson's theories. There were scoffers, even in the higher echelon of the medical profession, who looked with suspicion and doubt, and often refused their cooperation. The legal profession likewise was suspicious and reluctant to cooperate, and awatted results before giving its tacit approval, but it must be said to the credit of Chief Justice Harry Olson and his associates—probably because of his obstinacy and dogged determination—the laboratory commenced to show great results.

The judges were not required to refer cases to the laboratory-it being understood that it would be discretionary with each judge and done purely on a voluntary basis, but it did not require much time to recognize the great work Dr. Hickson was accomplishing in a short period. Soon every judge hearing criminal, quasi-criminal, bastardy, and domestic relation matters and other causes was sending a tremendous number of individuals to the laboratory. As the laboratory found cases that were properly identified, such persons were sent for jurther examination to the Psychopathic Hospital of Cook County, where they were subjected to a week of the closest scrutiny and examination by a board of at least five of the most competent alienists and neurologists, who were members of the board.

The record discloses that nearly all cases referred to them by Dr. Hickson were sustained as to his clinical findings, and soon the medical and legal professions fully accepted his theories and embarked on an era of cooperation, which has continued from 1914 to this date. In the first 4 years he handled over 60,000 cases, a record never before equaled in the annals of medicine and jurisprudence, and this number increased each year. Today there is no doubt as to the absolute necessity of this great adjunct to our courts, but the time, efforts, and tremendous sacrifices of the Hicksons cannot be

fully appreciated, nor has the true story ever been told.

Dr. William James Hickson was a man of sympathy, great skill, and rare breadth of vision. He was homespun, modest to the point of retiring, completely uninterested in personal publicity, occupied only with making progress for the increasing benefit of his fellow beings, aspecially those afflicted with mental ailments. He accepted the slights, incurred contumely, stupidity, all quite as a matter of fact, realizing patience, persist-ency, effectiveness, hard work and long hours, and proof by actual clinical cases would speak louder than words. His splen-didly trained mind and vast experience qualified him for such a great undertaking. He was a brilliant organizer. His thought was for humanity, for constructive activity, to attempt to adjust the lives of the mentally unfit to their environment and to return to useful pursuits those who responded to careful treatment and painstaking effort. He had no time to hate—only time to serve, to love, to give. His career was filled with triumphs. He lived to see counterparts of his beloved psychopathic laboratories in the largest cities of our Nation, where today his theories and methods are employed and carried out under the guiding genius of expertly trained mental specialists. His conceptions reconciled the vast diversities between the legal and medical professions and have been the basis of the unity which is now recognized between the profession. Thus Chicago has the largest and psychiatric institute connected with its courts of any city in the World.

Dr. Hickson proved that all mental illnesses are not in themselves per se incurable and many individuals today are useful members of society because of the influence of the Psychiatric Institute. The vast knowledge and experiences of his many years of private practice in his field were supplemented by years of intensive study in the great clinics of Germany, Austria, Switzerland, and other European medical centers where he collaborated with some of the most noted specialists of the world. He worked with Professors Kraepelin, Ziehn. Oscar and Cecile Voight, Eugen Blueler, who coined the mental term "schizophrenia" and other great scientists to prepare him for the greater task he was to develop in America, and during all of these years sharing and collaborating in all his research and investigations and studying with him was his distinguished wife, Mary K. Hickson, a distinguished scientist in her own right, and a tireless worker.

Dr. Hickson had a philosophy that was exuberant. He believed that we should always take new courage, that every person should have some interest in some artistic or intellectual pursuit, that long continued emotional experience from unresolved conflicts can be dramatically destructive; that frustration and suppressed fears must be met With wisdom, reason, and dignity. To live long, not only in years, but in the enjoyment of them, we must understand and control the forces which threaten life. therefore, cultivate the will to live. We age, not by years, but by our emotional reactions to events; therefore, the problem is not to add years to our life, but rather add life to our years. These are only a few of the philosophical observations of Dr. William James Hickson, a friend of humanity, whose work stands as a beacon on which the foundation of time has builded well.

Being a man of great compassion, he had always hoped that there would be no institutions labeled "insane asylums" and that the courts of law would not make findings wherein individuals were classified as insane persons or lunatics, but that the institutions would be known as mental hospitals wherein persons afflicted with any mental illness upon adjudication would become patients. And he lived to see the day when his dream was realized.

Dr. Hickson from childhood received nearly all of his adult education in the State of Pennsylvania. As he always expressed the hope that at his demise he would be interred among the grandeur of the Pennsylvania hills, his good wife saw to it that his last wishes were meticulously carried He was a graduate of Duquesne University, University of Pittsburgh, and the Pennsylvania University. We, therefore, sa-lute the great Keystone States for having for a time loaned us this great savant and humanitarian. His life reminds me of a lone great oak that towers high above all the surrounding trees on the side of a Pennsylvania mountain, there in all its majesty, standing like a giant sentinel surveying the great forest, with an air of dignity and great self-assurance, weathering storm and calm, rain and shine, cold and heat, and all the inclemencies of the weather, ever erect, and constantly pointing toward heaven; and while I do not consider myself equal to the task, I humbly offer, and dedicate, this meager effort to one whom I honored and respected during life, and whose memory I revere and hold sacred for all time:

"O mighty stalwart sentinel, looking up to God,

Placid and caim, but firmly embedded in the sod,

Your mission was planned, on the side of the hill

To keep out erosion, keep the earth firm and still.

"Storms come and pass, and break weaker trees

As they bend and break, from the blasts of the breeze,

But you stand alone and majestically survey

So in memory, and thought, you still live today.

"There are men, just like trees, that battle throughout life, Though their splendid ideas meet antago-

Though their splendid ideas meet antagonism and strife,

But ultimate time, and the acceptance of truth.

Will conquer the cynic, and silence the brute.

"So farewell, dear friend, for your mission on earth

Made our scientists honor, evaluate your true worth,

Your name is immortal among scientists and sages,

For, from now, henceforth, you belong to the ages."

Thus, we memorialize a great friend and humantarian, whose work is being faithfully carried out by those who have so ably acquired additional knowledge in that great field of operation, namely, the psychopathic institutes of the various courts of our Nation, and it may well be stated that divine providence that animates all nature and all mankind must have said to William J. Hickson: "Well done thou good and faithful servant; enter thou into the joy of thy Lord."

Yalta Papers: Why the Uproar?

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1955

Mr. HOSMER. Mr. Speaker, a lot of partisan uproar has followed the recent release of the Yalta papers by the State Department. In large part it seems to be an effort to divert attention from the contents of the papers by attacking the way they were made public. Rather, the important thing to discuss is what happened at Yalta, and why it happened, so the lesson can be well learned not to let it happen again.

The decision to make the Yalta papers public was unquestionably right.

The American people are entitled to know the facts concerning the conduct of the Nation's foreign affairs. This is particularly so in this instance where the papers reveal the details of a conference as a result of which thousands of American casualties occurred on a foreign battlefield.

It is President Eisenhower's policy to inform the people concerning the conduct of the people's business. The Republican Eisenhower administration does not believe either in making secret deals which sell out our allies or which are deliberately kept from the American people.

The position of those who oppose making the papers public is inconsistent. In one breath they say there is nothing new in these papers. In another breath they say they contained information so sensitive and secret that their release has been harmful to the national security and to the relation with our allies.

From the standpoint of the Nation and the free world, it was particularly wise to make the papers public at this time. Suggestions are being made to hold another conference with the Communist leaders. As we consider whether such a conference should be held, the records of previous conferences should be made public so that they can be studied not only by the diplomats, but by the people of the free nations.

Only this way can we adequately be prepared to meet the ruthless tactics of the Communists at the conference table. We also will be reminded again that in the past a Communist's word has meant nothing once the papers were signed. Only by studying the record of previous conferences can we avoid making the same mistakes in the future.

The sensitivities of diplomats, either ours or those of our allies, cannot be the decisive factor in determining whether to make public the record of a conference held 10 years ago. No diplomat's face is worth the life of one American boy.

Editorial Columnist Larry Collins, of the Long Beach Independent newspaper, recently set forth the need for recognizing and understanding the mistakes made at Yalta in the following writing:

WHY THE UPROAR?

It is hard to understand why the Democratic leaders are so upset over the publication of the Yalta papers. They cry out that they have been released for political reasons. It would seem as logical to say they had been suppressed for political reasons. Those who object so loudly to their publication place themselves in the position of criticising the actions of President Roosevelt. Otherwise, why do they object to the publication of something the people have a right to know about?

It has been 10 years since the Yalta meeting. What was done at that meeting has changed the social, economic, and political complexion of most of the world. In the light of what we now know, wrong decisions were made at Yalta. But the wrong was ac-

tually in trusting the Russians. Had they lived up to what President Roosevelt expected of them, those decisions might have worked out for the best interests of world peace.

Before we accept this as a partisan criticism we should recall the decision made by Republican President Harding, after World War I. That decision resulted in an agreement to cut down naval strength of Britain, Japan and the United States. The United States sank some of their nearly completed great warships, An equal ratio of naval strength was to be maintained by each of the three nations.

The debacle of that conference resulted in World War II, Japan never lived up to her agreement. She continued building ships, regardless of the ratio agreement. We fell far behind, because we lived up to it. When Japan started making her conquests in Manchurla, we allowed her to continue. We were not strong enough, or were too fearful, to stop her. Had we maintained our strength and not sunk our ships, following World War II, there probably would never have been a World War II.

There were mistakes made in each of these conferences. The mistakes are important. But the suppression of the facts is the issue in the Yalta paper disclosures. When it is charged they have been disclosed for political purposes, the fact is overlooked that the conference was 10 years ago. It may well be asked: How long are such facts to be held secret? When are the people supposed to be told what has been done about their affairs?

It has been said that, by the disclosure of the Yalta agreement, we have broken faith with other nations, whose leaders took part in that conference. It is embarrassing to Mr. Churchill. But it is also an issue dealing with world policy. That means it is the people's business. They are entitled to know. Holding up the disclosures for 10 years should be long enough to satisfy any reasonable person. Whatever the reason, it is good for the people that the disclosures have been made.

The mistakes at Yalta should not be used for partisan purposes. The Democratic leaders are emphasizing the issue by their bitter denunciation of their disclosure. It would be much more reasonable to accept the issue on its merits and learn a lesson. That lesson should be that secret diplomacy is dangerous for democracies. It should convince anyone that the Communists cannot be trusted. Leaders of both parties should accept the disclosures from these viewpoints and stop the cry of partisanship. Mistakes are not confined to either party.

L. A. C.

Toward Peace

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following editorial which appeared in the March 25, 1955, issue of the New York Journal American:

Toward Peace

Israeli Ambassador Adda Eban proposed Wednesday in the United Nations Security Council that Egypt and his nation join in a code of peace in the Middle East. It appears to us the proposal has the merit of an earnest effort to remove the cause of inflammatory outbreaks and should receive equally earnest reception.

We are not taking the position of passing off lightly the recent very unfortunate incident at Gaza. But it will do no good to consider it as an isolated instance. It needs to be related in the context of the whole regrettable series of border raids and reprisals involving Israel and the Arab nations, which as long as they continue endanger peace and benefit nobody but the Communists.

There is no real peace in the Middle East, but merely a restless armistice. The Security Council is working on a resolution dealing with Israel-Egypt in connection with the Gaza violence. We respectfully suggest that a vigorous design for peace based on the total aspects of the problem belongs in its considerations.

Prosecutor Speaks Up for the United States

EXTENSION OF REMARKS

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. MUMMA. Mr. Speaker, last November I was in the Panama Canal Zone at the time the late President Ramon was in Washington for the purpose of negotiating a new treaty, providing for an upward revision of the annual rentals paid the Republic by the United States and further restriction and control of Uncle Sam's activities looking toward proper administration of the Canal Zone.

Today I received a letter from a supervisory employee of the United States Commissary Division, Panama Canal Zone, enclosing clipping from the March 24 edition of the Star and Herald, the well-known Panamanian daily newspaper, entitled "Prosecutor Speaks Up for United States." Concerning this clipping, my friend said:

In my 44 years on the Canal Zone I do not think I have seen published a more honest expression of approval of Uncle Sam by a Panamanian. By honest, I mean there was no outstretched palm in this instance.

Pursuant to the privilege granted me, I include the article from the Star and Herald in these remarks. It is as follows:

PROSECUTOR SPEAKS UP FOR UNITED STATES

Dr. José N. Lasso de la Vega, who is prosecuting ex-President José Ramón Guizado in the current trial in the National Assembly, turned defense lawyer briefly yesterday.

He spoke up for the United States.

The special prosecutor digressed from the case to comment on United States policy toward Panama and Latin America in general. This occurred when he referred to a passage in the evidence that \$50 million was to be sought for Panama as compensation for damages it has suffered from the United States over the Panama Canal.

Noting that thousands of citizens are listening to the broadcast of the Assembly trial, Dr. Lasso de la Vega said this was a fine opportunity to convey a message to the people. He said:

"The Republic of Panama has never suffered damage at the hands of the United

States. It is a mistake to believe that the Panama Canal is harmful for Panama. The Panama Canal has been providential. Thanks to the canal, our country has developed apace with other countries.

"The truth is that Latin American ollgarchies, in order to conceal their own impotence, throw the blame on the United States and, hence, we are led to believe that the United States is an adversary, an enemy. * *

"What we derive from the Panama Canal is much more than \$50 million. But the rulers of our country have not found the means to have this money reach the people of Panama. Fifty million dollars is an insignificant amount in comparison with what Panama gets through the canal.

"What happens is that our governments fight the cause of Lebanese, East Indians. Chinese, Turks, and Syrians who are the ones who are absorbing the wealth entering the country. The truth is that the oligarchic Panamanian governments have been antinational governments, governments which create conditions for nonnationals to become rich."

Remarking that the United States no longer gives away cash gifts to other countries, the prosecutor added: "Nowadays, we have the Truman doctrine of technical assistance. Through the point 4, as it is called, we are receiving great benefits from the technical missions."

Republican-Eisenhower Administration Strikes a Blow For Peace

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. HOSMER. Mr. Speaker, not only in the United States but throughout the world opinion has strongly endorsed President Eisenhower's recent move to establish what is in effect a Secretary of Peace with Cabinet rank.

Not only are Americans reassured that our administration sincerely desires to solve the vexing problems that lead to armed conflict amongst nations but as well the whole world has been given further proof of our high intentions, notwithstanding the constant barrages of Communist propaganda to the contrary.

An editorial appearing in the March 23 issue of the Long Beach Press-Telegram newspaper explains in further detail:

THE NEW CABINET POST

President Eisenhower's creation of a Cabinet rank post for the framing of policies on the problem of disarmament is such a simple and desirable step that it's amazing it wasn't taken before by the head of some government.

We and other nations have always made war departments a prominent part of government.

But from the standpoint of world opinion alone, the setting up of a disarmament department would seem the obvious corollary.

Just as he did when he proposed the atoms-for-peace plan, the President has put the Russians a stroke behind in the peace propaganda field.

With the world on edge over the prospect of atomic annihilation, Ike again is showing that at least the United States is doing what it can to promote peace.

The new Cabinet post doesn't mean, of course, that we are about to throw our atomic and hydrogen weapons into the ashcan, leaving us at the mercy of militant and aggressive Communists.

It means that Harold Stassen, as Presidential Assistant for Disarmament, will conduct a comprehensive and organized study of the whole broad question of disarmament:

"He will be expected to take into account the full implications of new weapons in the possession of other nations as well as the United States, to consider future probabil-ities of armaments and to weight the views of the military, the civilians, and the officials of our Government and of other govern-

Most Americans, we think, understand how foolish it would be to agree to some disarmament plan without assurance of good faith from Russia.

But there are some who have fallen for the line that if we set an example by junking our weapons, such a gesture of faith and brotherly love will cause the enemy to lay down his arms.

An organized study such as the one in the offing will help emphasize realities.

At the same time, it will show we are as interested in the problems of disarmament as in the problems of armament. When all nations sincerely establish such a balance of interest, the crusade for peace will have been won.

United Nations Costs 56 Cents a Year for You. According to Christian Science Monitor Newspaper Editorial, March 22, 1955

EXTENSION OF REMARKS

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent so to do, I am pleased to present to the attention of all the Members of this great legislative body a short but very pertinent, informative editorial appearing in the Christian Science Monitor, Tuesday, March 22, 1955:

FOR U. N.: 56 CENTS A YEAR

From complaints, printed or otherwise, one might infer that American participation in the United Nations is very expensive. In absolute figures it is. For the current year the United States contribution to the U. N. budget is \$13,407,290, plus \$10,894,300 for related agencies, and \$68,354,871 for tech-nical assistance, Korean relief, Palestine relief, Chidren's Fund, and other U. N. special programs. This totals \$92,656,461.

Yet it comes out of a Federal budget calculated in billions. When the cost is spread over more than 150 million persons, the American Association for the U. N. figures that an average citizen's share of the direct cost of United States membership in the U. N.—the contribution to the U. N. budget is only about 8 cents a year. And that when all the U. N. agencies and programs are added, the total cost to the average American is about 56 cents a year.

By comparison, the AAUN News remarks, the United States military budget is nearly

\$400 per year per person."

Of course, most tax bills are greater or less than the average. So another way of figuring it, roughly, is this;

Out of approximately \$63 billion of estimated total expenditures in next year's Federal budget, \$34 billion are allocated to the armed services, not counting military aid That represents nearly 54 percent of each tax dollar.

As against the budget total, the \$92 million or more for U. N. purposes represent just about one-seventh of 1 percent of the American tax dollar.

In other words, whatever your tax bill (if you are an American), you can figure out of each \$100 you pay, approximately \$54 goes to preserve peace through national armament and defense organization, while approximately 14 cents goes to promote peace through international cooperation and humanitarianism. Does the 14 cents seem out of proportion? If so, on which side?

Letter Regarding Universal Military Training

EXTENSION OF REMARKS OF

HON, THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a very interesting letter which appeared in the Lynn Telegram-News, of Lynn, Mass., on March 23, 1955, which warrants the consideration of Members of the Congress:

LETTER TO EDITOR

DEAR EDITOR: This week may see the making of one of the most critical and farreaching decisions in the House of Representatives which America has ever been called upon to make. In spite of the serious nature of this decision, the newspapers have given very little, if any space to a discussion of the nature and importance of the proposed bill. This may be—and I suspect it is—because it has been handled intentionally in such a way that the major news agencies either were not assisted or they were asked not to make much use of it. I believe our local press is willing to present the news and is also willing to permit free, frank, and ample discussion of its controversial features. Because of that conviction, I am asking this opportunity to state the issue, to make it clear that I think it would be tragic for our country to adopt such a proposal, and to invite further discussion, both pro and con, in order to use the democratic process of a free press to help reach intelligent convictions about this critical issue.

What is the issue? Briefly, the proposal is H. R. 2967, which is due to come out of committee this week on the floor of the House of Representatives. Its purpose is to provide a modified universal military training and compulsory reserve system as a permanent peacetime part of American life. It would be compulsory; it would place every physically fit young man in the country under military control for a period of 8 to 10

Please note that this is not the regular voluntary enlistment program of our armed services. Nor is it selective service. The House has already approved H. R. 3005, the bill to extend selective service for 4 years. This in itself is, in my opinion, a tragedy for our country, and I hope that the Senate may find some way to reverse this trend, which in effect brings permanent conscription in small doses. But to add this clincher in the form of H. R. 2967 will, it seems to me, close

the door so hard on military regimentation that the United States will never be able to unshackle itself again.

The basic feature of the new bill is a proposal to take every young man for 6 months of basic training, then keep them for an additional period of 8 to 10 years under weekly or annual guard training. It is very noticeable that the Navy and Air Force do not want this; only the Army. Everyone knows that a modern soldier cannot be knows that a modern soldier trained in 6 months for highly technical warfare. This is obviously not the purpose. The purpose can be basically for only one thing: indoctrination into the military way of doing things. This to me means regi-mentation; lack of personal freedom; increasing the military power through local establishments in every city across the country; suppressing the freedom of the newspapers; controlling the budget of the United removing the effective control of education of our young men from the home, the schools, the colleges to the Army; capturing the moral power and force of our churches. It would mean, in short, the beginning of military regimentation as a first step in totalitarian control of our country.

I am very glad that President Eisenhower has announced the new post of what has been informally called "Secretary of Peace," to study the possibility of disarmament. If he is really serious about this, I think we ought to call on him to oppose UMT, and begin to practice in his official acts those measures which will show his desire to make it possible to disarm. I think we all realize, as the President does, that atomic and hydrogen warfare would be suicide for United States and Russia alike. We simply cannot longer put our trust in nuclear warfare or the military regimentation which prepares for it. Even less can we afford to begin the process which leads to totalitarianism in our own country, thus opening the door to fascism in the name of defense against communism. I am opposed to both. And my opposition is based on practical, political, and humanitarian, as well as religious and moral principles. If America ever has either of these, it will be because we are asleep, indifferent, unconcerned, and let measures such as UMT (H. R. 2967) slip through Congress without even knowing or doing anything about it.

We tend to think it couldn't happen here, as it has in Italy, Germany, Russia, and more recently in China. Well, it can. If it can happen in a nation with the culture of Germany, it certainly can come about here. One of the most disturbing features of the whole issue is this: It is proposed as a method to stop communism. On what does the power of communism rely? Basically on military regimentation and absolute control. Then if we adopt this elementary form of UMT. we are actually adopting the basic instru-ment of totalitarianism. How absurd and suicidal can we become? To adopt ourselves the thing that we say we are opposing.

One of the strongest arguments in favor of UMT is that it is democratic. It will be voted on by Congress and will reach everyone alike. Here again, what has happened to our reasoning? We are saying it is democratic to vote away for our entire future as a nation our basic democratic, civilian control. If Congress were to vote that we should all be annihilated by a hydrogen bomb, one just like the other that, too, would be democratic under this definition. For heaven's sake, let's keep civilian control in the hands of Congress, the White House and Supreme Court, and not turn over our foreign policy, our budget, our educational-propaganda program to the Pentagon.

For the past 15 years, similar measures have always been defeated, primarily because of the opposition of the labor unions, the farmers, the women, and some of the church groups. I cannot agree on the basic defense policies with our own local representatives,

but I am deeply grateful and want to express my appreciation for recent statements by Congressmen Thomas J. Lane and WILLIAM H. Bates. Representative Lane wrote me recently that he had "never supported legislation providing for universal military training, and you may be assured that I shall continue in my objection against enactment of such legislation." Representative Barks "I opposed universal military training said: when it was presented to the Congress a few years ago, and my views concerning that type of legislation have not changed." Representative PHILIP J. PHILBIN is a Massachusetts member of the Committee on Armed Services, and he wrote me recently concerning UMT: "I have vigorously op-posed this proposal and you may be sure that I will oppose it if the will oppose it if it is again presented to the Congress."

I would like to see all our citizens, and especially the parents of children under 18, write, wire, telephone or go to see our Congressmen and urge them to keep control of our Government in civilian hands, and not give more power to the military machine.

I want to thank this newspaper for the opportunity of free public expression on this issue.

Sincerely,

J. FLOYD MOORE.

Unemployment Insurance in Alaska

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1955

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I desire to call the attention of the House to a letter written to Secretary of Labor James P. Mitchell, on March 24, 1955, by Mr. William F. Schnitzler, secretary-treasurer of the American Federation of Labor:

MARCH 24, 1955.

Hon. James P. Mitchell, Secretary of Labor.

United States Department of Labor,

Washington, D. C.

Dear Mr. Secretary: We understand that tomorrow, March 25, the Territory of Alaska's unemployment insurance fund will be depleted. Workers who have qualified, or will qualify, for unemployment-insurance benefits, will not receive those benefits because of the exhaustion of the unemployment fund. We are also aware, as you must be, that the distress that will result from failure to pay unemployment benefits to Alaska workers is directly due to the fact that Territorial Governor B. Frank Heintzleman has refused to request an advance from the Federal loan fund which is his right—indeed his responsibility—under the law passed by Congress last year.

We have been informed by the Alaskan Territorial Federation of Labor that the Governor refuses to apply for such advance of funds demanding that the Territorial Legislature adopt his own amendments to the Alaskan Unemployment Insurance Act.

The situation is this, Mr. Secretary: A bill that is sponsored by labor and other interested groups contains essentially the provisions which you and President Elsenhower have asked for. It goes beyond your suggestions only in that it requires an employee contribution in order that the fund may move more rapidly toward solvency. On the other hand, the administration's appointee in Alaska, Governor Esintzleman, is sup-

porting and attempting to force through amendments which are so victous as to raise a serious question as to whether, in the event they become law, Alaska would, in fact, have an unemployment compensation law as required by the Federal Social Security Act.

This is an amazing and distressing picture. Here is the Governor—an appointed official, in no way accountable to the people of Alaska—using his protected position in an effort to intimidate the legislators of Alaska who are elected by, and accountable to, the people of the Territory. Moreover, we are informed the Governor is using his power in this unequal struggle to force through a program which is directly opposed to the recommendations of the President who appointed him. If he is successful, he will jeopardize the welfare of thousands of workers and their families in Alaska, as well as the economy of Alaska itself.

We have supported the legislation in Alaska which meets the requirements of your letters of February 16 and November 27, 1954, to the State and Territorial governors. We are prepared to utilize every available resource of the American Federation of Labor and the Alaska Federation of Labor in support of such measures. I should like respectfully to ask you, Mr. Secretary, whether you are also willing to use every resource of your Department in support of the unemployment compensation program which you have recommended.

Sincerely yours,
William F. Schnitzler,
Secretary-Treasurer, A. F. of L.

Proposed Commission on Ethical Practices

EXTENSION OF REMARKS

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. ASPINALL. Mr. Speaker, March 23, my good friend from the First District of Connecticut introduced a bill having for its purpose the establishment of a commission on ethical financial practices. May I state at the outset that I am heartily in accord with the objectives of such a bill. I regret exceedingly, however, that in the course of his remarks, the gentleman from Connecticut, for whom I have a high personal regard, made statements which caused me to believe that in his own mind he already had formed definite conclusions of guilt for certain individuals and business enterprises and is ready to publish to the world such alleged guilt without giving the legislation which he sponsors an opportunity to accomplish that for which it allegedly is sought. This smacks too much of questionable legislative activities which have become all too common during these times. My colleague from Connecticut is entirely justified in explaining on the floor of the House the reason which prompted his action in the introduction of legislation which he sponsors. However, I find myself in disagreement with any procedure which makes it impossible for the accused to answer in the forum in which the accusation has been made.

The seriousness of this matter is not minimized one bit when I realize that what really is involved is a stockholders' fight in a heretofore rather unknown business corporation. The floor of this legislative body is not, in my opinion, a good battleground for warring shareholders of a private corporation; nor is it a fit place to carry on an election contest for the board of directors of any private enterprise. The gentleman's proposed legislation provides the forum for the contest. Why did he not wait for the arena to be built? Surely the alleged immoral actions—no illegal activities having been alleged—could await an authorized and proper investigation.

I am confident that my good friend the Representative from Connecticut, when all of the facts are placed of record, will agree with me that his remarks unfortunately could be, and may I advise are being used to create misleading impressions to create an unfair advantage in a private dispute. I am sure that he would be the first to wish the record corrected when all of the facts are known to him. I think that it would be well, therefore, to review briefly the history of Penn-Texas operations since Mr. Silberstein, whom my friend attacks, assumed leadership of that great enterprise.

Approximately a year ago the Penn-Texas Corp. acquired ownership of a company in my State of Colorado. I am happy to say that far from having any detrimental effect upon that company, the Penn-Texas ownership and management has brought it great strength with resulting benefits to the company and its employees. As far as I personally am concerned, I would welcome further such enterprises in the State of Colorado because I know that it would be good for the State and good for the country.

One of the directors of Penn-Texas Corp. is Oscar L. Chapman, former Secretary of the Interior. I have known Oscar Chapman intimately since 1922. His reputation for honesty and integrity is well-known throughout this country. Together with all Coloradans, I am proud of his career in the public service and of his lifetime devotion to the public interest. I want to say, Mr. Speaker, that Mr. Chapman has discussed this matter with me and that I have the utmost confidence in his judgment.

I have also had the pleasure some time ago of meeting Mr. Leopold D. Silberstein, president of Penn-Texas and, I must say, I was very favorably impressed by the man and by what he has been able to accomplish. About a year ago, Penn-Texas acquired a company in my home State of Colorado and that company is now well on its way to becoming one of the leading producers in its field.

Mr. Speaker, the story of Penn-Texas is a success story in the great American tradition. Leopold D. Silberstein took over the management of Penn-Texas, then known as the Pennsylvania Coal and Coke Corp., in 1949. At that time, the assets of the organization consisted of three bituminous coal mines operating at a loss. Since 1949 the company has grown into a multimillion dollar corporation operating at a profit and paying

liberal dividends to its stockholders and good wages to its employees.

In common with many American firms seeking to protect their stockholders against violent fluctuations in the business cycle, Penn-Texas Corp. adopted a policy of diversification. Through its subsidiaries the company now owns a controlling interest in a profitable oil and gas property in Texas; it operates three ocean-going freighters, all under the American flag; it is one of the country's leading producers of wire and cable; it is one of the Nation's best known producers of railroad and shipyard cranes. traveling bridges, and dockside unloaders; and it has recently acquired the Bayway Terminal Corp. of New Jersey. one of the largest facilities for handling rail and water shipping on the Atlantic seaboard. Moreover, as I have already mentioned, Penn-Texas has taken over the Quick-Way Truck Shovel Co. of Denver, Colo., the first company in America to develop and produce in volume a complete line of truck-mounted cranes and shovels. I am advised that Quick-Way is now expanding its work force and rapidly becoming one of the leading producers of earth moving and material handling equipment in the Rocky Mountain States.

Apparently, Mr. Speaker, the Silberstein management has been very good for the corporation. It is my understanding that during the period of which I have spoken the company's common stock has tripled in value. In addition, Penn-Texas has increased its work force and payrolls many times over. A gratifying amount of Penn-Texas products and services are going into our Nation's de-

Mr. Speaker, I hesitate to interject myself into what I consider a private business dispute. These are matters for the stockholders to decide, not someone on Capitol Hill. Nevertheless, when any American citizen, or any American corporation is unfairly attacked I believe there is a moral duty to set the record straight and to afford an opportunity to tell the other side of the story.

fense program.

I have done my best to get the best advice available in this matter. The matters of which I speak are matters of record and could easily have been checked before any derogatory statements were made.

Various statements were made by my Food friend from Connecticut which leave the unfortunate impression that somehow there is something wrong with the Penn-Texas interest in Niles-Bement-Pond. The impression is left upon the record that somehow the Penn-Texas stock was acquired in a secret raiding operation and that in some way there is a cloud over the officers and directors of Penn-Texas. I am informed that the record shows that this is not so.

The fact is, Mr. Speaker, that Penn-Texas, according to my information, acquired its stock in Niles-Bement-Pond through open purchases through recognized brokerage houses and that Niles-Bement-Pond was on full notice of these acquisitions. It is a matter of record that Penn-Texas has openly invested millions of dollars in Niles-Bement-Pond

stock and that Penn-Texas owns almost 50 times as much stock as all of the present Niles-Bement-Pond management combined. Certainly it is elementary fair play that persons with so heavy an investment should be entitled to some voice in the management. Yet, Mr. Speaker, when the Penn-Texas interests requested a minority voice in management I am told that it was refused. Surely we are not arriving at that point in this country where one has to be a second generation American to purchase stock on the open market.

With reference to this latter aspect of the controversy between Niles-Bement-Pond and Penn-Texas, I am informed that it is a fact as alleged that Mr. Silberstein was born in Germany. I also have been advised of some other pertinent facts which I am glad to place on the record. I am told that he was a respected member of the Berlin Stock Exchange before he was 30. He left Germany when Hitler took over, and moved to Holland. He was a member of the Dutch Army when Holland was invaded. He fled to England before the onrushing Nazi Armies and along with thousands of other Germans of Jewish extraction, he was interned and sent to Australia. Before the end of the war. the British had brought him back to England and he is highly regarded in British official and financial circles. He is now a United States citizens.

Mr. Speaker, the fundamental principles of fair play and equal opportunity for all have made this Nation the greatest Nation on earth. Every time an attack, however unintential or ill-advised, is made on those principles, it is an attack on all of us and upon our most priceless heritage of freedom. I am proud that this great body is available as a forum to repair any damage which may have been done.

Defense Essentiality

EXTENSION OF REMARKS

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks, I should like to include in the Record an editorial from the Washington Post and Times Herald of March 28, 1955;

DEFENSE ESSENTIALITY

Publication of the Defense Department report on the essentiality of the jeweled watch industry justifies the complaints made last summer that political considerations were dominant in the decision to raise the watch tariff. At the time of the President's announcement, a number of critics termed the decision one of expediency rather than of principle. The Defense Department report, which the President had before him at the time, says that while the jeweled watch facilities "clearly represent excellent and desirable capacity, the needs of the Department of Defense for industrial capacity clearly demonstrate that no special nor pref-

erential treatment for the industry is necessary." Despite this, the Office of Defense Mobilization, relying chiefly on a Commerce Department study, concluded that the industry ought to be protected for defense reasons.

The importance of this report now belatedly smoked out to the embarrasment of the administration is not so much its disclosures with respect to the watch decision but with respect to other industries also seeking relief on the claim of defense essentiality. Nearly every industry that is asking for tariff relief maintains that it should be protected for national-defense reasons. Many of these industries are essential, and virtually all of them contribute to the industrial strength of the Nation. But the question for the Government to decide is whether high tariffs actually contribute to their strength or merely add an unnecessary burden on the consuming public.

Tariffs do not necessarily strengthen a dying industry; nor do they give new life to an industry that is noncompetitive in the world market. The administration should determine whether the American watch industry is any stronger today by reason of the high-tariff protection it is enjoying. All that anyone can be sure of is that watches cost more than they did before the tariff increase. If, contrary to the Defense Department conclusion, tariff protection of the domestic industry were essential to the national defense it would be necessary to provide some kind of assistance other than tariff relief which has the quadruple disadvantage of lessening competition, adding to the cost to the consumer, allenating a friendly country, and checking American exports. The adminischecking American exports. tration, however, has been as slow in seeking alternative means of aiding a crippled industry as it has been quick to rely on hackneyed arguments for the tariff when political pressures are applied.

Another Act of Soviet Treachery

EXTENSION OF REMARKS

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. KLUCZYNSKI. Mr. Speaker, 10 years ago today, 16 top Polish underground leaders were placed under arrest in Moscow. Only 2 were since released and the other 14 have not been heard from.

All of these 16 leaders went to Moscow in good faith and belief that a peaceful solution of Polish-Soviet problems was to be arranged. They had accepted an invitation from Marshal Zhukov to come to Moscow to implement the Yalta agreements, for the creation of a Polish government after World War II hostilities ended. They were given guaranties of safe return to Poland.

Today, when we contemplate the recent disclosure of the Yalta agreement, this incident should be kept in our minds. It marks one of the darkest passages of recent international history and serves as an everlasting monument of Soviet treachery and perfidy.

How can we even consider having any further meetings with these same leaders, until they satisfactorily explain their treacherous conduct in this instance, and until they order the release of each of the remaining gallant Polish leaders?

Had these men not been imprisoned, Soviet Russia would never have succeeded in enslaving the Polish nation. These leaders would have led a resistance movement that could have changed the entire course of world history.

I sincerely hope that our representatives will refuse to consider any further meetings with the Soviet representatives until positive action is taken to make amends for this and many other acts of Soviet treachery.

The Arab League: Happy Band of Schemers

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. CELLER. Mr. Speaker, under the leave to extend my remarks in the Record, I include the following article from the Reporter by Ray Alan:

THE ARAB LEAGUE: HAPPY BAND OF SCHEMERS (By Ray Alan)

A strange silence, born of exhaustion and a sense of utter futility, fell over the assembled Arab League Premiers and Poreign Ministers. The date was Sunday, February 6; the place, Cairo. They had been conferring, arguing, and at times shouting for 2 weeks in an attempt to coordinate their views on the Iraqi Government's decision to sign its American-sponsored pact with Turkey.

The deadlock was complete. Some delegations were even divided within themselves on the issue. The Lebanese Foreign Minister had argued violently against a proposal introduced by his Premier; the Jordanian Foreign Minister had been ordered by his Government to vote against a resolution he himself had sponsored; a leading member of the Egyptian delegation, Mahmoud Riad, had contradicted his chief, Lt. Col. Gamal Abdel Nasser.

Colonel Nasser rose to his feet. "Well, gentlemen," he observed, "we seem to have said everything that can be said on this matter. Shall we now draw up the usual communique reaffirming our complete untity of purpose and the unshakable solidarity of the Arab League?"

The statesmen emerged from their final session wreathed in rather sickly smiles, but the "usual communiqué" was, for once, not issued. Colonel Nasser called a press conference to drive home his threat that Egypt would leave the Arab League's military alliance the day Iraq signed the pact with Turkey.

But it was King Saud, of Saudi Arabia, who summed up the conference in the bluntest terms. After warning the Arabs of the danger of becoming "a saddle for imperialism" and "cannon fodder for the sake of the imperialists," and of being involved in "an all-out war in which our lands would be destroyed merely for the sake of others," he declared "The Arab League is dying.

Its pillars are already crumbling."

A NEW YORK OFFICE

An Egyptian diplomat in France told one of his western opposite numbers a few days before this was written: "I always expected that when the Arab League's grave came to be dug, it would be Arabs who did the digging. I never expected the United States Government to lend a hand." His is a view that is being echoed throughout the Near East.

As it now stands, the Turkish-Iraqi pact is a puny instrument, even though Washington officials were reported by the United Press on February 13 as having interpreted it as meaning that "Iraq can now be counted upon to resist [Russian] aggression."

The pact provides only for noncommittal military staff consultations and the exemption from customs duties of military stores passing through either nation on the way to the other. The Iraqi Premier, Nuri Pasha, has twice declared, notably in the Bagdad Parliament on February 6, that whatever arrangements he may make with Turkey are directed primarily against Israel, and that anti-Israel measures come higher on his list of military priorities than anti-communism. Nevertheless, Arab opinion remains skeptical. It regards Nuri Pasha's involvement in a western pact, however toothless, as an abject sellout to imperialism.

The State Department must have foreseen this reaction, intelligent Arabs argue, and must have been warned by its men on the spot that the outcome would be the disruption of the Arab League in its present form. Presumably, therefore, the United States wanted to destroy it.

On the other hand, the League's secretarygeneral, Mohammed Abdel Khalek Hassouna, a former Egyptian Foreign Minister, brought back from Washington last October the impression that the State Department took a sympathetic view of the organization and of himself.

Hassouna had asked permission to open an information office in New York for the purpose of conducting Arab League propaganda. State Department officials told Hassouna, he claims, that they saw no objection, politely adding the diplomatic equivalent of "Keep your nose clean."

An objection did subsequently arise, however, over Hassouna's request for diplomatic immunity for the proposed office. This privilege was required to safeguard the secrecy of the office's communications with Cairo as well as—in the words of an Arab source—to protect it from American Zionist attacks, including libel suits. The State D-partment rejected his request on the ground that diplomatic status could not be accorded a non-governmental agency.

The Arab solution of the problem was ingenious, to say the least. The Arab League Information Center is just about to open its doors in New York at 445 Park Avenue. Housed in the same suite of offices are the Arab League mission to the U. N. and the Yemen delegation to the U. N. Chief of all three agencies is an Egyptian diplomat, Kamel Abdel Rakim, former Ambassador in Washington, who now, as Yemen's Ambassador to the U. N., enjoys diplomatic immunity not only for his own person but also for the premises he occupies, which happen to be coterminous with those of the Arab League Information Center.

WHITEHALL GETS PANICKY

The Arab League—Egypt, Syria, Lebanon, Transjordan, Iraq, Saudi Arabia, and Yemen—came into being in March 1945. (Libya joined later.) Its creation marked the point at which the desires of the British Foreign Office and the ruling Arab oligarchies met for an instant, and then drew away from each other, never again to attain the same identity.

The Iraqi royal family and the then Emir Abdullah of Transjordan could be counted upon to aline themselves with Whitehall, which had supplied their thrones, Britain's defeat of Rashid Ali and the Iraqi military junta in June 1941, the British occupation of Syria, the same month, the ultimatum to King Farouk forcing him to accept Nahas Pasha as his Premier in February 1942, and, finally, the victory over Rommel at El Alamein convinced Arab ruling circles generally that Britain would be the arbiter in the postwar Near East—at least until a greater power came along. Moreover, that majority of Arab notables which had hoped for a British defeat was quick to see the importance of a token 11th hour declaration of war against Germany, once the tide had turned, and a rapprochement with Britain, without which the Arab states would, like Spain and Italy, have been excluded from the United Nations.

Whitehall, for its part, had only recently begun to give Near Eastern affairs a high priority in their own right. The region had traditionally been regarded as essentially a passageway to India in which it was sufficient to maintain a somnolent status quo as a barrier against internal upheaval and external intrigue. The Ottoman Empire met this specification until 1914, and the Arab regimes that succeeded it in the British sphere of influence were shaped with a view to their taking over the job. It required Hitler's lunge toward the area to impose a new conception of its significance, economic as well as strategic, on the minds of British policymakers.

In the course of his personal reappraisal, Churchill toyed with the idea of establishing a rather more positive relationship with the Turks and the Jewish community of Palestine than had prevailed in the past, thus liberating British policy to some extent from unpredictable Arab pressures. As so often in such matters, his thinking was 10 years ahead of most of those around him. British officialdom generally still tended to regard Mustafa Kemal Atatürk's atheistic, republican Turks as Bolsheviks and to mistrust the Jews as insufficiently manipulative.

The shock of Premier Rashid Ali's coup in Iraq panicked Whitehall into an Arab policy that was to culminate in what Churchill described as Bevin's "squalid war" in Palestine. British troops were still mopping up in Iraq when, on May 29, 1941, Foreign Secretary Anthony Eden made his famous pledge of Britain's "full support" in promoting "a greater degree" of Arab unity. Unfortunately, as with the 1939 Palestine White Paper that had been extorted from Neville Chamberlain's government by the Grand Mufti of Jerusalem's terror campaign against the Jews, Arab politicians noted not only the pledge but the circumstances in which it was issued. "Activists" in Egypt, Palestine, and Iran (and Egyptian broadcasts in support of Mau Mau barbarism in Kenya) were later to invoke these two gestures in justification of their belief that the best way of changing a British Government's mind is to kick it.

BIRTH OF PAN-ARABISM

Linguistically, the Near East is almost a unity, and the idea of welding its Arabic-speaking peoples into a corresponding political whole has much to recommend it. The concept is no less inspiring for bearing little relation to economic, social, and psychological realities within the region. The sentiment in favor of political unification has long existed in most of the Arabic-speaking states, but it has been concentrated in the new middle classes, which, nowhere yet in power, had no direct voice in the intergovernmental discussions that preceded the establishment of the Arab League.

The vast anonymous peasant majority was mute, its universe circumscribed by village boundaries. The support the Arab kings and emirs gave the cause of union was directly proportionate to what they judged to be their chances of dominating it. Powerful tribal sheiks and feudal pashas and beys occasionally paid ilp service to Pan-Arabism because it was politically popular, but basi-

cally they preferred the advantages they enjoyed under the status quo, and secretly worked against it. Senior army officers and minority leaders in the Levant states and Iraq adopted similar attitudes.

All effective Pan-Arab plans have foundered on these and similar reefs of contention within a few days of their launching. And the Arab League was but a sorry caricature of Pan-Arabism when the Arab governments, assisted by the British Foreign Office, finally towed it into the gap in 1945. Its very charter lays stress on the maintenance of the existing political fragmentation of the

Arabic-speaking world.

From the outset, the centrifugal force within the league could only be neutralized by directing it against something—France, Zionism, ultimately Britain itself. Even the Palestine Issue served to stucco over the league's interdynastic cracks only until it actually unleashed its invasion of Israel. Then began a race between Egyptian and Hashimite (Iraqi and Jordanian) leaders more intent on denying territory to each other than to the Israelis. By the time Israel had chased the Egyptian army out of the Negev, the league's moral distintegration was complete.

Nevertheless, It survived as an organizational entity. For between 1 and 2 years—the period varied from country to country—the Arab leaders succeeded in concealing from their own people the true extent of their defeat. As the news finally did filter in through censorship and repression, a concerted effort was made to drown it in appeals for Arab unity in preparation for an impending "second round" in Israel—the ideal instrument for which would be a renovated Arab League. A formal "collective security pact" was written into the league's framework.

Above all, there was no ready face-saving alternative to the Arab League. Its abandonment would have seemed to articulate Arabs everywhere an admission of ineptitude on the part of their leaders even more shameful than the Palestine debacle. Consequently, meetings continued to be called by the Arab League secretariat to which some states' delegations arrived late and others not at all. Grandiloquent resolutions continued to be passed and pigeonholed. In the lobbies, Iraqi and Jordanian delegates continued to threaten to walk out from time to time, and Egyptian spokesmen continued to threaten the expulsion of dissident states.

The league's then secretary-general, Abdel Rahman Azzam, continued to tour Near Eastern capitals periodically, denouncing the British and the Jews, and even—in hopes of making western blood run cold—discovering Islam's affinities with communism. The leaders of Iraq carried on a lively feud with Azzam, but since he was a protégé of King Farouk, it took the Cairo officers' revolt to get rid of him.

SHUKEIRI VERSUS HASSOUNA

Under the stewardship of Azzam's successor, Hassouna, the secretariat of the league has become little more than a records office for filing whatever communications are addressed to it and circulating memorandums when requested to do so. It has no policies of its own. However, as Falastin, a Jordanian daily published in the old city of Jerusalem, puts it, "It was Aliah's will that the Arab League should not remain silent, so he gave it, in his infinite wisdom, a spokesman who howls like the wind and roars like a raging lion. Do you recognize him, O reader? He is Master Ahmed Shukeiri * * *."

Shukeiri, the league's assistant secretarygeneral, has donned Azzam's mantle and issued gratuitous calls for increased sniping and terrorism along Israel's frontiers. The Arab States will finally liquidate Israel next October, he has announced, For over a year now, the Arab League's two top officials have been at war with one another. Shukeiri has spared no efforts to obstruct, embarrass, and, if possible, oust Hassouna. Their feud reached its climax in New York last fall when Hassouna, attending the opening of the U. N. Assembly, suddenly felt Shukeiri breathing down his neck. Shukeiri had got himself appointed chairman of the Syrian delegation to the United Nations. Hassouna ordered him to return to Arab League headquarters and cabled Cairo and Damascus for support. But Egyptian officialdom was busy tussling with the Moslem Brotherhood, and Faris el Khouri, newly appointed Syrian Premier (he has since been ousted), was fighting for his own political survival.

A frantic round of lobbying now began. Hassouna tried to split the Syrian delegation by luring some of its members to take the initiative on matters where protocol normally demanded that Shukeiri be consulted. Shukeiri denounced Hassouna as a tool of the British and declared that he spent too much time junketing in Washington while other Arab diplomats were hard at work at the United Nations. He cunningly associated Hassouna in the minds of the Egyptian delegation with the unpopular Iraqis at a time when personal relations between the late Dr. Azmi (Egypt) and Fadhil el Jamali (Iraq) were at their worst. (A typical Jamali utterance: "How can this Azmi, who was once married to a Jewess, claim to represent Arab interests?") keiri sedulously cultivated Arab press representatives, and last year Hassouna was sailed in the Arabic press, partly at Shukeiri's instigation, for spending 3 months in America. It was now whispered to him that unless he returned to Cairo promptly there would be even more violent attacks. Hassouna packed his bags.

NURI'S INGENIOUS PLAN

The League's controlling body is theoretically the biannual Arab League Council, a conference of Premiers and/or Foreign Ministers, like the one that has just broken up. It was generally expected to replace Hassouna in the first half of this year, but the crisis provoked by the Turkish-Iraqi Pact thrust the matter into the background. Even without this crisis, it would have taken more than a change of Secretary General to reinvigorate the League. The Egyptian and Iraqi Governments, certainly the two most active participants, had already come to regard it, at least in its present form, as an obstacle in the way of certain of their "national aspirations."

Iraqi Premier Nuri Pasha es Saïd is undoubtedly sincere in his desire for a link with the new Turkish-Pakistani alliance. At the same time, his desire to incorporate Syria into Iraq is as strong as ever.

Brilliantly stage-managed elections packed Baghdad Parliament in his favor last fall and gave him an opportunity to crush his most active political opponents and straitlacket the press. In Syria, persistent political instability is enabling Hashimite agents to paint the advantages of union with Iraq in glowing colors. The United States Government, hitherto opposed to Iraqi designs on Syria, is eagerly awaiting Nuri's signature on as many dotted lines as possible and therefore is confidently expected in Baghdad to look the other way from now on so far as Syria is concerned. The 66-year-old Iraqi Premier would seem to have some justification for hoping to be able to crown his long political career, provided he escapes assassination, with an audacious double coup. Effected as nearly simultaneously as possible, the two moves-alinement with the Ankara-Karachi axis and annexation of Syria-would complement and uphold each other. Taking the initiative on Syria would win the plaudits of those Iraqis most likely

to oppose Nurl's Turkish tie; the latter would ensure Western diplomatic backing against whatever hostile pressure Saudi Arabia and Egypt might try to exert.

In Egypt, the leading members of the ruling military junta have no more illusions about the Arab League than Nurl. An important group within the junta has insisted all along on Egypt's need to develop its African interests rather than dissipate its energies in the futile internecine squabbles of the Arab League. A firm hold on the Sudan would improve Egypt's economic position, provide an outlet for emigration from the grimly overcrowded Nile delta, and make Egypt the major nonwhite power in Africa—the China of Africa, as a leading Egyptian official has put it. Such an Anschluss, objectionable to the Hashimite governments of Iraq and Jordan because of the power and prestige it would bring Egypt, would be yet another kidney punch for the Arab League.

Egyptian Pan-Arabism still makes news, however. The dynamic Maj. Salah Salem, Minister of National Guidance and Sudan Affairs, has initiated moves that threaten to supersede the Arab League with a new and vital organization in which Egypt would enjoy uncontested leadership. On March 6 a joint communique from Egypt, Syria, and Saudi Arabia announced agreement to strengthen the Arab structure politically, militarily, and economically, outside any pacts like the Turkish-Iraqi one. Lebanon and Jordan are under pressure to join the new group, which sounds like the old league with a few parts missing.

BUILD ON BOCK

But it might be premature, even now, to conclude from all this that the League has no hope of survival. The only certainty in Arab affairs is uncertainty. A bird in the hand is worth two in the bush, in Egypt as elsewhere. Nuri Pasha's talent for planning has more than once outrun his executive abilities. Syrian republicans look to the Arab League to shield them from Hashimite expansionism. Lebanon, half Christian and half Moslem, trellised by communal and political rifts that match its physical structure, would be grievously divided over what attitude to adopt to an Islamic bloc (advocated in circles close to King Saud and in the Egyptian junta by Colonel es Sadati), an enlarged Iraq, or any other substitute for the Arab League. Those Lebanese Christians and Druses who disliked the League when it was first established would probably wish to cling to it now that it has proved innocuous.

The one firm forecast that can be made now is that for some little time to come the security of America's Near Eastern interests in going to depend less on what is decided in Washington than on the behavior of Iraqi mobs. When and if the State Department decides to disengage itself from its present entanglements, it will either have to make its peace with Egypt and what may then be left of the Arab League—on Egypt's terms—or fall back upon the fundamental strategic tripod composed of Turkey, Iran, and Israel-and-Lebanon, the only military pattern in the region that is politically viable and might even afflict the Kremlin's Near Eastern planners with the insomnia their American opposite numbers are contracting.

British officials, who now shudder when anyone mentions Pan-Arabism or Egyptian leadership of anything more complex than an Olympics committee, appear overwhelmingly to favor leaving the Arab League states to work out their own destiny for a while. They are unenthuslastic about Washington's Iraqi policy, the more so since Nuri Pasha is cunningly using the Turkish pact as an excuse for abrogating his country's sole effective defensive link with the West—the 1930 Anglo-Iraqi treaty under which Britain is allowed two air bases in Iraq.

Israel, incidentally, is increasingly valued in Whitehall as an area of stability in the political quicksands of the Near East, whose security it would be unjustifiable to jeopardize in pursuit of ephemeral Arab League good Will

Mr. Dulles, too, should realize that a "position of strength" has never yet been built on

dry rot.

Proposed Federal Commission on Government Security Programs

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Monday, March 28, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials: The first, entitled "The Com-munist Brush," published in the New York Times of March 10, 1955; the second entitled "Loyalty and Partisanship," published in the New York Times of March 20, 1955.

The two editorials refer to the hearings which were recently held by the subcommittee of the Senate Committee on Government Operations. The hearings centered around a proposed advanced by the distinguished Senator from Mississippi [Mr. STENNIS] and me to establish a Federal Commission on Government Security Programs.

There being no objection, the editorials were ordered to be printed in the

RECORD, as follows:

THE COMMUNIST BRUSH

The Federal employees' security program as conducted by both the Truman and Eisenhower administrations has produced some severe jolts to traditional American concepts of fair play. But few official governmental statements on the subject have been more shocking in their implications than the one published in this newspaper yesterday coming from Assistant Attorney General William

F. Tompkins.

"It is becoming increasingly clear," said
Mr. Tompkins, "that the current attack
information and against Government witnesses and informants of the Federal Bureau of Investigation has its roots in a Communist effort to stem the successful campaign of this Government to eliminate the subversion threat of communism to our internal security.

The Assistant Attorney General was speaking at the first day's hearings on the proposal of Senators Humphrey and Stennis that a bipartisan Commission on Government Security be established to study the Federal security program.

If Mr. Tompkins' words mean anything they mean that the nationwide protests against the repeated use of totally unreliable and professional informers by the Depart-ment of Justice and other Government agencies are Communist-inspired. They imply that only Communists or Communist dupes would make such protests. They suggest that the very purpose of such protests, and protests against secret, star chamber procedures, is "to stem" the Government's campaign against subversion.

That Communists oppose present security procedures for their own sinister reasons is of course true. But does this justify the misuse, or the careless use, of informers by Government agencies?

To hear one of the highest officials of the Department of Justice suggest that the doubts cast on present procedures must stem from pro-Communists is almost incredible. The Solicitor General of the Department himself has clearly indicated such doubts. So have many Senators, many plain citizens, many newspapers. If we have misinterpreted Mr. Tompkins' statement, we would appreciate a clarification. If we have not, the statement only helps to prove the need for the Commission proposed by Senators Humphrey and Stennis.

LOYALTY AND PARTISANSHIP

Former Senator Harry P. Cain is a Republican and a member of the Subversive Ac-tivities Control Board. This agency, set up in 1950 with a 3-to-2 division between the political parties, is supposed to determine whether designated organizations or individual members of such organizations are infected with communism. Mr. Cain, a vet-eran of the Second World War with many decorations and a record of stalwart conservatism, is not satisfied with the way things are being done. He appeared before the National Civil Liberties Clearing House on Friday to criticize severely what he called "the marriage between security and politics."

Mr. Cain had the temerity to defend the

Constitution-specifically that part of it contained in the fifth amendment. It is his belief that those who use "fifth amendment" as an adjective of disapprobation modifying the noun "Communist" are guilty of disrespect to the Constitution as any Communist could be. It seems to him that it is better to maintain the ancient principle that an individual shall not be required to convict himself than to punish a few who hide behind the privilege without justification. Mr. Cain suggested a sort of period of grace so that, for instance, an individual who had resigned from a Communist-front organization other than the Communist Party itself before 1947 and who since had engaged in no suspicious activities would be given a clean bill of intellectual or moral health.

Mr. Cain also supports a plan that has been rejected by the President and Attorney General Brownell—namely, that a bipartisan commission be appointed to study the security program. This plan certainly recommends itself to one's sense of fairness. And whatever course may be adopted to insure loyalty in governmental employees, political partisanship ought to be completely and permanently eliminated in it.

Key to Yalta Controversy

EXTENSION OF REMARKS

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sacramento Bee of March 22, 1955:

HATRED OF ROOSEVELT IS KEY TO YALTA CONTROVERSY

Like scavenging hordes of little foxes, the haters of Franklin D. Roosevelt are digging in the boneyard of Yalta.

The release of the incomplete, already challenged records of the Yalta Conference has been leaped upon with smug indignation or ill-concealed delight, to degrade, belittle, and defame the man who did as much as

any single person to see America through both its worst domestic crisis and its greatest hour of peril.

The defamers of the dead are almost drooling over every action and word of Roosevelt which in their own extensive hindsight can be presented as a mistake.

Sooner or later their vindictive second guessing is bound to boomerang. The American people are not that stupid, not that petty and not that ungrateful.

Had it not been for Roosevelt, Winston Churchill, yes, and Josef Stalin, there might not have been a Yalta conference. It might have been a Berlin conference presided over by Adolf Hitler and Benito Mussolini, to which America, Britain, and Russia might have gone as defeated supplicants.

The bold and ridiculed goal of 50,000 American fighting planes set by Roosevelt, the lend-lease deal which kept Britain in the war, the long struggle back from Pearl Harbor, the unbelievable acceleration of American industry, the high level of national morale, and the brilliant battlefield strategy all were in part contributions of Roosevelt to his Nation's victory and salvation.

Yet never since Abraham Lincoln has any American encountered such hatred and deprecation as that heaped upon Roosevelt. is an unrelenting hatred which he incurred by the methods he employed to save the Nation from economic disaster just before he was called upon to shoulder the burdens of a world war. It is a hatred which does not have the best interests of the American people at heart.

To these detractors Roosevelt in death is a threat. It is necessary from their view to destroy even his image and reputation. accomplish this end they cry imprecations against a voice which is silent; with eyes which have seen all that has happened these last 10 years they damn those eyes which, being mortal, could not foresee the precise future. And to make this cowardly hyprocrisy supreme many who now denounce Roosevelt's efforts at Yalta to keep Russia in the war are the very ones who cheered loudest when he succeeded in doing just that.

The man who attended the Yalta conference did not have long to live. He did not see V-day. He had led the Nation out of the pit of fear in the depression and done much to invest it with sufficient strength to save the free world.

Certainly he deserves from all free men a resolute resistance to the present nibbling of the scavengers. Deep in the heart of the hatred of Roosevelt is hatred of the people themselves. The affection the people held for Roosevelt is what the defamers really seek to destroy. Only disgust and indignation should greet their efforts.

New Frontiers for the West

EXTENSION OF REMARKS OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Earl L. Butz, Assistant Secretary, United States Department of Agriculture, before the third annual farm and ranch congress, Denver, Colo., Monday, March 7, 1955:

NEW FRONTIERS FOR THE WEST

The scientific and technological advances we will experience in the next decade will be unparalleled in American agriculture.

The geographic frontier in America is gone. No longer can a young man "go West" and stake out his claim. Even the wild and woolly Colorado frontier has been tamed. But the scientific frontier in America is barely scratched. And the scientific frontier has no effective limit. It is limited only by the mind and imagination of man.

Organized and imaginative research is the vehicle which will push the scientific frontier beyond limits we scarcely dare dream of to-

day.

It follows logically, therefore, that if we can keep our economy free and preserve an environment in which individual producers and scientists are free to dream a little about new techniques and new ideas, and to enjoy the fruits of their dreams, we shall experience phenomenal progress in the next generation.

The above prediction is made with full understanding that the American economy in 1954 was down slightly from a year earlier; but it has turned upward in recent months. Entirely too many Americans suffer under the economic illusion that it is abnormal-in fact disastrous-for the economic graph to dip modestly downward once in several years. Some of the modern-day alarmists would try to superimpose a new politically created artificial boom on top of an old war-created artificial boom, and push our economy from one unstable excess to another. We have no new evidence that man can completely circumvent the law of action and reaction, even in his economic behavior. Within the framework, however, the long-time growth curve of the economy is distinctly upward.

ECONOMIC STABILITY IS THE KEY

America has been enjoying a period of relative economic stability during the past year. The general level of prices has been remarkably stable during the past 12 months, varying within a range of less than 2 percent. That is virtually no change.

Prices received by farmers have likewise been fairly stable during the past year, fluctuating within a range of less than 6 per-

cent.

The widely advertised business recession of 1954 evidently reached the bottom about last July. The slow erosion of prices and business activity which had been in progress since shortly after the Korean boom halted them, and has turned up modestly. The upward course has been fairly steady, although not spectacular, for the past several months. Our economy is growing at a healthy rate, production is increasing absolutely and on a per worker basis, consumer incomes are rising, consumer spending is at a record rate, and higher standards of living within the immediate reach of all of us.

Nineteen hundred and fifty-four was the second biggest economic year in the history of America. This was accomplished without war, with Federal Government expenditures down \$11 billion, and Federal taxes reduced

\$7 billion.

In my book, the second biggest year in our history is a long, long way from the kind of depression some of our alarmists were preaching last fall. Last year was the most prosperous depression in our history.

The relative stability of the past year is reassuring. The adjustment in business activity from the peak levels of the Korean war period to the present time has been one of the mildest on record.

Truly the economic health of America is good.

Gross national production in 1955 will exceed the 1954 level of \$357 billion. It could equal the record of \$365 billion in 1953. It is reliably predicted that our gross production will reach \$500 billion by 1965. That would mean an average increase of 20 percent for each of us, above our present living standards.

In this overall environment of a stable to strong general economy, American agricul-

ture may also look forward to economic stability. Although farm income has declined slightly more in the last year than has the general economy, it is significant that its decline has been very markedly slowed from a year and a half ago. The price parity ratio for 1954 averaged 89, only 3 points below the 1953 average. The price parity ratio last month stood at 87. This was only 7 points below the figure for 2 years earlier, January 1953, when Ezra Taft Benson became Secretary of Agriculture. In the 7 months before January 1953, the price parity ratio dropped 10 points. In the 23 months before January 1953, the price parity ratio dropped 19 points.

It now appears that the stability we have been experiencing will continue through 1956. The domestic demand for farm products will continue strong, with a likely mod-

est increase in foreign demand.

It is gratifying that in this setting for potential progress in agriculture, the 63d Congress gave us a new farm bill that will point American agriculture toward better balance, greater freedom for individual farmers, and a more stable and prosperous economy. The new law establishes the sound economic principle of flexible price supports which will help gear our farm production to the needs of the Nation and will, at the same time, minimize the need for such stringent controls over farm production and marketing as we experience today. The new bill becomes operative with the 1955 crops.

It must be pointed out, however, that neither the new farm program nor any other legislative magic can be expected to solve our pressing farm problems in a few weeks or even a few months. The burdensome surpluses now owned by the Government were accumulated over a period of years by following wartime price-support policies long

after the emergency had ended.

WE NOW FEED OURSELVES ON SCIENCE

American agriculture is now feeding our rowing population on science and tech-

growing population on science and technology. We have increased our total agricultural output in the last 4 decades by 75 percent, on roughly the same acreage we had previously, and with 2½ million fewer farm workers. Even in the 15 years since the beginning of World War II, our farmers in America have increased their total production by 47 percent, with no increase in acres and with 1¾ million fewer workers on farms. These changes have accompanied the application of science and the advanced technology associated with mechanization and electrification of the American farm.

The efficiency of agricultural production has likewise increased tremendously in recent years. In the last 4 decades, total output per man employed in agriculture has increased 140 percent. In the last 15 years output per man-hour has increased 70 percent. This has resulted in higher level of living for farm families, and cheaper food for urban families.

In the same short 1½ decades, we have increased our steel production capacity by one-half, and have doubled our electric power production capacity. Surely a broad base is laid for a further rise in living standards for the average man and woman in America.

Modern science and technology have solved the age-old problem of hunger and postilence in the Western Hemisphere. But modern man has not yet learned how to manage his society and cooperate with each other in order to accomplish the high level of production and prosperity of which we are capable. The science of political economy is lagging the physical and biological sciences. Our most pressing problem now is to learn how to live with and to enjoy the age of science and technology which we have created for ourselves.

We must cultivate within our society an environment in which individual producers and scientists are free to experiment with new techniques and new ideas, and to enjoy the fruits of their labors. We shall experience phenomenal progress in the generation ahead, if we can preserve our system of free prices and free enterprise. No administration in Washington can do that automatically, for Government cannot go beyond what the people in our various States desire.

Your job and mine must be one of everlasting adult education about the things that make America great. If we keep our free economy, we must preserve a free-price economy. There are too many people in America today who do not really believe in free prices, but who still believe they can look to Washington for price supports, price regulations, price ceilings, and so on. We must get the point across to every citizen of our country that the incentives under free prices make our economy great, and make it strong, and make it productive.

Farmers believe in the free-enterprise system. They believe that government should be the junior partner and free citizens the senior partner. They know this system has produced in America the broadest opportunity for free and prosperous citizenship that exists any place in the world. Under this system individual producers and individual processors can grow and prosper as far as their ambition and their ability will take them. The right to succeed is open to everyone.

AMAZING CHANGES IN OUR GENERATION

We live in an era of the most rapid scientific and technological change of all time, If you were to put the full recorded history of man on the face of your clock, starting with the story of creation in the Book of Genesis and continuing until 1855-100 years ago-the hands of your clock would have moved from noon around to 11:45 p. m. last 15 minutes on the face of your clock would represent the last century. Yet, output per worker in the United States has increased more in that last 15 minutes than in the previous 11 hours and 45 minutes. And most of the increase within the last 15 minutes has occurred since the turn of the present century. Many of us now living have played a substantial role in this amazing sciientific and technological revolution.

Let us imagine for a moment that a good Egyptian farmer in the day of Moses could have been brought back to life in the day of the Caesars, some 12 centuries later, and placed on a good farm in Italy, then the most advanced nation of the world. He could have farmed with practically no additional instruction, for the art of agriculture had changed little, if any, in the intervening 12 centuries.

Let us imagine that same farmer brought back to life on a good English farm in the day of Shakespeare, some four centuries ago. He still would have been a pretty good farmer with no additional instruction.

Now let's bring that same ancient Egyptian farmer to the eastern shores of America 153 years ago and put him on Thomas Jefferson's farm, one of the advanced farms of He still would not have found that day. the art of farming very different from that which he practiced in Egypt 3,000 years earlier. He still would have used the same motive power, the same crude implements, and large amounts of hand labor. He would have known very little about fertilization, improved varieties, high-producing breads of livestock, and the hundred mechanical and electrical gadgets which occur on our modern farm.

Now imagine for a moment that same farmer on a modern American farm. Ha would be completely bewildered. He would not even recognize the working end of the tractor parked in the farmyard. He would probably raise the cry of witchcraft at all the wonderful things performed by mochanical and electrical power. It would require hard years of instruction and apprentice-

ship for him before he could even begin to operate the modern American farm.

MORE CAPITAL IS REQUIRED

Agriculture is now big business. It is in-evitable that family farms are becoming larger, as the number of workers on farms decreases and as mechanization of our farms continues at a rapid pace. It is estimated that the value of the United States agri-cultural plant is about \$150 billion. This means a national average of approximately \$30,000 per farm. Obviously, these averages include many small farms. The figure for include many small farms. typical commercial family farms is larger. It runs from \$50,000 to \$100,000.

On our good family farms it now takes an investment of nearly \$50,000 to create one farm job. In American industry it takes an average investment of from \$12,000 to \$15,-000 to create one industrial job. It takes three times as much capital to create one agricultural job on good family operated commercial farms. Truly agriculture has become big business. As such it calls for a very high level of managerial ability on the

essfully operated farm.

When many of us were youngsters it was often said, "If you can't do anything else, you can farm." Today the situation is reversed. If you can't farm, you'd better do something else. Successful operation the modern typical family commercial farm calls for a higher level of managerial capacity than does most of the family operated business concerns in your county seat

THE "COUNTRY HICK" HAS DISAPPEARED

Scientific research in agriculture has changed farming from a "way of life" to a "way of making a living." The "country hick" of a generation or two ago has almost completely disappeared from the American scene. The city limit sign which appears at the edge of your county seat town no longer means the same as it dld a generation ago. It is now just a tax boundary. It is no longer a cultural boundary, a recreational boundary, an education boundary, a social boundary, or an economic boundary. It is just a legal dividing line.

The same kind of people live on one side of that city limit sign as on the other. They have increasingly the same types of ambi tions, similar cultural, social, and economic opportunities, comparable ways of living, and even similar disappointments and frustrations. This development is all for the good. It has been associated with a lowering of the drudgery of farm life. The living conveniences of the city have been taken to the country. Mechanization and electrification bring shorter hours on the farm than a generation ago, with opportunity for higher economic rewards for the efficient farmer than existed a generation ago.

FOOD IS CHEAP IN AMERICA

The phenomenal increase in agricultural production made possible by scientific research has helped urban people as well as farm people. It has provided them with a record high diet at an all-time low cost. Few urban people understand this. We need to get the story across, every time we get a chance, that food is not expensive.

The retail price of food in America is lower now than it was a year ago. It's lower than it has been since 1951. Retail food prices in December 1954 were 110.4 (1947-49=100). The 1954 monthly average was 112.6, 1953 average 112.8, and 1952 average 114.6, and

1951 monthly average 112.6.

Food is cheap and getting cheaper in terms of how long the industrial worker must work to pay for it. It is cheaper now than before Korea. It is cheaper now than it was in 1932, in terms of how long the American worker has to work to get his food.

There is no country on the face of the earth today where the workingman spends so small a proportion of his working day earning the food he eats as in America There is no country on the face of the earth today where the workingman has so large a proportion of his working day left to buy the things that make life so pleasant in your home and mine, as in America.

At the present time the American public

is spending approximately 26 percent of its disposable income for food. In 1935-39, it spent only 23 percent of its disposable income for food. However, if the American public were content to eat the same quantity and the same quality of food per person we ate in 1935-39, we could get our food for 18 percent of our disposable income instead of the 23 percent we actually spent 15 years

The plain truth is that on a per capita basis we are eating about 13 percent more food in this country than we ate 15 years ago. And we are eating better food, with more meat, milk, and eggs. Consumption of restaurant meals and prepared foods is up.

We eat "higher on the hog" and enjoy it tremendously. And it doesn't cost us very much to do that either. The thing that bothers us most in America is not nearly so much the high cost of living as it is cost of high living.

THE AGRICULTURAL HORIZON LOOKS BRIGHT

An exciting experience lies ahead for those Americans who have the capacity to dream. The America we enjoy today was built by men and women who had dreams. America will continue to grow in proportion as her citizens dream imaginatively and constructively.

The future is filled with interesting challenges. Science will dominate the next cen-Brains will replace brawn in American agriculture and industry. Man will direct power rather than supply it. Production per man will continue to increase. This means still larger agricultural units with more capital. It means increased mechanization. also means high standards of living for those who produce our food and fiber. Farming will be even more big business than it is now. It will be still less a way of life than

LET'S DREAM A LITTLE

The sun is the ultimate source of energy for our earth. We think American agricul-ture, scientific as it is, does a pretty good job in converting the energy of sunshine into the usable energy of food and fiber. And by historical standards, modern agriculture does Yet a good farmer, using up-to-date scientific methods, can now capture from 1 acre of crops on his farm in 1 year about as much energy as God pours on that acre in I typical summer day. We now convert to usable form less than one three hundredth part of the energy poured on our acres every year.

Let your mind dream a little about the possibilities ahead in food production. If we learn somehow how to double our production per acre, we would still be getting less than 1 percent of the energy available. What a marvelous challenge ahead for

science and for men of vision.

NEW POWER AND PRODUCTION POSSIBILITIES

Let's dream for just a moment in another direction. The history of the rise of man's material standard of living is essentially a history of increased amounts of energy under the direction of a single worker. A century ago 85 percent of our people were engaged in agriculture. Many agricultural operations were performed by hand or with hand implements. As a consequence, output per worker was so low that there was little surplus food to support those who were engaged in nonagricultural occupations.

Today less than 13 percent of our population is engaged in agriculture, releasing more than 87 percent to follow nonagricultural pursuits and to produce the goods and services which make life so pleasant for all of us in America. This transformation has been made possible partly because each individual farmer directs so much more power now than formerly. This is also true in industry and commerce. Reflect for a moment on the changes that have occurred within your own experience in the amount of horsepower controlled by a single worker in agriculture, in industry, or in transportation.

Now let us dream a little. Within this decade, the nuclear age was born. Possibilities for new sources of energy stagger the imagination. New research developments with tremendous power potentialities occur

with amazing rapidity.

Some scientists now assert that our known reserves of fissionable materials exceed in potential power our known reserves of coal, petroleum, and water power. Other scientists predict that within 10 years we shall have available in this country as much nuclear energy as we now have available from our coal, our petroleum, and our water power, combined.

Let yourself dream for a moment in that area. If such predictions are only one-fourth right, it means that in 1965 our whole economy of 1955 will be obsolete. It means that the job of converting to the new and more economical sources of nuclear energy will dwarf the automobile boom of the 1920's. It means still larger units per worker in industry and agriculture. It means more capital per plant and per worker.

THE BEST YEARS ARE YET TO COME

The challenge of the next decade is unprecedented for men and women of vision and ambition. The challenge for agricul-ture is greater than ever before in its his-The scientists who develop knowledge for agriculture, as well as those who apply it, will have the opportunity, through producing more products at lower

cost, to occupy a ringside seat at the greatest decade in the history of America.

My life insurance company gives me 28 years yet to live. I am looking forward eagerly to those 28 years in this marvelous America. I except them to be the most challenging, the most interesting, and the most rewarding years in the history of mankind.

If I could have my choice of the period

of all time when I would spend my last 28 years on this earth, I would start them this

The scientific and social challenges which lie before us are unparalleled in history,

I approach my next 28 years with anticipation and enthusiasm.

I am going to have a lot of fun growing and building and dreaming with this still young and vigorous America.

I hope you too can see a great challenge for yourselves in the years ahead.

Un-UNESCO

EXTENSION OF REMARKS OF

HON. PRICE DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, March 28, 1955

Mr. DANIEL. Mr. President, a delegate to the Third National Conference of UNESCO, Hon. Alvin S. Romansky, of Houston, Tex., has requested that there be inserted in the RECORD an editorial entitled "Un-UNESCO", which appeared in the March issue of Art News. Accordingly, I ask unanimous

consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UN-UNESCO

With all credit in the world for good intentions, the record of UNBSCO becomes Two or three recent occasteadily poorer. sions bring it inescapably to the fore, and raise the grave question, to those who a decade ago were among its most ardent enthusiasts, whether it is worth today not only the huge sums spent annually on it (the United States being by far the heaviest contributor) but also the energy required to defend UNESCO's motives against many who attack them for the wrong reasons. Because of UNESCO's extensive-and perhaps far too pretentious, certainly misdirectedgram, the problem deserves the attention of every reader who is a sensitive taxpayer as well as a citizen of the world.

The recent occasions, upon none of which UNESCO has put anything like its best foot forward, are: Two quite different but equally direct activities in art (its own art books and the UNESCO sponsored and run First International Congress of Plastic Arts, held at Venice in October on which official reports are just beginning to come through); and its eighth general conference, at Montevideo in December, on which far too little comment has been made in the American press. To help remedy the latter, it is fortunate to find so detached and authoritative an observer as one of the foremost British political weeklies, the more than a century-old Economist, surely devoid of partipris on behalf of either America or the arts. Here are some major excerpts from that valuable report:

"It was encouraging to hear that at UNESCO's eighth general conference, held at Montevideo, commonsense seemed at last to be making itself felt. The conference considerably reduced the number of projects to be undertaken, and it decided that the members of its executive board, hitherto elected as individuals, should in future be responsible to their governments. The latter reform, originally proposed by Britain some years ago, should help to keep UNESCO's head out of the clouds and its feet on the ground. But fuller accounts of the proceedings at Montevideo revive the old doubts. The dclegates apparently thought they had done something of note by ordering their officials to 'study means of promoting peaceful cooperation' and by asking the governments they represent 'to take all necessary measures to assure freedom of expression and to remove barriers to the free flow of undistorted information between member States. Among the sponsors of these resolutions were the Soviet Union and Czechoslovakia. Dr. Evans described the two resolutions as 'ample proof of the lessening of international tensions.' People who know just how much freedom of expression and free flow of information is encouraged by Communist governments may be pardoned if they see in these resolutions fresh evidence of UNESCO's ability to cut itself adrift from reality and

even from honesty of mind.

"UNESCO started life 8 years ago, with the fixed idea that it must have a finger in almost every conceivable pie. The logic behind this reasoning was obscure; what is clear is that it has proved well-night disastrous. With less than \$10 million to spend each year up to now, the Organization has been forced to spread the butter very thinly over the great hunks it has tried to swallow; and the impression has inevitably been created that it is no more than a happy hunting ground for cranks. Culture alone is a vast and amorphous term; in no other field is it so easy to let one thing lead on to another, or to juggle so convincingly with the theoretically desirable and the practically useful. Thus it is that a body whose

constitution contains ringing words about preventing war by attaching its roots 'in the minds of men' now finds itself designing a 'mobile museum specially adapted to arid zones,' fostering a 'symposium on bromatology' at Santiago de Chile, and submitting reports reviewing research literature on the 'design of wind machines.'

"Dr. Evans, who was appointed Director-General some 18 months ago, has sought to adopt a realistic attitude toward UNESCO's manifold projects. But people acquire vested interests in education, science, and culture just as they do in other fields; and although UNESCO is young in years, it has shown itself old enough to be set in its ways. It will not find it easy to turn a deaf ear to those who urge in to provide the world with colored reproductions of Australian aboriginal art or gramophone records of the folk music of the Eskimo, Tuareg, and Foula peoples. * *

"To argue in this strain is not to prove oneself a Philistine. It would be in UNESCO's own interest to abandon some of its more esoteric projects and to concentrate its resources on those that offer practical results. Admittedly, at Montevideo some fears were expressed that emphasis on the practical might lead to neglect of spiritual values; but international organizations are unsatisfactory vehicles for the propagation of spiritual values, and the sad fact is that UNESCO's misguided efforts in some directions have diverted attention from the admirable work it is doing in others. * * *

"UNESCO can do valuable work in promoting understanding and personal interchange among relatively well-educated peoples, but in that field it is not alone; at most, it can only fill crevices between the activities of universities, learned societies, publishers, and national organizations. * * But it is still far from clear that that is what UNESCO has in mind."

To the silly esthetic boondoggling described above by the Economist, we can add one more late morsel: the prizes offered and awarded at the recent Venice Biennale by UNESCO, which became simply two or three others added to an already endless list of small cash and honors offered by tourist bureaus and insurance companies. may sound like a tiny thing, which it probably comes to in money and importance, yet these prizes are somehow typical of the most unpleasant and most dangerous fault of UNESCO, certainly in the arts—namely, its obvious wish and will to set itself up competitively, and on the same level, with existing organizations, instead of as a liaison in order to make the best possible use of them, as the founders of UNESCO intended. But that original premise has now disappeared under the hand of the firmly entrenched intellectual Tammany Hall which today inhabits as well as rules UNESCO.

Hence, of course, UNESCO finds itself, among other odd occupations, literally in the publishing business—and in the art field, in it with expensive, huge volumes that have recently been reviewed by competent authorities as inferior to equally recent, commercially published books, on the same subjects. But it is projects like these which create soft jobs and free travel for UNESCO function-

So also do, of course, international conferences like the one with the fancy name, for artists, at Venice, a few months ago. This turned out to be a no more successful performance of the long-range idea of creating a UNESCO-run international artists' association, for which an equally expensive flop of a general rehearsal, a sort of planning conference, had been held by UNESCO at Venice 2 years before. It was severely criticized on this page (Art News, November 1952) for powerful yet eventually ridiculous efforts by an Italo-French bloc to ram through its own procedure, ideas, and control. Now the same thing has happened again, on a larger

scale and a less easily combatable one, a few months ago—with no press observers invited (why?). As soon as official reports are cleared for release, we shall publish an account based on experiences of the considerably disillusioned United States delegation of artists.

What can be done about UNESCO? How do we control (in order to avoid having to halt entirely) this sorcerer's apprentice we have called into being? Better decide and act before it furnishes one more major, gratuitous fueling, at home and abroad, for all anti-international reactionaries.

The Fate of 16 Polish Underground Leaders

EXTENSION OF REMARKS

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. MACHROWICZ. Mr. Speaker, to-day marks the lapse of 10 years since the date that 16 leaders of the Polish underground were treacherously lured into Moscow, under the pretext of beginning Polish-Soviet negotiations for peaceful solution of mutual problems, and under guaranties of security. All 16 were placed under arrest by the Soviets and all but 2 have not since been heard from.

The person who masterminded this intrigue was Marshal Zhukov, who is now prominent in the Soviet Government. It is this same Soviet Government with Marshal Zhukov, and others like him, who would now like to lure the United States into friendly meetings to discuss peaceful solution of mutual problems.

In the past, each of these meetings have led to further concessions to Soviet Russia and have increased their capacity to further subjugate the free world, and threaten our own national security.

It has been said that Soviet Russia should first show its intentions of good faith before any new meetings take place. I submit, Mr. Speaker, that we should request the immediate release of the remainder of these 16 Polish leaders and an explanation of the unlawful action of the Soviet regime in imprisoning them, before we ever consider any further action toward meeting with them.

On July 2, 1952, during the debate on the report of the special congressional Katyn committee, I referred to this subject matter. Because the remarks are equally applicable today, under leave to extend my remarks, I am inserting, herewith, portions of my remarks made that day:

The United Nations, to whom we ask that this report be transmitted, should also look into the fate of the 16 fearless Polish underground leaders, who in March of 1945, were invited to Moscow by Marshal Zhukov under the pretext of beginning Polish-Soviet negotiations. There they were treacherously placed under arrest and placed in the infamous Lubianka prison.

This fact was at first carefully concealed by the Russians but was finally revealed during the conference at San Francisco, where it evoked widespread indignation of world opinion.

Under the influence of our appeasement policy, however, this matter was hushed in order not to antagonize the Russians, with whom we thought we could come to an agreement.

After 7 years what was the result of that policy? At least four of these brave leaders have died in jail as a result of the tortures suffered. Others, after release from the prison in Moscow, were again thrown into jails in Soviet-dominated Poland, where

they are languishing.

Former Ministers Jasiukowicz and Bien were sentenced in Moscow to 5 years imprisonment. They therefore should have been released and returned to Poland not later than March of 1950. To this day 21/2 years later, there is no sign of life of either of them. Neither is there any news of the fate of the former Minister, Pajdak, who who excused from the Moscow trial because of illness.

Seven and one-half years after his arrest he has not returned to Poland, nor has he

been heard from.

The United Nations Organizations recently adopted a bill of human rights which provides that no individual may be arrested without a proper court determination, that no one shall be deprived of his rights be-fore a public court trial and that no one can be imprisoned longer than provided for in the court's verdict. The Soviet representative refrained from voting because he thought the provisions were not sufficiently democratic and there is no assurance of the execution of the provisions.

It is not time to expose this horrible cynicism of the Moscow Communists, and to show them that the United States respects the decisions in which it participates and is willing and ready to enforce them?

Would that not be the best way to demonstrate to Poland and to the other nations behind the Iron Curtain that the United States has determined to defend the prin-

ciples of justice against force?

Action by our Government to determine the fate of these brave Polish underground leaders illegally held by Russia in prisons or concentration camps will do more for the cause of the United Nations than any other propaganda behind the Iron Curtain, based on promises rather than actions,

The Yalta Papers

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Friday, March 25, 1955

Mr. BURDICK. Mr. Speaker, England is having a nightmare over the publication of the proceedings at Yalta. Can it be that Mr. Churchill was less candid than he ought to have been when he reported on the matter to the House of Commons?

When was it discovered that the truth should be kept from the people? Since the truth is the easiest thing in the world to defend, why all this consternation about the publication here of those pro-

No one can read these papers without coming to the definite conclusion that the Korean War was born as a result of the Yalta agreement-and do you not think the mothers of the thousands of boys killed and wounded in that conflict are entitled to know how and why it started?

I hope the Potsdam papers are published in full. Then between the Yalta and Potsdam reports we can find out who betrayed Poland, Czechoslovakia, and the Baltic States. It would be hard to believe that the United States knowingly consented to turn over 200,000 Germans to slave labor, never to be returned by Russia to their native land, but when we read these papers we will know the truth. Were men from Germany in uniform to be the slaves of Russia as part of the reparation claims against Germany? Was Russia not willing to take property and dollars in reparations, or did they insist upon men, to become their slaves?

From these papers we can understand why Czechoslovakia was abandoned; we can understand why we didn't take Berlin when the Germans offered it to us; we can understand why we delayed until

the Russians got there first.

Why should any nation be offended when the truth is being unfolded? Are we ashamed to the truth? Is England ashamed of it? One purpose will be accomplished, and that is that these reports will deter this country from making any more secret agreements that may not only violate the principles of this republic, but blacken our name on the pages of world history.

I don't see how anyone can feel that publishing these proceedings would be a political move. If the Republicans intended it for that, it comes too early to have any effect, and the leaders of the Republican Party are entitled to more

credit than that.

The contents of these documents belong to the public, for if we were guilty of making colossal blunders at that time, the effect will be to keep us from making them again. If our representatives consented to the enslavement of people to serve the vindictive and selfish interests of the Soviets, we want the world to know that the people of this great Republic knew nothing about it and would never have consented to it is they had known. If those secret proceedings show the error our representatives made, and the people of Europe believe that was the act of the people of the United States, we never can overcome the ill feeling that will be fomented against us. It is important, therefore, that the people of Europe and Asia know that the people of the United States have never approved the action of our representatives at Teheran, Yalta or Potsdam. They could not have approved something we knew nothing about. Hereafter, we hope, Mr. Dulles and the President will not make the same error and put our name to any further secret agreements of similar character, the contents of which are kept from the people.

In the situation we are now in, there is only one thing that will save the people of the United States from world censure because of Teheran, Yalta and Potsdam,

and that is the truth.

The action of one Senator in proposing to investigate the leak in the publication of these documents serves no good purpose and contributes to further errors on the same subject.

I am not ready to charge any of our representatives with dishonorable intentions when these agreements were made. They could have been grossly mistaken

and poorly advised, but what they did in fact consent to, we should know. It isn't too late yet, for the honor of this country, for the people to disavow unconscionable and inhuman agreements.

The very fact that these agreements are being published is the best protection the people of the United States can have against any further diplomatic acts of similar character.

Shall We Burden All Our Posterity?

EXTENSION OF REMARKS OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. SMITH of Kansas. Mr. Speaker, I submit herewith an editorial written by a well-known midwesterner. He points out some facts that many of us have tried to get adopted in the past. The observations of this well-grounded writer, of course, is in absolute opposition to a well-known and often-quoted so-called economist, namely, Mr. Leon H. Keyserling.

Mr. Keyserling, of course, is the patron saint of all the big spenders who live under the rainbow-colored tint of the welfare-state theorists. Mr. Keyser-ling recently advocated that the way to national prosperity was to increase government deficits by several billion dollars through spending more and taxing less. Such a docrine carried out is simply a hard-surfaced road to disaster.

I commend Mr. Elmer T. Peterson's editorial:

From the Daily Oklahoman of March 23, 19551

SHALL WE BURDEN ALL OUR POSTERITY? (By Elmer T. Peterson)

Never in the world's history has there been such a deadly assault against a national treasury as we are seeing in the United States

If there were any exception it would be the deliberate inflation in Germany following World War I, planned to liquidate all people of property. It is impossible to believe that there exists any such deliberate plot in this country.

The publication Spotlight, distributed by the Committee for Constitutional Government, prints an article by Senator HARRY F. Byrn, of Virginia, which highlights the dire peril confronting our Nation in this respect, and the committee says: "Never in its long history was our Federal Republic in such grave danger as today." And the sinister thing about it all is that the demands for Federal funds, instead of decreasing, are growing into stampede proportions.

Among other telling statements by Senator ByRD is this:

The present public debt which we now owe is equivalent to the full value of all the land, all the buildings, all the mines, all the livestock, all the machinery-everything of tangible value-in the United States. mortgaged to the hilt.

As declared by a prominent Oklahoma City banker the other day, such a situation, especially in view of the fact that nothing has been paid off on our Federal debt in 25 years, is equivalent to insolvency, and the only thing that prevents the wreckage of this business organization we call the United States is the fact that the Federal Government has the added power of regulating or even creating currency, and issuing almost

unlimited mortgage bonds.

Senator Byrn says further: "The Congress is being subjected to tremendous conflicting pressures * * * a wide extension of measures to increase the public welfare through Federal appropriations for roads, for schools, and in many other categories, while, at the same time demanding adequate national defense. A second pressure comes from those who assert that Federal taxes must be reduced to increase business incentive and free greater purchasing power. They also demand a reduction in the cost of living.

Senator Byrn opposes the proposed device of adding actually to the public debt to the extent of \$20 billion for a national highway program while pretending that the existing debt is not thereby increased, this to be accomplished by juggling the specifications into a special Federal corporation created for

the purpose.

"Unless Federal spending is reduced * * * deficit spending and inflation will continue to the bitter end which is insolvency," says Mr. Byrn. "We cannot preserve our freedom in insolvency. We cannot defend ourselves militarily in insolvency. Our currency will be worthless in insolvency. Inflation knows no alternative. Left to develop, it moves in only one direction. All experience, all history tells the same bitter story."

What can be done to head off impending catastrophe?

One way would be to adopt the program for a national expressway system advocated by Harry E. Bailey, former director of the Turnpike Authority of Oklahoma, who proposes a pay-as-you-go method, using the toll road system, so the general taxpayer would not be burdened.

Another thing would be the adoption of the Byrd-Bridges amendment to the Constitution, which would forbid the making of appropriations beyond receipts, except under drastic national emergency.

Another thing would be to put a stern check on all the "gimmes," including Federal aid for public schools, new socialized medical schemes, foreign aid and many other categories of Federal grants-in-aid for which there is no money.

It is a common thing for parents to think of their children, grandchildren, and pos-terity far into the future in terms of their personal welfare. Wills are drawn and be-quests are made which will pass on to posterity whatever they may have accumulated. That is a natural thing to do. But there exists a curious by-passing psychology when It comes to precisely the same solicitude for posterity in terms of national welfare and solvency. In this department there is too much of a tendency to say, "Why should we worry about posterity?"

Senator Byrn is soberly reminding American citizens that they need to exercise patriotism in safeguarding our national heritage, which should be a sound economic structure for the benefit of generations yet

Facts About TV: Children's Programing

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. WOLVERTON. Mr. Speaker, there has been given a considerable amount of attention, pro and con, concerning the type and character of so-

called children's programs on television. This has included differing viewpoints.

The Television Information Committee of the National Association of Radio and Television Broadcasters in its March, 1955, issue of Facts About TV, has given the result of a study it made with respect to so-called children's programs,

The result of the study is so interesting and informative that I feel it is appropriate to include it as part of my remarks. It reads as follows:

FACTS ABOUT TV

A recent study reveals that parents and children watch and enjoy many of the same programs and that we make a mistake when we think of television's influence on children only in terms of so-called children's programs. The results of this study are quite significant for they show that (1) the family is drawn together by this common ground, watching and discussing programs as a group; (2) the tastes of children may be somewhat higher than hitherto believed; and (3) the vocabulary and intellectual curiosity of children develop faster and they turn to books, music, etc. to satisfy this interest that is piqued by TV.

It may be well to remind ourselves of something we've always suspected; namely, that children are part of the family and that TV shows labeled "family" are for them too. Our occasional forgetfulness may be forgiven on the grounds that many programs are called "children's programs, perhaps justly so because they have few if any adult This tends to mislead many critics "children's programs," whose comments often lead us to conclude that they themselves may not be getting the full picture

even if the children are.

The New York Herald Tribune education department recently completed a survey of television tastes of 1,200 school children. In an article "Kids Aren't Kids When It Comes to TV." Nancy Moltke-Hansen finds that "the kids don't like programs designed for them as much as programs designed for their parents. Their favorite show is I Love Next on the list comes Topper, then Disneyland, and Superman. No more than 40 percent of the children's favorites are actual children's programs. For the rest their votes cover the range of adult showsfrom You Are There and Hall of Fame, through Dragnet, the Big Show, and Medic, to Jackie Gleason, Life With Riley, and Beat the Clock "

Miss Moltke-Hansen finds the term "children" ambiguous in classifying programs, because many children's shows are slanted toward kids from 3 to 7 years old while their older brothers and sisters of 8 and 9 go for Roy Rogers and Disneyland. At 13, however, they want Dragnet and the abovementioned popular comedies.

In quizzing several TV network executies on their opinions as to who was viewing what, it was found that they were generally unaware of the extent to which children watched the situation comedies and other shows designed for older people.

The adult mind, properly typified by network executives, community leaders, and parents themselves, is not to be blamed for its incomplete understanding of children's pleasures and motivations. It is hard to recall one's own specific reaction to children situations; nevertheless, children have their own valid reasons for their likes and dis-

For example, one little girl in the grade said she liked Mr. Peepers because mother and father like it, too, and so do our next door neighbors," demonstrating a need to feel at one with the other members of her social group. Children feel cozy and grown up when they share laughter with their parents and their parents' friends, the

Topper offers the fascination of ghosts that you can't see. My Little Margie presents the appealing spectacle of someone else getting into trouble in a comical way, "Mama" is "such a sweet program—when you watch it you can laugh at some things and feel sad at others." These are the reactions of children in the third, fourth, and fifth grades.

Children apparently like to feel they are learning while being amused and they don't insist on happy endings. Medic's attraction is that it tells about hospitals; "It's a true story and the person doesn't always live." the Carousel tells "very interesting things" like "how they make shoes." You Are There is a favorite because it "gives historic facts and legends from many countries" and "shows the details of famous historical events."

What do these findings mean? For one thing, they show that the tastes and preferences of children may be somewhat higher than hitherto believed. It tells sponsors that much of their audience consists of youngsters, toward whom a programmatic as well as an advertising eye must be at least partially cocked.

But much more than this is suggested. Children enjoy, through television, the same entertainment as their parents, thus creating a common ground for the whole family that is the very basis of a healthy society. Family life becomes more than a mere peaceful coexistence. There are things to talk about, to compare with one another, to explain and to have explained. Stimulus and ferment, cultural curiosity, a parent-child interchange of feelings and ideas are created during the common leisure of both parents and their children-something of as much cultural validity as the father's playing baseball with his son or the mother's teaching her daughter how to cook and keep house. For TV creates ideas—the "how to do it" of the mind—as much as techniques-how to bake a cake, improve your golf, etc.

A case in point is the opportunity for children to ask "Why?" when presented with a TV situation. Here the parent performs his role as teacher and guide. In company with a 5-year-old, a 7-year-old, and a 10 year-old, Dr. Willard Abraham, professor of education at Arizona State College, watched a television program, taking notes of some of the words used in the script. They were:

Chapter, laboratory, surrounded, extinguished, devise, venture, instrument, audience, ceremony, domain, universe, influence, circuit, disappear, destination, expedition, desolate, inspection, squadron, adventure, crater, short wave.

After the program was over, Dr. Abraham talked it over with his young friends and was surprised to discover that they had understood it. He concluded that their vocabulary had grown through hearing the words used often in correct ways. So he writes in the March issue of Family Circle maga-

In considering the relationship between TV watching and book reading Dr. Abraham asserts that television is more an aid to reading than a hinderer of it, because it builds young vocabularies and stimulates curiosity on matters of detail that are suggested on TV but which cannot be presented as fully as in a book.

This thinking is strongly seconded by Commissioner John C. Doerfer of the Federal Communications Commission, the Government body whose responsibility it is to license radio and television and observe how

well the public interest is served.

Speaking in San Francisco recently, Mr. Doerfer declared, "The head librarian of a large metropolitan city recently was quoted as saving that "TV is tending to become more of an ally than a competitor.' When the people closely associated with these mani-festations of the cultural growth of the

American people publicly testify that broadcasting is no longer considered a competitor but an ally, it bears an imprint of more reliability than the subjective appraisals of broadcast programs by casual observers."

Furthermore, Mr. Doerfer pointed out, the audience for concert music rose from 3,680,-000 to 4,203,000 last year, the sale of musical instruments shows a big rise, and the number of children studying music has greatly increased. He quoted the dean of a conservatory of music and a director of choral music to the effect that a child seeing one of his own contemporaries give an outstanding recital on TV makes the youngster want to learn music himself.

Where but on television, he asked, could so many young people watch Yehudi Menuhin play the violin and take time to discuss what he was doing and why he enjoyed it so much. This he did on a recent Omnibus program one Sunday afternoon recently when millions of children and their parents

were watching TV.

Good Family Life Held Crime Curb

EXTENSION OF REMARKS

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the Record, I include an article from the New York Times.

GOOD FAMILY LIFE HELD CRIME CURB-FREE-DOM AND RESPONSIBILITY STRESSED BY PSY-CHIATRIST AS YOUTH'S GREAT NEEDS

A psychiatrist called yesterday for harmonious family life as the nearest solution to the rising crime wave among juveniles.

Dr. David Abrahamsen spoke with two other panelists at a forum luncheon at the Harmonie Club, 4 East Sixtleth Street, on ways to prevent juvenile crime.

Citing the many external and internal causes of crime, Dr. Abrahamsen stressed the need of upbringing based on freedom and

responsibility.

The youth's appreciation of his role in society should also be stimulated by teachers, who should add a fourth R to their curriculums, that of personal relationships.

"It is the adults' responsibility to spot the warning signals of disobedience, hostility, truancy, and aggressiveness among children," he said. And more attention should be given to those adults whose emotional problems continue to do damage to themselves and to others.

GOOD EXAMPLE HELD ESSENTIAL

But the prime preventive force against delinquency exists in good example, Dr. Abrahamsen said.

"A parent's fine example to a child will render punishment and reward unnecessary," he said, adding that experience had taught him that a woman's responsibilities in the home should take first place.

The two other panelists, Mrs. Anna M. Kross, commissioner of correction, and Irving Ben Cooper, chief justice of the court of special sessions, agreed that society and the young criminal were helped little by court action and imprisonment.

The young delinquent who is brought to court on charges of crime is invariably starved for associations in the institutions of his community, Justice Cooper said. It is up to the citizenry to impress on the youth that he has a role in school, club, and church work, he added.

Mrs. Kross spoke of the false concept of judges and the public that imprisonment provided a solution for criminal problems.

"It is a false social concept of security that we are safer if we lock them up," she said.

Amending the Natural Gas Act Is in the Public Interest and Will Restore the Jobs of Unemployed Coal Miners and Railroaders

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. VAN ZANDT. Mr. Speaker, continuing my efforts to relieve unemployment in the coal, railroad, and related industries in my congressional district, on March 18, 1955, I introduced H. R. 5068 to amend the Natural Gas Act.

In support of my bill, the following statement was submitted to the House Committee on Interstate and Foreign Commerce on March 25, 1955:

STATEMENT BY HON. JAMES E. VAN ZANDT, 20TH DISTRICT, PENNSYLVANIA, ON H. R. 5068, BEFORE THE HOUSE COMMITTEE ON INTER-STATE AND FOREIGN COMMERCE, MARCH 25, 1955

I have introduced a bill, H. R. 5068, to amend the Natural Gas Act in certain important respects in the public interest.

Bills of similar import before this committee have been introduced by Representatives STAGGERS, SAYLOR, CARRIGG, KELLEY, MORGAN, BYRD, BAILEY, KEE, PERRINS, and MOLLOHAN.

My bill addresses itself to a very vital problem on which President Eisenhower has indicated a deep concern and which involves the welfare of all our people. That problem is the development of a sound national fuels policy which will restore the balance of competitive conditions among our several fuels industries. The end results will mean great benefits to the consumers of fuel and energy, and growing employment in a prosperous economy.

President Eisenhower recognized the importance and scope of this matter many months ago. In 1954 he set up 2 committees, I of which was designated the Advisory Committee on Energy Supplies and Resources Policy. This Committee was composed of the Director of the Office of Defense Mobilization and the Secretaries of State, Treasury, Defense, Justice, Interior, Commerce, and Labor. The committee was directed by the President;

"To undertake a study to evaluate all factors pertaining to the continued development of energy supplies and resources fuels in the United States, with the aim of srengthening the national defense, providing orderly industrial growth, and assuring supplies for our expanding national economy and for any future emergency."

The committee was further directed to "review factors affecting the requirements and supplies of the major sources of energy including: coal (anthracite, bituminous, and lignite, as well as coke, tars, and synthetic liquid fuels); petroleum, and natural gas."

On February 26, 1955, the committee's report was issued by the White House as "The White House Report on Energy Supplies and Resources Policy." The opening paragraph of the report states:

"The importance of energy to a strong and growing economy is clear. As condi-

tions of supplies and reserves of coal, oil, and natural gas change, and as both defense and peacetime requirements come more clearly into focus, the bearing of Government policies upon energy needs reexamination."

The complete text of the White House report is part of the record of the hearings before this Committee on Natural Gas Act amendments.

I submit that the report and the fact of its incorporation into these hearings should guide the Congress in its consideration of legislation on natural gas.

The Congress should take a look at natural gas in relation to the whole field. It should seriously reexamine our supplies and needs, as the White House committee recommends, and we should give consideration to all of the provisions of the White House report as well as the recommendations of the Federal Power Commission, the agency charged with the administration of the Natural Gas Act.

The Natural Gas Act which was passed on June 21, 1938, has been amended in 1942, 1947, and 1954. This year we have the opportunity to amend the basic law in the public interest because we are faced with many problems to solve under present Government policies in administering the Natural Gas Act.

I am of the opinion that this Congress should not confine its legislative activity to only one phase of the many problems involved in the proper utilization and conservation of natural gas.

For that reason, I introduced and urge passage of H. R. 5068. My bill contains many provisions which have been recommended by the Federal Power Commission and by the White House Report on Energy Supplies and Resources Policy.

For example, section 1 of H. R. 5068 would amend subsection (b) of section 1 of the Natural Gas Act to give the Federal Power Commission jurisdiction over direct industrial sales of gas in interstate commerce. This is a change in the law requested by the Federal Power Commission as recently as 1953. It has also been recommended by the White House Report.

Under present policies, the Commission does not have jurisdiction over these sales with the result that large quantities of this scarce natural resource are being burned wastefully—and at prices which are subsidized, in some instances, by the consumers of gas whose prices are regulated by the Commission. Federal Power Commission regulation would not result in the elimination of such sales, but it should result in a more equitable allocation of the cost of producing and transmitting natural gas to the consumer, with consequent benefit to the gas consumers.

Section 2 of H. R. 5068 would establish statutory standards to be followed by the Federal Power Commission in the administration of the Natural Gas Act in respect to conservation of this resource. This section also is in accord with repeated requests by the Federal Power Commission to the Congress that its powers in the area of conservation should be broadened. The Commission already has general power to effectuate the proposed standards in my bill so that the enactment of H. R. 5068 would merely supply the necessary legislative mandate.

I think that the extremely limited reserves of natural gas make it imperative that Congress clearly authorize and direct the Commission to give effect to sound principles of conservation in regulating the utilization of natural gas.

The Federal Power Commission has also endorsed the proposal contained in section 4 of H. R. 5068, which would define the term interstate commerce to include commerce between any point in a State and any point in a foreign nation.

Section 5 of H. R. 5068 would require natural gas companies to secure a certificate of public convenience and necessity when seeking authority to import foreign gas. The principal objective is to require that all import applications be subject to the same provisions that govern domestic applications for a certificate of convenience and necessity.

Section 6 of H. R. 5068 would amend subsection (a) of section 4 of the Natural Gas Act to prohibit the sale of natural gas at a price less than its cost, including the cost of transportation and sale, plus a fair proportion of the fixed charges. This section incorporates almost the exact language of the White House report which is part of the record of these hearings. The report says:

"Sales either for resale or direct consumption below actual cost plus a fair proportion of fixed charges which drive out competing fuels constitute unfair competition and are inimical to a sound fuels economy. The committee recommends, therefore, that appriate action be taken that will prohibit sales by interstate pipelines either for resale or for direct consumption, which drive out competing fuels because the charges are below actual cost plus a fair proportion of fixed charges."

In light of that clear injunction in the White House report that action is required on this particular aspect of natural gas regulation. I think the 84th Congress would be derelict in its responsibilities to the American people if it falls to include in any natural gas legislation a provision such as section 6 of H. R. 5068.

The White House report contains the recommendations of a highly respected, impartial committee of distinguished public servants saying that this is one of the reasons why the competitive conditions in our fuels industries are seriously out of balance.

As a Representative of a congressional district whose economy depends upon coal and railroads, this unfair competition from natural gas has thrown thousands of coal miners, railroad workers and other employees in related industries out of jobs.

Sections 7, 8, and 9 of H. R. 5068 round out the objectives of legislation which I feel is needed in the public interest.

The principles in H. R. 5068 must be enacted for the protection of the peacetime economy and for the maintenance of a strong mobilization base within the domestic fuels industry.

Wheat Shipments by the Bunge Corp.

EXTENSION OF REMARKS

HON. CHARLES A. BOYLE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. BOYLE. Mr. Speaker, on this date, after hearing numerous and repeated inferences on the floor of the House of Representatives regarding the Bunge Corp., of Minneapolis, I have introduced a resolution which would authorize the Judiciary Committee of the House of Representatives to conduct a full and complete investigation of the Department of Justice in dropping criminal charges against Robert F. Straub, Andre Herschler, Simon Kern, Walton F. Mulloy, and E. H. Thornton, Sr., all associated with the Bunge Corp., of Minneapolis, growing out of alleged misrep-

resentations in connection with certain wheat shipments.

In certain wheat shipments, which apparently were handled by these men on behalf of the Bunge Corp., of Minneapolis, the wheat shipments were "slugged"-filled with some high-grade wheat and some wheat that was unfit for human consumption-and then certified as being first-class wheat only, and in doing so fraudulently enabled the Bunge Corp., of Minneapolis to obtain \$1,700,-000 in subsidy payments. It seems in-congruous that the company which these men were working with and for, the Bunge Corp., of Minneapolis, should plead guilty and pay a fine of \$5,000 and then that the individuals actually involved should have criminal charges against them dropped because of insufficient evidence.

However, I am the last individual to rob citizens of their cloak of innocence, and as a member of the judiciary t is my desire merely to assist in every way possible to remove this subject from the field of controversy and suspicion.

Seizure of American-Flag Ships

EXTENSION OF REMARKS

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. PELLY. Mr. Speaker, since calling the attention of my colleagues earlier today to the unlawful search and seizure of the American-flag ships Arctic Maid and Santa Ana by Ecuador, I believe it desirable to extend my remarks to include additional information which I obtained from the Department of State.

Only a few short weeks ago, Mr. Nick Bez, of Seattle, Wash., a well-known fishing operator and a constituent of mine, paid \$5,000 tribute to the Government of Peru for the release of his ships, the Western Clipper and the Tony Bee. Both of these ships asked sanctuary of the Peruvian Government, one for needed emergency repairs and the other for medical assistance for a sick crewman. After granting asylum to these fishing vessels and their crews, and literally inviting them into the protection of the harbor of Calloa, the Government of Peru seized the ships and to all intents and purposes held them for ransom. Three weeks ago eight American-flag fishing craft were seized, again by the Peruvian Government, and \$2,000 more American ransom dollars were paid out before their release could be effected. On September 4, 1954, the Sunstreak, an American-flag ship owned by Mr. Jack Crivello, of San Diego, was confiscated by Ecuador. Mr. Crivello paid between \$12,000 and \$13,000 for the release of his ship, and, pursuant to Public Law 680 of the 83d Congress, has filed a claim in this connection with the Department of

These are acts of piracy, Mr. Speaker. Therefore I ask, how long will these acts of modern-day banditry be tolerated?

How long will citizens of this country sailing under the protection of the Stars and Stripes be subjected to the indignities of forcible detention by foreign governments until tribute is paid for their release? I suggest that it is about time the United States ceased protesting and started protecting our American persons and property. The echoes of that stirring slogan of early years, "Millions for defense but not 1 cent for tribute," once echoed loudly in this land of freedom. In our position of world leadership it should resound from shore to shore, today louder and with far greater determination and firmness than ever before in our history.

What Price Inconsistency?

EXTENSION OF REMARKS

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. DEROUNIAN. Mr. Speaker, the following article, by David Lawrence, which appeared in the Washington Evening Star on Friday, March 25, 1955, is, I believe, worthy of special attention:

ERA OF STRANGE CONTRADICTIONS—DEMO-CRATIC SENATORS ACCUSED OF TURNING THEIR ATTENTION TO SUCH TRIVIALITIES AS SQUIR-RELS AND LEAK ON YALTA

These are strange times in Washington—strange because, with the world in a worried mood, there are Democrats in Congress who seem to be worried only about trivialities.

Thus, one Senator, a prominent Democrat, wants to raise a fund to build a fence so that the squirrels which, he says, were ordered off the White House grounds could return and the President still be able to practice golf on a smooth putting green. But it turns out that Mr. Eisenhower didn't know a thing about the squirrels until he read about them in the newspapers. Maybe the groundkeepers of the White House lawns should consult Congressmen hereafter before trying to keep animals of all kinds, large or small, out of the grounds.

Then another Senator, also a prominent Democrat, says he wants to see an investigation begun to discover how the Yalta papers "leaked" to a certain newspaper—the New York Times. But it turns out the documents were actually released on the same day last week to all the newspapers simultaneously. Nobody had a scoop. So there was only a hypothetical leak after all.

But assuming that the Times or any other newspaper gets a scoop hereafter, is the reporter to be investigated and is his informant to be declared a security risk? One Democratic Senator solemnly hands down a decision that whoever gave the Yalta papers to any reporter in advance is a security risk.

The Times hasn't told who its informant was, but it wasn't the Secretary of State, and the documents were never formally classified as secret either. They were just pieces of historical literature. Messrs. Churchill, Byrnes, and Stettinius have all published books with data in them from the Yalta records.

The pot shouldn't call the kettle black. Senators regularly leak to the press information that they get from the executive branch of the Government. Also under the Truman administration, the most sensational leaks occurred, and nobody on the Republican side

seemed to worry about the scoops the news-

papers got.

One conspicuous instance, for example, was the leak that gave a reporter for the New York Times a copy of the transcript made at the meeting between President Truman and General MacArthur at Wake Island in 1950 shortly after the Korean war began. A Government stenographer was planted outside the door without the general's knowledge, and the notes were allowed to get into print without consulting the Far Eastern commander as to their accuracy. Mr. Dulles at least consulted Mr. Churchill before making public the Yalta papers.

Nobody at the time thought there was a security breach in the publication of the Wake Island papers, though the ethics used in planting a stenographer clandestinely to eavesdrop were questioned by some critics.

Also didn't President Truman himself leak to a friendly Senator in October 1952 a document written in 1947 revealing General Eisenhower's recommendations while a member of the United States Joint Chiefs of Staff? Wasn't it the plain purpose to try to embarrass Mr. Eisenhower politically when he was a presidential candidate? All this was revealed just a few months ago in Senate debate.

As for confidential informants, the newspapers could hardly print all the news articles they do each day if the persons who are the sources of their information did not rely on the reporters to withhold their names. The courts have for the most part upheld the right of the press to conceal confidential informants. Day by day Government officials give out information with the explicit understanding that it isn't to be attributed to them. This happens all through the Government—especially on Capitol Hill.

Yet today the American Civil Liberties Union, which has a tendency to uphold most of the left-wing attacks on the security system, is demanding that all confidential informants of the FBI be disclosed in any personnel hearings inside the Government. A concerted effort by various organizations is underway to try to accomplish this. Anyone who presents any information that could be regarded as derogatory must be willing, if such a program is ever adopted, to have his name used in a formal proceeding, or presumably such information will not be available to the Government.

This is about the cleverest scheme yet devised to break down the whole system of ferreting out subversives in the Government. Yet there are sections of the press which insist on protecting confidential informants for their own use but would deny such a device to the Government itself as a guide in employment practices. It's an era of strange contradictions.

TVA at Work

EXTENSION OF REMARKS

HON. W. PAT JENNINGS

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the Record, I herewith include an editorial entitled "TVA at Work," which appeared in the Bristol Herald-Courier on March 22, 1955. The editorial follows:

TVA AT WORK

The floods which struck sections of upper east Tennessee last week were damaging and, in some instances, destructive, but they were far less severe and much more contained than they might have been 30 years ago.

In that day there was no Tennessee Valley Authority. There were no great dams to hold back the rush of swollen streams; no reservoirs to collect the millions upon millions of gallons of water pouring from the mountains into the valley.

mountains into the valley.

A very real picture of the value of TVA and its dams is found right in our own backyard. At South Holston Lake officials yesterday reported a rise in elevation of 6 feet 10 inches in the space of a single day. Who could calculate the damage that such a tremendous quantity of water might have caused had it rushed freely down the Holston River? And who will argue that the salvation of our resources and the alleviation of human misery is not worth the cost of TVA?

This is a major part of the TVA picture which, too often, is overlooked in the controversy over the merits and demerits of the system.

But perhaps it's only natural to talk about the great floods we did have rather than the great floods we didn't have.

Upsurge in Puerto Rico

EXTENSION OF REMARKS

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. FERNANDEZ. Mr. Speaker, by unanimous consent I place in the Appendix of the Record an editorial from the national Catholic weekly review America, of Last Saturday, March 26, commenting on the very excellent progress being made by Puerto Rico, as a self-governing commonwealth. The editorial reads as follows:

UPSURGE IN PUERTO RICO

When four Puerto Rican Nationalists let fly with gunfire from the spectators' gallery of the House of Representatives a year ago, they gave the Communist propaganda machine another chance to grind out a familiar tune. The Red press and radio played up the Puerto Rican gunmen as patriotic mar-tyrs, spokesmen for a people cruelly oppressed by American imperialism. The real facts, however, give the lie to the Red propaganda, and prove exactly the opposite. Puerto Rico's Governor, Luis Muñoz-Marin wrote in Foreign Affairs last July: "Puerto Rico in its upsurge is an exemplification of the fine spirit of freedom in which the United States can deal with civilized people of different origin in their homeland."

The upsurge of which Governor Muñoz-Marín wrote is an amazing uphili pull in social and economic development called Operation Bootstrap. It has attracted hundreds of teachers, engineers, economists, and other technical-assistance workers from all over the non-Communist world to see at work a plan that is increasing annual per capita income much faster in Puerto Rico than in any other Latin American country, or in the continental United States.

That per-capita income is still low. In 1953 it was only \$417 a year. Still, that is more than four times the world average, which is below \$100, and it represents a threefold increase in Puerto Rico since 1940. The present Government's industrialization campaign has added 330 new factories and reduced unemployment by one-third. The economic hazards of a one-crop, export economy which Puerto Rico had in common

with some other Latin American countries is yielding to a program of diversification of agriculture.

To guarantee the workers' share in this increased productivity, a vigorons labor-union movement has grown up. According to the testimony of the Inter-American Association for Democracy and Freedom, reporting in the January 24 issue of the New Leader, the unions are playing an important role in the development program. The association, founded in Havana in 1950 by 104 representatives of labor and democratic-political organizations in 16 North and South American nations, reports:

"The success of their activities might be measured by the fact that in elections conducted in Puerto Rico by the National Labor Relations Board, 77.9 percent of all cases were won by the unions last year. Elections supervised by the Puerto Rico Labor Relations Board show an even more overwhelming majority won by unions: 87.7 percent.

* * Furthermore they have successfully organized agricultural workers."

That is a far cry from exploitation.

Since 1940 the Puerto Rican death rate has been cut in half. Life expectancy has jumped from 46 years to 61. School enrollment has gone up 75 percent. Educational expenditures have increased 460 percent. Literacy has risen by 14 percent.

The political scene also shows progress toward stability. The Puerto Rican people in free elections have voted 81 percent against independence from the United States and 84 percent against incorporation in the Union as a State. They are in the process of forming themselves into a self-governing commonwealth freely associated with the United States. The Trusteeship Committee of the United Nations has officially recognized Puerto Rico as "an autonomous political entity."

The story of Puerto Rico, far from being a liability, should be a real asset to the United States in the propaganda battles of the cold war.

Rigid Supports Depress Farm Income

EXTENSION OF REMARKS

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. DAGUE. Mr. Speaker, it seems to me that any approach to the subject of farm supports from other than a consideration of their effect on farm income as well as cost to the taxpayer is illogical.

In debate on this vital issue there seems to be only one point that can be made without resort to a lot of questionable statistics, and that is the recital, even to the point of being repetitious, of the fact that present farm prices took their biggest dip during the period when rigid 90-percent parity supports were in full force and effect.

I believe it is generally known that Lancaster County, Pa., is the leading nonirrigated agriculture county in the country; and I think that fact justifies the editorial opinion reflected by the following article which appeared in the issue of the Lancaster (Pa.) New Era for March 23, 1955:

FARM PRICE SUPPORTS

When flexible farm price supports became the law, they were hailed in many quarters as a big stride toward a saner agricultural policy.

Until then, the Nation had pursued a policy of rigid, high price props that encouraged farmers to produce not alone for consumer needs but for Government storage warehouses. They turned out crops for which there were no buyers but the Government.

Even with the new flexible supports, no one imagined the painful problem of surpluses would be solved overnight. It was realized that other approaches were necessary, too. Production quotas, development of new foreign and domestic markets, new uses for farm products, these were seen as part of the picture.

This hard-headed view made sense. Experience since the flexible plan became policy shows that the problem doesn't yield easily. Wheat is an example. Though output has been cut and drought has made further inroads, United States farmers still will turn out enough wheat in 1955 to assure a surplus of 925 million bushels—more than a year's consumption in this country.

In the face of this evidence, the House Agriculture Committee recently voted 26 to 11 for a bill to restore the old high, rigid price props (90 percent of parity) on the basic crops now under the flexible system—including wheat, corn, and cotton.

Furthermore, the committee bill would hike price supports on dairy products, another group long plagued by surpluses, from the present 75 to 80 percent of parity.

Backers of the rigid plan argue it is justified by the 10 percent drop in farm prices during 1954. But actually what they propose would solve nothing. It would merely restore the old dilemma of the surpluses in its worst form, and put a real solution that much farther away.

No sensible, fair-minded citizen wants the farmer to suffer while his fellows prosper. Yet it is hard to believe that even the farmer himself wants to gain prosperity through a system like the rigid support plan, which not only builds ruinous surpluses but costs the taxpayers twice (through support loans and payments and storage charges) and the consumers once (through high market prices).

The problem needs an imaginative, manysided attack. All the real friends of the farmer should join happily in that enterprise. But it is a dubious sort of friendship that would return the farmer to the old rigid setup under which he gains at the expense of the whole country.

Greek Independence Day

EXTENSION OF REMARKS

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. LESINSKI. Mr. Speaker, Friday, March 25, was the 134th anniversary of the independence of the Greek people. One hundred and thirty-four years ago the Greeks rose up against their foreign rulers and for over 6 years of constant warfare and much bloodshed fought against the chains of their bondage. This rebellion brought about the birth of what today is modern Greece.

This anniversary date should be memorialized by everyone, for it marks the rebirth and rejuvenation of a nation that had been under a foreign yoke for four centuries. In spite of those long years of servitude and personal suffering, the Greeks did not lose the traits that had made their forefathers great. We all know the debt we owe the Greek nation, for many aspects of our modern civilization were developed from the knowledge and thinking of the early Greeks. Even today, many of their findings are being rediscovered.

As an American, I am proud that in recent times our Nation came to the assistance of the Greeks and provided them with military, economic, and technical assistance. Our military aid helped prevent the Communists from subjugating the people of Greece and reducing them to the status of slaves. Our economic and technical assistance gave the nation a chance to rejuvenate itself and to build the internal strength that is so needed.

This day should be proclaimed to the world, for it symbolizes the thinking of every person who has suffered under foreign oppression. Four hundred years was a long time but it could not still the heart and the will for freedom. The courage and determination of the Greeks are reflected in their freedom. By proclaiming their independence day to the world, we show to the people of the world a shining example of hope for the future, and further ingrain and strengthen in the minds and hearts the determination, so passionately desired, to remain free of any oppression.

Ex-FBI Agent Named as Nixon Assistant

EXTENSION OF REMARKS

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. HILLINGS. Mr. Speaker, I wish to place in the Record an article which appeared in the February 1955 issue of the Grapevine, official publication of the Society of Former Special Agents of the Federal Bureau of Investigation, Inc. This article discusses the FBI background and experience of Mr. Robert L. King, able assistant to Vice President Nixon.

The article follows:

EX-AGENT IS NAMED AS NIXON ASSISTANT—
KING FINDS JOB WITH VICE PRESIDENT IS A
TREMENDOUS EXPERIENCE

(By Karl G. Hastedt)

Walk into the executive offices of Vice President Richard Nixon at the Senate Office Building at Washington these days and you're almost sure to be greeted by former Special Agent Robert L. King, an old friend of hundreds of society members.

Visit the Vice President's mahogany-lined office in the Capitol, just off the United States Senate Chamber, and you're almost certain, if the Vice President is in the immediate vicinity, to find Bob King on the job also.

Should the Vice President have an important assignment of a delicate nature to undertake it's almost a sure bet that somewhere in the background will be Bob King. Indeed, as the assistant to the Vice President, Bob is in the thick of things nowadays in the Nation's Capital where Dick Nixon is skillfully handling an increasingly important administration role.

CAME FROM ST. LOUIS

Up until the first of January, if you wanted to see Bob you would have had to go to St. Louis to do it. Until then, for a period of 9 years, he had been vice president and general manager of Southern Comfort Corp., a widely known firm of rectifiers. The fact that Vice President Nixon picked King as his top assistant didn't mean, as some of the Nation's drys feared, that the man who occupies the second highest office in the land was giving special recognition to the alcoholic beverage field. Actually, the industry didn't enter the picture at all. Vice President Nixon selected him because Bob, as a former special agent of the FBI, has the training and experience the job calls for. Also, as a close friend for many years Bob is a man DICK NIXON trusted and for whose talents and abilities he had a great respect.

When the Vice President suggested last summer that he'd like to have him come to Washington, Bob thought it over for a long time. The salary certainly wasn't any incentive. He was making far more in private industry than what he would receive in Washington. It would mean a real financial sacrifice. But somehow the money factor became in the end a minor consideration.

"What counted most," recalls Bob, "was the definite feeling that here was an opportunity to serve. Each of us, as I see it, has an obligation as a citizen to pitch in and help in whatever way he can. Finally, I was convinced that my background and training in the bureau fitted me particularly for the work that DICK NIXON had in mind for me."

DEACON IN HIS CHURCH

Bob naturally gave some thought, too, to the reaction which his business associations might have in certain quarters in connection with his work with the Vice President. He had carried into his business life the same high standards and ethics for which the bureau is noted and he had a right to be proud of his record with the corporation he represented. Bob remembered what an officer of the Central Presbyterian Church at St. Louis of which he is a member had said when they invited him to become a member of the board of deacons.

"Church officers," Bob was told, "aren't picked because of any particular business they represent. They're selected because the congregation thinks highly of them as individuals and as Christians. We want you on our board for the same reasons."

So it was because of all these factors that Bob finally agreed to accept Dick Nixon's invitation to become his assistant.

MET ON WEST COAST

How did Bob first become acquainted with Vice President Nixon?

Well, he wasn't Vice President then. Just a lieutenant in the United States Navy. It was 1944. Bob King was at the San Francisco field office of the bureau supervising the investigations of Communist and Russian activities. "Comrap"—for "Comintern apparatus"—was the code name for his probe of Russian espionage in the area. His work also entailed some portions of the security of the atomic bomb work being carried on at the University of California at Berkeley. Bob and his team several times detected transmission of information by Russian agents to the Soviet consulate at San Francisco.

Mrs. King, meanwhile, was working in a Government office in the city. One of her coworkers was Mrs. Patricia Nixon, wife of the young Navy lieutenant. Through this association Special Agent King later met Lieutenant Nixon when he returned from duty in the Pacific and they became warm friends.

When Dick Nixon was asked by a group of his fellow Californians to run for Congress and was elected, there was no one any happier than the Kings. And when Nixon followed through on his brilliant record as a Congressman and won election to the United States Senate the Kings were among the first to wire congratulations. It was the same way when Senator Nixon was nominated and elected as Vice President. Couldn't happen to a better man, they said. Whenever the Nixons went through St. Louis or the Kings came east to Washington, a family visit was always a "must."

HIGH PRAISE FOR NIXON

"Dick Nixon is one of the greatest guys in the world," said Bob the other day as we sat talking in the Vice President's office at the Capitol. "He's absolutely sincere and courageous and really dedicated to his job. I've seen other dedicated people in my time, but Vice President Nixon to me is tops. He believes devoutly in his purpose and mission, Another thing, he's tremendously human, easy to know. Why, he's still just as affable and unaffected as he was when I first met him. A lot of people are just beginning to find out now what a terrific guy he is. I discovered that about 11 years ago."

Pete Provencal, the doorman at the Vice

Pete Provencal, the doorman at the Vice President's office, is equally enthusiastic in his estimate of Dick Nixon. "Mr. Nixon tells me all the time," said Pete, "to be nice to the people who come here, to make them feel at home. "This isn't my office,' he says, but belongs to all the people. They're the ones who elected me Vice President."

BORN IN BIRMINGHAM

Chances are Bob King never would be where he is today, had he remained at Birmingham, Ala., where he was born 41 years ago. But in 1934, after he'd finish 2 years at Howard College there, he came on to Washington to take a job with the Federal Government. At the same time he enrolled at George Washington University law school and in 1938 got his law degree. A year earller he'd qualified as a member of the District of Columbia bar and was admitted to practice.

During that time a young lady named Gretchen Bradshaw, whose home was near Raleigh, N. C., also had come to Washington, to work for the Government. Bob recalls that when he met her for the first time he had a pretty good idea that she'd be the future Mrs. King. In July 1938, following graduation from law school, Bob was appointed special agent and made the usual preliminary rounds to various cities. By 1940 he was assigned to the San Francisco field office and there made plans to obtain a leave, fly east, and be married by Dr. Peter Marshall in Washington. Just then, however, with the war in Europe at a critical stage, President Roosevelt declared a national emergency, and all leaves of special agents were canceled.

WED IN RENO INSTEAD

The most Bob could get off was for a few days. So he arranged to meet his fiance at Reno, Nev., where there was no 5-day waiting period for a marriage license as there was in California. Bob bought a new car and drove to Reno. "We had a day and a half honeymoon at Lake Tahoe" he remembers. "Then it was back to San Francisco and apartment hunting."

Fortunately for King, he remained at San Francisco until he resigned from the Bureau in November 1945. Francis E. Fowler, 3d, a special agent on King's squad, was the son of the owner of Southern Comfort Corp., and told King his father was interested in having Bob join their organization. Like DICK NIXON, Bob is easy to work with. He and the Fowlers hit it off well.

So off he went to St. Louis where he soon won recognition for his outstanding administrative abilities. Family and civic life occupied much of his time, too.

HAVE FOUR CHILDREN

As for family, Bob and Mrs. King have an unusual one. They point with pride to their four children, all of them adopted. There's Bob, 12 years old; Tommy, 111/2; Susan, 5, and Sally, 4. Wonderful young sters they are and about as nice an American family as you'll find anywhere. Certainly it's a mighty happy and animated group that gathers about the dinner table evenings at the Kings' suburban home at Frontenac, Mo. Bob isn't with them too often these days, now that he's in Washington. He recently purchased a new home at Sleepy Hollow, near Falls Church, Va., but until he disposes of his home near St. Louis, Mrs. King and the children are remaining there. expect to be fully installed in their Virginia residence by early spring.

Bob's civic activities in St. Louis were many. He was vice president of Junior Achievement, Inc., for the Mississippi Valley area. This is a youth organization which teaches and encourages among high school students the American system of free enterprise. Bob was active, too, in the St. Louis Community Chest campaigns and was a member of the Downtown Kiwanis Club. A few years ago he also was a vice president of the Society of Former Special Agents of the FBI.

WORK STIMULATING

Working in Washington, of course, is nothing new for Bob. He had lots of that some 20 years ago. But now it's different. Caught up in the hustle and bustle of his work with the Vice President, he finds his assignment stimulating and Washington, the city which has made and broken many a man, a fascinating place. Bob counts himself as extremely fortunate to have had the honor of meeting President Eisenhower during his first week.

"I'm lucky to have the opportunity to work with Vice President Nixon," says Bob. "It's a tremendous experience."

There's an interesting story behind the beautiful crystal chandeller hanging over the Vice President's desk in his office at the Capitol. At one time the massive chandeller was in the White House where it caused great annoyance to President Theodore Roosevelt because its crystals either gave off an undue reflection of light or set up a chorus of tinkling sounds whenever a stray breeze entered an open window.

Roosevelt ordered the chandeller removed and when asked where to, is said to have replied: "Put it in the Vice President's office; he has nothing to do."

PLENTY OF WORK NOW

If that were true in Teddy Roosevelt's day, it just isn't so now. Vice President Nixon is a hard-working member of President Eisenhower's team. As a matter of fact, it is generally acknowledged by most people that Vice President Nixon has for the first time in our history given his high office real stature in the upper councils of Government. President Eisenhower instituted the unprecedented action of having Vice President Nixon preside in the President's absence at both Cabinet meetings and those of the National Security Council. And yet with all his busy schedule, he still finds time to help worthy causes. For example, a few days after the Grapevine staff visited him in Washington he served as a gas station attendant to raise funds for the March of Dimes campaign.

As the assistant to the Vice President, Bob King's job is more than just that of administrative officer. It's a 24-hour-a-day assignment, helping to relieve Dick Nixon of some of the pressure which his job entails; working

on confidential matters in connection with the Vice President's work with the National Security Council; handling legislative matters involving Mr. Nixon's constitutional office as presiding officer of the United States Senate, and serving as adviser in many ways. In addition, he'll handle research assignments in the preparation of material for Nixon speeches.

That doesn't mean, however, that Bob will write speeches for the Vice President. Draw Nixon is a man who writes his own. Doesn't feel right, he says, delivering a speech someone else has written. "If I say it," he told Bob, "I have to write it." As Bob put it, this is just another indication of the man's innate sincerity.

Bob isn't going along on the Central American good will tour that Vice President Nixon is embarking upon shortly. Since he's still fairly new at his job, he wants to use the time while his boss is away to get better acquainted with his assignment.

From all indications, that assignment is going to become more interesting as the months go on.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 722, Supp. 2).

Appendix

Unemployment in the Shipbuilding and Ship-Repair Industry

EXTENSION OF REMARKS

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks, I include at this point in the RECORD a statement concerning unemployment in the shipbuilding and ship-repair industry prepared for the Senate Committee on Labor and Public Welfare, Subcommittee on Unemployment, by John J. Grogan, president, Industrial Union of Marine and Shipbuilding Workers of America, CIO:

STATEMENT CONCERNING UNEMPLOYMENT IN THE SHIPBUILDING AND SHIP-REPAIR IN-

Employment in both the shipbuilding and ship-repair industries in this country is today well below the minimum required even for national defense purposes. of production workers in United States private shipbuilding and ship repair yards has fallen to 84,500 workers in December of 1954. Total employment in the same yards has fallen to 98,000 workers in the same month. There has been a decrease in the past year of over 23,000 production workers and over 25,000 total workers. There is no present prospect of a rise in employment with the bogging down of the tanker program, within the next few months. We are now almost down to the low level of January

In addition to the lack of employment, those people who are working are mostly working short hours. Intermittency of employment in this industry is a constant characteristic, particularly in repair, and presently layoffs are even hitting major con-

struction yards.
As of March 1, 1955, the total of oceangoing vessels under construction in private American shipyards was 16, no change from the previous month. The total personnel employed in these private American shipyards who are engaged in the construction of these vessels is 5,200, that is, 30,000 less than the minimum nucleus estimated by the Maritime Administration as being required in the beginning of an emergency to bring the yards to ready condition.

We have testified before every session of the Congress for the past 10 years on the perilous state of shipbuilding and ship repair facilities and unemployment in the in-We have urged the Congress and the Administration to guard against any further decimation of our skilled manpower. We have given the Merchant Marine and Fisheries Committee of the House of Representatives and the Interstate and Foreign Commerce Committee of the Senate detailed and lengthy statements on the things which We must do to provide for a properly balanced shipbuilding and ship-repair program. This is not within the purview of the present committee. We do, however, desire your committee to realize that employment in the shipyards, in repair as well as new construction and conversion, is declining rapidly. Although men remain on the payrolls of the repair yards, they are lucky if they are obtaining 1 or 2 days' work per week.

Intermittency of employment has been a concomitant of work in the shipbuilding and ship-repair industry. We do submit, however, that very few people realize just how intermittent this employment is.

In 1952, and again in 1954, during negotiations, the Bethlehem Steel Co. provided the union with information respecting average weekly hours worked during the years 1946-53 in its Atlantic coast shipyards. These shipyards include two major ship construction yards-Fore river and Sparrows Point. The average weekly hours worked in these yards are much higher than in repair yards, and the Bethlehem Steel Co.'s average weekly hours worked should be much higher than those, for example, in the exclusively repair yards of Todd Shipyards Corp. and Maryland Drydock Co. In each of the years mentioned above, the average hours worked were 34 hours or less per week.

Comparison of average weekly hours worked in Bethlehem with those worked in building trades and durable goods manufacturing, 1946-53

Year average	Building construc- tion	Durable goods	Bethlehem Atlantic coast yards 1
1946	38, 1	40. 2	32. 6
	37, 6	40. 6	33. 1
1948	37. 3	40, 5	33. 7
1949	36. 7	39, 5	32. 0
1950	36. 3	41, 2	31. 8
1951	37. 2	41. 6	32. 6
1952	38. 1	41. 5	34. 0
1953	37. 0	41. 3	32. 4

¹ Hourly paid employees.

This intermittency is not a phenomenon peculiar to a single year or time of year in this industry. It is a constant characteristic. Today, this intermittency is even worse than before.

The average age of workers in the shipyards, who comprise the nucleus of skilled employment in these yards, is such that if these men once are forced out of the industry by a closing of the yards, they will be too old to come back if the yards should open again in a few years. Most of them will either retire or find other jobs which they would be reluctant to leave for the intermittent type of employment which they have been obtaining from the yards during the past few years.

Contrary to common belief, it is not true that a simple employment of one-twelfth of the normal work force in a shipyard means that the shipyard will be capable of expanding to the normal work force within a few months. This ratio of 12 to I has been used so frequently that we have lost sight of the fact that it is really meaningless. The ratio may be correct as far as certain departments are concerned, but it means absolutely nothing in the case of the more skilled and apprenticeable crafts. The ratio of 12 to 1 does not mean anything in the mold loft. Good loftsmen take years to train, and apprenticeship is simply the beginning of training for a loftsman. make a first-class loftsman can often take as long as 7 to 10 years. The loftsmen in this industry are now mostly elderly men. Apprenticeship was interrupted during the war and the number of apprentices today, because of lack of work in the yards, is insufficient in case any future emergency should occur.

The same thing is true of coppersmiths and pipefitters or marine plumbers. One cannot train a coppersmith in 3 months. One cannot train a first-class piping layerout man in 3 months. One cannot train a marine steamfitter or plumber in 3 months. These men take years to develop the necessary skills required for the building of complex ships.

The same thing is true of outside machinists. The main bottleneck in the development of a shipbuilding program during the national emergency was a shortage of outside machinists. These men take years to develop their skills. Although the work has been broken down in this department to some extent, there is still required, for the proper functioning of the shipyard, a nucleus of trained men to make sure that the

semiskilled men in the department are doing

the work correctly. The installation men in this department take years to train. Again, this is true of shipfitters, the ship wrights, as old timers in the industry call them. This work has also been broken down to a certain extent, but those men who actually do the assembling in the shipfitting craft cannot be trained in a matter of months or even in a matter of years.

It is true of the blacksmith shop, of the boiler shop, and of the forge.

During the preceding war, the War Manpower Commission issued an industrial manning table for the shipbuilding industry. It is unusual to see how many of the skills in the industry take over 2 years to acquire minimum competence, even in a wartime accelerated training program. When we mention minimum competence, we are not discussing first-class men. We are discussing training to accomplish the minimum requirements for mechanics' work in these crafts.

The actual mechanics who formed the nucleus of the shipyard skills during the Second World War have had 5 years in which to acquire training in their crafts-from 1936 to 1941. They are today mostly com-posed of older men. The average age in the shipyards for the nuclear forces is approaching men with 25 years or more of average seniority. This is particularly true in the new-construction yards and in the small nuclear forces of the repair yards. In some departments the seniority average is well up over 25 years of seniority. (Here we are discussing the average seniority of the skilled workers.) If the industry is allowed to die within the next 5 years, with no possibility of replacement training, it will not be possible to start it again without a period of from 5 to 7 years of on-the-job training in most of the building and repair yards in the country.

The rapid expansion required for the shipyard forces in America during the Second World War and the cost of the facilities it was necessary to construct cost us well over one-half billion dollars in facilities, wasted manpower, and training programs. In addition to this, the cost of building a fleet which would be usable in peacetime is difficult to measure, but we would venture to say that close to \$5 billion worth of unusable merchant ships were constructed because of the emergency and the fact that the ships had to be built quickly by mass production methods, with no time to construct a fleet which could be usable in peace as well as in war.

Time and time again during the past 10 years, we have stated that it was imperative to restore the revolving fund of the United States Maritime Administration; to prevent transfer of American-flag ships to foreign flags; to improve the construction differential subsidy for the merchant marine; to bring to United States private shippards the shipbuilding being done in foreign ship-yards for American shipowners; to authorize unsubsidized ship operators to deposit in their construction reserve funds earnings that would be tax-deferred for the purpose of construction of new vessels; to grant operating subsidies to tramp operators; and in the present precarious state of the industry, to have more Government building and repair work done in private shipyards.

Finally, last year, during the second session of the 83d Congress, the then Under Secretary of Commerce for Transportation, Robert E. Murray, Jr., submitted a report to Congress on March 3, 1954, dealing with vessel requirements to meet the mobilization and manpower needs of the Department of

Defense.

Experience in two World Wars and the Korean conflict demonstrated that the United States must depend upon its own merchant fleet and shipbuilding and repair industries for ocean transportation.

National defense, on the basis of current planning, requires an active merchant fleet in peacetime of about the size of that in

operation on December 31, 1952.

A review of present traffic available for United States flag ships and of anticipated trends indicates that United States commercial needs probably will not require the employment of an active merchant fleet larger than that privately operated on December 31, 1952.

Oceangoing merchant ships available to the United States on December 31, 1952, numbered about 3,644 of 40,423,000 deadweight tons. These included 1,974 reserve fleet vessels and 1,670 American and foreign fleet ships in active operation and under effective control of the United States. This country's active fleet comprised 1,574 vessels of which 1,297 were privately operated and 277 were operated by the Government.

A construction program of 60 oceangoing ships a year would maintain the American shipbuilding industry at sufficient strength to provide a nucleus of shippard manpower capable of expansion to meet estimated mo-

bilization requirements.

This program over a period of years would eliminate the bloc obsolescence problem, enhance the commercial and national defense strength of the active fleet, and improve the quality of the reserve fleet, provided that the better type active vessels were acquired by the Government for the reserve fleet on a trade-in basis.

However, if annual deliveries of oceangoing ships drop below 30 ships per annum, shipyard employment will drop below the 1953 levels, and there will be a corresponding resultant deactivation of facilities.

The critical period in the attainment of the required shipbuilding program is the next 10 years, because very few vessels will reach retirement age in that period. Present aids are insufficient to induce private operators to replace a substantial number of ships in the next 10 years.

The replacement of the ships in the active fleet as of December 31, 1952, as they be-

come 20 years old will be beyond the capacity of existing United States shipyards and the financial resources of American shipowners, since about 80 percent of that fleet will be due for replacement within the 3-year period from 1963 through 1965.

In the light of the above conditions, it is interesting to note what is happening in East German shipyards, which are operating today at over 800 percent of prewar levels. An article in the Marine News of September 1954 points out facts and figures representing the first reliable data since the end of World War II. The data was checked by intelligence officers in Bonn. The article states:

"Shipbuilding in the Soviet zone of Germany has been promoted so heavily by the Russian occupation authorities that the present construction capacity of the area has reached 800 percent of the prewar level. The capacity is still growing and there are no hints that the trend will reverse in the near future. Most of the gain must be credited to the building capacity for greater cargo ships and some special types of vessels such as patrol boats and fishing craft.

"There are now 16 important plants in the Soviet Zone of Germany. They have been developed from a greater number of smaller shipyards, none of them having been of international importance before the war. Almost all of the plants are so-called people's enterprises, which means that they are owned and operated by the Government, which in turn acts under tight control exercised by Russian officers. Private enterprises shipbuilding in the area is now almost zero.

"Like all industrial activities in the Soviet Zone of Germany, shipbuilding, too, is following a master plan. The main features of the plan have never been published, but it is now evident that it has been designed for the following purposes:

for the following purposes:

"1. To build and organize an East German merchant marine which would mainly operate on a China run and between East German and other east bloc ports.

"2. To supply patrol boats and other smaller vessels for the sea police, which is

the nucleus of a small East German Navy.

"3. To build repair facilities into a capacity big enough for repair orders from East Germany, Soviet Russia, and other east-bloc countries."

The Russian fleet is being restored by Western European shipyards, and the Russian Navy is already at combat strength. In an address at the centennial celebration at the Mare Island yard, Secretary of Navy Charles S. Thomas, on September 18, 1954, asserted that Russians had built 13 cruisers and more than 50 destroyers since the war, and now had a naval air arm of 3,500 aircraft, including jet fighters and bombers. He declared that Russia's growing merchant fleet was being built largely in satellite or western shipyards, leaving her own shipyards free to concentrate on combat construction."

"What does this growth in Russian naval shipping mean?" Secretary Thomas continued. "I was interested to see that recently one respected British newspaper concluded that if the Soviets' present building pace continues, that in only 2 years her navy will be bigger than our own."

The people of the United States can no longer ignore the situation in Russia with regard to naval and merchant marine construction, and keep on decimating the ranks of skilled workers in an industry where worker training is among the most difficult of any industry. We, therefore, urge your committee to give serious attention to the plight of the skilled workers in this industry, and to assist in devising measures which will keep them on the job and not on the street.

Respectfully submitted by:

JOHN J. GROGAN, President.

Is Branch Banking a Monopoly of Commercial Banks?

EXTENSION OF REMARKS

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. MULTER. Mr. Speaker, recently one of our local New York newspapers, the Long Island Commercial Review, as a public service sought to present both sides of the savings bank-commercial bank controversy. The savings banks readily agreed to bare their views to public opinion. The commercial bankers declined.

I wonder why. Is their position so untenable it cannot stand the light of day? Legislators certainly would be justified in drawing that conclusion.

Although the reasoning set forth on behalf of the savings banks appears to be addressed to the New York situation,

they apply nationwide.

I am, therefore, pleased to here record those views as expressed by one of New York's very distinguished bankers, Joseph A. Kaiser, and published in the March 21, 1955, issue of the Long Island Commercial Review:

IS BRANCH BANKING A MONOPOLY OF COMMERCIAL BANKS?

(By Joseph A. Kaiser, chairman, Group Five Savings Bank Association)

During each of the past four sessions of the legislature, a bill has been proposed which would permit mutual savings banks to open one branch outside the city in which its main office is located but not more than 15 miles from the city line. This same bill would give savings banks in villages (which new have no branch privilege) the opportunity to open one branch within 15 miles of its office or any place in its home county, but only in a town having at least 10,000 population. One more very important restriction is provided in the proposed legislation: "Before any branch office shall be opened and occupied * * * the superintendent shall have given his written approval, if he shall find upon investigation that the public convenience and advantage will be promoted by the opening or maintenance of such branch office, and the banking board shall have given its approval by a three-fifths vote of all its members."

Does anyone seriously believe that either the superintendent of banks or the banking board would do anything that would jeopardize the safety of any financial institution? They are equally concerned with the financial stability of all banks. There will be no sudden flooding of villages with savingsbank branches.

Each year that this legislation has been proposed, the superintendent of banks has endorsed it. In commenting on the Branch Bank Problem and the State System in his annual report for 1953, William A. Lyon, then superintendent of banks, stated in part:

"Several issues are involved in this controversy. Most fundamental of all is the public interest, the right of the public to convenient, complete, and efficient banking service. Then there is the competitive striving between commercial banking and mutual savings institutions and the competition also between the older types of mutual banking, the savings bank, and the rapidly growing savings and loan system. Finally, there is involved the standing, indeed the survival,

of the State system in a struggle where the Federal law and policy are ceaselessly watchful to see that Federally chartered institutions are not put to any competitive disadvantage by State action. In the guise of preventing discrimination against their brood by the States, the Federal chartering and supervising agencies have tended to make such extensive claims for their banking institutions as to put the State system at a serious disadvantage.

"It is not too much to say that the dis-

"It is not too much to say that the disparities in branch powers as between the Federal and State systems must be removed in one way or another if the latter is to escape

breaking up."

Here we have an objective statement by the then superintendent of banks whose responsibility it is to maintain the well-being

our our banking system.

Now let us analyze just who is opposed to this legislation that deprives the people of Nassau County of savings-bank facilities, except in one small area in the northern part of the county. It couldn't be instigated by the few large banks that are absorbing every independent bank they can lay their hands on, could it? For example, Nassau County has had a population increase of 145 percent since 1940. Yet the number of independent banks in Nassau County has declined 33 percent since 1940, while the number of branches has increased 800 percent. Our opponents have bombarded the legislature with pathetic pleas on behalf of the small independent commercial banks, arguing that the issue is independent-bank survival. With whose tongue in whose cheek was that point made?

The superintendent of banks has said:
"Where a community can afford only one
type of banking, there is not the slightest
doubt that the one type should be a commercial bank. The banking department
would not waste much time over any savings
facility-branch application which gave rise
to any real doubts on that score."

This position has our unqualified endorsement. Innocently, we wonder whether the large chain banks are willing to give similar assurance to their smaller counterparts.

These remarks are anddressed directly to you businessmen. Do you believe for 1 minute that business would have gained as it did in Nassau without industrial mortgages placed with savings banks; stores built with our financing; homes built to supply an ever-increasing labor supply with adequate housing? The mutual savings banks made over 60 percent of these mortgage loans in Nassau and Suffolk.

Our depositors have moved out to the suburbs by the thousands and knowing that convenient savings facilities are most important, all we have asked is the right to follow our depositors and give them the same service they were accustomed to in the city.

Every other service has been made available to the people of Nassau. Department stores have opened branches; chain stores have been the mainstay of new shopping centers; but because of an antiquated law and the opposition of selfish interests, savings banking—with its unequaled record for safety—has been denied to you.

Savings banks have been operating in this country since 1819, conceived and designed to fulfill an essential public need, namely, the preservation and the protection of the funds of those of modest means. That concept has received unparalleled public acceptance. Although savings banks in this State are outnumbered by both commercial banks and savings and loan associations, nevertheless, it is the savings banks which have over two-thirds of all thrift accounts.

The leadership of savings banks in their sphere is built on a solid foundation. Recognition of this fact can be established out of the mouths of those who oppose us. In 1952 the New York State Bankers Association published a booklet entitled "A Study of

Savings Facilities in New York State." Here is a quotation from page 8 of that booklet:

"The second point is that the major change in the relative positions of savings banks and commercial banks came during the period 1930 to 1935. Savings banks were the only type of institution to experience an increase in deposits during those crisis years. While the savings and loan associations lost nearly 35 percent of their assets, State banks 35 percent of their time deposits, and national banks 40 percent, the deposits of savings banks increased by 8 percent. These changes brough the percentage of total savings held by savings banks from 61.2 to 73.1, while those held by commercial banks decreased from 33.7 to 23.3."

We emphasize that the period to which the quotation refers was the crisis period, from 1930 to 1935—the bottom of the depression. The Issue then uppermost in the minds of the public was not dividend rate or yield. The sole issue was safety and security. In this time of crisis, the public turned to their savings banks and their savings banks did not fail them.

In the public interest, savings banks must insist that they be given a reasonable privilege to extend their services to the suburban areas of our State. We promise the people of Nassau the same service we have become noted for wherever a savings bank exists, interest, and participation in civic and philanthropic organizations for the betterment of the community as a whole and friendly discussion of your financial problems.

We respectfully submit to your judgment whether we are not entitled to the same branch privileges accorded commercial banks and savings and loan associations, or shall it remain a monopoly? That is all we are asking for.

The President's Economic Report

EXTENSION OF REMARKS

HON, ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I include herewith a statement made by George Meany, president of the American Federation of Labor, which was printed in the April issue of the American Federationist:

THE PRESIDENT'S ECONOMIC REPORT (By George Meany)

The keynote of the economic report of the President for 1955 is found in the following statement:

"In view, however, of the likelihood that our economy is now undergoing a cumulative expansion of some strength, the wise course for Government would be to concentrate this year on basic policies for fostering long-run economic growth. We should direct our program for 1955 principally to this purpose, rather than to seek to impart an immediate upward thrust to general economic activity" (p. 48).

In plainer, simpler words, this statement means that the administration is quite satisfied with the Nation's present and prospective economic health and that its economic program for the immediate present will be based upon a "hands off" or "do nothing" policy. The recession of 1954 is—for the administration—over. America is on its way to "a glorious economic future" and within a

"decade" can increase its annual production from \$360 billion to \$500 billion.

As an organization representing more than 10 million wage-earners and their families, the American Federation of Labor would be more than happy to accept this lighthearted picture of America for 1955. We were gratified by the halt to the downswing of 1954 and pleased by the upturn of the last several months. But the bald statement that this recent upturn has developed into an expanding economy and that the Government can rest on its laurals squares neither with the outlook presented by our employers across the collecting bargaining table nor with the statistics published by the President's Council of Economic Advisers.

UNEMPLOYMENT

For example, what are the facts about unemployment?

The low point of unemployment during the 1953-54 recession was reached in August 1953, when 1.9 percent of the civilian labor force was out of work.

The peak of unemployment during the recession was reached in February-March 1954, when the unemployed were 5.8 percent of the labor force.

The latest figures published by the Council of Economic Advisers indicate that for January 1955, unemployment was 5.3 percent.

Nor is the situation changed by reviewing the absolute figures of unemployment. In August 1953, there were officially 1,200,000 unemployed. This figure rose officially to a peak of 3,700,000 in March 1954. By January 1955, there were officially still 3,300,000 unemployed. Thus, by official measurement, unemployment is much more than twice as large as it was when the recession began.

All of these official figures do not describe accurately the extent of unemployment. There are just no figures which fully reflect the number of men and women who are ready, willing, and able to work but who do not have jobs. The official figures do not count as unemployed the men laid off and promised employment in several weeks or several months. Nor do official figures reflect unemployment arising from short workweeks. And they do not tell of the increasing number of weeks of unemployment facing the wage-earner if he is laid off. Concretely, an unemployed worker could expect—on the average—to be out of work roughly 10 weeks if he lost his job during the early months of 1954. Yet in the closing months of 1954 he could expect to be out of work for 13 weeks.

In the face of these facts concerning unemployment, it should be quite understandable just why the American Federation of Labor cannot believe that the welcome upturn of the last few months of 1954 has put an end to the problem of unemployment. If this record on unemployment reflects the achievements of the administration while it was actively engaged in its program to end the recession of 1953, what can be expected if the administration now adopts a hands off policy with regard to existing unemployment?

The American Federation of Labor has watched the sluggish decline of unemployment. We have been heartened by this all-important indicator of recovery. But we believe that the progress to date is no reason for the complacency exhibited by the administration's position that unemployment will now cure itself and the Nation can now focus its attention upon long-run problems of the economy. To unemployed wage earners every single day of unemployment is long enough and there is no need to search for "long run" problems in terms of decades.

Throughout the economic report emphasis has been placed upon the fact that the true source of the recovery to date has been the confidence of all Americans that there was a positive Federal program to end the

recession. This belief that "something was being done" was most heartening-particularly to the worker without a job. Now, however, he will learn that nothing more need be done for the immediate present-despite the fact that more than 3,300,000 wage earners are without jobs. It is not difficult to understand what will happen to the confidence about which the economic report boasts so blatantly.

To probe further into the facts of the recovery, consider the record to date on industrial production and job-creating investments in plants and equipment.

INDUSTRIAL PRODUCTION

What are the facts about industrial production?

At the onset of the recession, industrial production was at a peak described by an index number of 137.

In July-August 1954, the low point of 123

was plumbed.

The current figure-estimated for December 1954, by the Council of Economic Advisers—is 130 and represents the high tide of the recovery to date.

Thus industrial production is but halfway

back to the prerecession level; some 7 of the 14 points dropped have been recovered.

Moreover, even this recovery has been spotty. The durable-goods industries, fabricated metal products, electrical machinery, nonelectrical machinery, and the clay, glass, and lumber products industries registered declines in output in December. In the non-durable-goods industries, the gains in production have been steady except in the food, beverage, and tobacco industries, where production remained practically unchanged throughout 1954. The really bright spot in production is the current output of automobiles since the introduction of new models.

But all of these data do not carry us beyond the welcome fact that the beginnings of a recovery are now in progress. The distrubing fact is that while production as a whole has reached halfway up the ladder of recovery, unemployment has not dropped by one-half. The unresolved question is whether or not "recovery" in terms of production will mean a return to full employ-Furthermore, the annual growth of the labor force for 1954, 1955 and the immediate years ahead indicates that the 1953 production rate is meaningless in terms of full employment.

INVESTMENT IN PLANT AND EQUIPMENT

What is the record on job-creating investments?

The heart of the administration's recovery program has been the orthodox principle that, if investment incentives were stimulated, there would be an increase in jobcreating construction of plant and equip-

ment by producers.

In keeping with this principle, "incentives" were given to business almost to the exclusion of every other segment of the Nation. To business management went the lion's share of the tax reductions, larger and faster depreciation allowances, greater periods of time over which business losses could be carried back for tax purposes, relief from taxation on dividends, and the definition of research expenditures as current expenses. All of this preferred treatment was designed to increase earnings and thus enable business to plough back an increased investment in plant and equipment. Requests for some stimulation for consumers by means of tax reduction were brushed aside with assuring statements that consumers would benefit from the expected stimulation to the economy arising from greater investments.

When the record is examined, however, the undeniable fact is that investment in producers' plant and equipment for industrial purposes has declined without interruption since the start of the recession of 1953.

There has been no reversal of this downswing. There has been no upturn in this sector of our economy. In the third quarter of 1953 the annual rate of investment in plant and equipment by nonfarm producers was \$32,600,000,000. Quarter by quarter, it dropped throughout 1953 and throughout 1954. Moreover, business interests now rethat such investment will be less in 1955 than it was in the two preceding years.

From these facts the administration may conclude that it need not pursue its program of providing incentives to investment for the immediate present. Clearly the policy of ladling out benefits which enabled business to accumulate greater returns has not led to

ploughing in the economic fields.

Yet in the face of the unsuccessful policy of stimulating producers, the administration does not propose to stimulate consumption so that unemployment will drop at least as fast as production rises. Instead, the ad-ministration now proposes to do nothing for consumers and also does not propose change its policy by recalling some of the benefits granted to business as business incentives in the form of generous tax treatment. Its only declaration is that it will not reduce such taxes further this year, although it does hold forth such a prospect for perhaps next year.

We of the American Federation of Labor believed that the administration erred in its single-purpose tax policy of aiding business producers almost exclusively. We urged the administration to include in its program some stimulation for consumers. that the accumulated inventories were simply unsold goods which could be most quickly liquidated by increased consumption rather than by increased production. Our position

was not recognized.

Once again-supported by this record of failure of the administration's business-incentive program-we urge that immediate steps be taken by Congress to improve the "climate of consumption" through significant reductions in taxes which now restrict consumer buying. Specifically, we urge reduction of income taxes for those on the lower rungs of the economic ladder and a reduction of excise taxes.

To sum up at this point, the American Federation of Labor can find no justification for the complacent attitude inherent in the position of the administration that nothing "more" be done by it to restore the Nation to a position of strength, and that our only problems are those of a "long-run" nature.

We are not impressed by the timidity of the administration in facing up to the immediate problems of the hour-problems which are clearly demonstrated by data which describe the extent of the economic upturn to date.

Putting aside for the time being this basic assumption in the economic report, that our economic recovery is an accomplished fact, let us turn to the recommendations which are made "for the long run."

RECOMMENDATIONS FOR LONG-RUN ECONOMIC

GROWTH

This "second report of the present administration under the provisions of the Employment Act of 1946" contains a number of recommendations designed to foster prosperity in the long run. But of all the proposals advanced, none merits priority of consideration more than the new interpretation of the Employment Act of 1946.

This act is a Federal law enacted by the Congress of the United States to define the responsibilities of the Federal Government in promoting the economic well-being of the Nation through maximizing employment, production, and purchasing power. Since the depression of the 1930's, the role of the Federal Government has been commonly

recognized, and it is reduced to writing explicitly in the Employment Act of 1946.

In this report the administration attempts to water down the clear-cut responsibilities of the Federal Government by arbitrarily assigning to the individual States its conceptions of what the States should do as partners of the Federal Government. The explanation for this new interpretation of the Employment Act is a convenient discovery that in implementing the act the Federal Government is constrained by "the constitutional rights of individuals," by the duty to "respect the authority of the States," and that "it must protect the integriy of he money in which contracts are expressed and payments made."

These references to the constitutional duties of Government are obviously platitudinous. No Member of Congress in subsequently, ever believed that the Employment Act of 1946 was designed to scuttle the Constitution. Actually, this discovery of constraints is nothing but a transparent effort to shift responsibilities from the Federal Government to State governments-with or without their consent. This economic States rights doctrine has been adopted as a method postponing or avoiding completely necessary improvements in conditions which most directly affect the daily lives of wage earners.

MINIMUM WAGES

In the long-run policies proposed by the administration in its economic report there is little of positive value for wage earners. The inadequate recommendation to increase the minimum wage to 90 cents per hour is a lone exception. Even this recommendation is less than the facts indicate as being realistic.

There is no question about the fact that since 1938 the minimum wage has failed to keep abreast of the cost of living, increasing productivity and the general rise in wage levels. As early as 1951-52 the Wage Stabili-zation Board accepted \$1 per hour as a conservative estimate of a minimum wage. cost of living has moved upward since then and so have other pertinent economic factors affecting wages. Now, at this late date, the administration has finally reached the position where it is willing to correct the injustice of a 75-cent minimum wage, but only up to 90 cents per hour.

In defense of its timidity, the administration parades all the ancient and hackneyed arguments which were advanced every time the subject of minimum wages has been considered. Yet here again the dire predictions of the effects of minimum-wage legislation have not been borne out. Reference is made to a recent study by United States Department of Labor on "Results of the Minimum Wage Increase of 1950" which belies all the concern traditionally voiced over the alleged disastrous effects of necessary increases in the legal minimum wage. If full consideration given to the historical record of this Na-tion's advances since 1938, then there will be no question that the American Federation of Labor's proposal for a realistic minimum wage of \$1.25 per hour is merited.

The other long-run economic policies affecting wage earners-unemployment insurance, housing, and public works-demonstrate forcefully the real meaning of the administration's discovery of States' rights in the Employment Act of 1946.

UNEMPLOYMENT INSURANCE

Consider, for example, the administration's proposals on unemployment insurance.

In this economic report full admission is made of the need to extend to more wage earners the protection of unemployment insurance, the need to raise unemployment benefits to a level equal to 50 percent of an unemployed worker's earnings, the need to

increase duration of benefits to at least 26 weeks, and the need to reduce the reasons for disqualifying unemployed workers from receiving benefits.

But in the face of these problems, what solution does the administration propose? It proposes to turn these matters over to the individual States to resolve.

This refusal by the administration to face up to its problems can mean only one thing: retrogression. All the progress made toward creating a genuine built-in stabilizer will come to a halt as particular States seize upon this opportunity to stimulate the migration of industry from other States by not improving unemployment insurance. States will not compete to protect wage earners from the results of unemployment; they will compete in finding ways and means of tearing down this bulwark. We need only point to the record of the pitiable development of workmen's compensation under the doctrine of States' rights to support this

Rather than proposing to turn back the development of unemployment compensation, this administration should move in the direction of progress by establishing Federal standards for unemployment compensation and thus put an end to the use of the unemployed workers as pawns in a competitive game among the States. We believe that the well-being of individual workers as well as the strength of the entire Nation can be preserved by a genuine unemployment insurance program. This is not the time to retreat from the policy of insuring workers against the disastrous effects of short-run unemployment which they can neither control nor avoid. No administration can delude the wage earners of this country that it is concerned with their welfare when it advances a long-term policy of stagnation or destruction behind the political screen of States' rights.

The long-term proposals for housing are based upon the recognized boom in the construction of homes for sale to persons able and willing to purchase housing through lifetime mortgages. But for those who are able neither to buy nor to rent privately built housing, the administration offers practically nothing.

Under the leadership of the deceased Senator Taft, Congress adopted a public housing program which provided 135,000 units of subsidized housing each year for 6 years to replace the hovels in which people at the lower levels of the economic plane were forced to live. This administration has watered this program down to 35,000 units for each of the next 2 years-providing that the public housing will be available only to persons displaced by slum clearance programs, not merely to those who need this minimal housing. For those least able to protect themselves this entire so-called dynamic housing program is a myth. Moreover, slum clearance and redevelopment programs are to "depend partly on what the Federal Government does and in much greater degree on the efforts of civic organizations and on actions that can be taken only by State and local governments."

The shifting of our national disgraceslums-on to the States is but one reflection of the basic doctrine of the administration.

PUBLIC WORKS

The Economic Report describes fully the Nation's needs for highways, schools, hospitals, and roads. A special message is promised on a national highway program. The traditional role of the States in the construction of schools and hospitals is mentioned. But nowhere is mention made of the relationship between public works and stimulation of the economy to insure that it will continue the upward movement from the recession of 1953-54. The description of public works given in the report is connected solely with plans for the next 10 years and the needs of the Nation over that span of time. By thus adopting the position that the recession is over, the administration reduces the role of the Federal Government and emphasizes the responsibilities of the States and municipalities.

The difficulty which lies at the bottom of the proposed shift of immediate responsi-bility for public works from the Federal Government to the States is that the States are not in a position to finance such a heavy public-works program. In the laws of many States and municipalities there are fixed ceil ings of the amount of indebtedness they may incur. Many States have already reached those ceilings.

In the face of this dilemma, the administration shows great resourcefulness; the administration tells the States they should pass new laws increasing their debt ceilings.

While this "guidance" is a far cry from the doctrine of respecting "States' rights," nevertheless the administration's entire "program" of public works collapses without new and higher State debt limitations. Even shifting public works to the States does not enable the administration to escape the problem.

In short, there is nothing in this Economic Report concerning public works which is either realistic or progressive. Rather, retrogression is the keynote, and human values are displaced by political theories.

To sum up at this point, the discovery of constitutional limitations in the Employment Act of 1946 by this administration appears to be singularly fortuitous; the doc-trine of States rights has been elevated into a perfect defense against proper action by the Federal Government during times of economic downswings.

This defense is used against any proposal affecting workers directly; it is strangely missing in programs designed to aid business—big or small, foreign or domestic. Frankness requires that this entire approach be brought into public view.

CONCLUSION

After full consideration of this economic report, it is the judgment of the American Federation of Labor that there is little in it to guide the people of America along paths which are certain to lead to economic growth and expansion. Timidity rather than bold leadership is the outstanding characteristic of the report.
Within the limits of our private-enter-

prise system, there is a dynamic role which the Federal Government must play if the Nation is to move forward. Halfhearted wait-and-see attitudes are not in keeping with the times. At this moment the confidence of the people of America in the economic strength of their Nation is high: this is not the time to gamble with that belief. Any hesitation, any false step now in eco-nomic leadership can have disastrous consequences both here at home and abroad. True conservatism dictates positive measures which will bring an end to the recession which is now into 1955. We have had our second-best year; there is not time for a third-best or longer period of inferior years.

The American Federation of Labor urges Congress to step into the breach which the economic report would establish and take positive steps to preserve the signs of economic recovery which are in evidence.

What Are We Fighting?

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by the countersubversive activities committee of the American Legion. Department of Pennsylvania, dealing with the background and aims of the Communist movement throughout the world and in the United States:

WHAT ARE WE FIGHTING?

THE WORLD COMMUNIST MOVEMENT

Communism is a worldwide conspiratorial movement, the ultimate aim of which is the destruction of all non-Communist governments and the establishment in their place of Communist states subservient to the Soviet Union.

In driving toward world domination, communism has advocated the abolition of religion, private property, and inheritance. Wherever communism has triumphed, it has suppressed all forms of representative government and destroyed freedom of speech, freedom of press, and the right of assemblage.

Communism advocates the employment of all persons in a state-planned, stateand state-controlled economy. owned. such a state, individual initiative, ambition, and effort are replaced by the economic security of collectivism, which amounts to the security of a prison.

The theory of communism is not new. Evidence of its existence appear in the writings of the Greek philosopher Plato, which date back to 500 B. C. Throughout the ages it has continued to crop out from time time in the writings of political philosophers. A number of unsuccessful attempts to establish communistic communities have been made, Modern communism, however, may be said to date from the issuance of the Communist Manifesto by Karl Marx and Friedrich Engels in January 1848.

The basic thought underlying the Communist Manifesto is contained in the following quotation:

"The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions. Let the ruling classes tremble at a Communist revolution. The proletarians have nothing to lose but their chains. They have a world to win. Workingmen of all countries, unite." (See Investigation of Un-American Propaganda Activities in United States, appendix, pt. I, 1940, p. 19.)

An organization known as the First International Association of Workingmen was organized in London in 1864 by Karl Marx to implement the ideas expressed in the Communist Manifesto. The First International, as this movement is known, lasted only 9 years. In 1872 Marx withdrew his support because the anarchists were becoming too powerful. Mark bitterly opposed the anarchists because they were against any form of government including the one which he had proposed.

The Second International was formed in Paris in 1889 based on the teachings of Marx and became in due time, the fountain head of international socialism. World War I caused a disruption of the Second International as the Socialists with but a few exceptions, placed national patriotism before their party doctrine. For this reason the Second International was repuddated by an extremist element under the leadership of V. I. Lenin, a Russian disciple of Marx who had been exiled for revolutionary activities.

Following the Russian Revolution and seizure of power by the Communists, the Third International was organized by Lenin in Moscow in March 1919, for the purpose of carrying out the revolutionary objectives of the Communist Party of the Soviet Union. Joining in the Third or Communist International as it is called were representatives of Communist, revolutionary, and leftwing Socialist groups throughout the world.

The main objective of the Communist International has been to promote world domination by the Soviet Union. From its inception, the Communist International has been dominated by the Russian Communist Party and could not have existed without the wholehearted support of the leaders of Russian Communist Party and the financial backing of the Soviet Government.

Immediately after its creation, a call was issued for the organization of Communist Parties throughout the world and their adhesion to the Communist International.

COMMUNISM IN THE UNITED STATES

During 1917 and 1918, the radical elements of the Socialist Party carried on activities contrary to the platform of the Socialist Party, and in November 1918 a Communist propaganda league was formed in Chicago. During the same year the Boston branch of the Socialist Party began the publication of the Revolutionary Age, in which Communist tactics were advocated.

As a result of this dissension, a leftwing section of the Socialist Party was formed in New York in 1919. This leftwing section was expelled from the Socialist Party. From this leftwing section there arose two Communist Parties, the Communist Party of America and the Communist Labor Party. The unification of these two parties was decreed by the Communist International and in May 1920, a convention was held which resulted in the merger of the Communist Labor Party with a splinter group from the Communist Party of America. The new organization then formed was called the United Communist Party of America. A year later the remainder of the Communist Party of America was given to the new organization.

During the latter part of 1919, the Department of Justice submitted to the Department of Labor, a large amount of evidence concerning the subversive nature of the Communist Party of America, This resulted in the issuance of a large number of warrants for the deportation of alien members of the Communist Party. As the result of a large number of arrests and deportations, the Communist Party was forced underground.

The Third Congress of the Communist International in 1921 ordered the Communist Party of America to form an open political party that could operate legally. To carry out this mandate, the Communist Party of America organized the American Labor Alliance as a purely propaganda organization in the first step in creating an open legal political party.

In December 1921 the Workers Party of America was formed as an open and legal organization while the Communist Party of America remained underground. In January 1922 the Communist Party of America tent secret instructions to all its members instructing them as to the part they were to play in the Workers Party to insure its absolute control by the Communists.

Faced with the prosecution and possible imprisonment of the top officials of the American section, the fourth congress of the Communist International in December 1922 decided that the Communists should function as an open legal party. On April 7, 1923, the Communist Party of America voted to dissolve and merge with the legal Workers Party and authorized the latter, when desirable, to adopt the name of Communist Party of America.

The merger of the two Communist Parties and the elimination of the underground did not put an end to the everlasting disagreements among the top leadership—the struggle for power within the party. The American Communists never questioned the right of the Russian Communists to boss them, but they continued to fight among themselves as to who was to be the American boss.

The Daily Worker of August 18 and 19, 1925, carried a letter from the Communist international to the central executive committee of the Workers Party of America directing that the Workers Party be reorganized. A convention was held accordingly in Chicago in August 1925 from which emerged a new organization called the Workers (Communist) Party.

The constant bickering and struggle for control of the party brought numerous rebukes from Moscow. On July 1, 1927, the executive committee of the Communist International endorsed a resolution of the Comintern calling the Workers (Communist) Party to task for deviations and other mistakes.

The Daily Worker of August 3, 1927, published a declaration of the political committee of the Workers' (Communist) Party declaring its complete acceptance of the Communist International resolution, closing the declaration with a plan for a unified Communist Party in America.

Just prior to its 1929 convention the Workers' (Communist) Party received an open letter from the executive committee of the Communist International which gave strict instructions to end all factional disputes. This directive of the executive committee was accepted without hesitation by the American Communists, who once again reorganized their party, this time calling it the Communist Party of the United States of American, section of the Communist International.

By 1935 the Communist International became anxious to disguise its role as the center-world revolution and to lead other nations to believe that the Soviet leaders were no longer interested in organizing Communist conspiracy in other countries. In keeping with this strategy, the Communist Party of the United States dropped from its title the words "section of the Communist International."

The Voorhis Act, which became law in October 1940, provided for the registration of every organization in the United States subject to foreign control which engaged in political activity. Inasmuch as the constitution of the Communist Party, U. S. A., provided that the party be affiliated with the Communist International, the question arose as to whether the party came within the scope of the Voorhis Act. To escape possible necessity of registration, the Communist Party, U. S. A., called a special convention in November 1940 and adopted a new constitution in which all references to affiliation with the Communist International was omitted.

The attack on Russia by Germany in June 1941, followed by the Japanese attack on Pearl Harbor, placed the American Communists in the position of supporting a capitalist government. The national committee of the Communist Party, U. S. A., met to hear Earl Browder, general secretary of the party, state that the Communist Party

would commit itself in full good faith to the war effort. In addition, Browder recommended that the Communist Party, U. S. A., change its name to Communist Political Association. Accordingly, such a change was made at the 1944 convention of the party.

After the end of the war in Europe, another change took place in the ranks of American Communists. Folowing its criticism by the leader of the French Communist Party, the Communist Political Association was dissolved and a more militant Communist Party, U. S. A., was reorganized.

COMMUNIST FRONTS

A Communist front is an organization which has ostensibly been established for some humane, charitable, or worthwhile purpose, but which in reality has been secretly organized and controlled by Communists to support their aim and objectives.

Communist-front organizations are characterized by their common origin, the rigid conformity of these organizations to the Communist pattern, their interlocking personnel, and their methods to deceive the American public. Being part of a conspiratorial movement, their essence is deception.

During the first few years of the Communist International, under the stimulus of the Russian Revolution, its international appeal was stridently revolutionary. As world economic conditions improved following the First World War, the international revolutionary movement began to wane. The Hungarian and German Communist Revolutions failed and the Communist International began to lose strength. Hence, it was deemed necessary to moderate the earlier revolutionary appeal, to adopt middle-of-the-road slogans, and to build so-called united-front organizations in the interest of the international Communist movement.

A front organization is organized by the Communist Party in the following fashion: First, a number of sympathizers who are close to the party and whom the party knows can be depended upon to carry out party orders, are gotten together and formed into a nucleus which issues a call for the organization of a particular front organization which the party wants to establish. And generally after that is done, a program is drawn up by the party which this provisional committee adopts.

Then, on the basis of this provisional program, all kinds of individuals are canvassed to become sponsors of the organization, which is to be launched in the very near future. A provisional secretary thus appointed is a Communist Party sympathizer. As president of the organization, some prominent public figure is chosen who, if not willing to go along with the Communists, is of such a type that he will be too busy to pay attention to the affairs of the organization.

On the committee that would be drawn together is a sufficient number of Communists and Communist Party sympathizers who carry out party orders. Out of this number a small executive committee is organized which carried on the affairs of the organization. This small executive committee, with the secretary, really runs the organization. The result is that when manifestos or decisions on campaign are made, those campaigns are ordered by the Communist Party. Communist fronts are organized to attract followers from every walk of American life. Some of these are:

- Fronts for special age and sex groups: Labor Youth League, Congress of American Women, League for Women Shoppers, Sweethearts of Servicemen.
- 2. Religious and peace fronts: People's Institute for Applied Religion, American Peace Crusade, American Peace Mobilization.
- Civil and progressive fronts: National Lawyers Guild, Civil Rights Congress, Inter-

national Labor Aid, International Labor Defense, People's Radio Foundation.

4. Minorities and foreign relief fronts: American Committee for Spanish Freedom, American Slav Congress, Council for Pan-American Democracy; American Committee for the Protection of the Foreign Born.

5. Fronts for the glorification of Soviet Russia: National Council of Soviet-American Friendship, American Russian Institute, American Soviet Music Society.

6. Occupational and trade union fronts: Farm Research, Labor Research Association, Joint Committee for Trade Union Rights, Independent Citizens Committee of the Arts, Sciences, and Professions.

Multiply these by 10 or 20 and you have some general notion of the extent and pervasiveness of the menace. Cancel out the overlapping membership, and you still have a residue of several million Americans directly or indirectly enrolled in Communistmanipulated associations; knowingly or unknowingly thinking, shouting, demonstrating in behalf of Moscow's party line.

THE INDIVIDUAL COMMUNIST

A Communist is self-contained, dependent upon us only for his physical needs but otherwise living in a complete world of his own—the world of the Marxist-Leninist class struggle for absolute power. A class conscious, seasoned, disciplined Communist trusts no one but his own leaders. He reads and believes nothing outside of his own trusted party organs. He can neither be persuaded, mollified, nor shamed. A trained, cynical swindler, he is immune to trickery, blandishments, or appeals to his better nature.

He is completely devoid of all moral inhibitions and is, therefore, without any concept of law, ethics, or morality. True Bolshevik morality, that the ends of the resolution justify any and all means, is his sole moral guidepost. What advances the social revolution is good and therefore moral; what hinders or delays the revolution is therefore evil and to be sternly rejected. There is only one supreme good in this world—power—absolute and total power over mankind and property. Anything which might hinder or delay his progress to power, whether it be religion, morals, ethics, conscience, custom, traditions, propriety, public esteem, well-being, comfort, self-interest or even pride, are necessarily evil and un-Marxist.

A sincere Communist revolutionary has dedicated his entire life and every waking moment of the day to one single goal—the advancement of the world revolution and the complete transformation of society to what he is pleased to call a higher level. Marx and Lenin have assured him that the inex-orable processes of history are on his side. He can't lose. The rest of us who are merely concerned with our personal interests of making a living, bringing up a family, buying a home, promoting a business or advancing in one's professions or in politics are considered immature and unrealistic.

The Communist conspirators have been more than open and frank in advertising in advance precisely what they propose to do and how they intend going about getting what they want. The libraries are loaded down with books, pamphlets, and periodicals blueprinting down to the last minute detail the Communist Party program. Communists work full time, night and day, year in and year out, advancing their interests and moving relentiessly toward their ultimate goal—seizure of power. We who are dedicated to this countersubversive fight can do no less. We have the additional duty of activating, arousing, mobilizing, and training others for the common defense.

It is up to us, through every media available, to alert the American public to the ul-

timate goal of the Communist Party of the United States of America, and to expose the party and its members wherever and however they appear.

The Yalta Papers—Part I—A Calamity of Errors—F. D. R.: Revealing Self-Portrait

EXTENSION OF REMARKS

HON, HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a series of editorials from the Buffalo Evening News concerning the Yalta papers.

There is no question but that Yalta will plague us for years to come. The decisions taken there have already cost thousands of lives, billions of dollars, and immeasurable disruption and chaos. Whether the documents were published or not, the United States and the world have already paid in blood and tears for those decisions. The documents merely verify what was done, and reveal the mindless, cavalier, and insensate way in which the Atlantic Charter was torpedoed, and America's great moral power and prestige were scuttled.

Mr. Speaker, we cannot rewrite history, but we had better be wise enough

not to repeat it.

The Buffalo Evening News has rendered a notable service with its thoughtful and incisive analyses of the Yalta documents and their implications. I include them in the Record in three parts, of which this is part I:

THE YALTA PAPERS-I-A CALAMITY OF ERRORS

In the 10 years since Yalta, three conflicting general theories have grown up about that fateful conference. One is the treason theory-that traitors were there, wielding a Svengali-like influence through President Roosevelt deliberately to betray the indent Roosevelt denocrately terests of this country in behalf of Stalin's Russia. The second theory is that monstrous blunders were made at Yalta, by a weary, even a dying President who gave away far too much in return for empty, cynical promises by a wily dictator whose intentions the Americans completely misread. third general theory of Yalta is that it was a defensible piece of give-and-take international bargaining and the deals would have been all right if the Russians had only kept their word.

The release last week of practically all the American documents pertaining to Yalta now makes it possible to appraise these theories in the light of a far broader perspective than we have had from the self-serving memoirs, the public utterances and the many charges and innuendoes that have provided the raw raterial for debate heretofore.

Our reading of the Yalta papers provides no new material with which to sustain the treason theory, and there is much in the context to refute it. On the other hand, the papers provide no comfort whatever for the wishful believers in the third theory. That leaves us with the second theory, and with what seems to us a very mountain of factual data and revealing personality sidelights to support it.

Yalta was—and these papers show it only the more vividly—an historic calamity for America and the free world. It was a tragedy compounded of many grievous blunders, in which Franklin D. Roosevelt stands out as a fully self-revealed prisoner of his own supreme egotism, of his illusions about the nature of the Russian "ally" and of the equally monstrous delusion that all we needed to do to create the brave new world was to show Stalin how accommodating we would be as partners in the new triumvirate of benevolently dictatorial great powers he sought to create.

The very release of the papers at this late date has become a major political issue in America and a cause of consternation among disillusioned allies overseas. Furious Democrats picture the release as some kind of Republican smear. But this is no more than truth being revealed in its fullest perspective; if the result is disillusionment with long-cultivated myths, it is not the releasers, but the makers of the record at whom the finger points. Defenders of Yalta can read these papers with sympathy and understanding. But defenders of the Roosevelt diplomacy can hardly sustain the claim that throwing all the Yalta records open for every man to read and ponder is a smear unless they admit that the whole truth is itself a smear.

The truth about Yalta is a complex thing. Certainly it is not revealed in any single quote, or any tidy little package of quotes torn from the context of that time. Neither can it be capsuled by us in terms that any other reader of the record would accept as fully comprehensive. Politicians living then and now will debate it for many years; historians will then continue the debate for many more years.

For us, the truth stands revealed in both the massive record and in the 10-year perspective we now have, is that Yalta was a calamity of American diplomacy—a tragedy in the classic pattern of great figures moving toward their doom, amply warned by history and by a few current voices that were quickly drowned out, but seemingly helpless to control the future they themselves were writing. The most tragic figure is that of Roosevelt; the most sympathetic and frustrated, Churchill; the most cunning and purposeful, Stalin; the most prescient, Eden; all the rest were a chorus, some voicing warnings that no one heeded, some suggesting only faintly a pattern of betrayal.

To approximate the truth of Yalta, it is necessary to study the whole record. To interpret the truth, as we see it emerging from this massive record, will require several more editorials.

THE YALTA PAPERS—II—F. D. R.: REVEALING SELF-PORTRAIT

It is generally conceded that the Yalta papers released last week disclose no great secrets heretofore unsuspected nor do they lay at rest any of the angry controversies that have swirled around that fateful conference in the 10 years since. What they add is a vast array of detail and data bearing on the motives, the mental attitudes, and the maneuverings of the participants. then, should the release of the papers have caused such political anguish among Democrats? The reason-the most obvious single reason—is the completely revealing and de-glamorizing self-portrait the documents give of the late President Roosevelt and the role he played in the tragedy of Yalta.

Roosevelt was not a commanding figure at the Crimean conference. On the contrary, these papers reveal him as a weak, almost disinterested negotiator, a spent man whose sense of both history and of the in-

calculable human coin in which he was trading was tragically dulled by wartime vindictiveness and deathbed weariness—yet a man whose tremendous egotism permitted him to brush off all counsels of caution and pin his faith on the proposition that Stalin's Russia could be trusted if only we allayed her fears and acceded to her wishes with openhanded generosity.

It will be unfair perhaps for history to judge the life and works of Roosevelt by the Roosevelt at Yalta. Yet Yalta was the final capping of his diplomacy, and it sowed the seeds from which the world has since been harvesting so bitter a fruit. And the Roosevelt that history will find in the Yalta papers is a figure of tragedy, the more so because he came home reporting, and apparently believing he had achieved, a brilliant success.

It is not in any smattering of quotes that the new self-portrait of FDR is found. These are only the surface brush strokes; the body of the picture is the entire context of the meeting and can be seen in all its subtle shadings only in a full reading of the documents.

The minutes of the Yalta meetings, plus the detailed briefings he had in advance, disclose a Roosevelt who not only yielded to Stalin again and again but offered him concessions which he (FDR) had previously opposed, and which his experts had urged him to avoid.

Two of the more glaring examples were the positions taken on (1) the dismemberment of Germany and (2) reparations. The State Department had urged that the Conference take no decision on dismemberment; Roosevelt had agreed that no decision should be taken; the State Department later urged in a briefing book paper for Yalta that he oppose the forcible partition of Germany, and warned of the consequences. But the Yalta minutes show Stalin and Churchill arguing about dismemberment and whether it was advisable to decide the question then, at which point Roosevelt chimed in:

"The President then said that it seemed to him that they were both talking about the same thing, and what Marshal Stalin meant was should we not agree in principle here and now on the principle of dismemberment of Germany. He said personally, as stated by him at Teheran, that he was in favor of dismemberment of Germany. * * He added that he still thought the division of Germany into 5 States or 7 States was a good idea."

So Churchill's objections, and those of the United States State Department, were over-ridden; the Conference agreed to the idea of dismemberment, and so stated in a secret protocol.

Before he went to Yalta, Roosevelt had told the State Department, in a terse note to Secretary Stettinius, to this point "in the linings of their hats": "We are against reparations." But at Yalta, we find Roosevelt saying, according to the minutes, that "he would willingly support any claim for Soviet reparations since he felt that the German standard of living should not be higher than that of the Soviet Union. * * We would also help the Soviet Union retain the reparations in kind which she required, as well as German manpower. * * He concluded that he was in favor of extracting the maximum in reparations from Germany but not to the extent that the people would starve."

The news accounts of the Yalta documents have told us of many other instances of similar import—of Roosevelt's suggestion to Stalin, when Churchill was not present, that Britain should give Hong Kong back to China; of Roosevelt's weary readiness to accept fuzzily-phrased assurances about free Polish elections; of the implications for Germany and all central Europe, of his readiness to yield on the Polish frontiers, both eastern and western; of the alacrity with which he

yielded to Stalin's requests for vital concessions in Asia.

But perhaps the most revealing part of this tragic self-portrait is the way in which, after entering deal after deal which torpedoed letter and spirit of the Atlantic Charter, Mr. Roosevelt could still come home and report to Congress that he and Stalin and Churchill had laid the foundations for a peace that was based on the sound and just principles of the Atlantic Charter. How Yalta marked the final demise of that earlier idealism, and of all the moral force of American leadership that went with it, will be considered tomorrow.

The Yalta Papers—Part II—Demise of Atlantic Charter—Mysteries Still Unsolved

EXTENSION OF REMARKS

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. OSTERTAG. Mr. Speaker, in addition to documenting the steps by which the Atlantic Charter was nullified, publication of the Yalta papers has raised questions about the conferences at Teheran and Potsdam which must be answered. In its noteworthy series of editorials, the Buffalo Evening News highlights some of these questions. I include in the Record herewith these editorials:

THE YALTA PAPERS—III—DEMISE OF ATLANTIC CHARTER

In the Atlantic Charter, signed by President Roosevelt and Prime Minister Churchill on August 14, 1941, and subscribed to by Soviet Russia on January 2, 1942, the great allied powers of World War II, pledged among other things:

"Their countries seek no aggrandizement, territorial or other;

"They desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned.

"They will endeavor, with due respect for their existing obligations, to further the enjoyment by all states, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the

After the Yalta conference, the three great leaders issued a communique (Feb. 11, 1945) in which they stated, among other things: "We reaffirm our faith in the principles of the Atlantic Charter."

When he returned to Washington, Mr. Roosevelt reported to Congress in glowing terms (March 4, 1945) "It can be a peace—and it will be a peace—based on the sound and just principles of the Atlantic Charter."

How fared the Atlantic Charter at Yalta?

The basic agreements reached there have long been a matter of record—territorial agrandizement for Russia at the expense of Poland, not to mention the three swallowed-up Baltic countries; territorial compensation for Poland at the expense of Germany; territorial aggrandizement of Russia in the Far East, etc.

But how fared the spirit of the Atlantic Charter in the Yalta conference? The cynicism of the discussions, the utter unconcern for the grand principles so nobly subscribed to by all the participants, is one of the truly shocking revelations of the Yalta documents.

Consider the pledges above against the following minutes of the Yalta meetings:

On Russia's aggrandizement, territorial and other, in the Far East: "Following the discussion of certain military questions involved in the Far East, Marshal Stalin said that he would like to discuss the political conditions under which the U.S.S.R. would enter the war against Japan. He said he already had a conversation on this subject with Ambassador Harriman. The President said he had received a report of this conversation and he felt that there would be no difficulty whatsoever in regard to the southern half of Sakhalin and the Kurile Islands going to Russia at the end of the war * * * He said he * * * had not had an opportunity to talk to Marshal Chiang Kai-shek (about the Manchurian railroad and the ports of Dairen and Port Arthur) * * * Marshal Stalin * * * said he did not think it was necessary yet to speak to the Chinese * * He added that it would be well to leave here with these conditions set forth in writing * * * The President indicated that . The President indicated that writing * he thought that this could be done .

On Poland: "The President said * * he believed the American people were in general favorably inclined to the Curzon Line as the eastern frontier of Poland, but he felt that if the Soviet Government would consider a concession in regard to Lwow * * * that would have a very salutary effect. He said that he was merely putting forth this suggestion for consideration and would not insist on it." (Stalin objected, and the Polish eastern frontier was fixed where the Russians wanted it.)

On Germany: President Roosevelt: "Our objective is seeing that Germany will not starve in helping the Soviet get all it can in manpower and factories and helping the British get all they can in exports to former German markets. Therefore, the time has come to set up a reparations commission. In rebuilding we must get all we can but we can't get it all."

"No aggrandizement," pledged the Atlantic Charter. They will "further the enjoyment by all states, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the world." said the Big Three in subscribing to the charter.

In rebuilding Germany, said Mr. Roosevelt at Yalta, we must help Russia get all it can in manpower and factories and the British get all they can in exports to former German markets, "but we can't get it all."

In reporting to Congress when he returned from Yalta, Mr. Roosevelt told the American people: "We made it clear again at Yalta—and I now repeat—that unconditional surrender does not mean the destruction or enslavement of the German people. * * It can be a peace—and it will be a peace—based on the sound and just principles of the Atlantic Charter."

The final demise of the Atlantic Charter and of any moral force that attended it, we submit, can now be dated accurately to the period of the Yalta conference, February 4-11, 1945.

THE YALTA PAPERS—IV—MYSTERIES STILL UNSOLVED

Despite the mountain of documents now available, the Yalta "whodunit" is still—in several key respects—a mystery. The major elements of mystery remaining, moreover, go to the heart of two questions still subject to angry political debate: (1) The extent to which there may have been deliberate betrayal at work in the Yalta Conference, and (2) the extent to which the late President Roosevelt was justified by arguments of military necessity in making some of the concessions that have led to such tragic consequences since.

We will consider the role of Alger Hiss and some of its implications tomorrow. Meanwhile, let us examine the main case for the defense: The contention that concessions to Russia were made under the pressure of military necessity, and in return for equivalent concessions that would have made the whole package a defensible deal if Stalin had

only kept his word.

The defense usually given for the concessions in Europe-which made Poland a Russian puppet, put Stalin in a postwar position to dominate all Eastern Europe, and made such mockery of the idealistic promises of the Atlantic Charter-is that Stalin's armies, by the time of Yalta, were already entering Germany, and there was nothing we could have done to force him to yield more than he did on the Polish or related questions. By giving him what he demanded there, it is held, we kept the Big Three united for the peace and even won some Russian concessions in organizing the U. N. As for the gifts to Russia in the Far East, these are usually defended on the opposite groundnot that the Russians were already there. but that we needed Russia's help to save American lives in defeating Japan, and these were Stalin's price for giving it.

The Yalta papers throw much light on both these contentions, but they also intensify the mystery with respect to two cru-

cial points:

1. How many of the 1945 Yalta deals were really just confirmation of tentative commitments made at Teheran in late 1943?

 Who set the value of Russian participation in the Pacific war so high, and on the basis of what conflicting estimates of the military and strategic situation in the Pacific?

On the first point, the Yalta papers are extremely suggestive; on the latter, those released to date are practically a void. It is understood that about one-tenth of the Yalta file has been held back—and that most of the still-secret papers relate to an Army-Navy controversy over how near we were to having Japan on the ropes, and whether a costly invasion would have to be undertaken, and of how high a price we could justify paying for Russian help.

There have been various claims since the war that Japan was already trying to sue for peace at the time of Yalta, and that at least some members of our high command at Yalta knew it or should have known it. But precious little light is shed on any of this in the papers just released, and there is nothing to indicate that Roosevelt himself had any other idea but buying Russian participation with the concessions he freely gave.

About the only vigorously dissenting voice was that of Britain's Foreign Secretary Eden:
"If the Russians decided to enter the war against Japan they would take the decision because they considered it in their interest that the Japanese war should not be finished by the United States and Great Britain alone. There was therefore no need for us to offer a high price for their participation, and if we were prepared to agree to their territorial demands in the Far East we should see to it that we obtained a good return (elsewhere)."

In the Yalta discussions of the far eastern deal—as in discussions relating to Europe—there are vague references again and again to tentative pledges given at Teheran. In talking about Polish frontiers, for example, Roosevelt began: "As I said at Teheran, in general I am in favor of the Curzon line." In opening the discussion of a Russian warmwater port in China, Stalin "recalled that they had discussed that point at Teheran."

If the purchase of Russian help in the Pacific war must thus be dated back to late 1943, instead of early 1945, it is conceivable that the still-secret Teheran papers could put Roosevelt in a better light than do the Yalta papers, for this would render somewhat academic the question whether Japan was on the verge of surrender at the later date. Certainly Russia at Teheran was in a

better position to command a stiff price for a promise of assistance in the Pacific than she was at the time of Yalta.

But if that was a factor in the Far East, the reverse was true in Europe. Russia was still fighting on her own soil in late 1943 and was in no position to dictate to us the terms for Eastern Europe at Teheran, as it is contended she was 14 months later, at Yalta. What the Yalta papers, with their suggestive cross-references to Teheran, indicate most clearly is that the grand design of Yalta was nearly all implicit in the basic decision Roosevelt revealed at Teheran to abandon the idealism of the Atlantic Charter and the close partnership with Britain, and to pin his faith for the future on the misplaced realism of a global deal with Stalin.

History, in short, cannot begin to close the books on Yalta until it has opened all the books on Teheran.

The Yalta Papers—Part III—Treason's Role, if Any—History Versus Politics

EXTENSION OF REMARKS

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. OSTERTAG. Mr. Speaker, in the decade since the disastrous conference at Yalta, the question has been raised many times as to the role of Alger Hiss. In its careful and comprehensive analysis of the Yalta papers, the Buffalo Evening News has suggested what Hiss' role was. Under leave to extend my remarks, I include in the Record editorials bearing on this and related points which appeared in the News:

ANY

THE YALTA PAPERS-V-TREASON'S ROLE, IF

There is not much support, if any, in the Yalta papers for the overdramatized betrayal theory which usually pictures Alger Hiss as the sinister manipulator, breathing sweet treason into the dying Roosevelt's ear, and thereby causing him to hand the world to Joe Statin on a platter. But there are deeply disturbing implications and puzzling questions raised by the role Hiss did play, and by the preconference maneuverings of Harry Dexter White back home.

Hiss was there all right, and he was privy to every Yalta secret and had access in advance to every scrap of advice and data the United States State Department took along. His was the job of gathering the file together to make sure that President Roosevelt was fully briefed. Yet the documents released last week show him cast as a giorified clerk—an ever-present clerk, but not an influential adviser, except on matters relating to the forthcoming San Francisco conference to create the U. N.

How Hiss came to be chosen for the Yalta trip is not clear. Mr. Roosevelt did not plan to take him at first, but the delegation was gradually enlarged. Presumably he was added by Secretary of State Stettinius because of his work at Dumbarton Caks and the importance of that prelude to San Francisco in the Yalta discussions. He cannot be dismissed as a minor figure. He was 1 of the 9 Americans present at nearly all the plenary sessions of the 3 leaders, saying nothing, but taking copious, cryptically abbreviated notes. He was 1 of the 5 or 6 Americans who attended nearly all of the foreign ministers' meetings, taking notes and

sometimes joining the discussion on matters relating to the still-unborn U. N.

Assuming treasonous intent on the part of one so situated, there is no special reason for concern over any role these papers show Hiss playing in the plenary sessions. A spy would do the Russians no good there, for Stalin, Molotov and company were right in the room, and Roosevelt received little nudging from any of his advisers except Harry Hopkins.

Where a spy in Hiss' spot could have done this Nation greatest harm—and Russia most good—was in the advance stage of briefings and preparations. Consider this January 10, 1945, memo of a State Department staff meeting: "The secretary asked that all memoranda for the President on topics to be discussed at the meeting of the Big Three should be in the hands of Mr. Alger Hiss not later than Monday, January 15."

The subsequent memoranda that crossed Hiss' desk contained all the recommendations as to our preferred position on each question, where we should be willing to compromise if we had to, and what we should hold out hardest for. There is nothing in the papers to indicate that any of this file was passed on to Stalin before the Yalta sessions started, but no vivid imagination is needed to guess how helpful his access to it could have been.

access to it could have been.
In one other sense, the Yalta papers are suggestive, if only faintly, of the way a treason game could have been played if there was that intent. The American delegation, as it turned out, was more stubborn and diligent in pressing for Soviet concessions on procedural questions involving the organization of the U. N. than on any other general subject raised at Yalta. These were the issues with which Hiss was officially concerned, and the ones on which he did some fairly vigorous arguing for the American position. The Yalta record of give-and-take is one in which we did most of the taking on these questions of procedure, and most of the giving on questions involving the strategic control of Europe and Asia. there was any pattern of deliberate betrayal at work in the briefing of Mr. Roosevelt for Yalta, it is not inconceivable that its objective was to magnify the importance of the procedural questions in his mind in order to minimize the others.

It is in the preliminaries at home, rather than in anything said or done at Yalta, that the newly released documents are most suggestive of disloyalty at the policy-influencing level, and these relate not to anyone in the State Department but to the eager Treasury expert, Harry Dexter White, who worked closely with Secretary Morgenthau to sell Mr. Roosevelt on the dismemberment and pastoralizing of Germany. Mr. White had better luck with that than with another scheme, for a postwar reconstruction loan to Russia which, by the strangest of coincidences, the Soviet Government first requested 3 days after Secretary Morgenthau had suggested it to the President. The circumstances hint that Moscow had a pretty fair pipeline into the pre-Yaita briefing rooms of the American Government. In short, the documents now available add no weight to the treason theory of Yalta, but neither do they quite lay its ghost.

THE YALTA PAPERS—VI—HISTORY VERSUS POLITICS

History's interest in the Yalta papers is obvious; it simply wants the facts because it seeks nothing but the truth. The interest of politicians, however, is something else again. They favor suppression or disclosure, depending on whom the truth will help or hurt; they view the record not to see the whole truth in context, but to see what can most usefully be taken from the context.

In this series of editorials, our main concern has been with Yalta as history. In this concluding piece, our purpose is to consider

some of its broadest political implications.

First, the domestic political hullabaloo over release of the papers: This, as we see it, is a phony issue. Why shouldn't they have been released? What do they tell but the truth? American practice since the Civil War has been to release the record of diplomatic events, usually 15 years afterward. The Yalta conference has now been the subject of raging controversy for 10 years; it has intimately affected the life of every American. Because of this, Congress 2 years ago authorized preparation of the Yalta documents, with a view to prompt publication; there was no great furore about it then.

The papers were ready last fall; they were withheld until after the election to avoid any charge of political timing; they were withheld again in December at the request of the British. But they had been widely enough seen by then so they could not be suppressed forever. The confusion that attended the exact timing of the release is, in our view, a tempest in a teapot insofar as it affects the basic issue of suppression

against disclosure.

On that, we are now and always on the side of as full and prompt disclosure as is compatible with our national security. For Democrats in particular to take any other line is to repudiate the whole Wilsonian concept of open covenants openly arrived it; it is to reject the fundamental concept of ultimate accountability that is corollary to the constitutional power of the President to conduct our foreign affairs.

Second, the international repercussion: Here, too, the cleansing power of truth is complete answer to the immediate yelps of pain. No one is hurt by the Yalta papers who did not hurt himself by the character he revealed at Yalta. If diplomats are made more cautious at future conferences, knowing that what they say may one day have to stand the light of history, so much the better. If some nations are disillusioned at learning what men they have honored as friends said about them and did to them 10 years ago, international relations are less well served by leaving the false myths to be eroded away by suspicion and rumor than by building a cleaner relationship based on truth. With every sympathy for the French Germans, Poles, Chinese, and others who are reminded anew how cavalierly they were treated at Yalta, we still don't know a better foundation than truth about the past on which to build a foreign policy for the future.

Third, Republican exploiting of Yalta: There is enough legitimate campaign material for Republicans in the Yalta papers so they would be very foolish, in our view, to continue exploiting the illegitimate. The truth does not support the picture of deliberate betrayal that some have painted; neither does it support an ostrich-like escape to isolationism. What it does disclose is a thoroughly shameful enthronement of cynicism over idealism, of smart-aleck expe-diency over principle, of crass power politics over morality and justice.

The Yalta record, in short, is a kind of gross caricature of the worst tendencies evident throughout the New Deal years in our domestic politics. To say that Republican politicians should not use that record to point up its contrast with the moral tone of the Eisenhower administration is to say that they should quit trying to win elections. But let them remember (1) that Yalta is 10 years old, (2) that even the Democrats under Truman have fought to retrieve some of its worst blunders, and (3) that any party which uses its obsession with the past to dodge the issues of the present isn't going have much future. In short, let the GOP comb the Yalta papers for what they're worth, but let them not forget that it is

the record of their own present administra-tion that will be the main issue of the next election.

Fourth. the Democrats' dilemma: The problem of the Democrats is whether to vacillate between denying and defending the Yalta record or to do their best to forget it and convince the country that they've learned its lessons. Their fundamental choice is between the two "liberal" strains in their modern party tradition—the liberal idealism of Wilson's "open covenants" and "self-determination" and Roosevelt's Atlantic Charter versus crude political expediency masquerading as liberalism which characterized the New Deal approach to so many issues and reached its tragic de-nouement at Yalta. It is all very well for the Democrats to say, with Senate Majority Leader Johnson, "Let's talk about what can be done rather than what cannot be undone ' It will be better for them if they make it clear that they have pondered the Yalta lessons, and have finished with denying, sugar-coating, and covering up the blunders made there.

Tabulation of a Poll on Questions of Current Interest

EXTENSION OF REMARKS OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. HARVEY. Mr. Speaker, under leave to extend and revise my remarks. I wish to report the outcome of a public-opinion poll conducted among voters of Indiana's 10th Congressional Dis-

This is the 5th consecutive year in which I have sought to obtain a cross section of public thinking on current national issues. In this 1955 canvass of citizens of east-central Indiana, a total of 6,501 marked ballots were tabulated. The results, I believe, are fairly indicative of the prevailing sentiments of voters in the Midwest.

Following are the recorded votes on 10 questions of current interest:

Ultimatum to Red China: Free United States prisoners or risk naval blockade. Favored, 4,301; opposed, 1,419.

Multi - billion - dollar Federal - State program of highway construction: Favored, 3,489; opposed, 2,146.

Three-year extension of reciprocal trade with United States tariff reductions: Favored, 3,716; opposed, 1,407.

Raising minimum-wage rate to 90 cents an hour: Favored, 4,020; opposed,

Continuance of flexible farm-price supports: Favored, 4,038; opposed, 1,644.

Economic-military aid to free nations of Asia: Favored, 3,727; opposed, 1,651. Federal aid to school-building con-

struction: Favored, 3,062; opposed, 2,974. Enactment of President's national re-

serve plan for military manpower: Favored, 3,721; opposed, 1,279.

Bricker amendment to limit treaty powers: Favored, 3,332; opposed, 1,530.

Increase in rates on air and first-class mail: Favored, 2,723; opposed, 3,060.

Fifty Years of Distinguished Service to God and Humanity

EXTENSION OF REMARKS

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. TUMULTY. Mr. Speaker, it is with pleasure that I address this House and call to its attention the golden anniversary of a distinguished man of God. the beloved Father Hooper, of Hoboken, N. J. Appropriately his 50th anniversary coincides with the centennial of the city of Hoboken. I know Father Hooper personally. He has given his life to the service of God and his fellow men of all faiths. He has been called a great priest. On March 2 the Hudson Dispatch, a leading newspaper of New Jersey, had the following editorial concerning this good and holy man:

TO HONOR FATHER HOOPER, HOBOKEN, ON GOLDEN ANNIVERSARY

The year that Hoboken marked the golden anniversary of its incorporation as a city, 1905, also happened to be the year that Rev. Edward P. Hooper, rector of Holy Innocents Episcopal Church in the "mile-square city." was ordained. Quite fittingly, we think, since Father Hooper has served Hoboken so well during 32 of the 50 years he has been a cleric, his own golden anniversary and the city's centennial will be celerated on the same day, March 27.

A half century of service in any profssion or occupation is a remarkably long period and an accomplishment deserving of commemoration, and Holy Innocents parish is arranging a program worthy of this notable occasion. On March 27, a high mass will be offered at 9:15 a. m., followed by a Benediction of the Most Blessed Sacrament, with Father Hooper as celebrant. A parish reception and buffet dinner will be held in the church hall at 4 p. m.

Father Hooper was born and educated in New York City. After graduating from City College, he had a brief business career before entering General Theological Seminary, from which he was graduated in 1904, after which he received appointment as curate in Holy Innocents Church from the late Rev. George Ernest Magill, then rector. He was ordained as an Episcopalian priest on March 27, 1905. in Holy Innocents Church by Rt. Rev. R. H.

Holy Innocents Church was founded by Mrs. Martha Bayard Stevens of the famous family so closely related with the history and growth of Hoboken. Her son, Col. Edwin A. Stevens II, and Mrs. Stevens, his wife, were guests at the reception held in Castle Stevens following Father Hooper's ordina-

Serving as curate at Holy Innocents until 1908, Father Hooper then became rector of Christ Church in Pompton Lakes, at which post he remained until 1915, when he became rector of Ascension Church in the Hudson City section of Jersey City. He remained there 11 years, during which time his leadership resulted in the church debt being paid off and in the renovation of the edifice. An endowment fund was also estab-

In 1926, when the late Father Magill retired from Holy Innocents Church and became rector emeritus, Father Hooper received a call to return to his original parish as rector. In the succeeding 29 years, his ministry there has been marked by many improvements in the church property and in the growth of its membership. Hooper notes particularly the fact that in the past 2 years there has been a resurgence of faith not only in Hoboken but throughout the world.

In addition to his splendid service to Holy Innocents and to the community of Ho-boken as well, Father Hooper has been a pillar of strength at Christ Hospital, Jersey City. He is president emeritus of that institution, which has a fine record of growth in recent years. In his civic work in Mile-Square City, he has been a member and past president of Hoboken Kiwanis Club.

Our best wishes for many more active years in God's work are extended to one who has labored long and well in the vineyard.

Congressional Salary Increase

EXTENSION OF REMARKS

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following petition submitted to me by Asa C. Dye, of West Plains, Mo.:

The undersigned citizens and voters of Howell County, Mo., respectfully request the Senate and House of Representatives to repeal the recently enacted law raising the pay of Senators and Representatives.

We believe the amount they formerly re-

ceived to be sufficient.

Robert Valeur's Address Before the Harvard Club of the District of Columbia

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include an address delivered by Robert Valeur, first counselor of the French Embassy, at the annual dinner of the Harvard Club in Washington, D. C., on March 24, 1955. His address includes a commentary on the publication of the Yalta papers and a forceful review of the important part that France has played during the many years of international strife.

The address follows:

President Kavanagh, President Pusey, Senator Saltonstall, distinguished guests, gentlemen, the publication of the Yalta papers which was generally heralded in this country as a victory of open diplomacy against secret diplomacy affords me an unusual opportunity to speak to you tonight with frankness not usually associated with diplomacy, and especially with French diplomacy which from Richelieu to Talleyrand and Jules Cambon has stood for the traditional approach as against the public forum approach of today. Furthermore, as a mem-ber of the Harvard Club and as a former professor of political science in a great American university-although it was not Harvard-I hope you will not resent my expressing tonight the sadness I feel in my heart, as a Frenchman and as a devoted friend of the United States, in the face of the criticisms of which France is more and more the target and the unfairness with which its actions are so often appraised in this country and, generally speaking, in the Anglo-Saxon world.

The publication of the Yalta papers does not add very much to what we knew already of the feelings of the Big Three toward the smaller nations. Yet, it is not very pleasant to have it said in so many words.

I feel certain though that the French, however hurt in their feelings, will never forget that President Roosevelt, by campaigning against American isolationism as early as the Chicago quarantine speech made it possible for France to be liberated 1, or possibly 2 years sooner than would have been otherwise the case. And who knows what we would have found in France then, if anything at

I feel certain also that, although the Yalta papers reveal verbal indiscretions toward us on the part of the Prime Minister Sir Winston Churchill, the French people will always think of him as the indomitable leader who saved our freedom in 1940 and as the valiant friend who fought at Yalta so that France be given some measure of recognition in world councils.

But when Stalin, resisting Churchill's proposal, said that: "We cannot forget that in this war France opened the gates to the enemy," a remark which did not even elicit a mild rebuff on the part of our Anglo-Saxon allies, this is really unfair.

Stalin's words remind me of what Westbrook Pegler wrote in 1944: "It is, he said, because the sons of the heroes of Verdun were not worthy of their fathers that American boys are being killed on the Normandy beaches."

Is it really necessary at this time to recall that it was France which, on the contrary, for a whole 30 years, bore the main burden and suffered the heaviest losses and sacrifices in

the onslaught of Germany against Western civilization?

Is it really necessary to recall that it was the French poilu-and no one criticized then his taste for red wine-who did most of the fighting on the western front? One million and a half were slaughtered. The United States' entry in the war was decisive, but few remember that the American Army, through-out the fighting of the First World War, did not fire a single cannon which had not been manufactured in the hard-pressed French arsenals.

Victory came. A victory at a high price and soon after the armies of democracy had paraded under the Arch of Triumph, each of the great Allies went his own separate way. Great Britain returned to its balanceof-power policy, helping Germany's resurgence so as to offset France's continental influence. The United States went back to their traditional isolationism, while accusing France of militarism.

As we look back, it seems unfortunate that there was not even more militarism in France for, obviously, a bigger and better French army would have had more of a chance in 1940 to keep the gates closed to the enemy.

Yet, the fact remains that, of the three great democracies which defeated Germany in 1918, the only one which kept a measure of preparedness against the eventuality of the Germans going once more on the rampage was France; France which had already paid more than her share; France which, furthermore, was by far much poorer in men and resources than Great Britain and, above all, the United States.

Now I assure you that we French, regret more than anyone, Westbrook Pegler and Stalin included, that we did not defeat the Germans in 1940. We would not have to eat humble pie * * * as we do now. The instability of French cabinets—which, by the way, did not prevent the victory of 1918would not occupy such a prominent place in American editorials or in Mr. Attlee's specches in the House of Commons, nor would one really care whether we drink too much wine and not enough milk. * *

We doubtless committed fatal tactical and strategic errors in the campaign of 1940. V. 3, French, deplore it, but feel no reason to be ashamed of it. A year later, Soviet Russia, with its 200 million people bent by the iron fist of its Communist dictatorship into a prodigious war effort, saw its Red army smashed to bits by the German Wehrmacht and its remnants pushed back to the Caucasus, that is to stay three times the greatest length of France.

Even though France in 1940 was badly beaten in the field of battle, it honorably discharged its international obligations and, above all, remained true to its traditional mission of being the frontline fighter for the freedom of man against any kind of tyranny. The deeds of General de Gaulle's fighting French and of the men of the Maquis should also be remembered as evidence of the loy-alty and vallance of the French people even when subjected to the worst sort of duress.

Yet it took the full might of the United States, which, as always, once challenged, brought to play its amazing material resources and indomitable will to win, to bring the enemy to bay. This, I assure you, the French will never forget. Neither will they forget the considerable material assistance that America brought them after the liberation. But, even more than material help, what was needed in France then, what is needed now, is sympathy and understanding. Instead, we are too often faced with doubt, suspicion, even irritation or, at least, a sentiment of impatience.

The truth of the matter seems to be that, for the first time in their history, the American people do not feel secure within their own borders. They have to concern themselves with what is going on in Europa,

Africa, or Asia because happenings in these continents may vitally affect their own se When the United States reacts with curity. such obvious impatience to France's failure to ratify the EDC or to the fall of France's Prime Minister, it is less out of sympathy toward us than because France's attitude and decisions may have serious repercussions on the security of the United States. In other words, Americans feel irritated or impatient with us because we are not acting the way they would like us to act, as we were irritated with them in the thirties because they did not want to open their eyes to the danger of nazism.

The great difference, however, between the Americans and the French is in the fact that we have been used to insecurity for the past 2,000 years, whereas it is the first time in your history that you feel insecure. The result is that, we French feel that your impatience with our ways may, at times, be excessive. We are a proud old nation and, unlike you, we have known tragedy again and again. Please be more patient with us; you need us as we need you and the best way to get results either way is through patience and understanding.

Do keep in mind in particular that, if things in France are not going as well as you and ourselves wish, it is because we were left practically alone in 1914 and in 1940 to face the German armies and that two wars and two occupations in a generation have left tehind tremendous physical and moral wounds.

Furthermore, in your criticisms of our parliamentary system of government, of its in-stability, there seems to be a lack of realization that, while you were able—as England for that matter-to develop your political institutions in the security that two oceans afforded you, our revolution, which was inspired by the same ideals as yours, at once prompted attacks from all kings of Europe, and as a reaction caused the internal violence of the terror and the coming to power of a

tyrant. We never quite recovered from it.

It is in the past 3 months, however, that doubts and criticisms of France seem to have reached a peak in Anglo-Saxon countries. These doubts and criticisms stem from the protracted debate which took place last December in the French National Assembly on the ratification of the Paris Accords and from the fact that these accords, which grant Germany the right to rearm, were finally voted with only a slim majority. Many Americans concluded that the French National Assembly is irresponsible and that France cannot be depended upon as an ally.

The problem involved here is that many Frenchmen still feel toward Germany the way President Roosevelt did at Yalta. still harbor a profound resentment toward the country whose armies have invaded and occupied their native land three times in 70 years. These French look upon Germany's rearmament in awed dismay and, in insisting at this time that Germany be rearmed, the American Government has faced the French nation with an agonizing problem for the French know that their refusal to agree to German rearmament would gravely imperil their alliance with the United States and, if it so happened, the seat thus left empty by us-as we were just told in so many wordswould be taken by Germany.

Let us put it this way:

Had the French National Assembly been asked to vote separately on the maintenance of the American alliance on the one hand and on German rearmament on the other, on the first issue; that is, the maintenance of the American alliance, there would have been a unanimous vote, but for the Communists, on the second issue there doubtless would have been a substantial majority against German rearmament.

The staggering difficulty was that the French National Assembly was asked to vote on these two issues, not separately, but wrapped up in a single package.

The very fact that even a small majority of the French Assembly was willing to set aside its resentment of Germany and its fear of German rearmament, to ratify the Paris Accords, thus saving the Franco-American alliance, is the greatest token of friendship that France has given the United States in a long time and compelling proof of France's unfailing loyalty to its 175-year-old American alliance.

Whatever the danger involved, once more France is true to her commitments. Behind the apparent instability of her politics, there is a profound stability in her policies. Beyond the amazing ups-and-downs of her history, France always emerges anew, stronghold of freedom in a world of confusion. Even the Germans could not bring themselves to destroy Paris and you, our friends since always, cannot lose faith in the only great power which has always been your ally.

I am aware as much as anyone that, after all, this is past history and that bygones should be bygones. Then, according to your American expression: "Where do we

go from here?"

May I say that after a grave setback, France's curve is decidedly up. In the politi-cal field, she doubtless killed the EDC but produced the Schuman plan and made it work, and is now completing the ratification of the Paris Accords. Just quoting from last Monday's "New York Times" may I add that: "When former French Premier Mendes-France, during his visit to the United States several months ago, proposed a Big Four meeting in May, his idea was received somewhat cooly at the State Department. But there are indications that the administration now believes an early meeting might be useful."

In the economic field, France's industrial production rose by nearly 10 percent in 1954. Your investments in France in the form of Marshall plan aid and technical assistance

are beginning to pay off.

Last year France's balance of trade and balance of payment improved so much that we have been leading the European Payment Union nations in gold gain. The recent discovery of what seems to be an important oil field in France should improve further our

foreign exchange situation.

Our industrial and scientific techniques are again tops. In 1954 we set new speed records for electric trains as well as new and fantastic records for deep sea diving. We won the contract for the 300-ton magnet for the synchrocyclotron of the great European Laboratory for Nuclear Physics in Genevaanother French initiative-against the competition of the best firms in Great Britain, Germany, Italy and Switzerland. Our French-built military aircraft is of such a quality that we have received large orders of "Ouragan" interceptors from abroad and even from a member of the British Commonwealth. We are building the first oil refinery in Brazil and all over the world bridges made with the newly discovered French process of precontracted concrete. You will be interested to know that French navy yards are building 264,000 tons of tankers for United States concerns.

The French even defeated, 3 weeks ago, the English rugby team on its own ground.

Most of all, we haven't had a serious strike in a year and a half and the French currency and prices have remained remarkably stable for nearly 3 years.

And last, but not least, there is a renaissance in French poetry. As poetry is, with music, the most instinctive expression of a nation's soul, this is a good omen that France is once more resurging, full of fresh

vitality and bristling with new ideas.

One reason for this resurgence may be that France is presently undergoing a tremendous revolution: France which, for over a century, had a stationary population, now has the highest birthrate in Western Europe. France which was ruled by older men and had the conservative outlook which goes with old age, feels now a new blood throbbing in its veins. It is this new blood which is helping the French to shed old prejudices and resentments. It is this new blood which enables the French to conceive new ideas, to work out new techniques. It is this new blood which is making it possible to put an end to the fratricidal feud between France and Germany. It is this new blood which alone can cause, soon we hope, much needed changes in the constitutional setup of the

Gentlemen, France is beginning once more to look forward. Let us hope that she may be again, as happened in the past, a beacon of light in this confused world.

More Errors in the Hoover Report on Government Lending Agencies

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to a letter sent by the National Foreign Trade Council pointing up another of the many serious errors in the Hoover Commission's report on Government lending agencies. That leaves just about nothing right in that report.

The letter follows:

NATIONAL FOREIGN TRADE COUNCIL, INC. New York, N. Y., March 18, 1955. Hon. HERBERT HOOVER,

Chairman, Commission on Organization of the Executive Branch of the Government, Washington, D. C

DEAR SIR: In its section on the Export-Import Bank of Washington the recent report of the Commission on Organization of the Executive Branch of the Government. entitled "Lending, Guaranteeing, and Insurance Activities," states that "many authorities such as our task force and the National Foreign Trade Council take the attitude that the normal banking facilities of the country are ample to finance exports and imports." We feel that this statement indicates a misconception as to the position of the National Foreign Trade Council regarding the Export-Import Bank.

The National Foreign Trade Council was one of the foremost organizations urging the creation of the Export-Import Bank. and it has supported successive measures for continuing the bank as a permanent institution and for expanding its facilities so that it could adequately render needed services in the financing of American foreign trade. We feel that the Export-Import Bank has an important and necessary role to fill in supplementing facilities provided by private financial institutions in financing the foreign trade of this country. We regard this supplementary service of the Fxport-Import Bank as of particular importance in assuring intermediate-term and long-term financing for American foreign

The position of the National Foreign Trade Council in regard to the Export-Import Bank has been set forth in the final declarations of many national foreign-trade conventions sponsored by the Council. The final declaration of the national foreign-trade convention held in 1953, for example, stated in part:

"The Export-Import Bank of Washington is, in the words of the 1945 amendment to the act creating it, an instrumentality designed 'to ald in financing and to facilitate exports and imports and the exchange of commodities between the United States or any of its territories or insular possessions and any foreign country or the agencies or nationals thereof.' In keeping with this policy, the Export-Import Bank, in cases Where adequate accommodations are not available through private financial institutions, can play a highly useful role in providing intermediate-term financing American exporters and importers, preferably with the cooperation and participation of these private institutions. It can also be helpful, under similar circumstances, in providing longer term financing for the purchase, by entities located abroad, of needed materials and equipment of United States origin. If this financing is made available in line with the courageous approach the bank has taken in previous years, American traders and investors can thereby be afforded a better opportunity to maintain their position against foreign competitors, whose governments are providing them with generous assistance for the development and expansion of their activities.

"The Convention commends the management of the bank for the care it has exercised in screening loan applications, and for the emphasis it has given to the need for fundamental soundness and productivity in the undertakings involved. It also com-mends the management for its adherence to the concept that the increased production and trade it has endeavored to stimulate can best be fostered through the development of enterprises under private operation and con-It is worthy of commendation, furthermore, that, in serving the interests of American foreign traders, the bank has, at the same time, so managed its affairs as to show a profit."

In calling for a rededication to the original purposes for which the Export-Import Bank was created and for active implementation of these purposes, the 1953 convention

stated: "It is, of course, equally important that the bank reaffirm its policy of not undertaking operations which commercial banks are themselves willing to finance on reasonable terms. "The Convention emphasizes that the American foreign trader cannot look to any international agency as a substitute for the Export-Import Bank for the financial ac-commodation he requires."

A pronouncement relating to the Export-Import Bank similar to that of the convention was also made by the National Foreign Trade Convention held in November That convention stated:

"The great bulk of American exports and Imports is financed either by the private enterprisers themselves who undertake the transactions involved or by private financial institutions whose facilities are available for the purpose. In some cases, however, it is recognized that the national interest would be served by the development of trade opportunities which depend for their realization upon intermediate - term or long - term financing facilities which private institutions are not providing out of their own resources. In this area the Export-Import ank, working preferably with the coopera-tion and participation of these private institutions, can play a useful and welcome role, and its operations are held to be com-Plementary to rather than in conflict with the predominant role that is played by private enterprise.

"The convention is gratified by the action taken by the Congress in amending the Export-Import Bank Act to provide for an index Independent management of the bank under a board of directors, for representation of the bank on the National Advisory Council, and for an increase of \$500 million in the bank's lending authority. It believes that the Export-Import Bank has done a commendable job, over the years, in promoting our foreign trade, and it holds that the amendments to the act now in force should further enhance the bank's usefulness.

"The convention commends the manage-ment of the bank for its adherence to the concept that the increased volume of business it seeks to stimulate can best be fostered through the development of enterprises under private operation and control. It holds that the American foreign trader cannot look to any international agency as a substitute for the Export-Import Bank for the financial accommodation he may, upon occasion, legitimately require. It believes that the bank, in serving as an essential and effective instrumentality for the financing of American foreign trade, can operate in harmony with the foreign policy objectives of the United States in a manner which is beyond the province of any international organization."

In view of the above and of our 20 years of active support of the Export-Import Bank, we can find no justification for the statement made in the report of the Commission that the National Foreign Trade Council "takes the attitude that the normal banking facilities of the country are ample to finance exports and imports." We, therefore, re-spectfully request that appropriate steps be taken to correct the erroneous impression conveyed by this report as to the position of the National Foreign Trade Council. view of the importance which we attach to matter, we are taking the liberty of sending copies of this letter to the other members of the Commission and to Members of Congress.

> Very respectfully yours, ROBERT F. LOREE, Chairman.

Strength and Caution

EXTENSION OF REMARKS OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. BOSCH. Mr. Speaker, we are hearing a great deal of talk at this time about the possibility of a Big Four meeting. Under leave to extend my remarks, I include an editorial of timely interest entitled "Strength and Caution," from the Daily Mirror, New York, March 29, 1955:

STRENGTH AND CAUTION

In the wake of French approval for the rearmament of West Germany, it was disclosed by our State Department Monday that quite active consultations are going on among Britain, the United States, and France concerning a possible Big Four meeting.

President Eisenhower has already indicated he is not going to rush into any big-power conferences and the current consultations presage no such hasty action.

That is just as well. When we have rushed into such meetings in the past, we usually got the worst of it-witness Yalta and Pots-

Much groundwork remains to be done. We must, as President Eisenhower is well aware, be absolutely sure that such a conference will serve definite purposes and not just become a sounding board for Soviet propaganda.

But it is intriguing to note that Soviet Premier Bulganin is receptive to the conference idea.

Previously, the Soviet stand was that a conference would be useful only if the West refrained from the completion of the NATO alliance and the Paris pacts, and would be useless if they went through-as they are now going through.

Nobody knows what Bulganin's apparent amenity in this respect means. From past experience, we are entitled to be skeptical and to welcome the Soviet receptiveness with caution. But we need not fear it.

The West gains both psychological and military strength by the French action.

And strength and caution must be our watchwords in any dealings with the Kremlin.

Textile Industry of the United States Loses Foreign Markets and Is Threatened by Imports

> EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement of the Textile Workers Union of America before the Senate Labor Committee:

TEXTILE INDUSTRY OF THE UNITED STATES LOSES FOREIGN MARKETS AND IS THREAT-ENED BY IMPORTS

(By Solomon Barkin, research director, TWUA-CIO)

The stability of the textile industry has been seriously affected, both by the loss of export markets and the displacement of American production by imports. These have tended to aggravate the internal adjustment being affected in the United States through rising productivity, mergers, changes in types of apparel, interfiber competition and other significant developments which are reducing domestic employment and the demand for textile products.

1. Loss of export markets: The American textile industry has, since 1947, suffered large losses in export markets and these are likely to continue to contract. During that year, the United States exported 1.5 billion square yands of cotton fabrics and 250 million square yards of synthetic fabrics. This volume has been drastically reduced: in 1953 exports were 621 million square yards of cottons and 198 million square yards of synthetic fabrics. In 1954, the export volume was even smaller: 605 million square yards of cottons and 200 million square yards of synthetics.

The primary American export markets are in Canada, the Philippines, Cuba, Latin America and South Africa. As for Canada, to which one-third of our cotton exports are sent, our market is now threatened by the new trade treaty to be consummated under the GATT agreement which will permit Japanese textiles to compete with American imports under very favorable conditions. We are likely to lose a substantial part of the market. As for the Philippines and Cuba, we enjoy a preferential position. Our exports to be Philippines are duty free. But this position is tied to a trade which has a terminus and considerable pressure exists for the elimination of this condition. preferential tariff position in Cuba has been threatened several times by the Japanese. In the other countries, our position is like-

wise insecure. It is dependent upon tariff rates as well as competition, primairly from Japan and now India in the cotton field. Our exports to Indonesia are completely related to the foreign-aid program and are likely to be terminated and substituted by Japanese or Indian textiles. There is no doubt that the volume of textile exports will continue to shrink.

2. Displacement by imports: Several divisions of the textile industry have felt the impact of imports most seriously. They are the woolen and worsted; woven carpets and rugs; screen prints; cordage and soft and hard fiber industries.

(a) Woolen and worsted industry: This industry has been beset by many difficulties which have shrunk employment in broadwoven fabric mills from a total of 122,500 production workers in 1947 to 100,000 workers in 1949; to 89,000 workers in 1951; 78,000 workers in 1953; and an estimated number of some 50,000 workers at the present time. Most of this reduction is due to the diminished use of woolen and worsted textiles, but imports have aggravated an otherwise difficult position. Woolen and worsted imports have constituted a rising proportion of American production, reaching its peak in 1953 when 24.3 million square yards were imported constituting 5.3 percent of domestic proportion. In 1954, the imports were 19.2 million square yards, comprising 5 percent of the domestic production.

These imports have been serious because they have continued to hit hard at a shrinking industry. Moreover, they have provided competition for the older divisions of the industry. The competition has been keenest for the finer qualities of worsteds and woolens. Thus those sectors which have the greatest chance of surviving in the domestic interfiber competition have been impaired

by competition from abroad.

We have not been able to get relief from the Tariff Commission under the provision of the General Agreement on Tariffs and Trade which permits increasing the tariff rate on fabrics in which imports exceed 5 percent of average annual domestic production. We have urged, to no avail, that the Tariff Commission interpret the above stipulation so that each class of fabric be con-sidered separately, by weight, in computing the 5-percent limitation; we have also main-tained that production of fabrics for Government orders should not be included in the domestic production averages since imports are not competitive with these fabrics.

(b) Woven carpets and rugs: Similarly in the woven carpet and rug industry imports have compounded difficulties resulting from the shrinkage in the industry. During the postwar peak, 1948, 89 million square yards were produced, but this volume has declined so that output in 1953 was only 67 million square yards, and in 1954, 55 million square In the meantime the volume of imports have risen. In 1948 (peak production year) imports were only 1.6 million square yards, whereas in 1953, it was 3.3 million square yards, or 5 percent of domestic production, and in 1954 imports were 2.9 million square yards, again 5 percent of domestic production.

A particularly aggravating feature of these imports is that they are concentrated on wilton or jacquard carpets, which have been least affected by domestic competition from the tufted carpets, the principal cause for the reduction in the sales of axminster and some of the velvet-carpet markets. Again, we have an illustration of imports threatening the very areas of the domestic industry which have been most stable.

(c) Screen-printed scarves: The screenprinted scarf industry, which employed 2,000 screen-printing employees, hundreds of sewing employees in New York City, and thousands in Puerto Rico, has been virtually eliminated by the refusal of the President to sup-

port the Tariff Commission's recommendations for higher rates for this industry. (See original and supplementary reports President on Escape-Clause Investigation No. 19 under the provisions of sec. 7 of the Trade Agreements Extension Act of 1951.)

(d) Hard-fiber cordage and twine: The destructive effect of tariff reductions upon American industry is further underscored by the hard-fiber cordage and twine industry. Binder twine has been on the duty-free list for many years. Baler twine was put on the free list by a 1951 act of Congress. The result has been that imports have risen strikingly in these areas, as have wrapping twine and rope, where low duties prevail.

Imports have risen in volume from 41.4 million pounds in 1948 to 106.7 million pounds in 1951 to 123 million pounds in 1953. In the first 10 months of 1954, im-

ports were 138 million pounds.

Imports were only 14.8 percent of United States production in 1948, but the proportion rose steadily to 35.7 percent in 1952, to 47 percent in 1953; and for the first 10 months of the year, the proportion was 73 percent. Domestic private production for the year 1953 was 245 million pounds, a drop of 95 million pounds from 1951. In the first 10 months of 1954 the volume was 177 million. The proportion of imports to American production for the respective products in the first 10 months of 1954 were as follows: wrapping twine, 130 percent; binder twine, 3.141 percent; baler twine, 96 percent; and rope, 7.2 percent. An industry so vital to American defense is being undermined by imports.

(e) Cotton textile industry: Cotton textile imports had constituted an insignificant proportion of American production through the entire postwar years. American manufacturing productivity had been able under existing modest tariff rates to maintain its domestic market. In 1953, the volume of imports was only 64 million yards. During the first 8 months of 1954, the volume again was low, amounting to 38 million square The prevailing great fear and alarm resulted from the large imports during the last 4 months of 1954 when the Japanese deliberately pressed exports to the United States. From a volume of 21.5 million square vards for the first 8 months, we find the imports shifted to 30 million square yards for the last 4 months. Particularly serious was the fact that these included substantial volumes of combed goods which alerted the American industry to the new threat, and a large volume of velveteens. The great concern in this field is that liberalization of the tariff rates would spell a real volume of imports. Imports to date have been disturbing at times of weak markets when the lowprice imports have further depressed the market or held back recovery. The second fear is the proposal for a double price system for raw cotton which will permit foreign producers to utilize American cotton at lower than American prices and thereby provide a second advantage beyond their current low wages, namely, low material costs, and thereby encourage further imports.

In view of the demoralization of the textile industry, a new burden of adjustment and displacement is already imposed on textile workers. Because of the rising productivity in the industry, which has already resulted in the displacement of tens of thousands of employees, the fact is that such increases will ultimately reduce costs of manufacture within this industry and foreign producers will not be able to maintain a permanent foothold in our market. Their temporary gains may lead them into futile efforts, expansion and diversion, with unprofitable ultimate consequences.

We urge that no further reductions be made in tariff rates for textile items. An exemption should be granted in the bills now under consideration in the Congress respect-

ing reciprocal trade and no further concessions should be given on textiles in the negotiations with Japan or in any subsequent negotiations of trade treaties with other countries.

In Fairness to All

EXTENSION OF REMARKS OF

HON. OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I submit this thought-provoking letter from Mr. John L. Gunkelman, of R. F. Gunkelman & Sons, Fargo, N. Dak., wholesale dealers in feeds, fertilizer, seed corn, grain, agricultural chemicals, and seed.

Mr. Gunkelman has had long experience in farm problems which qualifies him to speak with authority on this

topic:

R. F. GUNKELMAN & SONS, Fargo, N. Dak., March 15, 1955. Representative OTTO E. KRUEGER, House of Representatives,

Washington, D. C.

DEAR CONGRESSMAN: I am enclosing a copy of a letter I recently wrote to President Eisenhower, and I assure you with no delusions that it might ever reach him. ever. I thought it might be referred to one of the agricultural economists that must be giving him this false advice to date.

In dealing with the farmers, as I am sure you are aware already, we find that they still do want to believe in their President and indicate a reluctance to lose faith in him. I believe this is due to the fact that they supported him on the basis of his sincerity and idealistic approach to all prob-With this in mind, they feel that he has an inborn sense of justice in dealing with his people and still think that he will right this situation.

However, he is getting an incorrect impression, I am sure, of just how serious the farmers' comparative well-being is when it is considered alongside that of the other principal segments of our economy, and I is in this comparison of position with those of his fellowman rather than the comparison of where he might be today in relation of the 1930's is where the misunderstanding is arising.

I know you are doing everything humanly possible to bring this story home to him. As one of his supporters, I had finally come to the point where I had to get it off my For the farmers' sake, for President Eisenhower's sake, and for the sake of the Republican Party, I hope he sees the light

before it is too late.

With best personal wishes, Respectfully yours,

JOHN L. GUNKELMAN.

FEBRUARY 28, 1955. The PRESIDENT OF THE UNITED STATES.

White House,

Washington, D. C.

DEAR MR. PRESIDENT: I have long been one of your most ardent admirers, enthusiastic supporter, and willing worker. I am happy to say that I still am, but do feel that it is I am happy time to speak out frankly concerning what I feel to be one of your most serious situa tions facing you as President of the United

This, I sincerely feel to be a situation in which the American farmer finds himself at the present time. I would like to preface my remarks by saying that I am not an anti-Benson man; in fact, I have supported your overall agricultural program and defended it in many instances during the past 2 years; but I feel in relation to other segments of our economy, that your present program is unduly rushed and severe in its nature and its consequences. I am not a farmer myself, but our firm operates country elevators, and a wholesale seed and grain business in which we come in contact with farmers throughout North Dakota, South Dakota, and Minnesota, and I feel for the most part, that each and every one of these farmers have sincerely respected you for your idealistic honesty and fairness in contrast to many political figures. They still today want to believe in you and your program. They are reluctant to lose faith in the fact that you will lead them through to ultimate victory and a sound economic base on which they can develop their agriculture in the future.

However, in the face of continued industrial prosperity, increased wages to labor, increased prosperity of professional menthe farmer is beginning to lose faith that he is receiving equal treatment with relation to these other large segments of our economy. If this natural reluctance to lose faith in a man whom they have admired and respected is overcome by virtue of their necessity to protect their God-given right for equality in governmental action, I am sure it will not only spell defeat for the Republican Party, but far more seriously in my eyes it Will explode the confidence of the average man in a President to whom they have dedicated their loyalty by virtue of their sincere belief in his highest qualities of leadership

and God-given ability.

If you were to look at the position of the American farmer in relation to the 1930's, I am sure you would consider their position one to be envied. However, this is not a true measuring stick, or one to be used by most people. Human nature makes us measure our relative position by virtue of what our neighbor has and how he has prospered today. When the farmer looks at the laboring man, the businessman, the professional man, and what he is enjoying under our bountiful standard of living in America, it is then that he feels that he is not receiving his fair share of the national income; and it is on this basis, and this basis alone, that You can treat the American farmer and figure out what our agricultural program should be. As long as we continue to subsidize industry to bring prosperity to this segment of economy; as long as we foster a prosperous laboring man and professional man, then we must also subsidize the American farmer so as to keep him at a par with the other segments of our economy. If any one segment is to be let down, it must be let down in proportion with the other segments of the economy, or must be supported in proportion to the other segments of the economy if you are to have fair treatment of your people, and a people who are satisfied with their position in relation to their neighbor.

I know that this letter may never reach you; but if it should, I cannot urge you too strongly to investigate the position of the American farmer in relation to the position of his fellow man, and once this investigation is made, I am sure that in fairness and justice to the American farmer, you will take the steps necessary to keep his standard of living in proportion to those in industry, labor, and the professions. Yours is not an enviable position, I realize, but I sincerely hope that with the ability you have shown in the past to analyze situations and make the correct move, that you will again demonstrate this leadership and ability, and make the correct move to avoid the disaster that I feel, and that many others feel, confronts

May God bless you in your deliberations, and guide you to the correct decisions during your term as President of the United States.

Respectfully yours,

JOHN L. GUNKELMAN.

A Great American Dies

EXTENSION OF REMARKS

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to pay tribute to a truly great American—the late John W. Davis, of Clarksburg, W. Va.

A member of the staff of the Clarksburg Exponent, Clarksburg, W. Va., who knew Mr. Davis so well over the period of his great career, has paid tribute to this great man far beyond my ability to do so. His remarks in the form of an editorial under the caption, "A Great American Dies," is as follows:

A GREAT AMERICAN DIES

(Note for readers: In the following article a member of the Exponent news staff pays tribute to John W. Davis, an internationally known Clarksburger who died Wednesday in a Charleston, S. C., hospital.)

John W. Davis, distinguished native son of Clarksburg and internationally known statesman, lawyer, and orator, is dead, and our city, his birthplace, is sad.

The world mourns as the word of the passing of this great man is made known, and here in his hometown among the hills there's a feeling of sorrow that is particularly acute.

As a lad Mr. Davis was popular in Clarksburg and the citizens affectionately called him John. As a young man he practiced in the local courts and took part in the political and civic life of the community. He became a member of the West Virginia House of Delegates, a start in a political career which was to bring him the highest honor of the Democratic Party, that of the party's nomination for President of the United States.

Clarksburg relatives and friends fondly recall John W.'s intermittent visits here after his political endeavors and his legal practice kept him in Washington and New York most of the time. The middle-aged and older residents of Clarksburg remember the homecoming of 1924, when John W. delivered an eloquent address from a specially constructed rostrum in Goff Plaza in accepting the nomination for the Presidency.

No one, not even in a political campaign, ever questioned the integrity of John W. Davis. He was honest to the nth degree, and in and out of political campaigns and in and out of the courtroom he pursued his beliefs with eloquent argument and diligence almost without parallel.

Politically, we had sometimes differed with him, especially in recent years, when he became more of an independent in politics. But though we differed with his political views, we knew that he was sincere in his opinions and in his public stands and we respected him for it. Our columns always spoke favorably of him.

Elsewhere John W. Davis will be remembered because of the 1924 political campaign,

his service at the Court of St. James, his friendship for Woodrow Wilson, and the latter's great dependence upon him for advice, his work as a constitutional lawyer, and his ability as an orator.

We Clarksburgers will remember him for those things, too. But we'll also think kindly of the days when he took to the hustings here as a successful candidate for Congress, of the cases he tried in the local courts. of his remarks at public meetings, and of his intermittent visits back home. We'll remember that when he visited here he regularly looked up an old colored man who had befriended him in his boyhood days and secretly gave him a few dollars. We'll think of his homespun philosophy and of the fact that while he spent most of the past 40 years away from Clarksburg, he always considered this his hometown.

We'll remember him as having been one of us and we'll always be proud to tell those we may visit in other States that we're from the hometown of John W. Davis. We'll think of Mr. Davis as a hometown boy who went to the city and not only made good but attained political and legal heights such as few Americans have known. He was one of the greatest of noted Americans. True, he didn't become President of the United States, but the history of America undoubtedly would have been different had this kind and sagacious man spent a few years at the helm of our Government.

It is often said among those in the legal profession that John W. Davis had argued more cases before the United States Supreme Court than any other attorney in the Nation's history, with the possible exception of Daniel Webster. He had been counsel in some of the Nation's most important legal battles, among them the case in which he successfully resisted Government seizure of the steel mills.

It is unfortunate that John W. Davis has lost his greatest debate—that with death. We are told that as he seemed on the road to recovery a short time before death, he expressed the desire to go home. He doubtless looked forward to more service for his fellow man.

His lifetime is over, but John W. Davis* wise counsel has left an indelible mark on the history of the Nation, and his friendliness and natural love for his neighbors have placed his name forever in the hearts and minds of Clarksburgers. For generations to come folks of this city will be telling strangers they meet elsewhere that they're from the hometown of John W. Davis.

Protection Against Unprovoked Violence

EXTENSION OF REMARKS

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955
Mr. ROOSEVELT. Mr. Speaker, I

Mr. ROOSEVELT. Mr. Speaker, I have today introduced a bill which would give protection against unprovoked violence to all of the uniformed members of our Armed Forces.

The net effect of this bill is to make the unprovoked assault upon our military personnel a Federal offense, if committed while such personnel are engaged in the performance of duty or on account of the performance of duty. Persons charged with such assault could be tried in a Federal court. It would provide protection to all our servicemen and

especially those servicemen belonging to minority groups, who in certain localities of our Nation might be the object of prejudice. It would extend the same protection to all wearers of the uniform of our country which we now extend to the Coast Guard, and to many other Federal officers and employees, ranging from marshal and game wardens to meat inspectors.

Police protection in many localities where we maintain large concentrations of servicemen is inadequate. We therefore must rely on military policemen, who, if they are to maintain order must be given adequate protection against bodily harm. This bill would assure that persons guilty of assault upon any of our military personnel on duty would be promptly apprehended and prosecuted.

The Department of Defense has in the past formally endorsed this proposal. I hope and believe their endorsement will be forthcoming in this instance.

As we approach the consideration of any type of universal military training program or expanded Reserve program the need for such protection becomes more important.

It is my fervent hope that this Congress will give its swift consideration to providing the protection which our military personnel need.

Is the Working Family To Be Ignored in Present Administration Tax Policy?

EXTENSION OF REMARKS

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. EBERHARTER. Mr. Speaker, under unanimous consent heretofore granted to insert in the body of the Record a statement, herewith are my views covering generally the present situation with regard to taxation.

I cannot bring myself to agree to the conference report on H. R. 4259, to be presented tomorrow for consideration.

To do so will cruelly deny modest tax relief designed to benefit the needy family in the lower income brackets, while at the same time the "fat-cat" Republican Revenue Act of 1954 will continue to drain off billions in tax benefits predominately to large business, dividend recipients and wealthy individuals.

It is arrant fiscal irresponsibility, we are lectured from high administration places, to give modest tax relief to lower-income families—to give a direct tax saving of \$20 each to the father and mother and for each dependent child, so that the relief will be more effectively felt at the lower-income levels where the family burden presses the heaviest.

But—so goes the lecture from the same high administration sources—it is an act of high ennobled statesmanship, contributing to the welfare and stability of every humble home and fireside, to give unbounded tax relief to big corporations, coupon clippers, and wealthy

individuals as was done last year in the Revenue Act of 1954.

I and other Members on my side of the aisle took the floor many times last year and this to protest the one-sided character of that 1954 act, particularly as to its dividend credit tax bonanza and its distorted and swollen depreciation tax allowances to corporations.

The dividend-credit provision of that 1954 act—the special-tax reduction for coupon clippers—will cost \$362 million a year. Eighty percent of that relief will go to the six-tenths of 1 percent of American families who own four-fifths of all publicly held stock. Ninety-two percent of American families own no stock and get no benefit. Less than 4 percent of all taxpayers—those with incomes over \$10,000—receive 76 percent of all dividend income. And eightenths of 1 percent of all American families—those with incomes over \$25,000—get 55 percent of all dividend income.

I ask, is it a token of fiscal responsibility that special-tax relief be accorded a favored limited group of dividend recipients—the unearned income class—but even most modest relief be denied the mass of taxpayers who work and toll for earned income?

The special depreciation allowances granted by last year's tax bill-thinly disguised special tax credits for in-creased corporate dividends or favored capital-gains benefits to stockholders on corporate reinvestment of tax-free earnings-will continue to cost billions in reduced Federal revenues for a generation. Expert students of intricate tax maneuvers and business finance estimate that by the year 1960 the United States Treasury would be losing, at present levels of gross national product, about \$3 billion per year as a result of these new depreciation provisions if current tax rates on business remain the same. The same sources estimate that by 1955 the tax loss would rise to more than \$5 billion per year, and it would continue to rise thereafter. I commend to the attention of the Members the revealing study of Depreciation Under the New Tax Law, by Robert Eisner, published in the Harvard Business Review for January 1955, and reprinted in the RECORD of March 11 at page 2264.

But when the 1954 act was under consideration and even as of recent date, we were told in solemn assurance by the Secretary of the Treasury, and other administration fiscal pundits who now lecture us on fiscal irresponsibility, that these swollen depreciation tax benefits will really cost the Federal Government nothing. They say that if you view their tax effect on one piece of new machinery (and please limit your myopic view to only one added machine by the taxpaying corporation in this dynamic business economy of ours), then the Government will later get back the taxes it lost in the earlier years because no more depreciation tax allowances can be taken after the full cost of that single machine has been written off for tax purposes.

"Baloney," as a forthright statesman, dear to my memory, might have responded. The shallow assurance that the increased depreciation tax allowance "all washes out in the end"-to quote the study above referred to-"not only is misleading, it is to all practical purposes flatly erroneous." It mistakes the effect on a single piece of property for the cumulative tax effect, typical of American corporations, of increasing investment in new property additions each year in keeping with the economic growth of our system. Assume that gross additions of property are made at a constant rate each year by one of the big corporations in a heavy capital industry, if the properties last 33 years depreciation tax allowances under the generous new methods of last year will exceed tax writeoff under the old method in each of the first 27 years under one of the new methods and in every one of the first 33 years under the other new method authorized last year. The tax benefit does not "wash out in the end"; it can pile billions upon billions in reduced corporation taxes each continuing year for the next generation.

"When do we get back those billions?" I inquire after due heed to recent public sermonizing on fiscal responsibility. When I tried last year to find out from the Secretary of the Treasury, I ran into a stumbling block of refusal to give the information at first, then official stall, and finally airy assurance to the effect that "it all washes out in the end."

Not even the Wall Street Journal accepts the glib assurance of the Treasury that the new depreciation tax allowances "all wash out in the end." To quote from the lead editorial appraisal in the issue of March 28, 1955:

As shown here a few weeks ago, the depreciation change can produce large cumulative effects over the years. On any single plece of property the effect is minor. It merely postpones taxable income a few years by concentrating the depreciation in the early part of the life of the property. But as new facilities are built year by year, the relative weight of the early, heavy depreciation rates will keep growing, and Federal revenues will reflect this.

Yes; \$362 million a year of special tax benefits directly to stock dividend recipients—coupon clippers—and billions more per year in corporate tax benefits through tax-free depreciation allowances to be kept in company tills, distributed to stockholders, or reinvested with consequent increased stock values able to be realized upon at favored capital gains rate of taxation. In the eyes of "administration lecturers," that must be the acme of fiscal responsibility.

Relief for the wealthy, we are told, will stimulate investment and promote confidence. It will sustain that delicate maiden, whose confidence we must so tenderly nourish, the stock market boom. Relief for the needy, this administration tells us, must be spurned as phony and base political trickery. For the latter—for the needy—the weight of the tax load on their burdened backs will help spur their daily toil and assure heightened awareness of the precious price of citizenship.

Some other observers, perhaps lacking in self-righteous zeal for the current brand of fiscal responsibility, detect in this strutting fiscal conscience only the old hardpanned trickle-down theory again restored to its place of public eminence after years of brooding silence. I doubt that in our modern economy, sustained as it must be by mass purchasing power and ever-broadening distribution of the products of farm and factory, the trickle-down will be adequately or timely in rate of flow to promote the truly dynamic expanding economy that lies within our reach.

I urge disagreement to the conference report. I respect the views reluctantly reported by the majority members of the committee of conference. I know their sincerity, their deep conviction, and their persistent effort to gain acceptance of House action in passing the \$20 tax credit. Only under adament threat of Presidential veto on the eve of expiration of current higher rates of corporate and excise taxes did they bow to Executive fiat.

But I am still mindful that our Founding Fathers wrote in the Constitution that "all bills for raising revenue shall originate in the House of Representatives" and to the Congress the Constitution gave the power to lay and collect taxes. Too often of late has this House-its elected Members-forsworn its rightful prerogative. Let us assert it now, confident in the human justice and economic justice of our prior action, lest by failure to do so we embolden further the disciples of the McKinley era in their new onslaught of power and privilege. If we disagree to the conference report, then this House itself lifts the awesome responsibility from the individual shoulders of the able chairman of the conference committee and his fellow conferees. I doubt that the administration, despite its blustering threats, would rashly jeopadize by veto the true fiscal responsibility and fairness of our Government. The pages of history are studded with examples where human liberty and justice were won only by like defiance of entrenched power.

Tenth-Inning Politics

EXTENSION OF REMARKS

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. FORD. Mr. Speaker, under permission to extend my remarks in the Recorn, I wish to include an editorial from the Grand Rapids (Mich.) Herald of March 17, 1955, entitled "Tenth-Inning Politics."

TENTH-INNING POLITICS

As the administration's tax bill headed for the extra-inning showdown of a Senate-House conference committee, the "game" became wholly political.

It was plain that the Democrats, barring the outside chance of a complete upset, would not get the politically inspired \$20-a-person income-tax reduction tacked onto the bill as a rider in the House and thrown out, 50 to 44, in the Senate, but that wasn't the main issue.

The main issue is the 1956 presidential election

The House might or might not go along with the Senate and reverse itself on the

Should the rider be included in the ultimate conference measure, a Presidential veto of the whole measure would be in order, and Republican leaders have passed the word that it would be forthcoming.

Since there is no such thing as an item veto in Federal money bills, that would mean vetoing the whole measure including postponing decreases in corporate rates and certain excises, due to expire April 1. That, however, is no real risk. The administration would then resubmit the original bill and there is no reason to suppose that Congress would fall to pass it.

This is where Democratic campaign strategy comes in. They could claim the President blocked their handout, which undoubtedly is their purpose. Short of real issues, they are hardpressed to find any at all, phony or not.

Then it would be a question of whether the taxpayers put 38 cents a week ahead of executive courage, fiscal responsibility and economic stability.

It is hard to believe that the Democrats had anything else in mind when they added the tax-cut rider. The basic argument of the rider's opponents was unassailable. It was simply that a tax cut could not be justified 10 months before the effective date, January 1, 1956. Nobody could predict what conditions then would be.

The situation now is like it was in the summer of 1947 when a Republican Representative proposed a tax cut for the year ahead.

"Nobody knows yet," said a Democratic opponent of the proposal, "how much money we are going to spend, even on the regular appropriation bills, in the fiscal year 1948. So it would appear to me to be the sound, the wise, the sane thing to do to wait until the first of the year or maybe until the 15th of March 1948 and have a look around and see how much money is going to be produced in the way of taxes * * * before we begin reducing taxes. It seems to me that is so sound, that it is so unanswerable, that it should take hold, even upon one who is most anxious, politically or otherwise, to reduce taxes at an early date."

Who said that? None other than Speaker Sam Rayburn, now a strong backer of the \$20-a-person cut for next year.

What he said then is still true. It is difficult to believe that Speaker RAYBURN has changed his stand on an issue so fundamental. It is far easier to believe he would have said the same thing this time had he truly expected this tax cut to become law.

So the battle over the tax cut rider takes on more and more aspects of a political game of maneuver for partisan advantage.

It is a classic of its kind, a tie game as it goes into extra innings, as absorbing in its way as the seventh game in a World Series.

The Eastern District of New York Needs a New Courthouse

EXTENSION OF REMARKS

OF ILLIAN

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following resolution adopted by the Brooklyn Bar Association. I hope the Congress will take appropriate action:

RESOLUTION ADOPTED MARCH 9, 1955, BY BROOK-LYN BAR ASSOCIATION FOR THE ERECTION OF A NEW FEDERAL COURTHOUSE FOR THE EASTERN DISTRICT OF NEW YORK

Whereas the physical facilities of the existing courthouse of the United States District Court for the Eastern District of New York are notoriously inadequate; and

Whereas the business of the court and the attorneys and their clients suffer because of that inadequacy; and

Whereas the construction of the new Brooklyn municipal and civic center has begun; and

Whereas the United States has purchased a site for the erection of a new courthouse in that center; and

Whereas plans for the erection were interrupted almost 5 years ago because of the Korean situation; and

Whereas the land purchased by the United States is now lying idle: Therefore be it

Resolved, That the Brooklyn Bar Association strongly urges the immediate commencement of construction of the new courthouse to relieve the present deplorable condition; and be it further

Resolved, That copies of this resolution be forwarded to the chairmen of the Committee on Appropriations of the United States Senate and House of Representatives, the chairmen of the Committee on the Judiciary of the United States Senate and House of Representatives, the Commissioner of Public Buildings in the General Services Administration, and the Director of the Administrative Office of the United States Courts.

Economic Conditions in Northeastern Pennsylvania

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter addressed to the Honorable Samuel Rayburn from a resident of Lackawanna County which graphically portrays the dire economic circumstances in which that region presently finds itself:

MARCH 14, 1955.

Hon. Samuel RAYBURN,
Speaker of the House of E

Speaker of the House of Representatives, United States Congress, Washington, D. C.

DEAR CONGRESSMAN: Would you be so kind as to read this letter to Congress so as to give the entire Congress a true picture of the unemployment conditions in the Lackawanna and Luzerne County area of Pennsylvania where over 80,000 men are out of work at present, and each year the situation keeps getting worse. The total population of these 2 counties is 700,000. This area was once a prosperous hard coal mining area, as well as an industrial area. The industrial part is not too bad, but the mining part is very bad, in fact it is a very serious crisis to economic future welfare of more than 75 towns and 4 cities, such as, Carbondale, Scranton. Wilkes-Barre, and Hazleton. Even the factories have laid off men be-cause orders have been cut. They are operating on about one-third capacity. a better idea of the area, so as not to think of this area as one of the small mining towns out in the West, known as ghost towns, at the turn of the century coal mining was the chief industry here. People had faith in the community, and coal was a great resource to our Nation until oil came in. People built homes, and cities, and towns were built. Business people built banks, stores, bakeries, laundries, churches, schools, and factories. Streets were paved. Utilities built electric-power plants. Water and gas companies spent millions; telephone companies spent millions; hundreds of millions were spent. These 75 towns, I speak of, range from 2,000 to 15,000 population each. So as to give you a real picture of the size of each community I speak of, the 4 cities range from 30,000 to 125,000 population. Every town and city has had a decrease in popula tion since 1939. We lost one Congressman and several representatives on that account which proves the loss in population. These people, who left here seeking work, have settled in many different places. Some went south to Baltimore and Wilmington, Philadelphia, Trenton areas; others went west to Pittsburgh, Youngstown, Cleveland, Detroit areas; some went north to Buffalo, Binghamton, Rochester, Syracuse area; the most went east to Bridgeport, Conn., Hartford, Conn., Newark, N. J., to get work.

The problem is that everyone cannot leave and move to another city to find work, first, because these people have invested life's earnings in their homes, and with no work available, no one is going to move to this area to buy a home or even rent one. Second, those who did go to other cities to find work are doing it the hard way, by paying high room rent, eating out in restaurants, and riding home on weekends, or once a month, depending on the distance from home, to be with their families and to look after their homes. These men who have found work in other cities are hated and snubbed by the natives of those places because there are so many Pennsylvanians already there taking their jobs away and making it harder for the natives to get work, because the factories have found that Pennsylvanians are good, steady workers, and work harder. But the problem is why should over 80,000 unemployed home owners in 2 counties of Pennsylvania be out of work during peacetimes? Must we always have war to give our men steady employment? We do not want war to have prosperity. These men have been unemployed now for as long as 10 years. It started when people in large cities started to use oil and natural gas to heat their buildings, and hard coal has lost its market. It is not a seasonal un-employment, as is the case in other cities when they have changeovers, inventory, etc. This is a case of an area that has lost one of its chief exports, meaning hard coal. We have enough coal left in the ground to supply the Nation for over 100 years, but throughout our Nation people have turned to oil, natural gas, and even electricity to heat their homes, and we have lost our market by 75 percent. Just as the steam loco-motive is almost a thing of the past and diesel electric locomotive has taken its place, so have the hard coal men of this region been affected and all business firms suffering daily because of the loss of the income that these men used to earn. And \$30 a week unemployment benefits' pay is hardly enough for food alone, and after so many weeks it runs out, and then it is relief if you sign your property over to the State. The average weekly pay loss of the 80,000 men at \$15 per day, or \$75 per week, is \$6 million weekly. This not only hurts the workers but it hurts every kind of business here, except the unemployment office.

What the people cannot understand is how our Government can help other countries in Europe and Asia with hundreds of millions of dollars, and our own men who shed blood for our flag and fought for freedom in three wars and are the Nation's taxpayers cannot find a job in peacetimes? Our

people know that it is possible for our Government to solve the unemployment problem in this area because they know that during the war it cost the United States of America \$500 million a day. They also know that our Government could pretend that the war lasted just 1 day longer than it did to help some of our own United States ctizens in time of distress, not with charity or relief, but with a new industry for the whole region to replace the loss suffered by competitive fuels. Why does our Government give out large contracts to build new factories in places where there are no people living at all and no cities, and new towns are being built around these new projects, when here the homes, the streets, the powerlines, the sewage systems, the water, the schools, churches, banks, and hospitals are all built and cannot be moved away from here? All we need are the new factories. When the Government is giving out big contracts, it should insist that they go to this distressed

It is a shame to see so many people who want to sell their homes or even rent them because of the lack of work, but you cannot get people to buy or rent homes where there is no work. Our area is really feeling the depression. Small-business men can tell you better than anyone else. Many say that the early thirties were not as bad as now. A lot of robberies, sheriff sales, fires, unpaid taxes, foreclosures, etc., have hit the region due mainly to the economic condition. Please do not let so many of our good American people and citizens be disappointed. now. Act at once. Forget party These people did their share when politics. the Nation needed them. Regardless of politics, they stood 100 percent behind the purchase of war bonds, Red Cross, Army enlistment, anything to help when our Nation needed help. Our own Congressmen, Democratic and Republican alike, from this region, our own two United States Senators know the conditions and have promised to help, but they need the help of the whole United States Congress because these people are United States' own people. But when they hear how Uncle Sam is helping other countries with millions, their hearts cry with sadness when here they tolled all their lives, willingly did all that was asked, crawled underground on hands and knees for their daily bread in the coal mines, and now some of these men in their late forty's and fifty's are not old enough to die, not old enough for a small pension. They are sick at heart, weary about the future; they can and must be made happy and proud to be living in America, and we can make them proud and happy and ready to do anything that Uncle Sam might need of them in the future. Because a man seeking a job and unable to find one is a depressed man; we do not want depressed men; we want happy men. These are all God-fearing people and always have been. They hope and pray that Congress will look nearer to home.

Over a year ago a group of people, known s N. P. I. D. C.-Northeastern Pennsylvania Industrial Development Commission-went to Washington to get help for this area. But another year has gone by and no relief is in sight yet. Almost every year different groups go to Washington to seek help, such as, the chamber of commerce. They all come back with promising hopes, but we still have the 80,000 men unemployed in the 2 counties in the anthracite area, Luzerne and Lackawanna Counties, and that is a lot of unemployment for 2 counties. firms who feel the unemployment, have laid off men and women and have added to the unemployment situation are such as, transportation companies; railroad companies; department stores; garages; service stations; bakeries, by going out of business; machine shops; manufacturing firms; laundries; building and construction workers; bricklayers; masons; plumbers; electricians; carpenters; lumberyard workers; cafe and restaurant workers; painters and decorators; printers; refrigeration mechanics; roofers; schoolteachers; structural steel workers; stenographers and bookkeepers; dairies; grocery stores; insurance firms; packinghouses; hotel help; telephone operators; and many others. Several beverage companies went out of business. We must stop this before it spreads deeper or further. A committee should be sent here to check the situation at once, not 2 weeks or 2 months or a year, but right now.

P. S .- Enclosed are some of the buildings in some of the cities and towns in the depressed area just to show Congress that these are not just small mining towns, but are proud and well-built cities that once had a great future here and have cost people in this area billions to build. I am only a smallbusiness man who comes in contact daily with at least 50 to 100 people, such as, businessmen and workers, and have heard their troubles for over 5 years. I, myself, do not want any political office or favor. I only want Congress to help these truly 100 percent American people and wish everyone in Congress to see things as we see them and as they truthfully are here. And as a proud man of my community, I want peace, prog-ress, and prosperity. I hope you can send me some encouraging news soon.

Very truly yours,

JOHN K. NAGY.

Civil Defense

EXTENSION OF REMARKS

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the Record, I herewith include an editorial written by Louis Graves, contributing editor to the Chapel Hill Weekly and former editor of that newspaper. This is a very thoughtful comment on the important subject of civil defense, which appeared in the issue of March 25, 1955:

CIVIL DEPENSE SHOULD BE A GOVERNMENT DIVISION, RUN BY THE GOVERNMENT AS THE ARMY AND THE NAVY ARE

Civil defense—the preparation for the protection of civilians in case of hydrogen-bomb attacks—is either important or not important. If it is not important, then there is no sense in all the goings-on about it—the solemn conferences, the alarming speculation, the exhortations to the people to show more concern about what may be about to happen to them. If it is important, then all this talk, and whatever State and local organization may result from it, are utterly inadequate as preparation.

The persons who are in the best position to know whether or not it is important—atomic scientists, the President and other high-level officers of the Government, the members of the committees of Congress having to do with the defense of the Nation, military leaders, writers who have given serious study to the subject—declare that it is. And they declare it with all possible emphasis.

We ought to trust them to know what they are talking about. Not to have respect for their opinion, when it is virtually unanimous, unaffected by attachments to any party or any class, is to proclaim our lack of

faith in our whole system of democratic government. For the very basic idea of this system is that, by majority vote, we choose as our representatives the persons whom we consider most competent to study the problems of government-defense, foreign relations, the tariff, taxation, and all the restand make decisions about them. Of course When these representatives divide and dispute it is proper, in fact it is inherent in the system, for us to enter the dispute on whichever side we like, and rage and roar to our hearts' content. But when they do not dispute, when they are all agreed on a question vital to the national safety, certainly they deserve our confidence. not saying that a man does not have a perfect right to be a dissenter, even if he be the only man in a million or a hundred million to hold his opinion, but we are under no obligation to listen to him if we do not want to; not for more than a moment in passing, anyhow. Here I am talking not about lone wolves but about the ordinary run of people.

In connection with the danger of hydrogen bomb attacks you hear and read a great deal about dispersal and evacuation. The dispersal of population (that is, the moving out from big cities, for permanent stay) is a long-range policy. It has been under way for several years, quite independently of the danger of enemy attacks, and now more of it is being urged as a means of diminishing the panic and the slaughter in cities if the bombs begin to drop. Evacuation is something very different. It is an emergency operation. It means getting people out of New York or Boston or Philadelphia or Chicago or Detroit or any other big city with the greatest possible speed after an alarm about approaching bombers has been sounded.

If you think you can imagine what a task that would be, you are wrong, for the difficulty of it is inconceivable to even the most daring imagination. And the idea that it could be performed by any sort of makeshift State or local agencies, with the aid of civilian volunteers, is dangerous nonsense. And a makeshift is what any controlling agency other than a division of the United States Government is bound to be.

The hurry-up evacuation of a great city's Population calls for the most thorough, the most serious and the most devoted study, the most intelligent planning. Embracing, as it does, fire fighting, the regulation of traffic, the distribution of masks and the taking of other measures against radiation, medical and surgical services, and all manner of ministrations of relief, it calls for exhaustive advance training not only of technical experts but of administrators capable of directing this colossal and fearful enterprise. Which is not to say, at all, that civilians should not be called upon to help. Of course they should be, for the sake of the efficiency of the operation and for the sake of the national morale, just as the Red Cross and other auxiliary services have been called upon to help in all our wars, just as civilian spotters were called upon by the Navy and served with such remarkable success against Hitler's submarines along our coast, just as civilians are now being called upon to help spot enemy planes.

As it is now, we have an agency called the Pederal Civil Defense Administration, established in the executive branch of the Government 4 years ago "to provide a plan of civil defense for the protection of life and property." The principal responsibility is vested in the States, with the Government providing coordination and guidance. There is the Great mistake. For the Government to stop with coordination and guidance is folly. Overall direction and the major share of the actual performance of the various services embraced in an evacuation—these should be the functions of a personnel employed by the United States Government.

Civil defense should be made a part of the Department of Defense. There should be a civil defense uniformed force, with officers and enlisted men as there are in the Army and the Navy and the Marine Corps and the Air Force. There should be training schools for this new force, just as there are for our other forces. Of course, precedent to all this, and essential to it, is an adequate appropriation of money.

I return to the question: Is civil defense important or is it not important? If it is not important, stop talking and fussing and fuming about it. If it is important, then I, as one citizen, make this plea to the President, to the Members of Congress, and to our other leaders in Washington: Do not keep on trifling with civil defense. Give it the serious attention it deserves. That means: make it a direct responsibility, a definite operation, of the Government.—L. G.

American Interests Build 6,054,831 Tons of New Ships in Foreign Yards—United States Yards Lose \$1,800,000,000

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1955

Mr. WOLVERTON. Mr. Speaker, the extent to which big corporations of our country desert our American shipbuilders and build their ships in foreign yards is astonishing and highly distressing. It is no wonder that our American shipyards are in such a distressed condition for lack of work. It is no wonder that our ship workers are walking the streets unemployed. The very corporations that are ignoring American yards and going abroad to have their ships built are the very ones that will cry loudest for protection in the time of emergency.

Every sensible person must know that our shipbuilding industry and the trained personnel to operate it cannot continue to exist without work. And yet, while claiming all the benefits of American citizenship, these large corporations will build their ships in foreign yards and let our own shipyards dwindle to a state of inadequacy. This is not ultimately to the best interest of the corporations to which I refer, nor is it to the best interests of our country or its people.

The importance of this matter has been recognized by Marine Engineering in an extremely well-prepared and documented article by L. S. Blodgett, editor of that magazine. This article is replete with factual information that supports in every detail the statements and conclusions of the editor. I will not dwell upon all the facts and figures. Yet, there are some I will mention as an illustration of the important figures that are contained in the article.

For instance, in the postwar period ship orders placed abroad have resulted in losses to the shipbuilding industry in our country, employment and purchasing power totaling \$1,800,000,000 and these losses affect every 1 of the 48 States. It is my intention at a later date to ex-

tend my remarks in the RECORD to include facts that will show the detrimental effect a dwindling shipbuilding industry has in every State. Furthermore, the article shows that now only 14 merchant vessels of the 1,347 under construction in the world's shippards are being built in this country. And so I might continue, piling fact upon fact and figure upon figure to show the dismal picture that now exists and prove the distress that follows our neglect of a full and adequate shipbuilding program.

Marine engineering has performed a great service, not only to the shipbuilding industry and its workers but to this Nation of ours, in bringing pertinent facts and figures to the attention of the American public that should awaken it into action. I fully agree with the suggestion that we need a long range legislative program that will:

First. Encourage American shipowners to build and operate ships under the American flag. In 1954 United States flagships carried only 29 percent of this Nation's foreign trade:

Second. Insure a modern flag fleet, adequate shipbuilding facilities, and an effective force of trained workers to meet any national emergency; and

Third. Expand the market for the wide range of materials used in ship-building which originate in every 1 of the 48 States.

I hope this national problem will have the full thought and consideration by the present administration and that a long-range remedial legislative program will result.

The Fallacy of Controlled Inflation

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include the following article from the guaranty survey published by the Guaranty Trust Co. of New York for February 1955. This article deals with the subject of controlled inflation. It is well done and worthy of the attention of every Member of Congress. I hope my colleagues will take the time to read and study this article:

THE FALLACY OF CONTROLLED INFLATION

The battle in defense of sound money is never finally won. It is an unending series of skirmishes in which inflation keeps reappearing in new forms and under new names, always with glowing promises. The defenders are often forced to give ground. Occasionally they suffer outright defeat, and the people of one or more countries pay a heavy price for the monetary debasement that follows.

One alluring guise in which the inflationary nostrum is now being peddled is the idea of a governmental policy or program in which new money, presumably in the form of Federal borrowings from the banks, would be continuously created and administered

to the economy in doses sufficient to exert a slight but constant upward pressure on the general price level. This new money, it is supposed, would gently stimulate demand, raise output, sustain employment, encourage investment, and promote growth and expansion. The economy would remain under the beneficient influence of a mild boom, with full employment, large incomes, a high standard of living, and all the other material blessings associated with that happy state of affairs.

AN OLD FALLACY IN A NEW FORM

How much inflation would be needed to produce this economic miracle? A price advance of 3 percent a year is sometimes mentioned as being about the proper amount. At first sight, this does not look large. The general price level as usually measured has often risen more than 3 percent in a year. Such an advance, however, does not continue for long. If it did, the results would be surprising. In the course of a normal working life of 45 years, the price level would be almost quadruple. A dollar saved at the beginning of the period would have a purchasing power of about 26 cents at retirement age. In such an economic environment, what would happen to interest rates, saving, investment, and personal habits and morals?

Proponents argue, however, that losses to receivers of fixed incomes could be made up in other ways, perhaps by direct governmental payments. At all events, they maintain, any disadvantages resulting from such a program of controlled inflation would be far outwelghed by the absence of business recessions and mass unemployment.

Such a prospect prompts the question why so simple a means of sweeping away some of society's most troublesome economic problems has never been tried before. The answer is that it has been tried so many times that it is difficult to understand how anyone familiar with even the highlights of economic history can give a moment's countenance to such a scheme. The labels and details have varied at different times and places, but the essentials have been the same. Controlled inflation is nothing but the old snake medicine of cheap money in a new form. The experiment has been tried again and again, never with the intended results, and often with disastrous ones. In short, the proposal flies in the face of all experience, ancient and modern. It ignores the very nature of inflation.

FALSE PREMISES

The theory of controlled inflation is unrealistic at practically every point. To begin with, it assumes a much more direct and immediate relation than actually exists between the money supply on the one hand and prices and business activity on the other. Money affects these other conditions only as it is spent. Changes in the velocity with which money circulates are often more important as an influence on prices and business volumes than are changes in the amount outstanding, and they are much less amenable to control.

The idea of an economy responding in an orderly and predictable way to measured does of inflation also ignores the vital part played by nonmonetary factors in determining levels of prices and business activity. Money artificially injected into the economy by governmental action can remain largely ineffective as a business stimulant for long periods. Such money does not come into being in response to a specific need, as does money created by a normal bank loan, for example. Hence it tends to lie idle until business activity is stimulated by more positive forces. Then the idle money asserts itself vigorously, swelling demand at precisely the time when such an effect is least desirable. The \$20 billion, or thereabouts, poured into the economy by the Federal Government in the effort to "prime the pump" of recovery during the 1930's had surprisingly little effect at the time, but during and after the war it unquestionably played its part in intensifying the inflationary pressure.

tensifying the inflationary pressure.

The idea of controlled inflation conveniently forgets the disturbing effects of monetary manipulations on business. Changes in price levels affect different commodities and services in different ways. The price structure becomes distorted and ceases to be an accurate indicator of market forces. Businessmen and investors are misled into making faise calculations, and the resulting errors have to be curtailed. This means business losses, reduced demand, curtailed output, and unemployment. It is proverbial that in-flationary booms are followed by reactions. Inflation, unless administered in overwhelming amounts, occurs by fits and starts, occasioning a chain of developments which is the exact opposite of the steady progress dreamed of by the advocates of controlled inflation. If experience shows anything, it shows that an attempt to put such a scheme into practice would tend to amplify rather than moderate the boom-and-bust cycle.

THE POSSIBLE OUTCOME

To the inflationist mind, the reactionary phase of the cycle would be a signal for larger doses of the monetary stimulant. Herein lies one of the most menacing features of the plan, for it is certain that political and popular pressure for such relief would be very strong. It has typically been so in inflationary aftermaths. People look back upon the artificially induced prosperity that has vanished, long for its return, and are ready to resort to almost any expedient to recapture it.

The hard truth that the inflationists cannot bring themselves to face is that booms generate reactions. The latter are corrective movements, and they cannot be prevented without preventing the needed corrections. The longer they are postponed, the worse become the maladjustments that tend to cause them, and the larger the inflationary doses needed to stave them off.

Unless the pressure for more and more infiation is firmly and consistently resisted, somewhere along the line the people are likely to become aware that the value of their money is being destroyed. Then a flight from currency begins. The shrewder members of the population naturally realize this first. There tends to develop a class of professional speculators, and wealth gravitates into their hands. The worst impoverishment is among the masses of the people, who are least versed in economic matters, and hence are slowest to grasp the full meaning of infiation. Sooner or later, however, even the masses refuse to hold money. Then the velocity of circulation rises astronomically, lending its full force to the momentum of depreciation.

The vicious spiral may or may not proceed to the point of total destruction of the currency. Whether it does or not, the inevitable reaction must eventually be faced. By that time, however, economic disruption and stagnation may have reached such a crisis as to produce a Napoleon or a Hitler. Both of those dictators rose to power amid the economic and social chaos caused in part by inflation that got out of control.

These are not theories but historical facts. They describe what has actually occurred, not once but many times, in countries where inflation has been carried to extreme lengths,

Of course, the proponents of controlled inflation have no idea of carrying their program to any such lengths. Theirs would be a moderate program. The amount of new money would be carefully regulated. If the plan did not work, or if it had serious adverse effects, it could be discontinued.

Some of the most disastrous inflations in history have begun in exactly this way. It is

much easier to start an inflation than to stop it. Sound money, like all sound principles, imposes a discipline. Once the principle is abandoned or seriously weakened, the discipline becomes almost impossible to accept.

ADVERTISED DEPRECIATION

One of the most glaring of the proposal's many weakness is the fact that it is an inflationary program. The people would be notified in advance that their money was scheduled to lose its value little by little. They would be given fair warning that anyone who held money, bank deposits, life insurance policies, bonds, mortgages, or any other fixed claim to money did so at his peril. They would be placed on notice that their only chance of safety lay in successful speculation. The flight from money that ordinarily marks the last stages of an inflationary orgy would be invited at the start.

The inflation that followed World War II, bad as it was, could have been immeasurably worse if the people had known all that was to come. Even under the spur of patriotism, who would have bought and held savings bonds if he had known that their redemption price would have less purchasing power than their issue price, so that in terms of real value his investment would yield him a negative rate of interest? Who would have held any money asset if he had known that a few simple transactions in commodity markets would enable him to avoid the loss of a third or more of the value of his property? The saving feature of the situation was that the inflation was unplanned and hence to some degree uncertain. No such mitigating condition would exist in a deliberately planned program of controlled inflation.

OTHER OBJECTIONS

In the face of such considerations as these, it would seem hardly necessary to dwell upon other practical objections to such a program. The problem, for example, of compensating the receivers of fixed incomes, which the proponents of "controlled inflation" dismiss so lightly, would be formidable in practice. To whom would such compensation be given? Would it be limited to those who could prove that they had actually been pauperized by monetary depreciation? Or would it be extended to creditors in general, who, according to the Government's estimates, at the end of 1953 held money claims totaling \$683 billion, nearly twice the amount of the annual gross national product? Would the holders of all these claims, or only selected groups, become wards of the State?

What should be said regarding the morallty of a government that deliberately adopted a policy which enriched some of its citizens by impoverishing others? What would be the economic effects of removing all possibility of prudent investment? What would be the social consequences of destroying the foundations of individual thrift?

These and many other searching questions would be pertinent if there were any serious prospect that a program of "controlled inflation" might become a lasting feature of our economy. They are superfluous when it is considered that such a program would not have the slightest chance of long survival. For "controlled inflation" is almost a contradiction in terms. Speaking of a controlled inflation is much like speaking of a controlled forest fire. The hazard does not lie in the possibility that such a scheme might fasten itself upon the economy, but in the fact that it could do immense damage before it collapsed.

If there were a clear-cut choice between a slow price advance and an intermittent unemployment problem, as the "controlled inflationist" seem to suppose, it might be arguable whether the first evil should be accepted for the sake of avoiding the second. There is no such choice. "Controlled inflation" might conceivably postpone the day

of reckoning. But the postponement could not be for long, and the reckoning would be immeasurably worse when it came. Economic stabilization, within practical limits, is a worthy objective, but the road of currency depreciation does not lead to it.

Prosperity Begins on the Farm

EXTENSION OF REMARKS

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. GROSS. Mr. Speaker, the Nation's agricultural economy is in trouble and the resulting shrinkage of farm income will have an effect upon the econ-

omy of this country as a whole.

To arrive at a solution, attention must be given to basic defects and the following article by Mr. Carl H. Wilken, consultant to the Joint Committee on National Defense under the Senate Banking and Currency Committee, published in a recent issue of the Country Gentleman, is worthy of the attention of every Member of Congress.

> PROSPERITY BEGINS ON THE FARM (By Carl H. Wilken)

Its foolish to think that we can't have just as much prosperity in times of peace as in wartime. With the greatest productive system in the world, the American people ought to be smart enough to find out how to keep it working at its full rate. It can be cone.

All that is necessary is to make use of the total market that is possible in this country. The key to such a prosperity and the total market, on which it depends, is farm income.

We have neglected this key. Farm income has declined for the third successive year and is unable to play its decisive part in the total market. So our industrial output has had to be cut back, unemployment has reappeared and the national income has Gropped below that of 1953.

You have only to look at certain facts to realize why farm income holds such a key position in our economy. The best proof is found in the parallel tracks on which farm income and factory payrolls run under hormal, peacetime conditions. It is a matter of official record that in the long peacetime period for 1921 to 1938 they held to an approximate ratio of \$1 of cash farm income to \$1 of factory payrolls. In very instance during this period. factory payrolls had to adjust downward to farm income when it declined and also rose in ratio to any increase.

This balance was upset once World War II began. Wage costs and factory employment rose with the imperative demands for arms while farm prices were held down by OPA regulations. This abnormal situation found us in 1944 with \$32.1 billion of factory payrolls compared with \$20.3 billion of

cash farm income.

You'll remember that many economists predicted the usual postwar depression in 1946. One thing prevented it. This was a restoration of the balance that permitted a full operation of our economy. Farm cash receipts rose to \$24.5 billion in 1946. the meantime, the impending end of hostilities had cut back our war needs and factory payrolls dropped to \$25 billion, or their approximate normal ratio with cash larm income.

This laid a sound foundation for the general expansion that followed. The normal

1-1 balance between cash farm income and factory payrolls was maintained until 1949 when, as you will also recall, we had a re-cession. Farm income declined nearly \$2.5 billion and factory payrolls dropped in proportion. The net result was a setback of percent in industrial output.

The renewed military demands and inflationary spurt brought on by the Korean outbreak reversed this downturn, but with unequal effects. The consequent expansion of factory payrolls, coupled with lower farm prices, has created the greatest dislocation between the two in our history. Farm cash receipts for 1953 totaled \$30.9 billion and factory payrolls \$45.8 billion. The disparity has continued through 1954.

For the time being, the loss in farm income has been made up in part by the Federal deficit and increased governmental and private debt. This is the only way it can be.

The existing unbalance between farm income and factory payrolls, together with the spread between prices of manufactured goods and farm-price levels, is the most critical spot in the present economic situation. Factory payrolls can't be cut back to balance with a \$30 billion level of farm income. That would plunge us into a depression. But, as the record shows, we cannot have the total market necessary for peacetime prosperity until a balance is

The vital importance of farm income to industry and labor isn't any new fact. It was noted some years ago by Allen W. Rucker, industrial engineer. In his book, Labor's Road to Plenty, he said: "For practical purposes, the total dollar income of industry and manufacturing labor is limited, if not indeed determined by the existing level of There are a number of reafarm income." sons for this besides the one already cited.

Modern farming, with all its power, equipment and supply requirements, has become an essential part of the industrial market. Its machinery and motive investment stands at \$17.2 billion and its use of power has gone up 70 percent since 1940. Its ability to maintain or step up this outlay means jobs in many factories.

You need to keep one fact clearly in mind to realize the full value of farm in-come to industry. This is the dual role of the farmer—as both a consumer and the operator of a highly capitalized, high-cost business. In this multiple capacity the farmer, according to a competent research study, is 2.4 times as good a customer of industry as the city man.

The effects of farm buying power show up in the official record of retail sales in the United States. They reveal that farm States, like Iowa and South Dakota, spend 70 percent of their income for goods in contrast with only 50 percent for more urban States, such as New York and Pennsylvania. The difference is due primarily to the cash outlay by farmers for power, equipment, sup-

plies, and buildings.

A further light on the business-generating power of farm income is shed in a recent report by the Underground Water Commission of Arizona. Since 1943 there has been a rapid development of the agricultural resources in certain counties of that State, largely through the use of underground water for irrigation. The commission's report, in stating the economic effects, pointed out that each \$1 of farm income resulted in an additional \$1.27 of benefits locally through purchases of machinery, goods, and services. The local community realized \$2.27 for each dollar produced by farming.

The demand for factory goods created by farm income isn't something limited to farmers alone. The last census showed that 50 percent of our population live in towns of 10,000 or under and on the land around them. Most of these towns and and villages are really service centers between the fac-

tories and the farms and derive their sunport from farm income. It is distributed among their dealers and service people with the same business-creating effect as reported in Arizona.

You have seen from the foregoing how much business benefit the farm dollar develops at its starting point in the local community. The effects spread from there through our whole economy. An intensive study of the Nation's record since 1921 shows that each \$1 of gross farm income results in an approximate average of \$1 in wages for the factory worker and \$7 in national income by the time it completes the full economic circuit.

When you put all these factors together you realize why farm income is the key to the total market we must have for peacetime prosperity. It should be evident also that we can have such prosperity only with farm price and income levels in proper balance with manufactured goods and factory wages; otherwise we cannot have the total market that industry requires to operate at

full capacity.

Both industrial leaders and factory workers should be just as much concerned as farmers in seeing that farm prices and farm income are restored to par. Their stake, to put it simply, is how much they will be able to make, sell, and earn. The public also should be correctly informed in this regard. Instead of being told only of the cost of policies to maintain farm income, as the case has been, it should be informed of what these mean in terms of payrolls, increased opportunity, and a higher standard of living for all.

It's time to use some of the traditional American qualities of vision and boldminded thinking. If we do, we will be able to see the full possibilities this country offers for peacetime prosperity and the key part farm income has in creating it.

Advisory Committee on the Watch Industry

EXTENSION OF REMARKS OF

HON, EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement:

CELLER, AS DELEGATION SPOKESMAN, DEPLORES ADMINISTRATION'S ACTIONS IN WATCH CON-TROVERSY AND CALLS FOR PROMPT CORRECTIVE MEASURES

A strong indictment of recent administration actions aimed at curtailing imports of Swiss watches and a demand for prompt review of the damaging consequences to our national interest are highlights of a 26-page statement filed with the new ODM Advisory Committee on the Watch Industry. The detailed document has been presented on behalf of a delegation composed of 16 Democratic Congressmen, including Representatives Victor L. Anfuso, Charles A. Buckley, Emanuel Celler, Irwin D. Davidson, Isidore Dollinger, Herman P. Eberharter, Sidney A. Fine, Aime J. Forand, Lester Holtzman, Edna F. Kelly, Eugene J. Keogh, Arthur G. Klein, Abraham J. Multer, Leo W. O'Brien, John J. Rooney, and Herbert Zelenko, plus Gov-ernor Harriman, of New York State; Mayor Wagner, of New York City: Commissioner Edward T. Dickinson, of the State of New York Department of Commerce; Commissioner Richard C. Patterson, Jr., of New York City Department of Commerce and Public Events; and First Deputy Commissioner Martin Dodge, of the New York City Department of Commerce and Public Events.

The delegation's spokesman, Representative EMANUEL CELLER, Democrat, of New York in his accompanying letter, called on ODM Director Arthur S. Flemming to instruct the members of the new committee to give a new look and full consideration to the Defense Department's recently declassified study of the jeweled-watch industry which found that "no special nor preferential treatment for the industry is necessary." The Congressthe industry is necessary." The Congress-man, in pointing out that the delegation's statement had been prepared prior to the release by the Department of Defense of its long-classified study, also called attention to Dr. Flemming's testimony before the Senate Armed Services subcommittee on June 30, 1954, in which the ODM Director "emphasized the very essentiality which this de-classified Defense report negates."

In amplifying on this charge, CELLER

"We must assume that you were familiar with the Defense findings, and are, therefore, most interested in the source of the facts upon which you based your differing concluaions. Undoubtedly, the report of the Senate Armed Services subcommittee, which was forwarded to the President, was influenced by your testimony. It had about it, shall I say, the halo of your authority and prestige, and probably contributed to the President's decision to accept the Tariff Commission's recommendation to increase the tariff on Thus, we look forward to receiving your comments on this situation and trust that any damage resulting from your statement will be ameliorated at the earliest possible date."

The delegation's statement is highly critical of the ODM report which found that the skills of the four domestic jeweled-watch companies were essential to national secu-It point out that this report runs directly contrary to a comprehensive review of the jeweled-watch industry conducted by the Department of Defense, which determined that all military items produced by the four watch manufacturers can also be procured from nonjeweled segments of the American watch industry and from dozens of the foremost United States companies outside the timing industry. The statement includes an timing industry. analysis of the ODM report's five conclusions. and presents facts and figures to validate the delegation's indictment of the report's findings as being obscure and unsubstantiated.

The detailed document also emphasizes that recent administration actions against watch importers were motivated largely by the ODM report. The delegation claims that, by accepting the flimsy argument of defense essentiality for the four jeweled-watch producers, the Government has "opened a Pandora's box by which hundreds of industries may seck the benefits of high tariffs against foreign competition on the grounds of de-

fense essentiality."

"The administration," according to the statement, "could have used one or more of the direct aids mentioned by ODM-defense contracts, technical training, etc.-which would have avoided the necessity for tariff increases, and would have been in accord with our traditions of fair play and competitive enterprise. Raising tariffs against a friendly nation to achieve such a goal, on the other hand, is contrary to America's long-range interest."

The administration's actions in the watch controversy, according to the delegation's strongly worded presentation, sets a precedent which can easily undermine the reciprocal trade program envisaged by the Con-The document is sharply critical of the administration for frustrating the will of Congress in its efforts to expand interna-tional trade. It states that "the protection-

ist actions taken by the administration in an attempt to assist the four domestic jeweled watch producers is threatening to cause America to turn back the clock, figuratively speaking, to the 1920's in the matter of tar-

The statement points out that the 50-percent boost in watch tariffs last July, followed by other administration attacks on imports, was causing severe injury to the watch importer-assembled industry which brings "over \$250 million yearly into the York area and their nurchase of goods and services result in further circulation of \$150 million annually in the region." emphasizes that the jobs of tens of thousands of workers, many of whom are highly skilled, are jeopardized by the curtailment of imports. The analysis also cites the fact that in Pennsylvania and Rhode Island there are "a sizable number of jewelry manufacturers who furnish parts as subcontractors to the hundreds of watch importer-assemblers. Any Government action leading to a curtailment of their operations is an economic blow to these States as it is to New York.

In its conclusion, the delegation charged: "Apparently, the present situation adds up to the fact that the administration is endeavoring to do indirectly what it cannot and dare not do directly. It is administratively increasing the tariff and setting up all kinds of barriers against importation of a product without consultation with the Congress. Through the various agencies involved, the administration is using subterfuge and unsubstantlated arguments to hamper and obstruct the importation of Swiss watches and watch parts. * *

"We also urge the committee to determine whether the Government moves against importers have actually helped the four domestic producers or have merely injured the importer-assemblers and the Swiss. It is our conviction that these actions have been con-

trary to America's best interest.
"Finally, we respectfully suggest that the new committee conduct full and complete hearings, giving all interested parties an opportunity to appear, and that those in Congress who are interested in these deliberations be kept advised as to the progress of your studies."

Putting Price Tags on Public Information

EXTENSION OF REMARKS

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mrs. GRIFFITHS. Mr. Speaker, under leave to extend my remarks I should like to draw the attention of my colleagues to a recent editorial in the Detroit Free Press.

The editorial, published March 25, 1955, is abundantly clear. It needs no further comment other than the thought that it is repugnant to the American tradition for a Government official to use information to which we are all entitled for private gain.

The editorial follows:

PUTTING PRICE TAGS ON PUBLIC INFORMATION

Incidents in which information has been withheld on security grounds only to be sold subsequently in the form of magazine articles or speeches are a fairly familiar story.

The latest instance involves a forthcoming magazine article by Comdr. Eugene P. Wilkinson in which he will deal with tests of the atomic submarine Nautilus. Reporters have been seeking this information for weeks.

Defense Secretary Wilson has promised to look into it, and the Navy has now promised that Commander Wilkinson will release factual data before his article is published.

So far as the Nautilus story is concerned, it appears that proper methods of divulging public information will be followed. However, the prospect that they might not have been illustrates a growing danger which

should concern everyone.

When information to which the public is entitled is offered for sale instead of freely circulated the number of those whom it reaches will be narrowed, and without as many people as possible having all possible access to facts democracy cannot function as it should.

Farmers Who Lived Through the Last Depression Have No Difficulty in Supporting Full Parity

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. BURDICK. Mr. Speaker, the other day I received a letter from a man in Florida who felt I was being inconsistent by coming out for full parity and the family-type farmer. Here is what I told him:

Through press of business I could not get to your letter until today, and I note you think I am inconsistent when I propose the farm bill, H. R. 748. It may seem so on the surface, but if you lived through the last depression when we spent untold millions on feeding people, reorganizing the banks, and, in fact, every business in the country, you will remember that this great depression started on the farms. In my State wheat was 26 cents a bushel, not enough to cover the cost of harvesting and threshing, and many farmers burned their fields. Stores out there were filled with goods, but they buying power was gone, and in turn manufacturers could not sell and factories closed. At one time there were 15 million people walking the streets for something to eat. WPA and PWA were set up to give jobs. In my State alone in some counties 72 percent of the people were on relief. It swept clean as the businessmen and banks went to the wall. Seventy percent of the banks in North Dakota, South Dakota, and elsewhere in the West closed.

I do not want this to happen again-but if it is necessary to educate the people further, we can let the farms go and no matter what business you are in, it will finally reach you. It will reach you if you have insurance policies or any kind of investments.

You will recall that in the debates on the old price supports, nothing was said about putting the farmer back on his feet, but all emphasis was centered on putting the whole country back on its feet. The plan worked and when the farmer could get a price his buying power returned and factories reopened and the jobless went to work. principal business was farming at that time. and I lost all I had-\$150,000 and some more I had to earn and pay back later. I lost all my land, and when elected to Congress I had to borrow \$100 to get to Washington. I was not alone—if I had been I would have concluded it was my fault, but all went

All parity means now or ever did mean Was that a farmer should receive a price commensurate with what he has to pay out. You can see combines at \$2,000 (in those days) and wheat at 26 cents doesn't work and can't work. I never started farming again. I do raise livestock, and we used to get barbed wire for \$1.75 for 8 rods and 6 cents for our cattle. In the depression, wire went up and cattle down to \$12 per head for good cattle. We used to get good men for \$40 per month, and they worked. Now We pay \$250 a month and the work done is about 25 percent of what we received from \$40 men.

Parity means the farmer's selling price should be kept in line with his expense price.

Of course, if you want the small farms to disappear, schoolhouses vacant, and church monuments to once happy communities, your views will bring that about. If you want all the farm people crowded into the cities to swell the ranks of labor, you are on the way. If you want them on relief rolls you will probably live to see it.

The farmers are blamed for everything. Those who buy bread now at 26 cents per loaf pay the price and then cuss the farmer all the way home. The fact is that this 26-cent loaf of bread will be the same price if Wheat were selling for 75 cents per bushel instead of \$2.23. There is only 31/2 cents' worth of wheat in a loaf of bread and the rest of the cost in labor, transportation, insurance, workmen's compensation, and security assessments. Just follow a load of Wheat from Williston, N. Dak., to your table and see what happens. It is shipped to the grain terminals, and the freight bill must be paid; it is sold to millers, and commis-sion men get a dig at the price—they have to insure the grain and pay their handlers. The millers buy the wheat, and again it is shipped-more freight and switching charges. It arrives at the mill and an immense herd of employees grind it up. They all have to be paid, they must have liability insurance, old-age security, and job insurance. The flour is turned out. It goes to whole-salers and more freight is added. More of this and that until it finally reaches your store. You buy the bread, but the local merchant has to pay rent or taxes; he has to pay his employees, who in turn have all same demands that labor had on the railroads and at the mills. The merchants must add to the price enough to live on or go out of business, and when you walk home with that loaf of bread you have paid 31/2 cents for the wheat and 231/2 cents for the unending line of railroads, trucks, insurance companies, old-age security, liability insurance, and interest.

Of course, you get good and mad, but you can see that it is not the farmer you should be mad at.

There is only one way you can beat this game—and that is the way we had to do it in the early days of Dakota. We raised some Wheat-it was not hauled by railroads, it was not milled by millers, it was not handled by wholesalers or local merchants-we ground it ourselves in a coffee mill if we could find nothing else. Made our own bread, and man alive, if I could buy a loaf of actual bread like that on the American Continent today, I wouldn't ask the price. We didn't put in plaster of parls to keep the bread fresh; we didn't bleach it to make it white; we didn't fill up the holes or bubbles in gluten wheat with water; we didn't add compounds, ingredients, acids, or other synthetic materials that are harmful to human life; we made

even be a comparison. No; I think you are doomed to eat chemical bread, and I am not so sure that some amart guy may not come along some day and offer synthetic wheat. If properly advertised, it will sell. I hope the North Dakota wheat

bread and it was cheap in price, but so far

superior to bread today that there cannot

raiser will then escape the cussing of the bread eaters of the Atlantic coast area.

I don't have time to write as fully as this to everyone, but I will mimeograph this letter and answer other thousands who are after my scalp because I want to maintain on this continent the family-type farm and maintain farm prosperity as the only insurance against another disastrous depression.

The Status of Forces Treaty Should Be Revised

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. RODINO. Mr. Speaker, I rise at this time to voice to the House my strong support of the resolution for the revision of the NATO Status of Forces Treaty. I cannot speak too urgently upon this subject.

This treaty may touch the lives of millions of Americans-and touch them intimately and cruelly. Every boy who enters the service-and every boy is subject to call, as long as the present military necessity demands it, every man in the military service of our country will be subject to it.

We are dealing today with a situation unprecedented in our history and foreign to our way of thinking. Our heritage rebels against it; our outlook for the future shrinks from its potential dangers.

The NATO Status of Forces Treaty would subject every American in uniform who commits an offense to trial in the courts of the country in which it occurs. Now, at first glance the full import of this situation may not be too startling. But the danger lies in the fact that there are tremendous differences between us and most of the other countries of the world. Not only are there barriers of language, differences of outlook, of background, and of training separating the individual and his accusers, but there are differences in the legal systems and in the methods of the courts abroad.

Only with the English-speaking countries do we share the common law system in the courts. Elsewhere the civil law or some other legal system prevails.

Now our boys who get into predicaments abroad, whether guilty or innocent, will be at a tremendous disadvantage. First, they will not know the language. Though they may have able interpreters, there will be differences in terminology, shades of meaning, idioms, and legal phraseology-the fine points of the law-that do not readily lend themselves to interpretation or translation. The accused will not usually be represented by counsel of his same nationality. For the lawyer as well as for the victim these differences will present grave diffi-

Yet, so handicapped, the accused must defend himself in a foreign country, where the atmosphere may be hostile, the citizenry inimical. Public opinion might well be against him, a man accused of crime against the country which may already resent his presence, along with that of his fellows, though they be there for the good of all.

Even in England, even there, where the court system has a reputation for excellence, a reputation for fairness, even in England he will be a foreigner indicted, and brought before a panel ofto him-foreigners.

The trouble does not end here. Though we now have concluded status of forces agreements only with the NATO countries and Japan, there will be other countries demanding similar treatment; other, less developed, less friendly countries, countries less conscious of the demand for an equitable court system, of the public demand for justice.

Here lies the crux of the matter: Will justice be done? Or, will there be a mis-

carriage of justice?

What will be the American reaction when our military forces are subject to these things? These men and boys who serve their country abroad, whether through their own will or through a draft system which carries them to foreign lands whether they want to go or not, will be subject to trial and imprisonment under conditions and rulings which are foreign to us in every sense of the word. The reaction of the families and friends of these men will be indignant and bitter. Sympathy for our relationships abroad will decline, and there will be increasingly reluctant compliance with the draft law at home.

To object to this treaty arrangement is not to condone misconduct, but it is to suggest a revision of the treaty, a renegotiation of it, particularly with respect to article VII. It is to suggest a return to the system which was in operation during World War II, whereby a military man accused of an offense would be tried by the military authorities of his own country, an American would be tried by Americans. The authorities responsible for his being abroad would be responsible, if he gets into trouble, for seeing that justice is done.

The resolution which I am introducing is aimed to accomplish this. It would eliminate article VII of the agreement. Its purpose is to bring this about so that foreign countries will not have criminal jurisdiction over American personnel stationed within their boundaries. It urges that all possible steps be taken by the Government of the United States to accomplish that purpose.

Blame for Yalta Cannot Be Shifted

EXTENSION OF REMARKS

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. DAGUE. Mr. Speaker, I quite agree with President Eisenhower that the only good that can come out of the so-called Yalta papers is that which will warn us to beware of similar indiscretions or acts of bad judgment in the future.

Anyone who has studied the records of the Cairo and Yalta Conferences, with definite promises to return Manchuria to Chiang Kai-shek on one hand and on the other the perfidious turnabout in handing that same territory over to Stalin, must conclude that secret agreements entered into without regard for solemn commitments and the best interests of the United States are deserving of our bitterest denunciation.

It will serve the public interest best if this infamous deal is kept before the American people as a glaring example of what can happen when leaders are clothed with authority in excess of their regard for equity and should be held up for succeeding generations to examine as the ultimate in diplomatic chicanery

and bad faith.

The following editorial comment, appearing in the Philadelphia Inquirer on March 25, supports this view:

BLAME FOR YALTA CANNOT BE SHIFTED

Gen. Douglas MacArthur's vigorous denial that his advice was sought or given in connection with the Yalta Conference helps set the record straight on who was responsible for the events leading up to Yalta's fateful concessions to the Russians.

It also emphasizes more clearly than before that the Democrats, mainifestly set back on their heels by the disclosures in the Yalta papers, have been trying to salvage some shreds of partisan advantage from the war-

time conference 10 years ago.

When they tried desperately to connect MacArthur, and President Eisenhower, himself, with the disasters at Yalta, the effort backfired badly, but whether that will be a

lesson remains to be seen.

The Yaita papers make it clear that the view of the Joint Chiefs of Staff toward the end of the war was that Russian intervention in Japan was essential. It can be argued this offered an excuse for President Franklin D. Roosevelt's making some concessions to Stalin; it may be doubted that the military chiefs had in mind such sweeping concessions, the giving away of lands that belonged to somebody else, or the refusal to see that Stalin's promises were worthless.

But the Democratic view, at least as expressed in the Senate the other day, seems to be something like this: The Yalta agreements weren't so bad, but if they were bad,

Republicans are in on it, too.

That is a weak argument in any event. The Democrats, notably Senators Lyndon JOHNSON and HERBERT LEHMAN, weakened it further with their vain attempts to make MacArthur and President Eisenhower share some of the responsibility.

JOHNSON said that miscalculations, "if any were made" were made by Mr. Eisenhower and MacArthur. LEHMAN went further and said Yalta could be understood only in the light of recommendations made by the two generals. MacArthur, the New York Senator went on, urgently recommended that Russia be brought into the Japanese war.

President Eisenhower told his press conference that his advice was neither requested nor given concerning Yalta. He did not even attend the preliminary Anglo-American con-

ference at Malta.

General MacArthur let the record speak for itself. He wasn't asked to give his views before Yalta, either. If he had been consulted, he says, he would have regarded concessions to Russia at that late date as fantastic.

MacArthur's dispatches in the fall of 1944when preparations were underway for the

Yalta Conference-make it clear that he thought Japan was just about finished as a result of American victories. In September, he wrote that "defeat stares her (Japan) in the face." A month later he said the capture of the Philippines would be decisive.

LEHMAN apparently based his statements on an entry in the diary of the late James Forrestal concerning a talk the latter had with MacArthur in early 1945, when the General was portrayed as wanting Russia to get into the war. This, says MacArthur's spokesman, was a mistake in editing.

But when LEHMAN, and JOHNSON too, made their big mistake was in trying to twist the Yalta story to take the blame off the Democrats. Their obvious discomfiture at the new evidence of Roosevelt's mishandling of diplomatic negotiations led them to shoot recklessly from the hip.

Inescapably, there is politics in the record and results of the Yalta conference, since the responsibility was born by a politically elected official. Doubtless, as Secretary of State Dulles observed, the controversy will continue "through the ages."

It will be better for the country, however, if the record is soberly studied and mistakes are acknowledged, as a guide to the future.

The Democrats ran into a deserved setback in their first attempt to play politics by shifting the blame for the misfortunes that have flowed from Yalta. The episode ought to convince them they should follow President Eisenhower's advice to use the Yalta papers' to profit by past mistakes, rather than for partisan gain.

Resolution of Wisconsin VFW on Hospitalization for Veterans

EXTENSION OF REMARKS

HON, HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. REUSS. Mr. Speaker, under leave to extend and revise my remarks, there follows a resolution adopted by the Veterans of Foreign Wars, Department of Wisconsin, at its midwinter conference on March 23, 1955:

Whereas free hospitalization and medical care for veterans for non-service-connected disabilities was acquired only after 8 years of concentrated effort on the part of the major veteran organizations, following World War I: and

Whereas in 1926 it was granted with many restrictions such as, where beds are available, answering a questionnaire as to veteran's financial ability to pay, checking vet-erans service records, etc., but fortunately these prerequisites were not too forcibly applied during the interim in 1926 to 1933, when the so-called Economy Act invoked new restrictions, such as clearing out the VA hospitals of many nonservice cases and inauguration of the pauper's oath, as a check on future admissions; and

Whereas the present administration has wantonly accused many veterans of abusing this privilege by taking undue advantage of this free hospitalization and medical-care provision by taking the so-called pauper's oath when actually they were well able to meet this obligation themselves; and

Whereas a congressional subcommittee was appointed and delegated with authority to investigate these claims of the many veterans who had perjured themselves by falsely taking this oath for free hospital care;

Whereas this committee was chairmaned by the Honorable Representative BERNARD KEARNEY, of New York, and after careful and lengthy investigation, came up with these findings: That of all cases hospitalized, only an infinitely small percentage were able to pay for their own hospital care and consequently the charges preferred by the legislators and American Medical Association were ridiculously exaggerated and grossly misrepresented; and it was a pitiful reflection on the honor and integrity of our Nation's defenders, the veteran; and

Whereas the present administration is demanding a signed statement on financial ability of veterans requesting hospital care which are not service-connected cases; and

Whereas this procedure tends to incriminate veterans and presumably makes craven paupers out of men who have served their Nation honorably in time of war; and

Whereas this Nation has been spending millions of dollars in outright grants and foreign aid to nations which were our former enemies, at the expense of the veteran's health and assistance by increased taxes imposd on United States citizens generally, to meet these expenditure: Now, therefore, be it

Resolved, That our national legislature committee take immediate action to eliminate this so-called pauper's oath in VA regulations and endeavor to liberalize more fully restrictions for admittance for hospitals and medical care for non-service-connected disabilities of veterans at the earliest possible moment after the new Congress convenes; and be it further

Resolved, That a copy of this resolution be sen to our national service director, Omar B. Ketchum, our congressional representatives, to Administrator of Veterans' Affairs, Harvey Higley, and to the Veterans' Affairs Committee of the House of Representatives, Washington, D. C.

Tenth Anniversary of Arrest of 16 Polish Underground Leaders

EXTENSION OF REMARKS

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. TUMULTY. Mr. Speaker, if there is to be another conference with the Soviet Union, let our American leaders at that conference redress the following wrong. In accordance with the Yalta agreement the Moscow-sponsored provisional government of Poland had to be reorganized on a broader basis with the inclusion of leaders from Poland itself and from Poles abroad.

Mr. Molotov and the Ambassadors of the United States and Great Britain. residing in Moscow, were entrusted with the task to cooperate in the forming of a new government along above lines.

It was assumed from the very beginning by the American and British Governments that the most prominent leaders of the Polish underground, at that time hiding in Poland, would eventually enter the coalition. During the war they had fought in close cooperation with the Polish Government in London, a bitter struggle against the Nazi occupants and thus had largely contributed to the Allied war effort.

At the request of the British Secretary of State, the Polish Government in London disclosed for transmission to the committee in Moscow the names and whereabouts of the Polish Vice Premier and Government Delegate for the Homeland, and of the three members of the Home Council of Ministers. The Allied Governments gave assurance that they would do everything possible to insure the safety of the Polish underground leaders.

A short time after the Polish Vice-Premier, Mr. Jankowski and the last commander of the disbanded Home Army, General Okulicki were approached by Colonel Pimenov of the Soviet NKWD, with a request to attend a meeting with Colonel General Ivanov, a representative of the high command of the I White Russian Front. This invitation was confirmed by letter, on March 10, to Mr. Jankowski and General Okulicki. The purpose of the meeting, in Colonel Pimenov's own words, was "the clarification of the atmosphere and the coming into the open of the democratic Polish parties in order that they may take part in the general current of the democratic forces of Independent Poland." Although absolute personal safety was granted by the Soviet representativethe 16 Polish underground leaders, when they arrived on March 28, 1945, at the meeting place-were arrested and flown to Moscow and imprisoned there.

The Soviets committed in cold blood another act of shameless felony. It was only on May 5, 1945, that the official Soviet agency TASS announced the arrest of the Polish leaders. This hap-Pened during the San Francisco Conference, and Molotov himself confirmed the

The British and the United States Secretaries of State expressed grave concern to Mr. Molotov and asked for full explanation. Their intervention remained nevertheless without response, and on June 18, 1945, a trial of the Polish leaders was held in Moscow by the Military Collegium of the Supreme Court of the U.S.S.R.

Following sentences were passed:

First. Maj. Gen. Leopold Okulicki, born 1898, commander of the Polish Home Army succeeding Gen. T. Bor-Komorowski, after the Warsaw rising; 10 years in prison.

Second. Jan Stanislaw Jankowski, born 1882, member of the Christian Labor Party and Vice Premier of the Polish Government in London, appointed delegate in Poland; 8 years in prison.

Third. Adam Bien, born 1899, member of the underground government, Peasant Party; 5 years in prison.

Fourth. Stanislaw Jasiukowicz, born 1882, National Party, member of underground government; 5 years in prison.

Fifth. Kazimierz Puzak, born 1883, leader of Socialist Party and Speaker of Underground Parliament; 18 months in prison.

Sixth. Alexander Zwierzynski, born 1880, National Party, deputy speaker; 8 months in prison.

Seventh. Kazimierz Baginski, born 1890, Peasant Party, deputy speaker; 6 months in prison.

Eighth. Stanislaw Mierzwa, born 1905, Peasant Party; 4 months in prison.

Ninth, Zbigniew Stypulkowski, born 1904, leader of Democratic Party; 4 months in prison.

Tenth. Eugeniusz Czarnowski, born 1904, leader of Democratic Party; 4 months in prison.

Eleventh. Jozef Chacinski, born 1889, leader of Christian Labor Party; 4 months in prison.

Twelfth. Franciszek Urbanski, born 1891, Secretary of Underground Parliament, Christian Labor Party; 4 months in prison.

Thirteenth. Stanislaw Michalowski. born 1903, Democratic Party; proved in-

Fourteenth. Kazimierz Kobylanski. born 1892, National Party; proved inno-

Fifteenth. Jozef Stemler Dabski, born 1892, interpreter of Polish delegation; proved innocent.

Sixteenth. Antoni Pajdak, member of Socialist Party and of Underground Parliament; was not tried in public, and the sentence in his case, was not disclosed.

It is to be noted that in accordance with Soviet procedure the penal sentence is counted as from the day of arrest.

General Okulicki, Jankowski, Jasiukowicz, and Pajdak did not yet return to Poland. Okulicki should be released on March 28, 1955. Jankowski should have been freed on March 28, 1953, and Jasiukowicz on March 28, 1950. According to information-Pajdak was sentenced by administrative decree to 5 years, and if so-had to be freed on March 28, 1950. It should be stressed that the fate of these four prisoners remaining in Soviet Russia is still un-

The remaining leaders were brought back to Poland after the period of their detention in Soviet jails had elapsed. Puzak and Mierzwa were rearrested in Poland, sentenced, and Puzak died in Czarnowski, Urbanski, and prison. Chacinski died in Poland-the fate of Bien is not known, as well as of Zwierzvnski and Stemler-Dabski. Michalowski and Kobylanski acquitted during the Moscow trial, were again arrested in Poland and are detained in prison. Stypulkowski is in England and K. Baginski lives in the United States of America.

In connection with the 10th anniversary of this shameless act perpetrated on March 28, 1945, against the 16 Polish underground leaders steps should be taken to, First, ask for full information as to the fate and whereabouts of those four leaders still kept in Soviet Russia: second, demand their release from prison; third, insist on the liberation of the underground leaders who have been submitted to new ordeals by the Moscowsponsored regime in Poland after their return from Russia.

Natural Gas and Coal

EXTENSION OF REMARKS

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I am including a letter from Mr. M. G. Youngquist, managing director, Coal Heating Service of Des Moines, Inc., Des Moines, Iowa.

The letter follows:

COAL HEATING SERVICE OF DES MOINES, INC. Des Moines, Iowa, March 21, 1955. Hon. Paul Cunningham,

Congressman Fifth Iowa District,

Washington, D. C.

Dear Paul: Natural gas has been an Issue in districts outside of the producing areas for some 20 years, but the big promotions have been in the past 10 years, and I doubt if any political body has as a whole given it very much really serious consideration.

When a coal man approaches the subject he is considered prejudiced. When a Congressman is approached outside the gas-producing area many of them seem to think it's good medicine for John L. Lewis. They forget the real issue is neither coal men nor Lewis and that a lot of innocent people are going to get hurt. Not hurt by the cost of the fuel in particular, but by the cost of neglect in proper regulation of this valuable natural resource. It is of national importance and needs large-scale thinking.

In the first place we are gambling that less than 1 percent of our natural-fuel resources will last for an unlimited time.

We are being lulled into peaceful dreams that in a few short years atomic power will be so cheap and easy to get that it will only require the effort of a pushbutton to replace gas or any fuel.

Few local political bodies have given any thought of safety measures, either in installation, the supply, the storage, the standby fuel, or protection of its citizens in case of a catastrophe. Too little can be done when it is too late, and the time to pay the premium on the insurance policy is in advance planning.

As gas moved into the larger cities the promotion plans were to sell gas cheap to industrial users in order to build up volume. The housing program fitted into this program in that houses were built in mass production, exploiting the savings in no basement or chimneys that would not handle any fuel except gas in most of the projects. The result, millions of homes that in an emergency do not have a chimney that would burn wood, paper, or any other fuel are some of the benefits of this great moneysaving campaign.

Unlike coal, where the fields are proven for a thousand years' supply and where mines are mechanized to produce low-cost fuel, gas production is on a rising plane. Producers of gas must continually prospect to provide tomorrow's supply of gas. It must be recognized that in order to protect users of gas, ample provision must be made for increased costs in order to provide this fuel as the public demands to be served, The Government should not lead them to believe that protection means they will be provided with low gas rates. Their protection should come in an adequate supply of gas, properly distributed both as to safety and fuel needs, with a reserve in mind to protect the Nation should an emergency require prompt redistribution. In a recent conference on fuel needs an executive made this statement: "Gas is protected by Government regulation so that we know rates will be kept low which isn't the case with coal." These people are honest people and the expression is common and maybe it is so. I rather treat the price as secondary and you would soon find that out if the supply was reduced at any time.

If H. R. 4943 takes into account the protection of our national resource, covers orderly distribution, protects against overselling in order to extend the years of best use of this valuable resource, with due regard for the everlasting vigilance necessary to provide tomorrow's supply of gas, then I am for it and will believe you are placing the interest of the people first.

Yours truly,

M. G. YOUNGQUIST.

The Attack Upon Our Republican Tax Program

EXTENSION OF REMARKS

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. MASON. Mr. Speaker, last fall certain prophets of gloom and doom charged that the Republican \$7.4 billion tax reduction and the tax-revision bill—H. R. 8300—favored the wealthy tax-payer and bore too hard upon the workingman. That charge was absolutely false. Those same prophets now claim that the tax bills of last year favored the taxpayer in the upper brackets and discriminated against the taxpayer in the lower brackets; therefore, their \$20 per person tax-cut proposal was only fair. The following breakdown demonstrates the falseness of their charges;

First. A 10-percent cut was made in the personal income tax for all individuals in the middle and lower brackets. That tax cut tapered off to less than 2 percent for the taxpayers in the 3 top brackets. The great majority of taxpayers—85 percent—are in the middle and lower tax brackets. Did that tax cut favor the rich?

Second. All excise taxes, with the exception of those upon liquor and tobacco, were cut from 25. 20, and 15 percent to 10 percent—a cut of \$1 billion to consumers. The working men and women of America and their families constitute 85 percent of the consumers of the Nation. Did that tax reduction favor the rich?

Third. The repeal of the excess-profits tax last year reduced taxes upon corporations \$2 billion. What did the corporations do with the \$2 billion? Every dollar of it was either paid out to the corporation stockholders or was plowed back into business expansion. Since 80 percent of all the stockholders in America receive less than \$5,000 per year income, the dollars that went to the stockholders did not go to the rich. And the dollars that went into expansion provided jobs for the 600,000 new workers

that enter the American labor market each year. Can anyone claim then that the repeal of the excess-profits tax was for the benefit of the rich?

Fourth. The passage last year of H. R. 8300, the tax revision bill, established a favorable tax climate for American business and industry in which to expand. This created more jobs for the workingmen of America. Did the tax revision bill favor the rich?

On the basis of the facts, therefore, do the charges of the prophets of gloom and doom stand up?

A POLITICAL BAROMETER

Mr. Speaker, the recent attack upon the revised Federal Tax Code by the New Dealers in Congress, who—as a result of the election returns last fall—are again in the saddle, is a clear indication of what American businessmen can expect if the New Dealers take over the executive department.

Led by Congressman JERE COOPER, the new chairman of the Ways and Means Committee, and Senators HUMPHREY and Douglas, an attempt is being made to repeal the small tax easement upon dividend payments that was made in the new tax code. This was made as a start toward abolishing double taxation upon corporation profits. An attempt is also being made to repeal the new accelerated depreciation tax allowance provision. Both of these provisions were placed in the revised code to encourage business expansion, to provide an improved tax climate for business and industry that would result in the creation of new jobs for our ever-growing number of job seekers.

The revised tax code has already demonstrated its value, because it—more than any other one thing—stopped the downward trend last year and gave the lie to those prophets of gloom and doom who went around the Nation last fall spouting their gloom and doom prophecies. These same men are now in the Senate seeking to repeal the very provisions of the revised tax code that saved us from the predicted recession.

One and one-half million stay-at-home voters in Illinois and 30 million stay-at-home voters in the Nation were responsible for placing these New Dealers back in the saddle in Washington. These delinquent voters had better wake up before 1956, or it will be too late.

Knocking Ike Is Grist for GOP Mill

EXTENSION OF REMARKS

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. DAGUE. Mr. Speaker, the admirers of President Eisenhower in both parties will resent the attacks on our present Chief Executive, particularly when they center on wholesome diversions like fishing and golfing—as distinguished from poker-playing, weekend cruises—which are about the only

relaxation a hard-working President can count on.

And when such partisan attacks bring the President's wife into the picture and include their religious devotions, then it is generally agreed that the American electorate will simply bide their time until such ill-mannered diatribes can be repudiated at the polls.

The attitude of the average Republican is to wait with bated breath for fear that the opposition will realize the mistake they are making and call off the attack before it can be of benefit to the GOP next year. And it can only be presumed that they have forgotten just how much the Republicans served the cause of Franklin Delano Roosevelt by making him the object of their partisan tirades each time he ran and thereby assuring his reelection.

Veterans Do Not Create Wars Which Create Veterans

EXTENSION OF REMARKS

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1955

Mr. RADWAN. Mr. Speaker, under leave to extend my remarks, I want to again repeat what I have often said before, "Veterans do not create the wars which create veterans." I include herein a letter which I have received from the Paralyzed Veterans of America, and to which I add that I am also disturbed:

PARALYZED VETERANS OF AMERICA, New York, N. Y., March 24, 1955.

DEAR REPRESENTATIVE RADWAN: The men in our organization are disturbed by preliminary reports of the Hoover Commission on compensation cuts. Congress has power to declare war. By its acts, men leave their homes to enter the Armed Forces in time of war and peace.

By precedent, by moral intent, a contract was implied: "Leave your home and family and represent this country—It is a just country. If you die, the Congress, as representatives of the people, will care for your widow and orphan. If you are injured, if you lose part of your body, we will compensate you for that loss."

Congress has the power to effect economies. Before it now is the request of Defense Secretary Wilson for more pay for men in service because "we cannot keep these valuable men in the service." Will these men stay if the implied contract is broken? Will they stay if they know they'll be forgotten if injured?

Even top compensation cannot counterbalance the loss suffered by these men. Any amount is a pittance compared to the privilege of seeing, feeling, or walking. There are economy-minded men in many circles of our society who see moneys paid as compensation as a logical place to cut our budget. If this be true, then the United States is lacking in that moral integrity that is so desperately needed in the face of a hostile world. If we forget those who have given so much then we, as a Nation, should be forgotten.

We hope you will take a personal interest in these problems.

Sincerely yours,

MORRIS G. McGEE, Legislative Director.

Special Consideration Under H. R. 1 for Textile Industry

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter to the editor of the Boston Sunday Herald that appeared in that newspaper on Sunday, March 27, 1955, written by Prof. Seymour E. Harris,

of Harvard University.

Professor Harris has given more thought, study, and investigation to the textile situation in New England than any other individual. Possessed of this wealth of knowledge and as the expert named by the Governors of New England he has spoken out before many of the committees of Congress to warn them of the immediate danger to the textile industries in that section of the United States by the passage of the reciprocal trade bill as it is now written.

I am hopeful that every Member of the Congress may have the opportunity to read some of his statements made here on Capitol Hill. There is no doubt in the minds of many of us from New England that he is the best qualified person to speak on this most important matter of this session of the Congress.

The letter follows:

LOWER TEXTILE TARIFF TO WIPE OUT NEW ENGLAND JOBS

To the Editor of the Herald:

I was surprised at your strong criticisms of Senstor Saltonstall for urging special consideration under H. R. 1 (the current tariff legislation) for the textile industry. Since I testified four times in the last few months on behalf of the New England Governors on this issue. I would like to present a view in support of Senator Saltonstall. And I make these remarks though throughout my professional life I have not only been considered a free trader but I have even testified against quotas on imports.

But we must not be doctrinaire in these matters. The New England textile industry has lost almost 40 percent of its jobs in 3½ years, and the country has lost 20 percent. I can only repeat what I said to the Senate Pinance and the House Ways and Means Committees and two Federal administrative agencies that it would be the most irresponsible behavior on the part of the Government in these circumstances to cut

tariffs on textiles substantially.

The argument is not against relaxations on tariffs. We all look forward to the day when trade will be less restricted than it is today. But the major obstacles on trade are abroad, not here; our imports have increased by two-thirds absolutely and relatively to world imports since prewar. Over a period of 20 years our tariffs have been cut by three-quarters (though I admit this measure is aubject to some reservations).

There is a tendency to oversimplify the Droblem. You cannot and should not put a heavy burden on the weak and the vulnerable. Miernyk's study showed that more than one-half of the workers who lost jobs in six closed textile mills were still without jobs long after, and most of the remainder were unhappy. Mr. William Sullivan, the indefatigable and able head of the National Association of Cotton Manufacturers, in-

formed the Senate Finance Committee on March 17 that 236 New England textile plants employing 91,835 workers, were liquidated in the 9 years ending 1954.

The classical theory of free trade rests on the assumption that people move and find jobs or (and) new industries move in and offer jobs. But there are long, long delays. Witness Lawrence with roughly 20 percent of unemployment for 2 years now. Tariff policy should not be allowed to aggravate the adjustment problems.

There are other solutions to the problem of more trade and dollar shortage than destroying industries or at best accelerating their decline. The problems of adjustment should be put on all the people and especially on the strong. Why should the American people subsidize the strong, the exporters, to the extent of \$120 billion over 40 years? Why not yield some of our markets abroad rather than coldly destroy vulnerable industries through increased imports? The former also would help solve the problem of dollar shortage. Foreigners improve their dollar position more easily by penetrating our markets abroad than by capturing our home market.

It is not necessary to go back to the pre-1933 system of tariff negotiation. It is only necessary to include safeguards in H. R. 1, which would protect industries which experience much unemployment or substantial losses of employment against reductions of tariffs.

It is well also to consider the effects of all Federal policies on the New England economy; and the tariff is one facet of those policies. The net effect of these policies—farm, tax, spending, tax amortization, etc.—has been relatively unfavorable to New England. Why introduce another Federal policy unfavorable to this region, one that cuts prices of what we sell just as other policies have raised prices of what we buy? That we must solve the Japanese problem through destroying the textile industry I refuse to admit. In my evidence I offered numerous alternatives.

EEYMOUR E. HARRIS.

Harvard University.

The Advancing South

EXTENSION OF REMARKS

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Decatur Daily:

THE ADVANCING SOUTH

Things are happening in the South. People who live outside the region can perhaps see the changes taking place more readily than southerners. Nevertheless an era of unparalleled progress is foreseen for the South in the next 20 years.

William D. Poe, associate editor of the Progressive Farmer, has one of the most illuminating articles we have seen in the February issue of the journal devoted to the southern way of life.

For instance, population of 16 Southern States increased from 41 million in 1940 to 48 million in July 1954. The South gained 16.5 percent in white population, 1940-50, compared with a gain of 13.4 percent in white population for the rest of the United States. During the same period, the South's gain in Negro population was 1.5 percent,

while the rest of the United States gained 55.6 percent in Negro population.

Mr. Poe continues the number of farms in the South decreased 11 percent, but number of farm owners increased 12 percent, Tenants decreased 37 percent. To make up for loss in labor supply southern farmers increased ownership of tractors 241 percent and motor trucks 165 percent. Southern cash farm income increased from \$2.5 billion in 1940 to \$8.4 billion in 1950.

The South is balancing agriculture with industry. In 1951 the Southern States spent \$2 billion for new plants and equipment. This compared with \$1.7 billion spent in the heavily industrialized Middle Atlantic States, \$452 million in the New England States. Number of employees engaged in southern industry in 1951 was 3 million, compared with 4 million in the Middle Atlantic States and 1.5 million in New England.

Mr. Poe then gives his opinion of what all these changes will mean and summarizes with predictions of 1975 when the Nation's population will range from 190 to 220 million people and it will be necessary to increase farm production by 40 percent to feed this

increased population.

The Nation's total output of goods and services in 1975 will be twice what it was in 1950 and the South's opportunity for growth is clear when it is understood that in the next 20 years the South may expect to gain several thousand new manufacturing plants employing 100 or more workers. Each 100 new factory workers, it is shown, results in the following additions: 296 more people, 112 more households, \$590,000 more annual personal income, \$270,000 more bank deposits, 4 more retail establishments and \$360,000 retail sales annually.

Then quickly Mr. Poe adds this summary; Per capital income of many Southern States will rise above the national average; an increased demand for cotton seems sure to lie ahead; fertilizer requirements for the South in 1975 will be 2½ times the amount consumed in 1950; southern forest products will be in vastly greater demand; the chemical industry will be centered in the South by 1975, one-third of it is here now; use of electricity in the South will increase fourfold by 1975; it is likely that anther major steel mill will be located in the South by 1975. Then Mr. Poe concludes his excellent article by saying the South can surpass many of the achievements predicted. He closes with the late Dean Paul Chapman, who wrote, "No matter how fast the rest of the Nation grows, the South will grow faster."

Decatur people can also take pride in the fact that when Dean Chapman was preparing his series of articles on the South, he came to Decatur. After looking at our industry and agriculture and studying the foundation of what we have been trying to do here, Dean Chapman said it was not necessary for him to go farther, he had found what he had been looking for here.

So you may feel assured our foundation is sound, our roots are deep, and we will reap all of the benefits of southern growth between now and 1975. Our growth isn't likely to be spectacular, but it will be sound and steady if we continue to uphold the economic principles we have followed in the past. We have said that our growth is not likely to be spectacular. But rather the whole picture could change overnight with some other great American industry having decided that the Decatur location is the right location.

Whatever happens, remember this: Our system of farm marketing has no peer in Alabama, and our diversification of industry is the envy of many. We have wrought well in the past and by this experience we can do even better in the future provided we keep our eyes straight ahead on the target of better living for all of our people, city and rural.

Address of Hon. Mario Scelba, Premier of Italy, to the National Press Club, Washington, D. C.

EXTENSION OF REMARKS

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. CRETELLA. Mr. Speaker, under unanimous consent, I am, indeed, privileged to include an excellent talk given by Premier Mario Scelba, of Italy, to the National Press Club and officials of our Government on March 29.

It would be extraneous to go into detail of the great importance of the strong bond of friendship between the people of Italy and the United States. Premier Scelba speaks with extreme clarity for his countrymen on the need for Italy to sustain herself as a leader in the western coalition in Europe.

Mr. Scelba has graciously acknowl-edged the important role of American aid in the rebuilding of Italy and the stemming of the tide of international

communism.

He is worthy of acclamation as an exponent of the principles of freedom and democracy. He has admirably carried on the burdensome tasks of reconstruction by the late Premier Alcide de Gasperi and has displayed keen foresight and imagination in bringing forth programs of his own for the betterment of Italy and the welfare of her citizens. Mr. Scelba's speech commands the attention and reading of all Members of this body.

The address follows:

Mr. Chairman, gentlemen, I am very grateful for your invitation and happy to meet with such a distinguished gathering of American newspapermen. I am happy to have this opportunity for an exchange of views, which I trust will contribute to a better mutual acquaintance. Besides, I can think of no better or more appropriate place than this to convey to the great people of America a message of friendship from the Italian people, and to thank the American public, as well as you personally, for the warm reception extended to Foreign Minister Martino and to myself, as representatives of Italy, as well as to our associates.
Here in Washington I have once more had

the pleasure of meeting with your President, whom I had already known in Italy in the past. As a matter of fact, President Elsen-hower is well known by all of us in Europe, where, for so many years of war and peace, he has been surrounded with great respect and widespread popularity. I have also had the pleasure of meeting your distinguished Secretary of State and other leaders of the American administration. We have met and talked in a cordial atmosphere, which is the fruit of friendship and of community of

I suppose the first thing you want to know-I have been asked this already-Why am I here? Mine is a visit of friendship and good will. I have been asked by many of you gentlemen if I have come here to discuss economic questions, in fact, economic assistance. I would like to point out that any discussion of United States-Italian relations and cooperation cannot but include economic cooperation which is a specific aspect of cooperation in general. However.

speaking of economic assistance, I should, above all, like to say a word of gratitude to the American people. Together with other nations of Western Europe, we have received in many years generous and spontaneous American aid in our reconstruction. It has played a vital part, and without that aid Italy—and we might say the whole of Eu-rope—could not have avoided a major and prolonged calamity. If we had not received American aid, we could not be in a position to announce, as we can and do today, that postwar reconstruction is an accomplished fact and that the Italian economy has already developed well over and above the prewar level.

We sometimes hear from authoritative American observers that, despite all the aid received, we have not yet managed to solve our problems. Frankly, I cansider this approach completely wrong. It was only thanks to your assistance that we managed, with tremendous efforts and sacrifices on our part, to tackle our problems and start solving them. Without external aid our efforts

would probably have failed.

When people ask us how it is that, despite so many efforts, we have not yet fully overcome our economic and political difficulties, they seem to overlook the conditions in which democracy was restored in Italy. We had to face political, economic, and social conditions created by the fall of a dictator-ship, the splitting of the nation in two parts, the clash of armies, and the lack of all authority. It should be also remembered that the Allied authorities brought the Communists into the Italian Government, thereby accrediting them as a genuinely democratic group, and entrusted them with many key posts in the Italian administration. result, in the first postwar election held in 1946, the Social-Communists got over 40 percent of the total vote, an accomplishment which they could never repeat in later elections. This was the situation in which we found ourselves and which we did not

In addition to our postwar political problems, we had also to face our economic problems. First of all, this required the recovery of our economy from the effects of enormous war damages, which destroyed almost onethird of our national wealth, cut down by 50 percent our agricultural production, and brought our industrial production and foreign trade to a complete standstill. But the effects of war, with their economic and political implications, aggravated age-long structural problems, stemming from over-population in relation to resources, from a great gap in the level of economic and social development reached by different regions of Italy, and from persistent balanceof-payment difficulties.

From these conditions, partly natural and partly historical, spring fundamental problems of the Italian economy, such as our low level of per capita income (which as you know is less than one-seventh of the United States level), and the consequent low rate of saving and of capital formation. But in addition to all this, the very fact that, thanks to the hard work in which we have engaged, the Italian economy is once more in a phase of expansion and development, creates yet more problems, economic and political. The impact of all this weighs heavily upon many segments of our economy. As an example, I may quote the housing problem. It has been rendered all the more acute by the destructions of war, by the growth of population, and also by the improvement in living conditions which, particularly in southern Italy, leads to a greater demand for housing. To meet this pressure we have alhousing. ready built or rebuilt over 9 million rooms, and we are now about to embark on a vast additional program of housing construction. The government of democratic coalition, a coalition which has shown itself as the most effective and adequate to meet the nation's needs, is now more than 1 year old. Moving along the broad lines of policy which were laid by the late Premier De Gasperi, with respect both to the government formula and to political orientation, our government has achieved the work of reconstruction and it has settled great problems which were cloud-ing our political horizon. Among others I would like to mention the Trieste problem. the solution of which owes much to the friendly and keen contribution made by United States and United Kingdom diplomacy; the ratification of the Paris agreement on Western Europe: the adoption of many measures of internal legislation of great social significance.

Now that the postwar cycle has been closed, we are focusing our attention on the struc-tural problems of our economy, and are concentrating all our efforts on their solution. To that end Italy has devised and is putting into effect vast programs which will improve very substantially her economic and social structure. Among the most important I will mention the land reform. It has already resulted in the transfer of approximately 11/2 million acres of land from absentee land-owners to hitherto landless farmers. Incidentally, this entails a tremendous financial burden, also in view of the fact that, in addition to the cost of the land, there is an additional very large cost due to basic reclamation work

I should also mention the special program the south (Cassa del Mezzogiorno). which, together with land reform, has the purpose of improving basic living conditions in our depressed areas and to close the gap in wealth and income between the north and the south. From October 1950 to the present date special administration for the South has already committed approximately 400 billion lire, equivalent to well over \$650 million, for its projects.

I would like also to mention our recent tax reform, which is having an almost revolutionary impact on our tax habits, since it involves a new approach and a new spirit on the part of both Government and taxpayers. The overall tax bill, which is at present going through the final stages of debate in Parliament, includes strict sanctions against tax evaders. Its application will lead to the equal distribution of our tax burden. There is already an encouraging increase in tax revenue also as a result of these recent re-

We shall strain ourselves to the limit, in order to tackle our problems with our own resources. We shall intensify our existing policy of encouraging productive investments. In this way we hope to change the Italian economic structure, and will attain a higher volume of employment also as a result of a better distribution of income. you know, we have already presented to the Organization for European Economic Cooperation a development projection of the Italian economy, based on the principles just mentioned. It is not a rigid plan, in the acception of the word which is current in Eastern Europe. This is the product of detalled studies from outstanding experts. Italian or international. Their unanimous conclusion is that no action or reform initiated by any Italian Government can solve the Italian economic structural problems except within a framework of international cooperation. There are countries where there is a manpower shortage and yet where unsurmountable barriers are raised against our immigration. In order to settle our structural problems we need large capital, which we have not. International cooperation, also in the mutual interests of the free world, could and should materialize. We desire to attract foreign investments, and to that end our Government has submitted to Parliament new draft legislation which will encourage foreign investments and insure them an equitable remuneration.

Unquestionably, Italy is making determined progress along the road toward economic development. With respect to 1938, and in constant prices, our national income has increased by 40 percent, our agricultural production by 12 percent, and industrial production by 71 percent. Consumer expenditure, also at constant prices, is increasing steadily throughout the country, and particularly in the south at a rate which is quite unprecedented. At the same time it has been possible to reduce somehow the gap, however still existing, in consumer expenditure between our northern and southern regions.

Economic and social reforms and the defense of liberty under the law are the foundations of the policies that my government is pursuing in order to strengthen democracy in Italy. It is already apparent that antidemocratic forces are beginning to lose ground in the North, where our working classes are comparatively well paid and enjoy advanced standards. The outcome of shop steward elections in many industrial plants gives a definite indication of such trend. On the other hand, the situation requires careful watching in the South, during the present period of transition in economic and social condition. The new horizons disclosed by somewhat higher living conditions lead to higher and higher expectations. This creates opportunities for dissatisfaction which subversive propaganda is quick to exploit.

Some in Italy and abroad have advocated the adoption on our part of shall I say, violent forms of repression against extremist parties and against the enemies of democracy, enslaved to foreign ideologies, as has been done in some countries. However, each country has its own historical conditions, its own experiences and requirements, and we in Italy are firmly convinced that democracy can be defended and must be defended with democratic methods. Our public opinion is extremely sensitive and vigilant on this point. It insists upon respect for law and order, but is strongly opposed to repressive measures that might suggest the return of, or recall, nondemocratic systems.

Gentlemen, I am talking to representatives of the press of one of the world's greatest democracies. It was Thomas Jefferson who said: "I would rather be exposed to the inconveniences attending too much liberty, than those attending too small a degree of it." I quite agree we must not be content with that, and I can say that the Italian democratic state is in a position to defend itself and the freedom of its citizens against any and all threats from the enemies of freedom. The authority of the Italian states is getting stronger, and so is the sense of democracy.

We consider any alarm or concern sometimes voiced abroad completely unjustified. We have a sufficient sense of responsibility to realize what a tragic situation would ensue for the Western World, and what the plight of our Allies would be if Italy, in her key Position in the Mediterranean, did not belong to the family of freedom-loving nations. It is our first and paramount interest to see to it that such a tragedy does not occur, because we would be the first to suffer. At the same time the fact that our foreign friends occasionally feel concerned or alarmed is an indication of their deep awareness of how interdependent we all are and the fate of all depends on the fate of each. The subject of interdependence among nations has never been so vital and urgent as it is today.

A few months ago, during the speech which I made in Rome on Italy's European Policy, I said that when one talks of international cooperation the first thought goes to the United States and to American policy

after the war. The importance of the Marshall plan, which was the first happy experiment of an organized community of nations, was no less moral than it was material. I said on that occasion, and I would like to repat it now, that we are grateful to America not only for her material help, which was extended as by a free and independent nation to other free and independent nations, but also for the example she set of what nations can accomplish if they are united. I would like to emphasize the paramount importance of this aspect of our alliances and communities.

After the Marshall plan, the effectiveness of international cooperation for the security of peace and democracy was proved by the North Atlantic Pact. The Atlantic Alliance, which is the cornerstone of our foreign policy, led to the establishment of an effective system of mutual defense. Military defense, however, while fundamental, is not sufficient alone. Against the compact alinement of the iron-curtain countries with its network of military and political treaties, we must follow an international policy of untiy and solidarity. Peace and freedom must be defended not only with weapons, but with concerted action. Article II of the North Atlantic Pact gives full recognition to these principles, but we must admit that little has been done thus far to implement them.

What I have in mind specifically is the necessity of economic and social solidarity and of coordinated political action. This principle leads to recognition of the fact that no national economy can survive alone. It implies also that if there are weak spots in the economic or social structure of any one of the freedom-loving countries, this weakens the whole community of free nations, just as would occur in any military defense system. Politically, we have in past years experienced how harmful differences, even of method or even only apparent, between the members of our community can be. It is hardly necessary for me to recall how our opponents cunningly exploited the different reactions in various Atlantic nations to the spurious peace campaign waged by the Communists in 1953; or, more cently, the unfavorable effect that lack of unanimity among the European nations regarding EDC ratification might have had on the democratic forces in Germany. Our conviction that international cooperation is essential for the survival of the free world. as well as for the solution of our own major national problems, explains why Italian policies are so passionately European. the present time, we consider the Western European Union not as a terminal but as a starting point towards new forms of union and integration in Europe, which must be worked out without undue hurry but without delay. I would not like to dramatize, but there are no other alternatives for Europe: either integration or disintegration.

That is why Italy, despite the long parliamentary procedure prescribed by her constitution, was the first nation on the continent of Europe to ratify the Paris agreements.

It was also significant, and indeed exceptional, that the entire Parliament, with the exception of the Commuists and their allies voted in favor of the European idea. This indicates that whenever the present Italian Government or any other Italian Government identifies a united Europe with prosperity and liberty, it knows that it is giving expression to the requirements and to the interests of Italy as a whole.

Mr. Chairman, gentlemen, regardless of the fact that we are still at lunch, I have abused of your attention. I have ventured to do so however because I feel surrounded by an atmosphere of genuine friendship, which goes back to some of the most difficult days of our national history. I shall be happy now to answer your questions. Before doing so, however, I would like to thank you once more for your warm welcome, for your friendly and cordial reception, and for your invaluable contribution to the achievement of our common ideals.

Statement in Support of a Bill Extending Certain Veteran's Benefits to or on Behalf of Dependent Husbands and Widowers of Female Veterans

EXTENSION OF REMARKS

HON. WILLIAM C. CRAMER

OF PLORIDA

IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1955

Mr. CRAMER. Mr. Speaker, I have today introduced a bill into this Congress that would provide that, in those provisions of laws administered by the Veterans' Administration which relate to compensation, pension, retirement pay, and subsistence allowance, the terms "wife" and "dependent" shall include a dependent husband and the term "widow" shall include a widower whenever his condition is such that, if his wife were living, he would be dependent upon her for support.

This is one of the most compassionate requests I may make to you today. I take this opportunity to point out several of the merits of this measure. My sincerity in this case has been heightened by several cases in the First District of Florida of which I would recite one to bring into sharp focus the real need of many wives of the veterans of our wars in defense of this great Nation.

This resident of my district is a disabled female veteran, and her husband, because of physical disability, is entirely dependent upon his wife for support and comfort. It falls upon this woman the responsibility of providing a home for her husband and giving to this disabled man such comforts as life may bring him in his condition. This is a task that she welcomes as part of her matrimonial vows and one which she has cheerfully and fully taken upon herself. Who is this woman? She is one of those upon whom this Nation called for service in the defense of our Nation in the dire years of World War II. I think it is time to remind this House that these women were volunteers in our service. They had put their country above many of the comforts of home and had served beyond the call of duty to their Nation. It is time that we recognized their devotion and their service. It is time that we placed their responsibilities today on the same basis as the responsibilities of those veterans who receive the benefits of the compensation provided by the Veterans' Administration for dependents who cannot care for themselves.

In the bill that I have today proposed such relief would be provided. In the case of the individual I have recommended for your consideration the amount of additional compensation would be in the vicinity of \$27 per month. This is a small amount to each of us individually. This is a large amount to the veteran for whom I would provide some of the smaller benefits

of life.

I believe that this legislation is highly desirable, both on the basis of providing uniformity and because it is sound policy to make the benefits available to the dependent husbands of widowers of female veterans in the same manner as they are available to the wives and widows of male veterans. In view of the service rendered to the country during World War II particularly, and in a lesser extent during World War I, by female components of the Armed Forces, it is believed that such action is only fair and

There are approximately 300,000 living veterans of World War II, and there is no information on which to base an estimate of the number who would be affected by the passage of this legislation. Therefore no fixed cost estimate can be

provided.

These last two paragraphs of explanation of the bill are from the report of the committee of the 81st Congress in support of earlier bills. These statements are true today. They are more true as each year cases occur which place more of the family responsibility upon these female veterans.

It is my most sincere hope this Congress shall make such benefits available to the women who have served our

Nation.

Greek Independence

EXTENSION OF REMARKS

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. REUSS. Mr. Speaker, March 25 is the 134th anniversary of the independence of Greece. Under the leadership of Archbishop Germenos, on March 25, 1821, Greek patriots rose and overthrew their Ottoman overlords who had oppressed them for so long. The Greeks have always had to fight for their freedom. Fifteen years ago, Mussolini's legions found that Greek resistance was a hard nut to crack. It later took the full strength of Hitler's armed forces to invest the little peninsula that is Greece-and then only for a time, until the Greek people could help to bring about their own liberation. Hardly was Greek freedom reestablished when Communist-led forces attempted to seize the government. The world will not soon forget that it was the Truman Doctrine which helped the Greek people to stand fast, and with military and economic aid, to turn back and defeat the Communist challenge.

In 1949 I saw at first hand during a visit to Athens how the Greek people joined in the common fight against communism and poverty. Today Greece once again knows peace, and is making earnest beginnings toward a fuller economic life. There is no better symbol of Greek-American friendship than the plains of Thermopylae, once arid but now blooming with rice fields. The Greek children brought garlands of flowers to the American point 4 reclamation expert who had helped in the project, and their elders erected a simple monument of marble to his memory-of the same quarry as the Parthenon marble.

Those Greeks who have immigrated to our country have contributed greatly to the richness of American life. They have brought with them the high tradition of western civilization suggested by such towering figures as Socrates, Plato, Aristotle, and Sophocles.

In my home city of Milwaukee, thousands of good citizens proudly cherish their Greek ancestry. They have con-tributed much to our economic, social, and cultural life, and to the learned professions. In war their sons have served our country brilliantly. Two fine congregations attest to their religious belief.

May two of the world's oldest democracies—the United States and Greece—go on forever in friendly brotherhood.

Support of Housing for the Aged Is Nationwide

EXTENSION OF REMARKS OF

HON, BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. O'HARA of Illinois. Mr. Speaker, as indicative of the nationwide interest in H. R. 3919, a bill to provide public housing for the senior citizens of the United States in the introduction of which I have been joined by 12 other members of the Banking and Currency Committee as well as by others of my colleagues, I am extending my remarks to include a few typical letters of the many that I have been receiving, as follows:

FROM NEWARK, N. J.

MY DEAR MR. O'HARA: We, the members of the Essex County Council of Jewish Older Adults, wish to express our commendation and support for your bill, H. R. 3919, which deals specifically with a Federal housing program for elderly people of low income.

We are greatly encouraged and heartened by your recognition of the tremendous need of older people for adequate low-cost housing. Further, your provision for the inclu-sion of single older people in the housing program will correct an inequity in the Federal Housing Act of 1937, which has long worked a hardship on large numbers of older

A number of other community organizations have expressed an interest in the problem of low-cost housing for older people, and we should greatly appreciate your suggestions and counsel as to how we can build up public support for your bill.

It would also be most helpful to know whether a favorable report has been received from the Housing and Home Finance Agency on your bill and when the bill is scheduled

for action by the House Eanking and Currency Committee.

If action has already taken place in this committee, we should appreciate your letting us know which housing bill or bills were reported out favorably and where the bills are now. We should also like to have several copies of H. R. 3919.

Thank you for your interest and attention. Sincerely yours,

SOPHIE ENGEL Mrs. Joseph Engel. Secretary, Essex County Council of Jewish Older Adults.

FROM PHILADELPHIA

DEAR CONGRESSMAN O'HARA: I am delighted to find that you introduced a bill in Congress providing for public low rent housing for older persons. The Philadelphia Housing Association's Committee on Housing for the Aged, of which I am the chairman, has been reviewing over the last year the housing problems of older people and has come to the conclusion that the most important obstacle to decent housing for older people is the gap between the cost of adequate housing and the ability of older persons to pay for it.

We felt that the exclusion of single persons and groups of unrelated persons from public housing worked to the disadvantage of older persons, many of whom are not members of family groups. We have been recommending that public housing presently existing, under construction, or in the planning stage, be made available to single older persons. Making this recommendation, how-ever, we were aware that because of the small overall supply of public housing, admission of single older persons would solve the problem for only relatively few of those actually in need of better housing. We were also aware that the admission of more older persons would reduce the supply available to other groups equally in need, particularly the large families. Moreover, existing public housing is not specifically designed for older people.

We believe that an annual expenditure of \$3 million a year is a small price indeed for the American people to pay for decent housing for its older citizens. Moreover, we think that this sum will repay itself many times by lessened need for institutional and

hospital facilities.

For all of these reasons, we heartily applaud and endorse the introduction of legislation designed to produce good and cheap housing for the elderly which would not curtail the supply available to other groups.

the supp.,
Sincerely yours.
ELLA F. HARRIS,
HOL Chairman, Committee on Housing for the Aged of the Philadelphia

Housing Association. FROM CINCINNATI

DEAR CONGRESSMAN O'HARA: Here in Cincinnati we have a joint committee on housing for the aging, composed of representatives from the Better Housing League and the Community Council on Aging. This committee is trying to do something in the neglected field of improving housing for elderly people.

Mr. Lee Johnson, in his membership newsletter of March 9, 1955, speaks with praise about your bill, H. R. 3919, to provide housing of elderly persons at low income.

Would it be possible for you to make available to our committee one or more copies of this bill? If you have a supply. I would like to request 14 copies, but would be happy to receive just 1 copy.

Thank you for your cooperation.

Sincerely,
BENJAMIN P. GROVES, Executive Secretary, Better Housing League of Cincinnati and Hamilton County.

FROM SAN ANTONIO

DEAR CONGRESSMAN O'HARA: I read with keen interest and deep gratitude of your understanding of the needs of the aged, expressed through the introduction of your bill H. R. 3919. Those of us who have been in public housing for years are daily faced with a serious lack of facilities for our aging citizens, particularly those who live on our meager-monthly grants. Daily we turn away from the imploring eyes of the single aged person living perhaps in a garage or dark hall bedroom and eager for a small private abode where there is cleanliness and air and heat and even, maybe a small plot for flowers. Our existing public housing was constructed for families and therefore our smallest units (three and a half rooms) are considered too large for the single occupant. Personally, I would rather be a little extravagant spacewise than extravagant in contributing to the continuation of misery and ill health. Better, however, would be the lifting of public housing construction restrictions for relocation only and permitting local housing authorities to immediately construct small units and have the law lift the restriction on single occupants.

Without question, large groups countrywide will support your efforts and we sincerely hope they will meet with success. We now have some 300 aged couples here in San Antonio. Their happy faces shining through the wrinkles is a joy only offset by the dejection and complete futility that overcomes our aged individuals as they seek shelter from us and are rejected.

May your work be fruitful. Sincerely.

MARIE C. McGuire, Executive Director, Housing Authority of the City of San Antonio.

FROM CHICAGO

DEAR CONGRESSMAN O'HARA: As chairman of the planning committee for the aged of the Welfare Council of Metropolitan Chicago, I should like to take this opportunity to express the thanks of my committee and my own personal gratitude to you for your sponsorship of H. R. 3919.

It is, unfortunately, true that elderly persons are more likely to be alone than to qualify in Federal housing projects as a family. The need for low-rent housing for single persons in Federal housing projects is desperate and you are to be congratulated for having recognized it and taken action.

Sincerely yours,

LOUIS P. HALLER.

FROM THE MAYOR OF ST. LOUIS

Letter sent by Mayor Ray Tucker, of St. Louis, Mo., to all Members of the Congress from Missouri:

My DEAR SENATOR: It is my understanding that the Honorable BARRATT O'HARA, Democrat, of Illinois, has introduced H. R. 3919 to establish a Federal program of housing for elderly persons of low income. As I understand it, Mr. O'HARA's bill would provide Public housing for elderly single persons, as well as couples, designed specifically for their needs. Further, the bill provides that the Commissioner of the Public Housing Administration may authorize construction of not to exceed 50,000 such dwelling units in the fiscal year of 1956, and in each of the 4 succeeding fiscal years. It would also give the Commissioner the right to approve the remodeling of existing projects in an area Where the need for homes for elderly persons of low income is established.

I thought that I would call the bill particularly to your attention since there is a pressing need for this type of construction in the city of St. Louis. I am completely in agreement with the intent behind the bill and I would appreciate your cooperation and assistance in securing and expediting approval of the enabling legislation, as well as any related appropriations that may be involved.

Sincerely.

RAY TUCKER, Mayor.

FROM SAN FRANCISCO

Telegram from Charles De Limur, president of the San Francisco Center for the Blind, reads:

We are vitally interested in the House bill we understand you are introducing which provides for public housing for elderly citizens. Our single blind who are excluded from admission to public housing desperately need such facilities. We assure you of our heartlest support and any possible assistance.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodle is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not inter-fere with the prompt execution of work for the Government. The Superintendent of the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives. each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commis-sioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which I shall be delivered at his residence, I at his office, and 1 at the Capitol.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Administration's Highway Program

EXTENSION OF REMARKS

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES
Wednesday, March 30, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very able statement made by the Comptroller General of the United States, Mr. Joseph Campbell, in testifying before the subcommittee of the Public Works Committee on S. 1160, known as the administration highway bill.

The statement made by Comptroller General Campbell is accurate, is fundamental, and, coming from such a high authority, deserves the fullest consideration of the Senate.

I desire to compliment the Comptroller General on the very splendid presentation he has made on this legislation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF MR. JOSEPH CAMPBELL, COMPTROLLER GENERAL OF THE UNITED STATES, ON S. 1160, 84TH CONGRESS, BEFORE THE PUBLIC ROADS SUBCOMMITTEE OF THE COMMITTEE ON PUBLIC WORKS, UNITED STATES SENATE, MARCH 28, 1955

Mr. Chairman and members of the subcommittee, the General Accounting Office appreciates the subcommittee's invitation to appear before you and give you our views with respect to S. 1160, 84th Congress, which would create a Federal Highway Corporation for financing the construction of the National System of Interstate Highways.

In the opinion of the General Accounting Office, one of the most important aspects of the legislation is the proposed method of financing the highway construction. The bill would create a new Government corporation to be known as the Federal Highway Corporation. The Corporation would be authorized to issue obligations not to exceed \$21 billion. These obligations would be sold to the general public and, in addition, could be purchased by the United States from fiduciary, trust, and public funds, the investment or deposit of which is under the authority and control of the United States.

We feel that the proposed method of financing is objectionable because the result would be that the borrowing would not be included in the public debt obligations of the United States. While the issuance of the Corporation's bonds would be with the approval of the Secretary of the Treasury and the obligations would be repaid from the permanent appropriation established by section 105(c), the obligations would specifically state that they are not obligations of, or guaranteed by, the United States. However, the legislation provides that the Secretary of the Treasury may adance to the Corporation in any fiscal year an amount not in excess of the estimated appropriation for that year and, in addition,

the Corporation would be authorized to borrow from the Secretary of the Treasury not to exceed \$5 billion outstanding at any one Both of these provisions coupled with the permanent appropriation would apparently be to assure the investors of ability to meet obligations, and tend to have the effect of a Government guaranty of the highway obligations, at least in the minds of the investing public. As a practical matter, the obligations would be moral and equitable obligations of the United States, since they would be issued by a corporation entirely owned by the Government. While the obligations would specifically provide that they are not guaranteed by the Government, it is highly improbable that the Congress could allow such obligations to go in default when one considers that credit standing of the Federal Government would be involved.

In addition, the Corporation's activities would not be self-sustaining. It would have no substantial revenues, and funds for paying off the obligations would come from the general fund of the Treasury. The funds available would be measured by future anticipated increases in collections of taxes on gasoline and special fuels.

The fact that the bill provides for a permanent appropriation measured by gasoline taxes does not, in our opinion, establish revenues for the Corporation in any normal use of the term. The gasoline taxes are revenues of the Treasury and go into the general fund of the Treasury. The appropriation provided would come out of the general fund of the Treasury exactly as most of the appropriations made by Congress.

The total amount of borrowings by the Corporation would amount to the very substantial sum of \$21 billion and, in our opinion, would be borrowings of the United States Government, irrespective of the terminology applied. It seems only right that such obligations should be considered, classified, and disclosed as a part of the total borrowings of the Government, that is, the public debt.

It is our opinion that the Government should not enter into financing arrangements which might have the effect of obscuring the financial facts of the Government's debt position. We believe that the highway program—since it in reality is non-revenue producing—should be financed by appropriations made by the Congress. If, to provide these funds, it is necessary to borrow from the general public, we believe that the borrowings should be handled under the existing authority of the Secretary of the Treasury under the Second Liberty Bond Act, as amended. This is a normal function of the Treasury Department and in carrying out his assigned fiscal and debt management responsibilities we do not feel that the effectiveness of the Sccretary of the Treasury should be weakened by authorizing other Government agencies to borrow directly from the investing public. Also, under the procedure we recommend any borrowings necessary to fund the appropriations approved by the Congress would automatically be treated and disclosed as a part of the public debt of the Federal Government. In making this recommendation we recognize that a borrowing operation of this magnitude may require changes in the existing statutory public-debt ceiling.

Also, if the direct appropriation method is used to finance the highway construction,

the Congress would be in a position to make an annual review of the progress and changing needs of the road program because money to carry it out would have to be specifically appropriated by the Congress each year. In addition to reviewing the actual needs of the program, the Congress could also consider whether, from an overall picture of revenues and expenditures of the Government, the full amount authorized for high-way construction should be spent in a particular year.

In the event a Federal Highway Corporation is created, the Congress would, to some degree, lose its control over the program. The Corporation would submit annual budgets to Congress under the provisions of the Government Corporation Control Act, but only funds for administrative and operating expenses would be approved by the Congress. The program funds would continue to be available unless the Congress took affirmative action to limit the program expenditures.

I think most of you are aware of the position of the General Accounting Office with respect to Government corporations. We are opposed to the creation of new Government corporations, unless for the most compelling reasons or overriding public necessity. The corporate form of Government activity is objectionable because, for the most part, it is free from the normal safeguards set up by the Congress to maintain adequate control over the conduct of public business and the expenditure of public funds.

Eased on the recommendation of the President's Advisory Committee on a National Highway Program, the new Corporation would have very little duties, outside of the issuance and management of its obligations. Administrative functions would be exercised by existing agencies. The Commissioner of the Bureau of Public Roads would act as Executive Director of the Corporation. The Secretary of the Treasury would designate the treasurer of the Corporation to be established within the Treasury Department and authorized to utilize such Treasury Department personnel as the Board found necessary to properly perform its financial responsibilities.

Consequently the principal reason for the creation of a new Federal corporation seems to be that it would provide an identifiable agency outside of the Treasury empowered to borrow from the public on obligations issued in its name. If the necessary funds are obtained by direct appropriation as we recommend, the need for a new Government corporation would disappear. Any public borrowings necessary to fund appropriations would be obtained by the Secretary of the Treasury under existing borrowing authority.

On the question of indefinite appropriations such as would be established by S. 1160, we feel that the Congress should not as a general proposition authorize such appropriations. When collections are made available for expenditure on a permanent annual basis congressional control of the expenditures and the activities financed thereby are greatly weakened. In 1934 Congress considered this question and passed the Permanent Appropriation Repeal Act. This act eliminated numerous permanent appropriations then in effect and provided that such appropriations be subject to annual consideration by the Congress. However, since 1934 many

permanent appropriations have been authorized. A good example is the Fish and Wild-life Service of the Department of the Interior. Appropriations by the Congress during 1954 totaled \$17 million. Total funds available for expenditure during the year amounted to \$59.5 million. Permanent indefinite appropriations provided \$36.5 million of the difference, or about 60 percent of the total. These permanent indefinite appropriations are obtained from taxes on firearms, shells and cartridges, fishing equipment, sales of migratory-bird hunting stamps, and income received from mineral leases, timber sales, grazing fees, etc.

The feature of the bill S. 1160 which may

The feature of the bill S. 1160 which may raise questions of legality is the financing

method proposed.

Article 1, section 8, clause 1, of the Constitution gives Congress power to lay and collect excise taxes provided they are uniform throughout the United States. The Federal gasoline tax meets this requirement. There is, however, a constitutional limitation on the taxing power of the Congress. That power may be exercised only "* * to pay the debts and provide for the common defense and general welfare of the United States."

The question is then whether the revenue from the gasoline tax, or an equivalent amount, properly may be appropriated in advance for use in meeting the obligations of the Federal Highway Corporation. The only constitutional restriction on the duration of appropriations is that found in clause 12, section 8, article 1, which declares that no appropriation of money to raise and support armies shall be for a longer term than 2 years. As we have indicated, the Congress has frequently made so-called permanent appropriations. The following are current examples involving tax revenues: Appropriation of amounts equal to social-security taxes; appropriation of amounts equal to revenues derived under the Railroad Retirement Tax Act; appropriation of an amount equal to 30 percent of gross customsduty collections for use by the Secretary of Agriculture; appropriations for conservation of wildlife; appropriations to the govern-ments of the Virgin Islands, Puerto Rico, and

The case of Cincinnati Soap Co. v. United States (301 U. S. 308), involved a similar appropriation to the Philippine Government of future revenue from a processing tax on coconut oil produced in the Philippine Islands, and the Supreme Court held that an otherwise valid tax might be bound to a valid appropriation of the tax revenues. The Court said that if the Congress chose to adopt the quantum of receipts from the particular tax as the measure of the appropriation, it saw no valid basis for challenging its power to do so.

Another question is the propriety of the purpose for which the tax revenues are to be used. We do not think the legality of Federal appropriations for an interstate highway system can be questioned. It might be argued that the appropriated funds here involved are not to be used for the payment of debts of the United States, since the bonds are not legal obligations of the United States but merely of the Federal Highway Corporation. In the Cincinnati Soap case mentioned, the Supreme Court had this to say as to what constitutes debts of the United States within the meaning of the constitutional provision:

"It is conceded and indeed it cannot be questioned that the debts are not limited to those which are evidenced by some written obligation or to those which are otherwise of a strictly legal character. The term 'debts' includes those debts or claims which rest upon a merely equitable or honorary obligation, and which would not be recoverable in a court of law if existing against an Individual. The Nation, speaking broadly, owes

a 'debt' to an individual when his claim grows out of general principles of right and juistice; when, in other words, it is based upon considerations of a moral or merely honorary nature, such as are binding on the conscience or the honor of an individual, although the debt could obtain no recognition in a court of law" (301 U. S. 308, 315).

Thus, even though the bond obligations would not be legal obligations of the United States, strictly speaking, and would not come within the Federal debt limitation, there is no doubt that they properly may be considered as debts of the United States within the constitutional taxing authority granted to Congress.

We think a future Congress would be free to reduce or repeal the Federal gasoline tax, which would automatically reduce or cut off the only important source of funds for meeting the bond obligations and would preclude or curtail the issuance of further bonds. As we have indicated, however, we think it would be unrealistic to assume that the Congress would permit bonds already purchased to be defaulted.

In the event the subcommittee is to favorably act on S. 1160, we recommend that several provisions of the bill be considered

for amendment.

1. Consideration should be given as to whether the powers of the Corporation are too broad. We would recommend that the legislation be more restrictive as to the functions and duties the Corporation is to perform. Also, consideration should be given to limiting the life of the Corporation to a definite date.

2. Section 105 (d) is contrary to many of the existing statutory restrictions on the investment of trust funds. For example, the unemployment trust fund can only be invested in interest-bearing obligations of the United States, or in obligations guaranteed as to both principal and interest by the United States. If the purpose of section 105 (d) is to permit investment of these and other trust moneys in bonds of the Federal Highway Corporation, existing statutory restrictions on the investment of trust funds should be declared inapplicable to avoid any possible conflict.

3. Section 208 dealing with right-of-way acquisitions should be clarified as to the source of funds for payment of the property acquired. The section provides that the Federal Government will pay 95 percent of the appraised value, or the actual cost, whichever is lower, but the section is silent as to who pays the additional 5 percent. It is assumed that the 5 percent will be paid by the State. We think the section should so provide and also make it clear as to whether the State advances the 5 percent to the Federal Government prior to the payment for the property, or whether the Federal Government may pay 100 percent and then be reimbursed by the State for the 5 percent.

The National Labor Relations Board

EXTENSION OF REMARKS

HON, IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Wednesday, March 30, 1955

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address by the distinguished Chairman of the National Labor Relations Board, Mr. Guy Farmer. Mr. Farmer spoke to the Cleveland Bar Association in Cleveland, Ohio, on March 16, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am deeply honored to appear before the members of this distinguished association of lawyers. A public life such as mine is frequently a lonely one, but I feel at home here.

The NLRB is in a very real sense a law enforcement agency; our function is essentially judicial. The law which we administer is two-sided, impinging here upon employers and there upon unions, restricting in some important areas complete freedom on the part of both to do as they please. Nobody likes restrictions, and it is only natural that our enforcement of the law has not been universally acciaimed by either of these groups.

I am happy to have the opportunity to speak to this group of lawyers because I am confident that I will find among you a deeper understanding of our public responsibilities and a more objective appraisal of our public performance. This is all that we ask or have a right to expect. We are not heroes, and we do not seek a hero's acclaim. But we do welcome public interest and public evaluation of our agency, in order that there may develop a genuine public opinion of our decisions and policies.

Since I have here an audience with the capacity and the will to make fair judgments, I shall attempt to define the proper role of the Labor Board in labor relations and to outline for you my concept of the ideal quasi-judicial agency, by which I mean an administrative agency such as the NLRB which is charged by Congress with the responsibility for enforcing a regulatory statute. I do not pretend that this ideal can be perfectly attained, but it is necessary for us to have an ideal in order that we may act rationally. As Roscoe Pound said, "Making and finding law presupposes a mental picture of what one is doing, and why he is doing it."

1. An administrative tribunal must recognize and accept its natural and legal limitations: The first attribute of a quasi-judicial agency created by a specific statute is that it not try to play God. It is well that we as administrators recognize our limitations and seek to attain a degree of humility in the performance of our public trust. It is a healthy thing for an administrative agency to admit to itself that it does not know all of the answers. This should lead us to be careful in our judgments, to be skeptical of categorical solutions, and generally to search more diligently for the truth, realizing all the while that we may never quite find it. A quasi-judicial agency is no place for a demagog, a dictator, or a dogmatist.

It is not merely that we lack omniscience in human affairs. As ordinary mortals, we are subject to the mundane limitations of time and space, money and personnel. It was the recognition of these limitations that led the NLRB to revise its jurisdictional standards last July. In fiscal 1953, there were about 14,500 cases filed with this agency. and about 3,000 of this number ran the entire gamut of our procedures to final consideration and decision by the 5-man Board. It must be obvious to all of you that no quasi-judicial agency can handle this huge volume of cases and give anything like adequate consideration to each individual case. It is equally obvious, as actual experience confirmed, that the national Board was concerning itself with many relatively insignificant cases involving small enterprises which have always been considered purely local in character. new standards are designed to bring within our orbit all enterprises having any substantial impact on interstate commerce. while withdrawing our hand from small local

I might add that the promulgation of these jurisdictional standards was no new departure in principle. The NLRB has throughout its history operated on the premise that Congress intended that it should follow a rule

of reason in exercising jurisdiction.

There are also limitations of a legal nature upon our authority which do not always

seem to be clearly understood.

The first is a fundamental one which is applicable to all quasi-judicial agencies. Stated in terms familiar to lawyers, it is this: Qusi-judicial agencies have no common-law powers. Of course, I mean by the common law a body of law developed by judicial decision throughout the history of the Anglo-American system of jurisprudence. This body of law is constantly growing and changing, through the process of judicial decision, in response to the growth and change of historical, social, and philosophical concepts. In the field of the common law, judges who interpret (and in the process of interpretation "make") the law have a recognized latitude of decision far wider than any administrative agency. We administer a statute and not the common law. As all judges know, when the legislature speaks on a particular matter, there is little room for the application of common law principles (except to the extent they be specifically incorporated in the statute), the latitude of the judge is severely circumscribed, and his function is restricted to that of interpreting and applying a particular statute to the best of his ability in accordance with the statutory language and intent. If the application of the statute in certain circumstances produces inequitable results, the remedy lies not in rewriting the law by administrative edict but rather in petitioning Congress to amend the law.

In the interest of being precise, I want to make it plain that the distinction which I draw here between the common law and statutory law is not black and white. Even those who interpret a statute must bridge gaps in the statutory language by interpretations consistent with the spirit of the law. But the difference between a common-law court and a quasi-judicial agency is somewhat like the difference between traveling across a wide plain and walking down a narrow street. It is the obligation of a quasi-judicial agency to recognize and respect this limitation upon its own discretion.

Certainly not the least of the legal limitations on the action of a quasi-judicial agency is the authority of the courts. After all, administrative and regulatory agencies such as the NLRB are newcomers in our system of law, in contrast to our courts which have a solid background in our historical past. Our judiciary occupies an unassailable place in our constitutional system, and stands within its sphere on an equal constitutional basis with the executive and the legislative branches of our Government. When Congress established our administrative agencies and vested them with original power to regulate various spheres of activity, Congress was careful to preserve the vitality and the authority of our courts of law. In our own Agency, for example, we make the original decision in a case, but our order has no legal force or effect until it is adopted and enforced by the court of appeals. Before a binding decree is entered in any case, we must convince the court that our decision is supported by substantial evidence and that our interpretation of the statute is correct.

I suppose I might sum all this up by saying that our decisions are not selfenforcing, but are subject to judicial review. But that would not tell the whole story. The statutory scheme, viewed in perspective of our system of law, contemplates a harmonious relationship between the quasijudicial agency and the courts. It is not enough that we must submit our decisions.

to the scrutiny of the courts. It is also a part of the scheme of things that the quasijudicial agency pay proper respect to the Once the courts have spokcourt's opinion. en in unmistakable terms on the construction of a particular provision of the statute, with an opportunity for resort to the Supreme Court, the administrative body must conform its decisional policies to prevailing judicial interpretation. This is not a debatable principle—it is a recognized rule. Yet I find it necessary to emphasize it because there seems to be a general disposition on the part of those who evaluate our decisions to ignore it. For example, four of the decisions made by the present Board which have been rather severely criticized were cases in which the Board's action seemed necessary in order to bring or keep our decisional policies in line with prevailing judicial opinion. In the Livingston Shirt case, we held that an employer who made a noncoercive appeal to employees prior to an election had no obligation to provide a forum for the union to answer his speech. Our decision did nothing more or less than follow a decision of the court of appeals for the Second Circuit overruling the Board's broad Bonwit Teller doctrine. In the Blue Flash case, we held that it was not a per se, or automatic, violation of the act for an employer or one of his supervisors to inquire of an employee concerning his union affiliation or activity, in the absence of any circumstances indicating that the questioning had a coercive effect. We held that there might or might not be coercion, depending upon the context and atmosphere in which the questioning took place. Here again the critical response of some people to this decision ignores the fact that several courts of appeals had said, some on more than one occasion, that the Board's per se doctrine as applied to interrogation was wrong as a matter of law.

In two other decisions, which went against employers, the same consideration came into In the Monsanto Chemical case, we held that an employer must permit access to an employee parking lot for union solicitation in circumstances where there was no other reasonable means of access to the employees; and in the Whitin Machine case. we held that an employer must, upon request, supply information to the union representing the employees as to the wage rates of the employees in the bargaining unit. In both situations, the courts had already spoken so clearly as to the obligations of the employer that there was little left for the Board to do except to apply established judicial precedent to particular facts. difficult to see how anyone who understood the relationship between the Board and the courts could quarrel with these four decisions.

2. A quasi-judicial agency must be impartial: Judge Cardozo states in his treatise, The Nature of the Judicial Process, that "one of the most fundamental social interests is that law shall be uniform and impartial. There must be nothing in its action that savors of prejudice or favor or even arbitrary whim or fitfulness." In sounding this principle, the great judge was speaking not merely of the word of the law, but its ad-ministration as well. This same ideal was expressed long ago in Justinian's "Institutes," where it is said that, "Justice is the set and constant purpose which gives every man his due." In the frame of reference in which the Labor Board functions, justice consists of applying the law even-handedly and impartially to employers and unions, rendering to each what he is due under the Statute, no more to the one and no less to the other. When the interests of two persons or two groups come into sharp conflict, it is not possible to award one side all that it wants without giving the other less than it deserves. This requirement of impartiality is a sine qua non of honest adminstration.

3. A quasi-judicial agency must be judicial: It may appear that this is another way of saying what I have said before-that we should be impartial, but the term "judicial" embraces a great deal more than a mere desire to be fair. Equally important is the capacity to achieve fairness. It requires the know-how, the technique, the temperament, and the philosophy of a judge. In short, the quasi-judge must not only wish to be impartial, he must have the judicial equipment and comprehend the judicial method. The fact that the attributes of a good judge are difficult to define only emphasizes how rare it is that one finds them combined in a single man. Each of us cannot be a Justice Holmes, but in our far less lofty capacities as quasi-judicial officers, we can at least turn our gaze upward toward the heights of judicial excellence.

The need for the judicial method and approach hardly requires elaboration. While I have said that our job is the somewhat narrow one of giving effect to the statutory language and congressional intent, I have never said that this task is a simple one. I decry as much as anyone a mechanistic, pushbutton approach to the administration of the law. The language is not always clear, and the intent is not always plainly discernible. Varying factual situations arise which are not squarely covered by the letter of the law, and which were not within the precise contemplation of Congress when the law enacted. The ascertainment of intention, when that intent is clearly revealed, is not our most difficult task. As Professor Gray said, "The difficulties of so-called interpretation arise when the legislature has had no meaning at all: when that which is raised on the statute never occurred to it; when what the judges have to do is, not to determine what the legislature did mean on a point which was present in its mind, but to guess what it would have intended on a point not present in its mind, if the point had been present." This is where something This is where something more than an IBM classifier is required. This is the point where the judicial method must be employed to reach for a result in harmony with the basic purposes of the written law which we administer.

There are, of course, many provisions of our statute which are so plain and positive in their meaning that we can only give literal application to the literal language. As Justice Holmes so aptly said, "But, whatever the consequence we must accept the plain meaning of plain words." For example, the proscription against holding more than one valid election within a year is quite unambiguous and simple to apply. But, even this forthright proscription is not completely automatic in application. Problems do arise as to the meaning of "valid" in differing circumstances, as well as other questions as to whether and to what extent fluctuations in the number and character of the voting group affect the application

of the statutory proscription.

I could furnish you with many examples of NLRB decisions which do not involve literal application of statutory language, but in which it was necessary to fill in the gaps between the lines. The test of the validity of these interpretations lies in whether or not the spaces were filled by an interpretation which harmonizes with the spirit and intent of the statute as a whole. For example, I might point to our long-standing contract bar doctrine which is a judge-made rule, nowhere alluded to in specific terms in the statute. The act says that employees shall have full freedom to select or reject a bargaining agent, and if this provision were given literal interpretation, we would hold an employee election and permit a new choice every time anybody requested it. But, there is also the basic purpose of the law to encourage collective bargaining and to establish stability in labor relations. Both of these purposes may complement or contradict one another. In order to harmonize them, the Board has held that it will honor a bargaining relationship once properly established during the period of a labor contract, provided the term of the contract is reasonable in duration, normally 2 years. The Board-made contract bar rule has stood the test of time, for it harmonizes in a truly judicial manner the stautory goals of free dom and stability. In the same general area, the Board has held, and the Supreme Court in the recent Ray Brooks case has agreed, that a certification of a bargaining agent following a Board-conducted election is normally valid and binding for 1 year, during which time shifts of employee sentiment are given no legal effect. This is a sensible rule, but it does not appear, in terms, in the statute. It was evolved through the judicial process, and through that process alone.

There immediately come to mind other and perhaps better examples of necessary interstitial interpretation of our statute. may search the statute until you are blind, and you will find no dichotomy between union activity which is protected and that which is not. A literal interpretation of section 7 would lead a fundamentalist to conclude, as some fundamentalists did, that a sitdown strike, a partial strike, or a slowdown were all protected by our law. But, it soon became apparent that such a singleminded interpretation of section 7 would lead to antisocial and intolerable results. So, it came about that, in the Fansteel case, the Supreme Court called a halt to the logic of literalism and held that the sitdown strike was unprotected; in the Sands case, it held that a strike in violation of a no-strike clause was unprotected; and in the Southern Steamship case, it held that a strike in violation of a Federal mutiny statute was unprotected. Following these decisions, the courts and the Board have had to draw the line on a case-to-case basis between union activity which is protected by Federal law and that which falls beyond the pale.

The present Board has had to deal with this same problem. In the recent Honolulu Rapid Transit case, we held that a union was engaging in unprotected conduct when it attempted to conduct a partial strike by having its members work 5 days and engage in a strike for 2 days each week. This occurred in a public transportation system which necessarily had to be operated 7 days a week. We said that the employer had the right to insist that the employees either strike or work. In another recent case, the Boeing Aircraft case, the Board held that the establishment by the union of an employment agency to find better jobs for its members was not an act of disloyality of such character as to constitute unprotected activity within the meaning of section 7. Both of these decisions must withstand the acid test of judicial review. The point is that the issues presented in these cases could not be resolved by resort to literal statutory language. Rather, each emerged as a product of the operation of the judicial Interpretations such as these perish if they are spurious, dishonest, antisocial, or reach beyond the intent of the statute. They survive only if they are arrived at by the true judicial method, which seeks always to reach a result which harmonizes as best it can the basic purposes of the statute with relevant judicial precedent and with the commonly accepted standards of right conduct. These are the forces which shape the progress of the law.

4. A quasi-judicial agency must be independent: An agency such as the NLRB occupies what might properly be described as a delicate position in our governmental structure. It is essential that the quasi-judicial agency understand and maintain its proper position in the governmental scheme. The NLRB was created by Congress to ad-

minister a particular statute, the National Labor Relations Act. Its members are appointed by the President and confirmed by the Senate. The funds which we spend are appropriated by Congress upon the recommendation of the President. Our personnel policies are regulated by law and supervised by the Civil Service Commission. Thus, we are in a sense a part of the executive, but this primarily is a housekeeping relation-ship. In our substantive function, we are an instrument for effectuating the will of Congress as that will has been embodied in the statute which we administer. Congress alone has the power to alter or abolish the statute, or to alter or abolish the Board. A quasi-judicial agency occupies a position of public trust, the sole obligation of which is to faithfully implement the will of Congress as it is embodied in the statute which gives it life. This means that there is no more place in a quasi-judicial agency for partisan politics than there is in our Federal courts. The decisional policies of a quasi-judicial agency should not be affected by election returns, except to the extent that political shifts may bring about amendments to the law which we administer.

A quasi-judicial agency is no place for a man who conceives of his position as a vantage point from which to advance the interests of any political party or the special interests of any pressure group. A public member of a quasi-judicial agency has taken a solemn oath of dedication to the public service, and he must foreswear all other goals. This thought is expressed by Walter Lippmann in his recently published book, The Public Philosophy, in the following terms:

The constitutional mechanisms have never themselves been sufficient to protect the executive. And much invention and reforming energy have been applied to finding other ways to insulate the judicial, the executive, and the administrative functions from the heavy pressures of 'politics' and 'poli-The object has been to separate ticians.' them from the electoral process. The judictary must be independent of fear and There must be no connection between the judgment of the courts and the election returns. The civil service, the military services, the foreign service, the scientific and technical services, the quasi-judicial administrative tribunals, the investigating commissions, the public schools, and institutions of learning should be substantially independent of the elections. These reforms were inspired by the dire effects of the spoils system, and they were pushed as practical remedies for obvious evils.

"Yet implicit in them there is a principle which if it can be applied deeply enough, gets at the root of the disorder of modern democracy. It is that though public officials are elected by the voters, or are appointed by men who are elected, they owe their primary allegiance not to the opinions of the voters but to the law, to the criteria of their professions, to the integrity of the arts and sciences in which they work, to their own conscientious and responsible convictions of their duty within the rules and the frame of reference they have sworn to respect."

This is a long quote, but, try as I might, I could not leave out one word. To some this may sound like a sterile concept; to me it expresses a fundamental principle of Government.

I have said that a quasi-judicial agency must accept the natural and legal limitations on its capacity and authority, that it must be impartial, that it must be judicial, and that it must be independent. I have not said that it must be expert in its particular field, because I consider expertness an attribute which is desirable but not essential. Moreover, "expertise," which is nothing more than specialized knowledge and experience, will necessarily be acquired by the

quasi-judicial agency in the process of dealing with a particular phase of administrative law. I have said nothing about the virtues of honesty and diligence and intelligence for the reason that these qualities must be assumed to be present in a quasi-judicial agency which has the essential character which I have attempted to define.

But a quasi-judicial agency cannot approach the ideal of administering justice unless it deserves and wins public support, and by the public I mean a representative cross section of our entire body of citizens and not merely the particular groups with whom our activities are most directly concerned. The NLRB, as one quasi-judicial agency, is constantly beset on two sides by powerful and competing groups. These groups naturally have a keen continuing interest in what we do and are quite vocal in their comments and criticisms of what we do. This is their right, and I would not think of restricting it, even if I could. But I believe that it is fair to say that their attitudes are largely dictated by their own self-interest. Our courts have survived and grown in stature throughout our history because they have behind them the moral support of general public opinion. Unfortunately, our quasi-judicial agencies do not occupy this same solid position in the public mind. Yet, this is a status which we must achieve if we are to survive and acquire the judicial character of a truly public agency.

It is for this reason that I have welcomed the opportunity to speak to this group today, and it is for this reason that I invite public interest in our activities and public criticism of our decisions. We cannot, of course, expect public support unless we deserve it. But it is also true that, over the long haul, a public agency will be no better and no worse than the public expects and, indeed, demands. Unless there is developed and maintained a genuine public view of proper quasi-judicial function of the NLRB, it is not inconceivable that it will some day become a captive of one or the other special interest, or be abolished in favor of some alternative method of regulating labor disputes. I am resolved that by term as Chairman shall not contribute either to the capture or the liquidation of this important quasi-judicial agency.

Address by Hon. Herbert H. Lehman, of New York, at American-Jewish Tercentenary Civic Assembly

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered on March 20 at the American-Jewish Tercentenary Civic Assembly, sponsored by the Norfolk Jewish Community Council of Norfolk, Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY HON. HERBERT H. LEHMAN, OF NEW YORK, IN OBSERVANCE OF THE AMERI-CAN-JEWISH TERCENTENARY CIVIC ASSEMBLY SPONSORED BY THE NORFOLK JEWISH COM-MUNITY COUNCIL, NORFOLK, VA.

It has been a long time—more years than many of you in this room can remember—since I have been in Norfolk. But I am glad

for the opportunity to come tonight to this fine southern city, one of the great seaports of our eastern shore, and to meet with the leaders and members of the Norfolk community.

Like all of you, I am a port city man. Some of my earliest and most unforgetable impressions as a boy are of New York Harbor and of the ships sailing into that harbor and up the broad bosom of the Hudson River.

And I have southern connections, too. My father and his brothers, who came to this country over 100 years ago, settled in Montgomery, Ala. They lived there for many years and sank deep roots there.

Most of my family were Confederates. I wasn't around at the time, but I heard from my mother's and my father's lips the stories of the privations, the suffering, and the tragic sacrifices of those days. My parents moved north after the end of the War Between the States, and I was born in New York, but I have always had a sense of special kindship and sentimental attachment to the part of America below the Mason-Dixon line.

My friend and colleague, Senator LISTER Hill, often calls me the third Senator from Alabama.

My father and his brothers came to this country from Germany in the late 1840's. They came as refugees—refugees from tyranny; refugees seeking and loving liberty. For them America was the land of their aspirations; a land, though alien to their tongue, completely native to their dreams and hopes.

I think the same can be truly said of most of the hundreds of thousands and millions of immigrants who have come to these shores, in the distant past down to the immediate present.

Tonight we observe the 300th anniversary of the first arrival in this country of a special group of immigrants—those of our own faith—that hardy group of 23 Jewish refugees who set foot on the island of Manhattan in September 1654.

They came from Brazil, seeking home, asylum, and freedom of worship.

Manhattan was then, of course, part of the Dutch colony of New Amsterdam, presided over by the redoubtable Gov. Peter Stuyvesant. Governor Stuyvesant regarded these new refugees with distrust and dislike. He ordered them straightaway into jail and sought permission to expel them from New Amsterdam—permission from the Dutch West India Co., which exercised most of the powers of sovereignty over the colony.

But the West India Company decided that the Jewish refugees should not be expelled, but should be permitted to remain as long as they did not constitute a burden upon the community.

It was not an easy prospect. This little group faced prejudice and discrimination; but they had known these evils before. They had to win, one by one, the rights which we take completely for granted—first, the right to hold their own religious services and to have their own burial ground, then the right to enter business, and then to own their own homes.

The most vital barrier was breached only a year after the arrival of the 23 by a young man whose name deserves to be remembered in history, Asser Levy. He secured for himself, and then for his fellows—the right to Join the common militia, and bear arms in the common defense—a right generally denied to Jews, not only in New Amsterdam, but throughout the civilized world.

The willing, and even anxious, acceptance of the common obligation of military service led to the grant of common rights; only 2½ years after their arrival, the Jews of New Amsterdam were accepted as equals among equals. They won not only acceptance but inclusion—inclusion in the rights

and obligations of common membership in the community at large.

Such were the beginnings of the Jewish community in America. In each of the 13 American Colonies the story was, of course, different. In many, the progress toward the achievement of equal rights and full citizenship status was slower and more arduous. But ultimately the goal was won, and Jews were accepted as full members of the community of America, distinct in faith, but undistinguishable in the eyes of the law.

Those early Jews, and those who came later, played their sufficient part—and more—in the dramatic story which is the history of America.

They worked, they saved, they fought, they built, they invented, they dreamed, and they created. This was freedom. This was America.

For our contributions we Jews ask no gratitude of America. Instead we are and must be the grateful ones—grateful for the opportunities which have been here given to us and to all others. It should be a source of deep pride to us that we have been able to transmit to our country and to the whole civilized world the ethical and spiritual ideals that have come to us through the centuries.

There is a wonderful continuity to the ideals to which Israel has adhered thoughout the ages. Judaism has a history which is characterized throughout by a deep yearning for liberty—a yearning which sprang from its own bitter experience. Jews seek in spiritual and historic terms not as theorists, but out of the pain of countless generations who have remembered the injunction to bring freedom, justice, and peace to all men even as they themselves were brought to freedom out of bondage in Egypt.

Yes; we, as Jews, must be proud of our ancient traditions, as we, as Americans, must

be proud of our national history.

But both as Jews and as Americans, we have a special obligation to live and work, and to sacrifice, if need be, for the maintenance of those traditions, both ancient and modern. We have a special duty to reflect in our daily lives, a true dedication to the ideals of both the ancient Prophets who enunciated our faith, and of the early Patriots who founded our Nation.

We must never forget that of which we will soon be reminded by the Passover—that our spiritual forefathers escaped from bondage, with the Lord's help and guidance, and wandered for many years until they found, at last, asylum in the Promised Land.

And, so, to the fathers of our country—and our actual forefathers—came here as refugees from religious, political, or economic oppression. And here in America they reenacted the age-old drama of finding the promised land.

In view of these traditions, let us bear constantly in mind the Lord's injunction, repeated again and again in Exodus and Leviticus, but best phrased in the 33d stanza of the 19th chapter of Leviticus:

"If a stranger sojourn in your land, ye shall not vex him. But the stranger that dwells with you shall be unto you as one born among you, and thou shalt love him as thyself; for ye were strangers in the land of Egypt."

As Jews, this is our mandate; as Americans it is also our mandate. It was so understood by the early Americans, who founded our Republic, who were steeped, as we are no longer steeped today, in the wisdom and the morality of the Biblical prophets.

George Washington said in 1783:

"The bosom of America is open to receive not only the opulent and respectable stranger, but the oppressed and persecuted of all nations and religions: whom we shall welcome to a participation in all our rights

and privileges if by decency and propriety of conduct, they appear to merit the enjoyment."

Today we have departed far from these injunctions and principles. We have indeed rejected our bold and courageous traditions, in favor of selfish and narrow fears.

I refer, at this point, to our present-day immigration laws " " laws which not only establish unreasonable limits on total immigration, but cruelly discriminate among would-be immigrants on the basis of national origin and race.

Our present-day immigration laws establish myriad obstacles and hazards not only for the would-be immigrant, but even for the casual visitor to our shores—the tourist, the scholar, the scientist, and the student.

Our laws presuppose that every alien is a potential spy, saboteur and criminal—an assumption which is never wholly removed, even after the alien arrives here * * * even after he becomes a naturalized citizen of the United States.

Our laws for admission and exclusion of aliens clearly reflect this assumption. Our laws for deportation are based on the same principle.

Only last year and until very recently, our Government was clapping allens in Jalis—alongside criminals and derelicts—alien visitors and would-be immigrants alike—if there was any irregularity in their admission papers, if there was any question, doubt, suspicion or technical error in their elaborate documentation.

How repugnant this is to our traditions. When Gov. Peter Stuyyesant treated the 23 Jews who arrived at New Amsterdam 300 years ago in this manner, he was quickly reproved and overruled by higher authority.

In this respect, how far have we come in these 300 years? Or how far have we gone backward in the last 10 years?

In that day, 300 years ago, the Jews who arrived at New Amsterdam were, within 2½ years, granted full and inalienable rights as citizens of the colony.

Today, under our laws, every naturalized citizens is, in major respects, a second-class citizen. His American citizenship can be revoked for the performance of acts which a native-born citizen can perform with relative immunity.

Even a native-born citizen can lose his precious American citizenship for acts which are of relatively minor significance or of no significance at all.

A native-born American citizen named Andrew R. Jones, who was born in Texas, was deemed recently to have lost his American citizenship because, while living in Mexico, he took a job with the Mexican National Railway, which is owned by the Mexican Government.

On my desk in Washington, right at this moment, is the case of a woman—an American citizen—who went to live for a time in Trinidad, an island in the Caribbean. While there, she voted in a local election in her community—an election having to do with the improvement of sanitary facilities and roads in her locality. She, too, has been ordered deprived of her American citizenship—the most precious right any of us has or can have—more precious, in my judgment, than life itself.

If the ruling in this woman's case is upheld on appeal—and under the McCarran-Walter Act, it probably will be—that woman will be without a country, without nationality. For this law does not merely take from an American citizen the rights of citizenship. It strips him entirely of his American nationality.

I have cited just a scattering few of the incredible evils built into our immigration and nationality laws. There are many, many more. They are immoral, unjust and cruel.

Moreover they reflect senseless contradictions. The national origins quota system is based on the absurd theory that we should restrict admissions into the United States today to a composite group reflecting precisely the same proportion of national blood strains that existed in America in 1920.

Of course, the theory, itself, is repulsive to the spirit of America. But it doesn't work, in any event. It doesn't work because Great Britain, which under the national origins quota system, is given almost half the total quota of admissions into the United States, is no longer a significant source of immigration. The British don't want to emigrate to the United States today.

Most of those who do want to come to America, and who do succeed in surmounting our own Iron Curtain—or rather our red tape curtain—are from Italy, Poland, Austria, Norway, Holland, Greece, and other similar countries in Europe. But the national origins quota system restricts admission of persons born in those countries to a relative handful.

While we have erected this ponderous barrier of racial and national restrictions against legal immigration from Europe—so that a bare 100,000 are admitted annually—the gates are open wide for illegal immigration across the Mexican and Canadian borders.

According to official estimates, more than 2 million illegal immigrants entered the United States in 1953 across the Mexican border—2 million illegal immigrants from Mexico alone—with no screening of diseased, criminal, and subversive elements.

One hears very little outery of alarm in Washington over this phenomenon against this illegal flood which provides cheap labor for the big plantation farms of the South, Southwest, and Northwest. No, the outery is against any liberalization of our immigration laws which would permit the entry of a few additional worthy qualified and appropriately screened and selected immigrants from Europe and elsewhere.

My friends, there is no more urgent task than that of revising and overhauling our immigration and citizenship laws: to make them conform to the traditions of America and to the principles of decency, humanitarianism, and justice.

I would emphasize here, just in case there is any question about it, that immigration is not a problem of selfish interest to Jews.

The number of Jews in non-Soviet Europe who need and want to emigrate to the United States is extremely small. There may be ten thousand, perhaps, who want to come to the United States and would come if our laws permitted it. Most of that number are refugees and escapees—long-time victims of religious and political persecution and discrimination.

These few are but a minute part of the large number of Europeans who critically need to find homes, freedom, and opportunity in other parts of the world. A reasonably limited number of these should be admitted annually to the United States—on the basis of their need, and of ours.

So let no one think that we as Jews are interested in this problem because we want to bring Jews over to this country. Our interest stems from a higher motive: from our noble and ancient traditions—and from our recent traditions as Americans—the traditions of justice and of humanitarianism. We believe, as Jews and as Americans, that discrimination based on national origin is an evil thing and that prejudice and fear are ignoble sentiments which do not befit us and which do, in fact, demean and endanger us all.

We believe in the tradition of hospitality. We believe in America. We believe that Americanism is not in the blood stream, but in the life-giving air of freedom which we breathe in this land of ours.

Our Judale tradition reflects, in all its parts, a fierce and unyielding faith in freedom, in the equality and dignity of man, in the sanctity of the law, and in equal justice under law for every man.

This tradition is also, happily, the tradition of America—indeed, it is the tradition of all that is best in western culture and civilization. And this is another great tradition which we have need to translate more accurately into our daily practice than we have in the recent past.

The national wave of hysteria which was called McCarthyism was a direct departure from this tradition. It was a violation, even a rejection of that tradition, and of our faith in freedom. It reflected a loss of faith in our fundamental values. That hysteria betrayed a lack of courage to face the difficult and dangerous problems of the present day.

As a nation, we seemingly forgot, for a time, that the strength of freedom and democracy lies in its very tolerance of unorthodoxy.

"If there be any among us," Thomas Jefferson said in his first inaugural address, "who would wish to dissolve this Union or to change its republican form, let them stand undisturbed as monuments to the safety with which error of opinion may be tolerated where reason is left free to combat it."

How different this spirit of tolerance is from that shown in the recent past by some of the investigating committees of the Congress!

Of course, I do not advocate tolerance toward overt acts or conspiracies against the safety and security of the United States. Those must be detected by the duly constituted police and punished with the full, unremitting vigor of the law, in the courts of the land.

We must, of course, be eternally vigilant against sabotage, espionage, and genuine subversion. The Communist conspiracy must be effectively dealt with, under law, subject to the principles of our Constitution.

But in my judgment the forces of Mc-Carthyism did as much damage to America during the last 5 years than anything the Communists have ever hoped to achieve with their vile, vain plots, and projects.

The forces of McCarthyism raised the banner of fear in every corner and cranny of America, in every school and library, in every assemblage of public officials, in every Government office and outpost. They poisoned the wells of American politics, with the suggestion that the whole Democratic Party was soft toward communism, and even guilty of treason.

These evil forces divided America not on the real issues of the day—the most urgent ever faced by America in all its history—but rather on the question of who was loyal and who wasn't, who was a person to suspect of softness toward communism—and who wasn't.

They made American championship of the cause of freedom a cruel joke throughout the free world. In the eyes of a good share of mankind, McCarthy became the dominant figure in America.

Senator McCarthy has been eclipsed—temporarily, at least—by the action of the Senate in censuring him last December, and by the action of the American people in electing a Democratic majority in Congress, thus automatically depriving him of his committee chairmanship.

But the forces which raised McCarthy to such eminence in America and the world are by no means defeated. They seem, for the moment, on the ebb, but they are still strong and pervasive. Their effect and influence are still evident in every phase of our national life.

The widespread pall of fear is far from lifted. It still hovers over us. Few men in public life or in government employment,

or even in private life, dare yet to act, to write or to speak without adjusting their acts, their writings or their words to the present-day atmosphere—the atmosphere of apprehension, lest they be charged with being soft toward communism.

Basic questions of foreign policy—our attitude toward China—cannot be candidly and reasonably discussed because of this atmosphere. And there are scores of similar issues where the same thing is true.

It is our task—the task of all of us—to clear this atmosphere and to tear down the curtain of fear which hangs between us and the true ways and practices of freedom.

This is our task above all others. And we of the Jewish faith have a special challenge in this regard. As the guardians of the great tradition of the prophets, as men and women who know from the history of our people the meaning of fear, hate, prejudice and hysteria, we must be in the forefront, in common ranks with all freedom-loving Americans, in the eternal struggle for the sacred cause of freedom.

Difficulties must not daunt us. The strength of the opposition must not frighten us. Concern for our own safety and welfare must not impede us.

We must dedicate ourselves to this holy cause, God's cause—the cause of liberty and of human dignity.

This is the challenge of this tercentenary. This responsibility we dare not shirk. We do not ask the Lord to be on our side. Let us be on His side. Let us then proceed, with strong and active faith, to the tasks before us.

Florida Leads the Way

EXTENSION OF REMARKS

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES
Wednesday, March 30, 1955

Mr. HOLLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a most interesting speech made on March 19, 1955, by Maj. Gen. S. D. Sturgis, Jr., Chief of Engineers, United States Army, at the dedication of the largest low-level and largest self-powered pumping station in the world, near West Palm Beach, in the central and southern Florida flood-control district. This great station can handle over 2 million gallons of water a minute

Major General Sturgis is a man of great ability and energy, and is serving our Nation in the highest and best traditions of the Corps of Engineers. We in Florida are grateful to him for his leadership in connection with the cooperative central and southern Florida flood-control project which, in addition to protection of life and property, will make possible ultimately by substantial additional local investments, both public and private, the full development of 2 million acres of rich land in the winter garden of the Nation, to the benefit of all the Nation. We are happy that General Sturgis took time from his busy schedule to help us dedicate this large and important structure.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FLORIDA LEADS THE WAY

I am indeed glad to be here to join with you today in observing a most important milestone in the progress of the development of the central and southern Florida flood-

control project.

A few hours ago there occurred at Belle Glade a bond-burning ceremony which marked the end of the evergiades drainage district, whose program although wholly non-Pederal was a worthy predecessor of your present undertaking. For almost half a century that district fought the swamps, building hundreds of miles of canals, wresting out thousands of acres of rich land, and providing homes and livelihoods for some 50,000 people. Now you people are striving alone no longer. You are joined in a grand Federal-State-local coaliation against a relentless and hostile nature.

It is an honor to be able also to join you in public recognition of the outstanding work of the stalwarts of both organizations, old and new-to men like Bert Cole, chairman of the everglades district; to W. Turner Wallis, secretary of the new district, Fred C. Elliott, former chief engineer, Bee Arnold, general manager, and Elgin Bayless; to public-spirited citizens like Ralph Blank, a veteran leader in the flood-control fight, and Luther Jones of the State chamber of commerce; to legislators like Ted David of our host committee, and his colleagues at Tallahassee; to Gov. Leroy Collins; and to those great citizens not only of Florida but of the United States, Senator Spessard L. HOLLAND, legislative father of our Federal project, and Senator George Smathers.

Here in southern Florida the Nation is blessed by a potential treasure house of fertility. Vast areas have remained a wilderness solely because of the problem of controlling the waters. Today the Nation needs increasing access to their potential wealth and the protection of inhabited, productive developments. Our population is growing; our arable acreage is shrinking. We need the stability, the security from recurrent natural havoc, which will permit this great State to make its fullest possible contribution to the national economy.

For almost a century, the people of Florida alone grappled with the problems of this region. Because it is a region almost unique in America, they had little precedent or parallel to guide them. Drainage and flood-control work began as early as 1881. Great progress has been made since the Everglades Drainage District was created in 1905. Through that one agency, more than \$18 million have been invested; in addition, at least a dozen subdrainage districts and many individual landowners have contributed additional financial efforts toward the taming of the area.

Yet time and again nature has seemed to mock all human efforts. In September 1926, hundreds were killed and thousands more injured or left homeless by hurricane and flood. Two years later another disaster took 1,810 lives, injured 1,849 others, and in Palm Beach County alone, caused \$10 million worth of damage. In 1947 property losses were estimated at \$59 million, even though our levees at Lake Okeechobee held firm against the wind tide, keeping lake waters from adding to the losses.

These disasters roused Floridians to greater effort. And at length their faith in themselves and in their land brought the people of all America to their side as allies in construction of the central and southern Florida project.

This project is a demonstration of how, by skillful, forethoughtful planning, flood control and major drainage projects can be designed to provide a full range of water-related benefits and services. It will ultimately make possible the fuller development of 2 million acres of rich land—an area

greater than that of several Eastern States combined. It will permit higher utilization of urban property. It will aid navigation, provide irrigation, preserve fish and wildlife, help control salinity, aid materially in recharging underground reservoirs for municipal water supply, and provide recreation—all in addition to the primary benefits of flood control and drainage.

Today's ceremony, coming only 2 years after the dedication of the levees near Miami, offers visible proof, if any be needed, of the project's steady progress. The pumps in this ordinary-looking structure will help the West Palm Beach Canal to remove floodwaters at a rate of three-quarters of an inch a day from 230 square miles of rich agricultural land by pumping water out of the canal into the conservation area.

The project was conceived on a vast scale, even in this age of great undertakings. When finished it will include some 500 miles of canals—enough to reach from Tallahassee to Memphis. It will include 800 miles of levees—enough to reach from Tallahassee to Kansas City, Detroit, or Trenton. It is indeed one of the greatest and most complex water-resource development undertakings of our time.

It is a well-planned development which can provide many benefits because the people of this State wisely provided for comprehensive development from the outset, and saw to it that the authorizing legislation was broad enough to cover the full range of potentialities.

Of the costs which have so far been allocated, you people of Florida are paying about 40 percent. The costs of the second phase of the project have not yet been allocated. Your substantial contribution has helped win approval for your undertaking from the Nation at large, for the Congress and the general public has now come to feel that willingness of local interests to invest their own money is a desirable measure of a project's worth, and, more and more, appropriations are related to the degree of local support given—not only as regards authorization but in determining priority of annual appropriations.

Just as the Corps of Engineers represents the Federal Government in this undertaking, so the State is represented by the Central and Southern Florida Flood Control District, created by the State legislature to act for the people of Florida in all matters relating to the project. This is the agency through which your share of the costs is contributed. It provides the necessary lands and relocations. It will be responsible for the operation and maintenance of the completed works. The establishment of this agency by your State legislature and the appropriation of funds for its operation has been and continues to be a vital, indispensable element in the project effort.

The central and southern Florida project may well prove to be historic-one of the pivotal projects which, in addition to their direct benefits, by example point the way to further progress in the field of water-resources development. During recent dry years, even normally humid regions are becoming increasingly concerned over prob-lems of water supply. Here, by demonstrat-ing the feasibility of comprehensive full-range undertakings within the framework of existing flood-control and major-drainage authority, by providing invaluable engineering experience in this two-way type of problem, and by helping establish patterns for adjusting the complex problems of Federal and local cost sharing in projects of this kind, we may well be discovering the means of helping many another region to realize its full potential production for the strength of our Nation.

Thus the central and southern Florida project ranks with the foremost developments of its kind in America. I assure you that the Corps of Engineers fully shares your eagerness to work out solutions to all impending problems and to keep the program moving on its schedule toward completion. I am immensely impressed at the evidence of new growth and progress I find each time I visit this area. With the State government, the local agencies, and the people of Florida helping to set the pace, the Corps of Engineers will continue to advance the project to the maximum extent permitted by the availability of funds in order that you good people here, the State and the Nation will reap manifold benefits just as soon as possible which will continue increasingly, year after year, for generations to come. Thank you.

John W. Davis

EXTENSION OF REMARKS

HON, HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES
Wednesday, March 30, 1955

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an eloquent tribute to the memory of John W. Davis, delivered by Eric Sevareid on the CBS radio network last night, March 29, 1955.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. John W. Davis was buried vesterday at the age of 81; another of the dwindling group of towering Americans from a past age of event; great men, like Henry Stimson, who never achieved the pinnacle of public life, the Presidency, when lesser men did; men whose dedication to their country was whole-souled, nevertheless, and for whom the supreme frustration of personal ambition never deflected them away from public services of a monumental nature. The small band of true elder statesmen is dwindling still smaller; their counsel will one day soon be entirely lost, and sometimes one wonders how and when they are to be replaced. This may be illusion, but it always seemed to they represented an influence in our public affairs fundamentally different from the mental and emotional promptings of most men now of the prime and middle age. Because the men like Davis and Stimsonone could add others, like Learned Hand, or the poets Sandburg and Frost-were formed, in their minds, in a quite different

Their views of life were rooted in the long American past, anchored in what seemed to be rock; their principles of conduct and action, their faith in the American vision, were matured before the First World War. which began the present process of anarchy in personal and public principle; nearly all who have matured since that first world slaughter matured in doubt and the shortterm view. They matured in faith and the long view. On behalf of their eternal principles of the free mind, they would join no hasty rationalizations in the misused name of security; they would today, I think, in the face of possible war in Asia, look to the lessons of history, not to the alleged compulsions of strategy, where so many lesser men direct their eyes.

There were eternal verities for a man like John W. Davis and one was the meaning of the American Constitution. He was probably the greatest constitutional lawyer of his time; and he would, if his verities were involved, defend a so-called security risk other men would shun, or even an acknowledged Communist.

Always, the principle was the thing, not the individual, not the pressing needs of the harried present, nor the fleeting charms of popularity. Such men would not bow to the Icons of public opinion, knowing the majority can be wrong; one cannot quite imagine them scrutinizing the public opinion polls, sending careful trial balloons into the air to see where safety lay; or surrounding themselves with ghost writers weighing each calculated word to offend no possible pressure group. They proceeded from principle and hoped the needs of the moment would fit; they did not proceed from the needs of the moment, inventing or adjusting principle as protective coloration.

Such men had a positive effect on their country's course, beyond, sometimes, the influence of those who had taken the great offices in their stead. One wonders, somewhat the course of reconstruction would have been, that period of public disease, had Horatio Seymour not lost the Presidency to General Grant, so vastly in-ferior to Seymour in intellect and vision, One wonders what would have been our course through the frantic twenties, ending in the depression collapse, had John W. Davis not lost the Presidency to Calvin Coolidge, who sat on the White House porch and rocked, impervious to a new idea. Those are the might-have-beens of history, indication in themselves of how wrong the majority can be.

But Davis' life and works were not mighthave-been in themselves. Private life did not frustrate the great lawyer; his works were many, important, and the country is the better for his long and enviable life.

Refugee and Migration Problems

EXTENSION OF REMARKS

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Wednesday, March 30, 1955

Mr. IVES. Mr. President, Hon. Edward Corsi, special assistant to the Secretary of State on refugee and migration problems, recently spoke at the 25th anniversary luncheon of the National Council on Citizenship and Naturalization at the Hotel Astor in New York City. Over the years Mr. Corsi has served with considerable distinction in a number of positions of important public trust. He is very highly regarded and respected by those who know him in New York State.

I commend to my colleagues Mr. Corsi's remarks relative to the refugee relief program under the Refugee Relief Act of 1953, and I ask unanimous consent that his address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WELCOMING HAND

(Address delivered by Hon. Edward Corsi, Special Assistant to the Secretary of State on Refugee and Migration Problems, at the 25th anniversary luncheon of the National Council on Citizenship and Naturalization, Hotel Astor, New York, N. Y., March 18, 1955)

I have known and worked with the Council on Citizenship and Naturalization since its foundation 25 years ago. Mrs. Ruth

Murphy, its founder, was then a shy youngster with her eyes on worlds to conquer and the movement she inaugurated was destined to make history in the field of naturalization and citizenship.

If I am not mistaken, it was at about that time that the Immigration and Naturalization Services were wedded into a single agency and, here in New York, I was the minister who performed the ceremony.

It was at that time also that the favorite sport hereabouts was to take potshots at the Naturalization Service. I remember there was a director of the service by the name of Sturgis who was literally driven mad by applicants, Congressmen, newspapers, and other interlopers who would not let up on the poor fellow no matter how hard he tried. I mention this in the way of consolation, if any is needed, for present-day commissioners of immigration, administrators of refugee acts, and Special Assistants to the Secretary of State.

We live in a troubled world and, while our voluntary agencies have done much to create better understanding between Government and those who are served by Government, the pains, the frustrations, and the irritations of this world are reflected in the job you and I must do.

When I was a young Commissioner at Ellis Island, we knew just one word: "alien" or "aliens."

They used to tell an amusing anecdote concerning that much-abused word. It had to do with an immigrant inspector hunting for deportable allens in the peaceful counties of upstate New York. The inspector called at a home for the aged and inquired: "Any allens here?" To which a surprised superintendent replied: "Sir, they are all alling here."

Now we have added to the vocabulary of the profession, besides "alien," other appellations more professional even if more contusing: refugee, escapee, expellee, DP; and along with these novel terms a whole conglomeration of alphabetical designations of agencies in the field which baffle even the most expert in the business: ICEM, USEP, RRP, UNHCR, not to mention the identifying tags of the voluntary agencies themselves with which you are better acquainted than I am.

Back of these designations and these terms, however, is the grim story of two world wars in one generation—of the butchery of millions of innocents, the destruction of towns and homes and the wholesale uprooting of humanity by wars, revolutions,

and sheer human idiocy.

The human material with which you and I are mainly concerned today is not immigration as we understand it a quarter of a century ago—the mass of peasants and artisans who poured in endless streams through Ellis Island at the turn of the century. Those were immigrants who had homes and roots in their native countries. What they sought was a better job and greater opportunity for their energies. What we are concerned with today are frustrated men and women without homes and without countries; in other words, the victims of war and persecution who seek freedom and the chance to start their lives over again in a climate of decency and respect for the human person.

These millions are more akin to the political refugees of early America than to the latter day immigrant of my time, who was an economic rather than a political or religious exile. The immigrant from Italy or Greece or Poland at the turn of the century wept as he left his native village on his way to America. While he was eager for adventure and opportunity, at the same time he was reluctant to abandon the hearthstone of his ancestors and the country that he loved. But the refugee of today is homeless, stateless, and friendless. He has nothing to leave behind for which he may shed

a single tear except, perhaps, the memory of loved ones dead in concentration camps, on the battlefield, or in hunger marches on the way to exile and dispersion.

It is with these 38 million people, their future, their resettlement, their integration in new environments and new societies that we are greatly concerned, not only as a matter of humanity but as part of an enlightened foreign policy of peace and security in the world; and, I might add, we are concerned with these people as fellow fighters in the cold war against Communist tyranny in the world.

The story of what America is doing, at home and abroad, to alleviate the plight of these unfortunates should be better known even to many of us who devote our energies to the problems of immigration and resettlement.

The equivalent of \$200 million has already been spent through the foreign-aid program in Germany, Austria, Greece, and Turkey to provide relief to the refugees and facilitate their integration within these countries.

The United States Government is spending now, for the fiscal year 1955-56 the sum of about \$40 million on a dozen national and international projects for the relief of refugees, escapees, and other victims of war and persecution in all parts of the globe. This is exclusive of funds used for related purposes through the regular agencies of the State, Justice, Health, and other Federal Departments contributing to the admission of immigrants to the United States.

These millions are spent on the feeding, housing, caring for the health and welfare of refugees, escapees, and expellees throughout Europe and Asia; they are providing the transportation across the seas, and from country to country, of uprooted men and women on their way to new homes; they are helping to stimulate the flow of migration from the overpopulated countries of Europe to the underpopulated and underdeveloped lands of South and Central America, Africa, and Australia; they are training workers for new jobs and new assignments in countries of immigration; they are providing schools, nurseries, clinics for orphan children or the children of refugee families; finally, they are providing new hope for many who otherwise would rot in the slums and the camps of Europe where there is no hope and no future for them, except a bare subsistence at the hands of government or private charity.

Along with money, America is providing the leadership and the know-how for the constructive solution of the problems of the displaced in the modern world. Thousands of businessmen, leaders of government, social workers, educators, religious teachers are dedicating their lives to the rehabilitation of these people. The ILO, UNESCO, and other national and international agencies. to which we contribute generously, are having a direct impact on the refugee and migration area through providing employment services and training in surplus population groups and improving educational facilities. FOA, ICEM, UNRWA, UNICEF, UNHCR, provide the means of resettlement, integration, and employment of the displaced and his family in all countries of the earth; and in Korea, in Indochina, in the Near East, in Europe and in the Americas, these agencies are busy reconstructing the peaceful fabric of our society and helping rebuild a new world.

Here at home, we have added to the regular flow of quota immigration a special act opening our doors to 214,000 refugees from all over the earth. I refer to the President's Refugee Relief Act of 1953 in which I know you are all interested.

The vicissitudes and travails of this act since its birth a little over a year and a half ago are too well known to be discussed here; and there is no sense of harping on the past if we are to move ahead and get the program on the rails before the bell rings.

From the President down, there is every intention to make good on this act and, unless I am too naive to know what is going on, I can assure you that we will make good on this act; and that, given the public cooperation we need, we will bring in, if not all, at least most of the 214,000 beneficiaries of the law before the law expires in 1957.

I am not resting this optimism on mere hopes and guesses but on what is going on right now in Washington and in Europe in the way of administrative and policy im-

provements to get results quickly.

I am sure you will be glad to know that we have approved a \$16 million budget for the fiscal year 1955-56, which means personnel and operating expenses to handle a full flow of the migration contemplated by the act.

We are preparing to triple our Army investigating staff in Germany by the next 3 months. We have that much new personnel in clearance in Washington now. Sixty additional Army investigators will be in Germany by the end of the month.

We are prepared for necessary staff increases in Italy, Greece, Austria and elsewhere in Europe to meet a full caveload of assurances and applications as they come in.

The Secretary of State and the administrator of the act have already approved administrative changes in field operations in Europe which will be put through shortly and which will greatly speed up and restore confidence in the program, in Germany especially.

We have interpreted the act in liberal terms to encourage greater cooperation between the voluntary agencies and the administration.

We have begun the pre-processing of applications so as to be ready for additional assurances as they come in.

Only yesterday, instructions went out to our Embassy in Rome for the establishment of consular facilities in Trieste to handle the issuance of visas on the spot in that area.

In Italy, the Italian Government is now at work to give us, in cooperation with our own Labor Department, a reliable occupational census of the pool of refugees in that country. We are planning the same for Germany, In Greece and in Austria, we are already in view of a completed program well ahead of the 1957 date when the act expires.

I mention these items to dispel the gloom which surrounds the operations of the act and to dissipate the rumor in certain quarters that our Government has no intention of making the ack work but is simply going through the motions to make people think it

Is working.

I referred a little while ago to the past and I said something about things being different. Among the things that are different today from the things of yesterday—when I came through Ellis Island in the days of uncontrolled mass immigration—is the welcoming hand.

The hand that greets the newcomer today is a little warmer than it was yesterday.

And it is a little warmer because of our social and religious agencies—high among them the National Council on Naturalization and Citizenship.

Trade Program in Peril

EXTENSION OF REMARKS

HON, FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following address by the Honorable

ALBERT GORE, in New York City, before the Committee on Foreign Trade Education, Inc., upon the occasion of the receipt of the annual Cordell Hull award:

Mr. Chairman, ladies and gentlemen, to be chosen for the Cordell Hull award of the Committee on Foreign Trade Education is an honor which has a special significance for me. I have known former Secretary Hull since my boyhood in the little town of Carthage, Tenn. I guess that if I had a real idol, as a boy, that idol was Judge Hull. He was the Congressman from my district, and I have a very vivid memory of the times I used to sit on the grass in front of the court house in Carthage and listen spell-bound, as Judge Hull talked about national and international affairs. Later, when I began to have ambitions of my own, Judge Hull was kind and generous enough to encourage me. He is still my ideal of what an American statesman should be.

In my opinion, one of the greatest contributions Cordell Hull made to the prosperity of the Nation was his conception of what expanded international trade would mean. When Judge Hull became Secretary of State in 1933 our economy was in such a serious decline that it was obvious that some emergency action had to be taken. We and other nations of the world were hiding behind high-tariff walls and trying to outdo each other in erecting barriers to international trade. As a result, the 2-way flow of goods so necessary to economic life and vitality had practically ceased, and our international commerce had become stagnant. Unsalable surpluses piled up, arteries of trade became choked and clogged, and millions of men became hungry and desperate. Our farmers and workers needed jobs, and they needed markets for the output of their labor.

In searching for a cure for this atrophy of commerce, Judge Hull lifted his sights above the ordinary petty squabbles of the domestic market place. He sought to develop new markets abroad which would absorb our surplus production. But he knew that to sell abroad, we must be willing to buy from abroad. So he came forward with the idea of making agreements with other countries to lower some of our trade barriers to their products, in exchange for agreements by those countries to open some of their markets to us.

The basic formula worked so well that it is still in effect. The reciprocal-trade program that Judge Hull gave us is still good—but to remain a living, vital force for the expansion of our economy, it must be liberalized somewhat to take into account present-day situations. Even the best of programs must be kept abreast of the times, must be nourished from time to time with new enthusism and new ideas.

President Eisenhower has asked the Congress to extend the life of the program for another 3 years, and to make some very moderate improvements.

I am convinced that passage of H. R. 1 is the very minimum that should be done to bolster our sagging foreign trade, and to maintain the unity among free nations that we have achieved at such great cost. Failure to take this minimum step would signal a return to the protectionist policies which played a significant part in wrecking our economy in the early 1930's. More than that, it would seriously damage the grand afilance of free nations that stands with us as a bulwark against the spread of communism.

Last fall I went to Geneva as a United States delegate to an international conference on the General Agreement on Tariffs and Trade. While there I had an opportunity to talk to officials of dozens of countries. From these talks I got the impression that the whole free world was waiting to see what direction our international trade policy would take. I am convinced that any indication on our part of a return to protection-

ist policies would cause a stampede among other nations to raise their tariffs and erect any other protectionist barriers they can devise. For that reason alone, though there are many others, it is imperative that the President be given the new authority he asks under H. R. 1, without crippling amendments.

H. R. 1 has passed the House of Representatives, where it got by on a margin of one vote. It is now before the Senate Finance Committee. During the past few days I have been surveying the situation in the Senate. What I learned is most disturbing. The shocking truth is that as of now the President's program is in grave danger of defeat.

I know you are asking yourselves how it can be that this program is in danger of defeat if it is so important to our economic well-being, if it is so necessary to the strengthening of the free nations of the world in their fight against the spread of communism. I, too, have sought an answer to that question, and I think I have a part of it.

With the election of a Democratic Congress last fall it was assumed by most of those interested in seeing a liberalized foreign trade program enacted, that there would be very little difficulty in passing the President's program. But it appears we did not reckon seriously enough with the high-tariff lobby. That lobby has carried on a furious propaganda campaign against the trade program, while supporters of the program, for the most part, have failed to combat this campaign.

Supporters of the program should have been warned by the close vote in the House of Representatives that there was serious trouble afoot. But apparently that warning passed practically unheeded, and while those who favor an enlightened international trade program are snug in their complacency, the high-tariff lobby is busy trying to influence public opinion and win votes against the program with an insidious campaign of mis-information.

This is not the first time the tariff lobby has attempted to sell one-sided half-truths to try to block an enlightened trade program. That lobby has been in business a long time. Even in President Woodrow Wilson's day it was at work, and its efforts became so notorious that President Wilson felt compelled to issue a statement of warning to the country. Because I think that warning would be applicable today, I want to read what President Wilson had to say:

"I think the public ought to know the extraordinary exertions being made by the lobby in Washington to gain recognition for certain alterations in the tariff bill. Washington has seldom seen so numerous, so industrious, and so insidious a lobby. The newspapers are being filled with paid advertisements calculated to mislead not only the judgment of public men, but also the public opinion of the country itself. There is every evidence that money without limit is being spent to sustain this lobby and to create an appearance of a pressure of opinion antagonistic to some of the chief items of the tariff bill.

"It is of serious interest to the country that the people at large should have no lobby and be voiceless in these matters, while great bodies of astute men seek to create an artificial opinion and overcome the interests of the public for their private profit. It is thoroughly worth the while of the people of this country to take knowledge of this matter. Only public opinion can check and destroy it."

It is unfortunate that everything that President Wilson said about the tariff lobby in his day applies to that lobby today. It is unfortunate, too, that President Elsenhower has not emulated President Wilson's warning that the tariff lobby threatens the national interests. President Eisenhower must fight for the reciprocal-trade program and win the support of at least a few Repub-

lican Senators, or it will be defeated. So far the Senate has had only a tepid presidential message, and this seems to have had no effect upon Senators of the President's own political party who last year voted unanimously against the program.

Meanwhile, the lobby seeks to convince businessmen they are likely to be bankrupted by competition from imports, and it seeks to scare labor with the specter of unemployment caused by failure of businesses unable to meet import competition. But industries that really suffer from imports are decidedly in the minority, and in most cases only a few specialty lines in a given industry would have substantial difficulty meeting import competition. But the tariff lobby has tried to freighten all industry and all Members of the Senate by harping on the possible or imaginary plight of a few specialty lines. I insist that this practice has gone too far, and it is grossly misleading and dangerous to our country.

to our country.

Secretary of Commerce Sinclair Weeks, In testimony before the House Ways and Means Committee in 1953 stimated that 4.376,000 workers in this country owe their jobs to foreign trade. This is a very significant portion of our working force. Meanwhile, the Randall Commission, appointed by the President to study trade problems, estimated in a staff paper that only 202,000 workers might be adevrsely affected if all tariffs were suspended. Of course, H. R. 1 does not call for the suspension of all tariffs by any means. It only authorizes the President to make selective reductions in tariffs not to exceed 5 percent per year for the next 3 years. But to all of this, th tariff lobby is blind. It overlooks the serious impact a return to protectionism would have on more than 4 million persons whose jobs depend upon foreign trade.

The lobby runs heavy advertising campaigns in Washington newspapers, and now has set off a letter-writting campaign from the home State of each Senator. Some of the letters we receive from constitutents are no doubt genuine. But many more are obviously inspired by the tariff lobby. The lobby has gone to great pains to make the letters seem plausible and genuine, but after you read a few of them you begin to see the same ideas, phrases, and wording coming up again and again.

One letter I got is a prime example of what the lobby can do with its fear technique. This letter, well written and on the surface apparently plausible, came from the head of a very substantial business in Tennessee. The letter indicated this man's business was suffering seriously from import competition, and might be wiped out if H. R. 1 were passed. But what were the facts on imports of his product?

Well, imports were running at about \$13,-000 a year, but exports were more than \$800,-000. The tariff lobby had so misled and so frightened this businessman that he was ready to jeopardize an \$800,000 export business in order to cut off \$13,000 worth of imports. A good trade program would help this man expand his export market.

There you see the picture—the tariff lobby trying to frighten and enlist in its cause even persons who have a very great stake in passage of H. R. 1.

Because there are a few specialty lines in the cotton-textile industry which experience strong competition, the lobby has sought to convince Congress that the whole textile industry is in danger. Cotton-textile workers are one of the prime targets of the lobby. It has created fear of unemployment among these workers and played upon that fear in a most unpardonable manner. It has convinced many of these workers that they are slowly being driven out of their jobs by import competition. But what are the facts?

We produce cotton cloth at the rate of about 10 billion square yards a year. Im-

ports were about a half of 1 percent of that amount, or 50 million square yards, but those imports were far more than offset by exports of 600 million square yards. That is, we sold abroad 12 times as much cotton cloth as we imported. Cotton-textile workers have a very great interest in expanding those markets abroad so they can sell more of their product, and the authority granted the President in H. R. 1 would help to expand those markets.

Coal miners are another group to which the lobby's propaganda is directed. miners are told that the serious decline in the market for coal is due to imports of residual fuel oil from Venezuela. Now no one will deny that the coal industry is in a distressed condition. From 1947 to 1953 it lost markets for 155 million tons of coal. But during those same years the increase in use of residual fuel oil was equivalent to only 11 million tons of coal. So the coal industry must look elsewhere for reasons for the loss of markets for at least 144 million tons of coal. During this same period, coal exports declined by 35 million tons. Recapture of those export markets would answer part of the problem, and passage of H. R. 1 could very well facilitate that recap-

The chemical industry also presents a picture of unreasoned fear. It is one of our fastest growing industries, increasing production by about 10 percent a year as compared to 4 percent a year for all industry. Last year its production was worth about \$20 billion. Its exports were worth just under 1 billion, but chemical imports were valued at only about a fourth as much. In addition, imports are on the decline. Last year they were 15 percent under the 1953 level.

We simply must find same way to inform the public that it is being hoaxed by the tariff lobby; we must find a way to let the people know what is at stake, that their larger interest lies in an expansion rather than in a shrinkage of trade. Otherwise, the program may suffer defeat, and this great practical approach to greated prosperity developed by Cordell Hull will wither on the vine. Then the race to protectionism will start once again and international trade will stagnate. Our economy and the economies of the free world nations will suffer. I can think of nothing that would better suit the purposes of the Kremlin in Moscow.

Looking beyond congressional action on H. R. 1, there is still another important trade battle to be fought this year. On Monday our representatives signed at Geneva a series of agreements for revision of the General Agreement on Tariffs and Trade which was first negotiated in 1948. These revisions were agreed upon in negotiations with some 34 nations which, together with our own country, conduct about 80 percent of the international trade in the free world. One of the most important documents our representatives signed was an agreement which would set up an Organization for Trade Cooperation to administer the General Agreement. However, before this organization can become effective, it must be approved by Congress. And there, I suppose, we shall face another allout battle by the tariff lobby.

The General Agreement seeks to establish some ground rules on trade among member nations, and they are sorely needed. In many cases tariff rates are not the most serious barrier to the flow of international commerce. Many other trade gimmicks can be employed which are even more effective in blocking our exports than a tariff would be. Among these protectionist devices are exchange controls, licensing restrictions, import quotas, and internal taxes on imports.

One of the main objectives of the general agreement is to bring about a decline in the

use of these discriminatory weapons. In the 7 years since it was first negotiated, the general agreement has been instrumental in curbing the indiscriminate application of these economic weapons. In some cases we ourselves have gotten relief from discrimination after filing complaints based upon provisions in the general agreement.

One case involved the imposition by another nation of a nine per cent sales tax on imported lumber, a tax from which domestic lumber was exempted. After we complained, the tax was applied to domestic lumber as well. In another case, an embargo on American potatoes was lifted by another country after we complained. third case involved the efforts of the British to wean their population away from smoking pure Virginia cigarettes by requiring a 5 percent admixture of Oriental tobaccos. After several protests, based on provisions of the general agreement, the prohibition on the manufacture of unblended Virginia tobacco cigarettes was lifted. A score of other such cases exist-separately unspectacular for the most part, but impressive in total. It is doubtful that we would have gotten such redress in these cases in the absence of the general agree-

As soon as H. R. 1 is passed, I believe it is imperative that we begin to work for congressional approval of the Organization for Trade Cooperation to administer the general agreement. For we are the greatest trading nation in the world, and if we fall to ratify these accords, then the organization will fall apart.

I am convinced that isolation, in whatever form, political or economic, is no longer a safeguard for the United States, but a menace. We can no longer pretend that what we do is irrelevant to those who are with us in the grand alliance of free nations. Our economic position is so preeminent that what we do affects every member of the alliance. It is no longer possible for us to regard trade as solely a matter of domestic politics. Fortunately, we are in a position where our own economic interests and our world responsibilities converge in a trade policy that will permit an expansion of international commerce.

I do not regard the problem of developing an enlightened trade policy as one that we can take or leave alone, but rather as one that presses for an immediate solution. For, in the words of President Eisenhower, "If we fail in our trade policy we may fail in all."

FOA Demise-Need for Action No. I

EXTENSION OF REMARKS

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of the Congress to an editorial in the Washington Post and Times-Herald of March 24. The apparent continued inability of the administration to make up its collective mind regarding how the foreign-economic program should be handled will lead to administrative chaos unless affirmative action is taken in the near future. I am informed that rumors concerning the demise of FOA are having a serious effect on the agency's operating efficiency.

The continued and repeated organization and reorganization of these vital functions does not promote the stability and continuity which a long-range technical assistance and development program requires. I proposed last week that the Congress move in conjunction with the administration to establish a permanent technical and developmental cooperation agency to handle the economic technical aspects of our overseas efforts. The desirable goal of achieving foreign policy integration of this program can be accomplished by having the administrator of such an agency as I propose be responsible to the Secretary of State.

We cannot let this program drift and shift any longer. It constitutes one of the most essential ingredients we have for maintaining freedom. In addition, a state of perpetual uncertainty is unfair to the employees of FOA.

I intend to comment on this situation under special order on Thursday of this week.

The editorial follows:

Both Congress and the administration are open to serious criticism for their indecision and basically negative approach to the problem of the future of foreign aid. Despite the urgent need for technical assistance programs in Asia, the organization that is equipped to carry them out is about to be allowed to die. When Congress said last allowed to die. year that the Foreign Operations Administration must be terminated by June 30, 1955, the administration accepted the decision but failed to work out any alternative arrangements. The time has passed when largescale grants are needed, but a strong organization is required to administer the varied programs needed to support our foreign policy in Asia and the Middle East. FOA officials have the experience and know-how for such undertakings, which could be carried forward at relatively small cost. But these officials are leaving the agency now as fast as they can find jobs elsewhere.

A decision apparently is about to be made by default to put what is left of FOA into the State Department after the military aid functions are separated and given to the Pentagon. Just 2 years ago the point 4 operation was taken out of State and put in FOA. Many experienced foreign aid officials were "riffed" at the time, and it must be with mixed feelings that those who survived now prepare for the return trip. FOA may be unpopular in Congress, but it stands for something important overseas and is a significant adjunct of American foreign policy.

Of course, it is foolish to talk much about the future of the agency without knowing what the future program is to be. It is here that the administration is most gravely at fault. It has shown virtually no leadership in the all-important task of preparing for the next phase of foreign aid, a phase that could determine whether a dozen countries will remain independent or fall eventually under the Communist yoke.

If the skeleton of FOA that remains after June 30 is to be transferred to the State Department, certainly it should have the greatest possible autonomy under the Secretary. Political and economic considerations often are intertwined; it will be necessary to provide machinery whereby economic objectives can receive the same sort of attention and emphasis as the State Department is accustomed to give political problems. It would make an administrative monstrosity to dump the economic responsibility on political desk officers.

As important as the new structure that may emerge is the recognition that a different program is needed for each country and that guidance and technical assistance are more important than grants. President Elsenhower in the past has spoken eloquently about the possibilities in this field. Surely it is time for him to exercise his leadership so that a national asset is not frittered away in political compromises between agencies and between agencies and Congress.

FOA Demise-Need for Action No. II

EXTENSION OF REMARKS

HON, HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, under leave to extend my remarks, I would like to stress again to the Congress the seriousness of the administration's failure to formulate a foreign economic program The Foreign Operations Administration is scheduled to expire in some 40 days, yet no plan has been enunciated as to how our Government is to continue activities which are key weapons in winning the cold war. I wish to insert herewith a statement by the executive director of the American Veterans Committee, Mr. Andrew E. Rice, on the imperative need for continuing our technical assistance and foreign economic programs.

I intend to comment on this situation under special order on Thursday of this week.

The statement follows:

STATEMENT OF ANDREW E. RICE, EXECUTIVE DIRECTOR OF THE AMERICAN VETERANS COMMITTEE, BEFORE THE SENATE SUBCOMMITTEE ON TECHNICAL ASSISTANCE OF THE SENATE FOREIGN RELATIONS COMMITTEE, MARCH 4, 1955

Mr. Chairman and members of the subcommittee, the American Veterans Committee has long been an enthusiastic supporter of United States programs of aid to underdeveloped countries. In addition to endorsing Government and intergovernmental programs, we have participated, through the World Veterans Federation, in carrying out privately organized programs. (For example, last month Dr. Douglas Toffelmier, of Oakland, Calif., one of this country's leading experts in the field of amputee rehabilitation, left for central Java on a mission jointly sponsored by the United Nations and the World Veterans Federation to develop Indonesia's lone orthopedic rehabilitation center. Thus America's skills in helping the disabled veteran and civilian are transferred abroad.)

To this committee, however, I wish to do more than merely restate our support of assistance to underdeveloped countries. In our study of the problem over the past 5 years, certain general principles have emerged which, while I am not at present mandated to give them our unequivocal endorsement, seem to us worthy of most serious consideration by this committee.

The first principle is that programs of aid to underdeveloped countries cannot be arbitrarily separated into technical assistance and financial aid. The goal of our programs should be the all-round economic development of an underdeveloped area. Technical know-how must be accompanied by adequate tools and resources to make that know-how productive. This is the way pri-

vate investment always works; technical skills and financial resources go hand in hand. In the very least developed countries technical training alone may be necessary before any substantial funds can be usefully employed. But beyond a certain level training alone, without resources to put that training to work productively, can only lead to frustration and disillusionment.

Our second point is that financial assistance on a far larger scale than at present is essential if we are to give the underdeveloped countries any real hope that the widening gap between their standard of living and our own can ever be narrowed. America's productivity is moving ahead rapidly on an average more than 4 percent per year. Despite our enormous defense expenditures, our standard of living has been rising. Robert Nathan, the well-known economist (and an active member of the American Veterans Committee) has estimated that we could. If we desired, invest some \$10 billion a year overseas without in any way affecting our own standard of living.

In the light of these facts it becomes almost incredible that our Government has not yet endorsed SUNFED—the Special U. N. Fund for Economic Development. Not only is the economics of this position faulty, but so is the psychology. To argue that we cannot "afford" to invest in SUNFED until an enforceable worldwide system of disarmament has been achieved, is hardly calculated to appeal to the Soviet Union as an argu-

ment for such disarmament.

Thirdly, it seems impossible for private enterprise alone to do the job, for reasons which Dr. Willard Thorp very eloquently outlined to this committee. Certainly private investment should be encouraged in every way possible, but as long as our own country offers so many highly profitable investment opportunities itself and overseas investment is generally so risky, capital will not flow freely abroad. Moreover, as George Woods of the First Boston Corporation so well pointed out, the "export of investment capital by the nationals of capital deficient countries is a difficult fact to explain away to well-informed investors in the United States who are weighing the advantages of investing capital abroad as opposed to making investments at home."

As a subsidiary to this point, I should like to point out that the real channel through which private investment is flowing to underdeveloped areas today is the Internation-The Bank is selling its bonds on al Bank. the private money market in all major financial centers-London, The Hague, Basle, as well as New York-and is having no difficulty at all in disposing of its offerings. Now Secretary Humphrey has announced United States support for an international finance corporation, a proposal first put forward by the Nelson Rockefeller Board in 1951. Although public funds would be subscribed for the IFC, its issue would go directly to private enterprises. IFC, which I hope this Congress will support, would thus indirectly give great impetus to private investment.

The fourth consideration which seems to us important is that within reasonable limits, assistance to any underdeveloped area should be coordinated. By this overworked word I mean that all aspects of a nation's or region's economy need to be developed simultaneously. Uneven development is unsound economically. To grow more crops, but not to have the transportation network to get them to market doesn't make sense. This "coordinated" development approach should extend right down to the village or community level, as in fact is being done in the United States-supported community development projects in India.

A corollary of this viewpoint is that, within the United States Government, the administration of aid programs should be centralized. Whether there is an independent operating agency or an operating unit within the Department of State seems relatively unimportant. Either is far preferable, however, to splitting up aid functions among several Federal agencies which makes overall development planning almost impossible. Incidentally, the United Nations has come to realize this; the last General Assembly, by unanimous vote, changed the previous system of allocating technical-assistance funds to the specialized agencies, to a country allocation system which emphasizes balanced development.

In presenting these four principles, I do not, of course, mean to overlook other important considerations such as the need for long-range planning and, where possible, commitments of funds, the value of people to people contacts, the methods of selecting and training United States personnel for overseas assignment, the importance of multilateral programs, and the like. This committee will certainly wish to give full attention to the lessons which the experience of the past 5 years has taught us.

I would like, however, to emphasize only one final point. Members of this committee have expressed concern, I know, at what they consider the lack of public interest in our aid programs to underdeveloped areas. I will agree that certainly there is a lack of public knowledge, due in part perhaps to the restrictions on a public-information program which Congress wrote into the Mutual Security Act. But more fundamentally, I believe, such lack of knowledge is because development aid is not "newsworthy" in the usual sense of that term. Most Americans are simply uninformed by the news channels on which they rely.

Yet where Americans are informed, they have shown solid support for these programs. Through our own great voluntary organizations, such as those testifying before this committee, they have shown such support. I believe in all sincerity that if this Congress expands our Nation's participation in development aid programs it will find the majority of the American people behind it.

Salaries for College Teachers

EXTENSION OF REMARKS

HON. D. R. (BILLY) MATTHEWS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1955

Mr. MATTHEWS. Mr. Speaker, under leave to extend my remarks, I would like to include information which has been compiled by the McGraw-Hill Co. relating to salaries for college teachers. I know that all of us in Congress are vitally interested in the profession of education as it applies not only to our public-school teachers, but to those on the college level. I find the information in the article by McGraw-Hill Co. very illuminating, and I respectfully call the attention of all of my colleagues in Congress to the article which follows. The first paragraph is a summary in my own words of a chart which appeared in the article:

SUMMARY BY MR. MATTHEWS

There was recently a chart compiled from information furnished by the Council for Financial Aid to Education, United States Department of Commerce and United States Department of Labor, entitled "What's Happened to College Faculty Salaries?" This chart shows the increase or decrease in real income before taxes of four economic classes of our population, and covered the period

from 1940 to 1954. According to this chart, physicians enjoyed a gain in real income during this period of 80 percent; industrial workers a gain of 48 percent; lawyers a gain of 10 percent; while college faculty members suffered a decrease in real income before taxes of 5 percent during this same period.

COMPILATION BY McGRAW-HILL CO.

This chart tells a story of profound importance to every American. It is the story of the financial beating our college and university faculty members have been taking in the past 14 war and postwar years.

On the whole, this span of 14 years has been one of great and growing prosperity. But, as the chart shows, our college and university faculty members have, as a group, had less than no share in it.

During this period, from 1940 through 1954, the real income of the average industrial worker (that is, what his wages would purchase in goods and services) has increased by almost one-half. Among professional groups, physicians have enjoyed an increase of about 80 percent in their real income. Lawyers, far less favored financially, have had an increase of about 10 percent. But faculty members have not only had no increase at all, over these years of prosperity their average real income has fallen by 5 percent. These figures do not take account of the increase in taxes since 1940.

SENIOR TEACHERS HARDEST HIT

These figures are, of course, averages. For some groups of faculty members it has been better, for others worse. It has been particularly hard on senior faculty members. Between 1941 and 1953 their salaries lost about 8 percent of their purchasing power. Being deeply committed to their careers, they could not respond to alternative employment opportunities as readily as could their junior colleagues. For junior faculty members there was some increase in real income between 1941 and 1953, but only about half as much as the average for the Nation.

PUBLIC COLLEGES FARE BETTER

There are also marked differences In the average financial reward received by faculty members in different types of colleges and universities. A recent study by the Council for Financial Aid to Education indicates that in the last academic year, 1953-54, teachers in privately endowed, independent colleges and universities were paid an average salary about \$1,000 less than that paid to faculty members in tax-supported institutions. The same study indicates that salaries far below the average are especially common for faculty members in the small private liberal arts colleges. This study found that during the last academic year the average salary of all college and university faculty members was about \$4,700.

The special difficulties under which the independent colleges and universities, and particularly the independent liberal arts colleges, are laboring to get back on their feet financially have been discussed in previous editorials in this series. These difficulties underline the need of special help for these institutions to which business firms are now contributing in increasing volume. However, the problem of providing increased salaries is not peculiar to any particular type of institution.

It is not easy to prescribe a precise standard of fair pay for college and university faculty members. This is partly because they put less weight relatively on money rewards than they put on rewards of scholarly accomplishment and prestige. Consequently, they have consistently been willing to work for very modest salaries in relation to the intellectual ability, education and application required. Obviously, however, it is the dictate both of fairness and good judgment to see that faculty members are given a roughly proportionate share

in the general prosperity. Indeed, their crucial role in our society could be made to justify a larger share than this.

DAMAGE TO NATIONAL SECURITY

There is no way to know with any degree of precision what the underpayment of our college and university faculty members over the past 14 years has actually cost the Nation in reduced quality of intellectual performance of those institutions. One reason is that the damage has been minimized by the devoted services of many faculty members who have loyally stuck to their jobs in spite of the great financial discouragement.

It is obvious, however, that, if no grave deterioration in the intellectual performance of our colleges and universities has occurred so far, it is because we have been living on borrowed time. It is time borrowed from faculty members who have, in effect, been subsidizing these institutions by their financial sacrifice. This arrangement is not only a menace to the cultural and intellectual life of the Nation, it is also a menace to our national security in a time when successful national survival may well depend in peculiar degree on the full development and utilization of our intellectual resources. depend on our college and university faculties pre-eminently to provide this develop-ment. Adequate financial reward for such service is an elementary form of national insurance.

Many of our colleges and universities are working hard to improve the financial lot of their faculty members. Business firms are also playing an increasing role of providing the necessary financial assistance. The methods being used by business for this purpose will be the subject of another editorial in this series. However, vastly more must be done, and quickly, to stop the financial beating being taken by our college and university faculty members if the Nation's welfare and safety are to be properly protected.

Death of Walter White Is Mourned by World

EXTENSION OF REMARKS

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1955

Mr. DIGGS. Mr. Speaker, those of us who are dedicated to the fight for the liberal cause and those peoples throughout the world who battle for freedom and equality among men have suffered an irreparable loss in the passing of Walter White. His life and efforts, which have been a potent influence in promoting the cause of democracy within America and in promulgating to other countries the ideals basic in our philosophy, should serve as an inspiration to his own contemporaries and to all succeeding generations to brighten the torch of freedom, for the sake of all men, and to keep it fired always to its full flame.

In all the works which Mr. White accomplished, among my principal regrets is that he did not live long enough to witness the fruition of all his dreams, one of which will be represented in the 100th anniversary, in 1963, of the Emancipation Proclamation, when it is hoped that the more dramatic struggles of his people will be resolved.

The Patent System Is Being Strangled

EXTENSION OF REMARKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. WILSON of California. Mr. Speaker, as the holder of several United States Patents, none of which, admittedly, are of earth-shaking importance, I have been impressed with the need for improvements in our United States Patent Office. The great technological advances made by this country through the years have been encouraged by a workable patent system. We now find that system bottlenecked and strangled through insufficient appropriations. Under unanimous consent, I include in the Appendix of the RECORD an article by the New York Patent Law Association:

THE PATENT SYSTEM IS BEING STRANGLED

The Patent Office must have at least \$15 million for fiscal 1956.

The United States patent system is being strangled by lack of funds to operate the Patent Office.

The patent system is of vital importance to the country. It has been estimated that 75 percent of the jobs in this country today are due to inventions made within the last 50 years; for example: automobiles, air-planes, radio, television, moving pictures, automatic telephones, home appliances, synthetic rubber, plastics, electronics, business machines, aspirin, wonder drugs, cellophane, nylon, rayon, army tanks, guided missiles, proximity fuse, and atomic energy. A large fraction of the income of the Federal Government is based on business which exists only as a result of invention. The outcome of any future war will depend largely on new inventions. And the patent system is the most important stimulus to the making of inventions. When the Government is spending billions of dollars each year for defense, is it not absurd to starve the Patent Office? A single invention may directly save the Government more in a single year than the entire cost of the Patent Office for many

The situation has reached emergency status. While the number of patent applications filed has been steadily rising, the number of patent examiners has been steadily reduced and is now at its lowest level since 1947. Only a few applications for patent filed today will be granted in less than 4 years.

Industry and the patent bar have become aroused. A delegation representing both of these groups traveled to Washington and called on the Commissioner of Patents, the Secretary of Commerce, and the Budget Bureau before the present budget was sent to Congress. Yet the appropriation asked for fiscal 1956 is only \$12 million, only \$500,000 more than the appropriation for fiscal 1955, almost the same as was spent in fiscal 1954, and less than was spent in either of the 2 preceding years.

The Commissioner of Patents has clearly explained the emergency. In his annual report for fiscal 1954, the Commissioner of Patents said on page 2 (matter in parentheses added): "* * it is imperative that the size of the examining corps be substantially increased.

"Nearly 100 more than the average number in the examining corps in 1954 would be required merely to keep abreast of the inflow of new work. The present backlog would remain undiminished. If the corps of examiner assistants were maintained at an average level of 630, which was the number of examiners at the end of 1954 fiscal year, the backlog could be expected to increase by no less than 12,000 cases, so that by the end of fiscal year 1955 about 207,000 applications would be on hand in the Patent Office. (As of January 31, 1955, there were 208,566.)

"A large backlog of pending applications is not conducive to the rendering of proper service to the public."

He said further, beginning on page 3 (matter in parentheses added):

"The adverse effects of reduced employment for a given period of time cannot be offset, in comparable time, by the subsequent hiring of new examiners. While the average workload may be sharply reduced, considerable time is required for new men to achieve the production level of the experienced examiners they replace. * * * In the meantime, the production of other examiners diminishes because they must devote time to training and supervising new men.

From the end of fiscal year 1946, when the workload on the desk of each examiner reached a peak, a period of 6 years elapsed before the maximum waiting time had been brought down to 9 months and the average to 8 months (from 18 months), despite very substantial enlargement of the examining corps in the years 1946 to 1949. It required 4 years to reduce the average waiting time by 10 months.

"Since the end of 1952, when both the examiner workload and waiting time were at their lowest in the postwar years, but still short of the more desirable prewar conditions (4 months' average waiting time in 1938), the average workload has been increasing. A concomitant increase in waiting time has also occurred and, on the basis of present trends, it is apparent that the average waiting time will increase to well over 1 year by the end of fiscal 1955."

The figures show the emergency. The following table shows the need for an increased appropriation in order to reduce the backlog of work, get patents issued more promptly, and improve efficiency by shorten-ing the waiting time between successive Patent Office actions.

	Fiscal year ending June 30				
	1952	1953	1954	1955	1956
Applications filed during year Number of applications awaiting action at end of	60, 386	70, 341	75, 271		
3. Applications disposed of (allowed and aban-	96, 836	98, 878	1 116, 392		
doned) 4. Average number of examiners	76, 931 720	72, 082 688	63, 672		
5. Number of applications awaiting action per examiner (2 divided by 4)	134. 4	144	178		
6. Money spent by the Patent Office	\$12, 219, 338	\$12, 129, 581	\$11, 933, 934	\$11, 500, 000	
8. Appropriation asked by Budget Bureau for fiscal 1956.					\$12, 000, 000

140,895 as of Jan. 31, 1955. 2 610 as of Feb. 19, 1955.

There is no economy in refusing to face the facts and make an adequate appropriation. The workload on the Patent Office was imposed by Congress by enacting the patent statutes. Inventors and industry spend their time and money on inventions and patent applications relying in good faith on those statutes. The delay in the issuance of patents is against the public interest. The Patent Office should be permitted to do the work Congress has set for it. There is no economy in postponing services required by law to be provided.

The Patent Office appropriation should be at least \$15 million for fiscal 1956. With a 25-percent increase in patent applications filed from 1952 to 1954, an increase of at least 25 percent in the appropriation is required to provide even the restricted services rendered in 1952, not considering rising costs since then.

BOARD OF GOVERNORS. The New York Patent Law Association. NEW YORK, N. Y., March 23, 1955.

California Battles Colorado Basin Plan

EXTENSION OF REMARKS OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I would like to insert a newspaper article which appeared in the Christian Science Monitor of March 28.

This article, by Kimmis Hendrick, chief of the Pacific news bureau of the Monitor, impressed me as an impartial evaluation of the forces playing upon the proposed upper Colorado River storage and development. I recommend this article as a pleasant and informative antidote for some of the more partisan insertions that have purported to deal with this subject:

CALIFORNIA BATTLES COLORADO BASIN PLAN Los Angeles.-California is once more

ranging its bigness against the rest of the West to defeat congressional approval of the upper Colorado River Basin project.

President Eisenhower has described the project as "well conceived" and has pledged it his administration's support. But California's Colorado River Association is urging Americans everywhere to ask their Congressman to turn it down.

Headlining the association's latest tract

runs the resounding warning. "A new \$4 billion tax burden threatens you."

Colorado, Utah, Wyoming, and New Mexico, in which originates virtually all of the water of the long-contested river, describe their project as costing \$1,100,-000,000. California declares that hidden costs will add \$3 billion more.

It is on this claim of excessive cost that California-especially the southern part of the State, but with State backingnewing its opposition to the upper Colorado project. It opposed the central Arizona project-effectively-the same way.

DEBATE ON CONCEPTS

Figures used on both sides are controversial, depending on various premises accepted in their reckoning. The Department of the Interior regards the upper Colorado project as economically feasible; California does not. The Upper Basin States maintain that even if the cost will involve subsidy, their future prosperity warrants a national investment. They contend that it will do the Nation no good to let all of the Colorado's water run down to the southwest tip of the map, while the Mountain States remain industrially and agriculturally water shy.

Really, the contest between California and its neighbor States is a debate over concepts. One is the Coolidge era approach to resource development, in which California had no other course than to seek Federal help to build Hoover Dam on a pay-back basis. The other is the newer view that the sounder road to regional development is repayment plus subsidy as a means to long-range economic

California cannot forget that it was the first Western State with enough money and people to underwrite the initial development of the Colorado River. It contracted through numerous public and private agencies to buy power and water from Hoover Dam and it invested two-thirds of a billion dollars in canals, tunnels, pipelines, and high-voltage transmission wires to bring the power and water across the mountains and deserts to the coast.

Northcutt Ely, counsel for the State of California in the pending case of Arizona v. California et al., in the United States Supreme Court, has said that without Hoover Dam, there could not have been any further development of the Colorado in either its upper or lower basin.

TEAMWORK IN 1928

California has not opposed Federal subsidies when they benefited California. The real hurt in the upper-basin project, for a State that does not think in regional terms but rather of its own prospects, is that this one might damage California's investment. Mr. Ely, for instance, has pointed out that the upper-basin project might cut Hoover Dam power production by 30 percent or more.

It might also lesson California's access to Colorado water. This would be a knotty problem. Prior rights to that water were established by the State's southern farm areas long ago, and nobody seems sure what curtailment would do to Los Angeles' industrial and urban prospects. It was Los Angeles Imperial Valley teamwork that got congressional approval of the Boulder Canyon Project Act in 1928, and this teamwork is still deemed essential to the protection of California water interests.

The whole Colorado question is full of such complexities. The upper-basin States have their own, as do the lower. Another illustration is that while the upper basin wants dams at Glen Canyon, Echo Park, and Curecanti for the express purpose of protecting the lower basin's stake in Hoover Dam, California supposes these dams may be detrimental and opposes them.

One phase of the controversy is the fact that ever since the Colorado River compact was signed at Santa Fe, N. Mex., on November 24, 1922, parties to it have differed over the meaning of terms. If California's interpretation of what the compact allocated to the lower basin were sound, the upper basin might not be able to build the project as now planned for it by the Reclamation Bureau.

Neither could Arizona build its central Arizona project. There wouldn't be enough water. Meanwhile, the upper-basin States and Arizona watch California's planning to bring its own tremendous water resources southward from their upstate origin and conclude that California must be merely greedy.

California has long believed that the problem involves a legal interpretation of the 1922 compact by the Supreme Court. It welcomes the case now pending before that high tribunal as brought by Arizona. But the upper-basin States fear that a Supreme Court finding may yield years of incidental litigation, not water, and they would rather have Congress give them their project than wait.

California has intimated, at the risk of getting some questions turned back on itself, that what is really needed is a full-scale reappraisal of the Colorado. But it has given no indication of wanting to lead in the exploration of a regional plan for its development.

It has, however, raised some provocative questions. For instance: What about building great hydroelectric dams in an area that abounds in coal, oil shale, and uranium? Will the competitive market for their power be there in even so short a time as 20 or 30 years?

What about turning salt sea water to fresh? If it is still expensive, isn't a milliondollar dam? (Reverse question: If salt water conversion can be done economically, will California need the Colorado at all?)

Square Dance, 1955

EXTENSION OF REMARKS

HON. D. R. (BILLY) MATTHEWS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1955

Mr. MATTHEWS. Mr. Speaker, the third annual Florida square and folk dance convention will be held in Miami Beach April 29 and 30, 1955. Sponsored by the Florida Square and Folk Dance Callers and Teachers Association, the convention will present a full 2-day schedule of activities at the great Miami Beach City Auditorium, with the high points the dances on Friday and Saturday evenings.

An anticipated 2,500 dancers from the eastern seaboard and southern States will attend. A considerable number of dancers will attend from Florida's Eighth Congressional District, among them Prof. Ernest R. Bartley, of the University of Florida's political science department. Professor Bartley, presently on leave in Washington, D. C., under a Ford Foundation grant, is an ardent square dance enthusiast with a hobby of calling the intricate figures. He is very active in the Florida Caller's Association.

There is much misunderstanding of what square dancing today is like. The material by Dr. Bartley attempts to dispel some of this misunderstanding and shows square dancing as the healthy and moral activity that it is:

SQUARE DANCE, 1955

(By Dr. Ernest R. Bartley, member, Florida Square & Folk Dance Callers & Teachers Association, associate professor of political science, University of Florida, Gainesville, Fla.)

There are millions of square dancers in the United States today—just how many millions no one can say with accuracy. It is certain, however, that there are few forms of recreation which have shown such a phenomenal growth in the past 10 years. Prior to World War II, square dancing was found in small, widely separated areas of the United States. These areas were, with some exceptions, rural in character. Today square dancing has come of age and is found in every part of the Nation—every State, every large city, and most of the smaller communities and rural areas.

Yet with all its size, the square-dance movement is much misunderstood by many persons. Some self-styled sophisticates view it, incorrectly, as a hayseed proposition, fit only for the unintelligent, unlearned, back-country character. Others imagine square dancing as nothing better than a knockdown, dragout, foot-stomping, and applejack-cornwhisky swigging contest with nothing of grace and devoid of morals.

Today's square-dance movement is a far cry from either of these ideas. Picture, if you can, one mamoth dance attended by all the devotees of this healthful form of recreation, gathered together from all over the Nation. No Madison Square Garden or Cow Palace can hold even a minor fraction of the multitudes who attend. Nothing but soft drinks will be sold for the quenching of thirst—no beer, no wine, no hard liquor. Modern square-dance figures will not permit participants to indulge even a bit in alcoholic refreshment; drink after the dance if you will, but there is an alcoholic taboo on drinking at or before our gargantuan gettogether.

The floor will be a colorful affair. Our millions of persons will be garbed in typical western dress or casual attire. You'll find no suits, no starched collars, no conventional formal dresses—and no bib overalls. Many of the men, who never rode a horse in their life, will be wearing cowboy boots.

The ladies will be wearing dresses with color variety to rival the rainbow and with enough yards of filmy material in the petticoats to circle the earth at the Equator. There'll be very few, if any, plain gingham or callco dresses; milady's square-dance fashions are of the highest order, breath-taking in their beauty. Dresses, hats, boots, neckties, jewelry, shirts—a whole industry has been created in the United States to cater to the dressing needs of these many dancers. Millions of dollars' worth of square-dance clothing are sold every year.

And who will our dancers be? They will come from every State, every county in the United States. The majority who come to dance will come from homes located in the urban areas of the Nation, for contrary to popular belief the major centers of square dancing in the United States are no longer in the rural areas. Many of our dancers will be farmers, of course-producers of cotton, corn, tobacco, rice, wheat, cattle, hogs, sheep-producers of every known agricultural commodity. But dancing with our farmers will be professional persons: doctors (why here's a famous surgeon), lawyers and judges (one from the Supreme Court of the United States), politicians (look, there are some 80 Congressmen of the United States and their wives), scientists (that one over there had a leading role in the development of the atomic bomb), Government workers (the Department of State is well represented), educators (if they were all wearing caps and gowns, we could hold an academic procession that would be blocks long), members of the military (you can't tell the chiefs from the Indians for squaredance regalia has no place for insignia of rank). No profession will be unrepresented.

Dancing will be the businessmen of the Nation's communities—the bankers, grocers, auto dealers, shoe clerks, jewelers, purveyors of hardware and TV sets, photographers. With us will be labor—the skilled and the unskilled—the carpenters, bricklayers, painters, boilermakers, truckdrivers.

And here, too, will be many ministers of the Gospel, for these men of God of many faiths have come to realize that square dancing has outgrown paganism and left its lessmoral days behind. Square dancing is an integral part of many religious youth programs. Some of the callers on the program tonight, and they are goods ones in more than the spiritual sense, will be men of the cloth. Here also will be the recreation leaders of the Nation—the city and county received.

reation people, the leaders of the 4-H and Future Farmers of America, the county agents, the service club people—all utilizing square dancing as a part of the broad scale recreation programs available to all classes and ages of American society today.

Off to one side, and yet a part of the mammoth dance, will be a small and pathetic group of participants. They are the lame, the halt, and the blind. These handicapped persons will not perform the more complicated figures, of course. But paraplegics in wheelchairs will dance and enjoy themselves, wheeling their chairs in rhythmical Patterns, their faces wreathed in smiles. Here a few squares of blind persons will amaze you with their ability to see as they fuse themselves into the great mass of swirling dancers. Some other squares will feel the rhythm through the floor as they dance. for they cannot hear either music or callsthey are deaf. Some squares will be com-posed of persons sick in mind, lifted for a lew fleeting moments to a realm of forgetfulness; square dancing has proved to be of therapeutic value in many of these pitiful

Our callers and musicians for the dance Will be as conglomerate a group as our danc-A few will be professionals, making their living by teaching, calling, and playing for square dances; but most of the callers and musicians are hobbyists, finding in their hobby relaxation from the cares of state, litigation, tending shop, teaching, doctoring, laying bricks, or using a rivet gun. Their Pay is the most precious coin to be found anywhere in the realm—the knowledge that they are bringing healthful enjoyment to the groups with which they work.

These callers invest scores of thousands of dollars annually in public address systems, tape recorders, records (to be used when "live" music is not available), books, and magazines. A whole new phase of the record industry is devoted to square, round, and folk-dance music. Special public address systems built specifically for square-dance calling constitute a small but signficant part of the sales of the electronics industry as do tape recorders. Square-dance magazines, numbering their circulation in the scores of thousands—slick-paper jobs, artistically put together—keep the caller and dancer up to date on the latest developments in the square-dance field. Books by the tens of thousands are sold annually.

Yes, square dancing has come of age. in this complex century, that fact means commercialism, a facet of square dancing that has both its good and bad aspects.

But the square dance today is far more than numbers of dancers or financial returns. Today's square dance continues a basically American contribution to the general world of dance, for square dancing fundamentally American institution.

Square dance is a part of 20th century

American culture, as it was of 19th century life.

And it is one of the very few media in the Nation today which provides recreational Outlets without regard to class. Labor, agriculture, business, the professions—they meet on common ground, without talk of shop, in a square-dance group. Here is a manifestation of American democratic principles so close to the heart of all of us. There is no question of position in the community; this is fun and fellowship based on a common interest. And when the evening of fun is over, you will be surprised that our great square dance closes on the notes struck by this little couplet:

"May the good Lord bless and keep you, no no matter where or when;

May the good Lord bless and keep you, till we meet again."

Tonight there were no cares; we are better prepared to meet the cares of tomorrow.

Behind the Bamboo Curtain

EXTENSION OF REMARKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the story from the Southern Cross, a newspaper published weekly by the diocese of the Catholic Church in San Diego, Calif.

This is the story of one missionary who is imprisoned in Red China because he refused to accept dollars from the United States to subsidize a university in Red China controlled and dictated to by the Peiping Government:

BEHIND THE BAMBOO CURTAIN-A MISSIONARY SUFFERS BITTER LASH OF RED JUSTICE

A man languishes in a far-off prison behind the Bamboo Curtain.

But he can't be forgotten. He is an Amer-

ican. He is a priest.

He vanished into that Pelping prison solely because he was a Catholic missionary in Reddominated China. He vanished into that prison July 25, 1951, the victim of cruel injustice. He was left by his Red tormentors to wither away in that jail, forgotten by the

many, remembered by a few.

But Father Harold W. Rigney, the Chicagoborn divine word missionary, will be remem-bered by many now. The injustice of his plight is stirring a storm of protest that soon will be heard by the Red leaders who forced him into prison without charges, trial, or

And indignant San Diegans will join Father Rigney's brother here in adding their voices to the mounting protest. Father Rigney's brother here is Father Francis J. Rig-ney, a lecturer in the history department of the University of San Diego's College for Men.

At the time of his arrest Father Rigney was rector of Fu Jen University, a Catholic university supported by foreign mission funds. It was founded in 1925 at the personal request of Pope Pius XI.

In June 1950 the question of new teaching contracts for the following term arose, but Father Rigney would not accept them since five of the professors revealed their Communist identity and openly attacked the church. Contracts called for salaries, and money was to come from headquarters of the Society of the Divine World.

On July 14, 1950, Father Rigney informed the president of Fu Jen University, a Com-munist and pagan named Chin Yan, that the subsidy of \$12,000 (United States money) a month would be stopped by his superiors if a new board of trustees were not formed, and if the church did not have the right to veto contracts and choose its teaching staff. Father Rigney was informed his terms were unacceptable.

The government later told Father Rigney

that if the subsidy was stopped by the church, he would be responsible to the people's government.

When the subsidy was stopped, the people's government ordered Father Rigney to obtain the subsidy, though the government owned the school and property.

Father Rigney then was placed as a hostage under house custody for the \$12,000 monthly subsidy, and when that did not come he was bound and led into the Peiping jail on July 25, 1951, along with 13 Catholic priests, foreign and Chinese.

Father Rigney's fate remained shrouded in mystery until last June, when a freed Belgian priest said Father Rigney was readied for release but was left behind at the last

One eyewitness described Father Rigney as old, thin, and stooped, although he is only 54.

Father Albert Sohier, a Belgian missionary freed by the Chinese Reds last November, also saw Father Rigney. The Chicagoan was rather broken and passive, whereas formerly he was active and jovial, according to Father Sohier. He also was described as thin and haggard.

Father Rigney was seen in prison the week before last Christmas by Msgr. Tarciso Martina, CPS, perfect apostolic of Yihsien, who was serving a life sentence when released. The two could not speak to each other, nor did they live in the same room. But they showed signs of recognition by winking at each other in the washrooms, workrooms, or during exercise.

That's the story of Father Rigney's sad plight. That's the story of the unhappy fate of the man who was the first American missionary to be appointed to the flying corps in Africa during World War II and who later became chaplain for all Catholic American Air Corps personnel in Africa at

Now a Chicago lawyer, Louis Kutner, the request of Father Rigney's mother who lives in Chicago, is preparing a petition for a United Nations writ of habeas corpus for the priest's release.

The eyes of men everywhere will turn searchingly to the U. N. to see what stand it will take in the case of Father Rigney.

Will the U. N., in its search for peace on a world scale, find time to pause and act in behalf of one man?

Are the rights of an individual as sacred

as the rights of a nation?
On the U. N.'s answer to these questions hangs the fate of many United States citizens unjustly imprisoned in foreign lands.

And San Diegans will join with indignant Americans everywhere to sound an evermounting protest to the U. N. in the cause of universal justice.

An Experiment in Militant Journalism

EXTENSION OF REMARKS

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I would like to insert a very excellent article written by Mr. Houston Waring, editor of the Littleton (Colo.) Independent, which appears in a recent issue of the Nation magazine relative to Cervi's Journal. Cervi's Journal is a weekly newspaper published in Denver.

Mr. Speaker, Mr. Cervi is one of the outstanding and most enterprising newsmen of Colorado. As a member of the Fourth Estate, he has covered the Rocky Mountain scene for almost a quarter of a century. Five years ago, Gene Cervi converted his Cervi's Newsletter into a regular printed newspaper. The success of his idea and venture has increased with the publication of each new issue of Cervi's Journal.

As one who has personally known Gene Cervi for over 20 years, I am pleased to see him receive this national recognition. and I commend Mr. Waring's article to all students of journalism:

AN EXPERIMENT IN MILITANT JOURNALISM

LITTLETON, Colo.-Wherever working newspapermen gather, the discussion turns. sooner or later to the feasibility of starting a newspaper in a large city. Marshall Field was the last one to try it—that was 13 years ago. Other publishers have added a morning or evening paper to one already estab-lished, but the Chicago Sun is the only major independent newspaper launched in recent years.

The news and editorial policies of most metropolitan newspapers are conservative. The enormous expense of publishing a large newspaper has made it impossible for anyone but a multimillionaire to enter the field. How, then, is the liberal viewpoint to get a

hearing?

A decade ago Nelson Poynter of the St Petersburg (Fia.) Times suggested that small dailies in big cities might use syndicated offset pages, but the experiment was never tried. Another method was worked out for a metropolitan weekly by Gene Cervi, of Denver, whose Cervi's Journal is now completing 5 successful years. "I got the idea for the Journal 25 years ago when I saw a legal publication at the courthouse," Cervi recalls. "I thought how ridiculous it was to go to all the trouble of publishing a newspaper and come up with something so dull."

Cervi mulled this over for 20 years, and on September 24, 1949, he converted Cervi's News Letter into a regular printed newspaper with a tabloid format and restrained head-lines. "Our formula is very simple," he says. "Just take an ordinary reporting service and breathe some life into it."

His reporting service handles such things as building notes and permits, newcomers to Denver, prominent hotel guests, conventions, chattel mortgages, new Denver businesses, trust deeds, petitions in bankruptcy, local stock quotations, real-estate transfers, car sales, coming events, and brief reviews of books for business. It may sound dull, but Cervi makes it as bright as possible. He provides vital news to several thousand business men who like it packaged in one placeonce a week.

"I think most people look first for the dynamic front-page story, the think piece on the editorial page, and the back page about people," Cervi will tell you. "I have fought against the gossip column, and I don't believe our back page is gossip. If we ever print trivia, we name it just that."

Cervi does not worry if the two big dailies get the news ahead of him. "We print spot news but we interpret it," he explains. "A paper like the Journal must be started by local working newsmen who know their territory. My 20 years as a reporter around

Denver were invaluable to me."

While most papers have given up personal journalism. Cervi has revived it. He attacks people, and he does it week after week. "But I seldom throw a brick through a man's greenhouse unless he has \$2 million," he once joked to fellow-newsmen. Since his page-one piece may be full of opinions, he sometimes warns the reader with a small caption: "An editorialized news report."

The Journal has a circulation of 4,000, and costs \$12 a year. "When a man pays \$12 for a weekly," he says modestly, failing to credit his own flair for writing, "he is going to read it thoroughly, and that means results for the advertisers." "I believe our peak circu-lation will be 5.000," he has said. "If we go "If we go beyond that we shall probably begin to get cautious." Like all honest editors, Cervi strives to keep his independence. His biggest advertiser accounts for only 2 percent of his gross, and so he has not had to do any pussyfooting so far.

Cervi prints 20 pages on extraquality 40pound newsprint and hopes to go to 32 pages this winter. His rates for his 125 advertisers per issue are almost as high as the Denver dailies charge-from 17 to 29 cents a line. He justifies these rates by the thoroughness with which well-to-do subscribers read his paper. His average reader probably has an income 4 or 5 times that of the metropolitan daily.

In order to devote his time to the editorial side of the Journal. Cervi has it printed by a commercial establishment. Thus he does not have to spend an hour or so a day discussing inks, paper, machinery, or the shortage of printers. His staff consists of three advertising men, a bookkeeper who runs the office, a circulation man with a girl assistant, an all-round "girl Friday," and an assistant to the editor. He is proud that they all get "guild wages or better." Fifteen part-time people gather the statistics about bankruptcy, and so forth.

"Ray Campbell, of the Denver Post, says our paper is an anomaly," Cervi once remarked to his friends. "He says we get our readers from the business world and then attack business. We believe in free enterprise, but we point out its weaknesses. We try to bridge the gap between the people and the dwindling dailies. There is a bright future in the next 20 years for young men to start weeklies in the Greeley tradition. would recommend starting in the monopoly towns like Kansas City or Omaha, entering the field with ideas, integrity, and a burning passion. It is not enough to say you are going to fight so and so. You must do it."

The heart of Cervi's formula for a metro-

politan weekly is interpretation and opinion. The opinion is personal, and the editor sees that his readers don't forget it. main editorial will end with the slightly pugnacious words: "My name is Gene Cervi."

That is a principal reason why 20,000 persons in 4,000 offices rush to get the mail each Thursday morning.

HOUSTON WARING.

Senator Gore Receives Cordell Hull Award

EXTENSION OF REMARKS OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. SMITH of Mississippi. Mr. Speaker, on Wednesday, March 23, I had the privilege of participating in the ceremonies in New York City when our colleague, the Honorable ALBERT GORE. junior Senator from Tennessee, was awarded the first annual Cordell Hull award by the Committee on Foreign Trade Education.

The Committee on Foreign Trade Education is providing effective leadership in the vital field of bringing the American public to a greater awareness of the importance of a sound foreign trade policy to every citizen.

Senator Gore, who is a native of Cordell Hull's home town of Carthage. Tenn., is a very fitting recipient of the Hull award. Under unanimous consent, I include the text of the award citation, and a copy of an editorial concerning the award, from the Memphis Commercial Appeal:

FULL TEXT OF CORDELL HULL AWARD

In recognition of his national leadership and the great tradition of public service he established in a career of more than half a

century as Secretary of State, as a Senator and a Member of the House of Representatives, and in appreciation of his historic sponsorship of the reciprocal trade agreements program, the Committee on Foreign Trade Education, Inc., salutes Hon. Cordell Hull and inaugurates the annual Cordell Hull award for leadership in building United States foreign economic policy.

The 1954-55 award is made to Hon. ALBERT Gore, junior Senator from Tennessee.

Senator Goze wins the widest public commendation for his wholehearted adherence to the principles of his fellow townsman, Cordell Hull Senator Gorr's service in both the House of Representatives and in the United States Senate has found him in the forefront of those battling for a trade policy in the true national interest. Most notably he led the fight in 1954 to revive the proposed extension and liberalization of Reciprocal Trade Agreements, when shortsighted political interests found it expedient to postpone consideration. Senator Gonz is now the outstanding Senate advocate of a modern United States tariff-trade program.

Award made this 23d day of March 1955, by the Committee on Foreign Trade Education, Inc.

B. A. RITTERSPORN, Jr., Executive Director.

SENATOR GORE LEADS

With the Senate approaching action on tariff policy, the Committee on Foreign Trade Education, Inc., has directed additional attention to the situation by naming the first

winner of the Cordell Hull Award.

Cordell Hull was the chief architect of the reciprocal-trade agreement method in use since 1934. It was given only a 1-year extension of life last spring, and the extension now being considered barely squeaked through the House this spring. Decisions on some other matters of major policy can be delayed through appointment of a commission further study, but in this case the method has already been used. The Randall Com-mission has reported, and the question comes to a showdown soon.

For the committee to make an award in honor of Cordell Hull is good. Presentation now is timely. Choice of the first winner is excellent.

ALBERT GORE, who has followed the Cordell Hull footsteps from the same Tennessee district to the House and then the Senate, has been named for his leadership in building United States foreign economic policy.

Senator Gore, like Cordell Hull, has be come known among other Senators for his wide and deep knowledge of tariffs and for his skillful work on behalf of more international trade. He sees this trade across national boundaries as essential for prosperity of this Nation and for world peace. He considers trade to be a powerful weapon in advancing our methods of managing human affairs against communistic management-

Senator Gore is indeed a leader in forming our economic policy, and we hope there are others like him to claim this award in future years.

Federal Regulation of Natural Gas Prices

EXTENSION OF REMARKS OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. VANIK. Mr. Speaker, continuing my efforts to fight for the consumer interest in connection with the proposals to amend the Natural Gas Act, on March 25, 1955, I testified before the House Interstate and Foreign Commerce Committee with respect to the vital concern of Cleveland and Northern Ohio in the outcome of the proposals which are before Congress. Over 95 percent of the residents of my district are consumers of natural gas which is distributed by a distributing company serving northeastern Ohio, including the northern Ohio cities of Akron, Canton, and Youngstown. This distributing company derives negligible quantities of its gas from the Ohio and West Virginia fields. The Overwhelming quantities come from Texas, Oklahoma, and the Southwest.

During the past several weeks, the House Interstate and Foreign Commerce Committee has been hearing considerable testimony in support of various bills to release the so-called independent producers of natural gas from the regulation of the Federal Power Commission. The proponents of this legislation argue that it is necessary to protect the public interest in view of the so-called confusion allegedly brought about by the Supreme Court's decision in the Phillips Petroleum case. The testimony in sup-Port of this legislation has largely consisted of experts provided by the oil and natural gas industries. It is possible that their great plea supported by \$1,500,000 "educational fund" may be directed to the public interest, but it would be indeed unusual. The gas consuming public of America better awaken quickly in this tremendous drive to destroy effective Pederal regulations and control. We may discover that the gas consumer's Protection will be completely legislated away.

We in Cleveland are as vitally concerned as consumers as perhaps any Other group in America. For example, the local distributing company—the East Ohio Gas Co.—has had its natural gas sales perdomestic consumer rise from 85,743 cubic feet in 1945 to 195,893 cubic feet per domestic consumer in 1954. And domestic sales have increased in the area of our local distributing company, which is the northern Ohio area, from 46,674,-457.000 cubic feet in 1945 to 131,175,-084,000 cubic feet in domestic sales in 1954. For this same period, industrial Sales have climbed from 30,126,754,000 cubic feet in 1945 to 59,554,879,000 cubic feet in 1954. The total consumption therefore of our northern Ohio gas served principally by this one local distributions. tributing company has risen from 76,-801,211,000 cubic feet in 1945 to 190,729,-963,000 cubic feet in 1954. In analyzing these figures, we find that gas consumption has increased almost 300 percent in domestic sales and almost 200 percent in industrial sales within a 10-year period. Putting it another way, our space heat consumers have increased from 120,709 in 1945 to 539,109, or roughly an increase of almost 350 percent. In our part of the country, gas heat is practically the only source of fuel we use and we do not desire to return to wood stoves. In short, we have been consuming a lot of gas—a tremendous quantity of natural gas of which we have produced very little ourselves. As a matter of fact, our northern

Ohio community has made just about as great a contribution to the domestic economy, to the welfare of the great sovereign States of Texas and Oklahoma, as almost any other section in the country.

Now, it will be undoubtedly mentioned that Cleveland has one of the lowest gas rates in the country and that is true. And there is a very important reason for it. Our low gas rate stems from the prudent activity of our distributing company, the East Ohio Gas Co., in establishing huge areas in the Akron-Canton area for the storage of natural gas. The diminished wells in the Canton, Ohio, area which formerly provided the early gas for our community, are now being used as tremendous reservoirs where gas is pumped in the slow seasons of consumption in the warm weather months and then used during the cold season when it is pumped out of the reservoirs and into the lines of the consumers. Therefore, the northern Ohio distributing company can make a steady and constant purchase of gas into its territory. In addition to that, perhaps no other community in America uses the tremendous volume of natural gas for industrial purposes than we do in the greater Cleveland area. It is mixed with other industrial gases and used by the basic industries of the Cleveland area in the production and fabrication of steel and in the manufacture of coke and in many other industrial ways so that while our domestic consumption has been large, our industrial consumption has also been large. As a large consumer, we are entitled and have received a large quantity consuming price—a lower price—the benefit of large volume consumption. In addition to the maintenance of reservoirs, our local distributing company has done a splendid job of selling natural gas not only as a clean and efficient household fuel but also as a useful fuel for the operation of appliances. We perhaps have more gas water heaters, gas incinerators, gas refrigerators, and gas stoves per capita than perhaps any other community in America. The local distributing company has done a tremendous job of stimulating and extending gas consumption on the basis of its low cost, and we have come to rely on natural gas.

Much has been said about the relatively low price of gas at the wellhead and the high price at the point of distribution to the retail consumer. But it must be borne in mind that the producer digs a well and the gas flows outusually under the natural pressures of the earth. Most of the time the find-ing of gas is an incidental happening a bonus-discovered in the search of oil. The pipeline people must build and maintain pipelines and must maintain pressure through the lines, but the big operational cost features naturally devolve upon the distributor who must build a tremendous distributing system down every street of every city and into every home in which he must maintain an expensive meter. There is a thousand times more earth displaced in the laying of distribution lines than in the drilling of gas wells. And the distributing company must maintain the pressure of gas throughout the system and be sure that it is of sufficient thermal strength to be useful as a fuel. In addition, the distributing company must maintain the huge reservoirs I spoke about, with excessive pumping facilities. It must stimulate the use of gas for space heating and for the operation of household appliances and must in the northern American cities maintain a constant inspection system so that the use of natural gas in a home or in a factory is adequately flued so that there is no resulting danger to human life.

We in Cleveland and in northern Ohio have nothing to say about whose gas we use or where it comes from. It comes through the transmission pipelines and the distributing company's pipelines. We have nothing to say about the price that was paid for it by either the distributing company, the transmission company, or the agents of the wellhead producers. If we had oil furnaces, we could bargain for our oil. It could be trucked into our homes from any part of America, from any oil distributors in our country and we might have a choice of either burning Pennsylvania oil or Oklahoma oil or California oil which is transported all over America by oil tank cars. And if we used coal, we would have the choice of using Ohio coal, Kentucky coal, or Pennsylvania coal that could come from any of thousands of mines, and we could choose between anthracite coal or bituminous coal or design our furnaces to burn coal dust or coal bricks in some form. We could purchase our coal directly from innumerable retail outlets. But when our economy, when our lifeblood, when the very stability and usefulness of our homes depends only on the natural gas which flows through the pipelines into them, then we are completely at the mercy of everyone along the line who has anything to do with that gas, producer, transmitter, and distributor.

It has been declared that we could adequately regulate the price through our State public utilities commission, and this is nonsense. What can the State public utilities commission of Ohio or any other State do about the price of gas before it reaches the State line? The answer is "Absolutely nothing." It would have and does exercise dominion over the activities of the distributing system which is within the State and it can and does review the charges made upon natural gas and the price factors that go into natural gas that is distributed by our local distributing system. But my State cannot exercise any dominion at all or raise any questions at all concerning the transmission cost of natural gas to the Ohio line or at the producer's wellhead in the Southwest. Therefore, the only hope that we have for any kind of check on the reasonableness of the price of gas that comes to us is through the Federal Power Commission, under the Natural Gas Act of 1938, which specifically directs the Federal Power Commission to provide such regulation and pricing as are necessary in the public interest.

Prior to 1947, there were relatively few independent producers of natural gas. After a series of Federal Power Commission rulings, with which I did not agree, and with which most of our northern gas consumers did not agree, there developed on the horizons a great number of producers of natural gas who, relying upon those decisions, considered themselves exempt from the regulation of the Federal Power Commission; and the number of independent companies has continued, and is continuing, to multiply to the end that the price of gas at the wellhead may be freed from Federal control. Everything was fine with the so-called independent producers until the Phillips decision came along and said that it was all wrong; that if gas was intended for transmission in the interstate pipelines it was subject to regulation.

Let us analyze the increase in numbers of the so-called independent producers of natural gas. There were some in 1938, but the fact is that the Federal Power Commission conveniently does not have records of the number of independent gas producers in the succeeding years until the year 1953 when it determined that there were 4,545. The fact is that the number of so-called independent producers of gas did not increase until it became very profitable for them to increase under the subsequent favorable rulings of the Federal Power Commission. Now, just how independent are these so-called independent producers? It looks to me that they are nothing more than the legally divorced spouses of the principal transmitters of natural gas from the Southwest. Although they were legally divorced, we find that they are still very, very much in love. They date each other very frequently and they are not the least bit clandestine about it. They consort together in public places and are represented by the same lawyers. Are they really independent? Who incorporated them and who owns their stock and who controls them and who is their spokesman? And just how much has the Federal Power Commission done to analyze the nature and the character of the so-called independents? The Commission could not have done very much to identify them if it has no records as to their numbers prior to 1953.

There has been considerable talk throughout these hearings on the effect that the Harris bill would have to conserve the natural-gas supplies and at the same time make more gas available at no higher price to the consumer. It cannot do all things for all people. simply cannot. It was pointed out by the officials of the Federal Power Commission that we have reserves that would last 221/2 years at the present rate of consumption. But the fact that is overlooked is that the present rate of consumption is only a fraction of what current increased demands could make it, particularly in view of the anticipated increase in the population and the development of our industry. I doubt whether the present reserves are sufficient to last 10 years. The shoe may end up on the other foot. The great gas-producing States of Texas, Arkansas, and Oklahoma may someday, sooner than they now believe possible, find themselves in the same plight as Ohio. The wells may become depleted and become useful only as storage bins for gas that might even have to come into Texas and Oklahoma from other States. If that were to happen, would Texas and Oklahoma feel then as they feel now about the regulation of the Federal Power Commission on this important subject?

It has been brought out during these hearings that 45 percent of the gas produced in Texas goes into interstate, while 55 percent remains in Texas. What was overlooked in the discussion is that most of the 55 percent of gas remaining in Texas is pumped back into the wells to be mixed with and prepared with other gas for ultimate consumption in interstate use. The 45 percent estimate on interstate shipment is not correct.

The Harris bill speaks of a fair field price. The fair field price of a substance-any substance in demand-is what the market will pay. A fair field price of natural gas at the wellhead will move the areas of competition from the field-the producing end-to the consuming end in the development of vigorous competition between cities and urban centers needing the gas. Apparently some Indiana communities are willing to get the gas at any price. We cannot bid for gas at the Texas county gas auctions. The struggle which we witness in this hearing is a struggle between the have and have-not areas of this country with respect to natural gas. We call ourselves the United States of America: we are united in the Federal form of our Government in the national welfare, but this process of picking away at the very thing that makes America strong will destroy us. We are an economic unit, and the interdependence of one section of America upon another will strengthen the land.

There has been considerable discussion before this committee on whether or not natural gas produced for interstate commerce is a public utility. As far as the United States is concerned, that question is moot. Under the long chain of Federal decisions, the test of Federal regulation is whether the subject or substance passes through interstate commerce. As far as the consumer is concerned, there is absolutely no question. Most definitions of public utility concern themselves chiefly on whether there is monopolistic control. To the gas consumer of the North, whose natural gas comes to him from a producer over whom he exercises no selection through a pipeline transmitter over whom he exercises no selection and through a distributor over whom he exercises no selection, gas is a public utility. He is at the complete mercy of the people who provide, transmit, and control the flow of natural gas to his home.

I am in perfect agreement with the distinguished trained judicial minds of the United States Supreme Court in the Phillips case. And what are the Southwest producers endeavoring to do now? They do not like the Court's decision so they want to overrule the Court by an

act of Congress. The calm judicial temperament and the wisdom of our highest Court in the Phillips case is being circumvented by regional emotions. History tells us that the upset of judicial decree by intemperate legislative action does not result in ultimate national good.

Now the Federal Power Commission comes here today and tells us that they do not want to fix the wellhead price of natural gas going into commerce. Do they want to escape their public duty? Well, they do not say. The Natural Gas Act tells them what to do and the United States Supreme Court in the Phillips case gave them a mandate. It says the Commission must fix the field price of the wellhead producer. And they have the broadest authority under the law as it now stands to fix formulae, flexible formulae for the pricing of natural gas. It seems to me that the law is satisfactory just as it is. If the Commission arrives at an unjust or arbitrary formulae, the wellhead producer or the transmission line may go to the courts and get the formulae corrected. If the consuming public does not like the formulae. they can go to the caurts and get it changed or they can exercise their public prerogative as voters and dismiss the Federal Power Commission if they disapprove of its work.

Now if it should be decided that the Federal Power Commission must be guided in the factors surrounding regulation and the determination of wellhead price, I have a bill which I think is fair. It leaves the production of wellhead gas under Federal Power Commission control if it is intended for interstate shipment in accordance with present law. With respect to pricing formula, it says that producers of natural gas at the wellhead should be allowed a fair and reasonable return on their investment, and I would be willing to see the measure amended to specifically include a producer's dry-well experience in determining the investment factor. I recognize that a dry well can cost a considerable sum of money. Now, I am not saying that 3, 4, 5, or 6 percent is a fair and reasonable return on this kind of investment-you can get that kind of return on investment today with no risk factor. Why not let the Federal Power Commission take these facts under consideration and allow a producer a fair and reasonable return on his investment which will include the factors of risk, the high cost of dry wells, and problems of reaching transmission points.

I do not know extensively of the terms that surround the whole atmosphere of natural gas regulation, I have studied the problem here and I have followed it for a long time as a member of the Ohio State Senate and as a member of the Cleveland City Council. It seems to me that despite all the talk about escalator costs, fair field prices and favored nations clauses, the issue before us simply boils down to a political decision. Are the people of the sovereign States of Texas and Oklahoma and the other gas producing States of the Southwest which produce the natural gas, privileged to

hatural gas on which they find them-selves? That is the Harris bill. Are the northern consumers of natural gas who have no choice about whose gas comes into their homes going to suffer the lack of any effective public regulation on this important natural resource upon which they have become so dependent? In short, is the public to be served in any

way by the Harris bill? The people of my State and the people of my district do not want to engage in combat with the good people of Texas and Oklahoma and the Southwest. All we seek is peaceful coexistence. seek in natural gas what another distinguished Texan, WRIGHT PATMAN, seeks in other fields, fair and reasonable trade policy. We do not want to pay a tariff on our gas to Texas, Oklahoma, and the other States of the Southwest. We want the good people of the Southwest to get everything to which they are entitled for their enterprise and for the bountiful things the Lord put in their earth and forgot to put in ours. They are entitled to very much consideration for their enterprise and for their risks in drilling for oil and gas-but some of the national interest in the earth of the Southwestern States is something that the Northern public feels entitled to because we are also part of the same United States. We live in the same Re-Public, we feel entitled to participate in the bounties of another part of our Nation at a reasonable cost because the Deople of Texas, Oklahoma, and the Southwest did not put that gas into the

The decision which confronts this Congress is very technical, but it is primarily a political and economical conflict between regions. Should the rights and interests of 88 million people be disregarded in the interest of several thousand so-called independent producers of gas? My bill and a Federal Power Commission which is constrained to work could do the job in fairness to all groups concerned.

Hero in Time of Peace

EXTENSION OF REMARKS OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mr. DAVIS of Wisconsin. Mr. Speaker, a very courageous but very modest man has returned to my home city in Wisconsin from the Mayo Memorial Hospital at the University of Minnesota. Although he sought no publicity and does not approve the nationwide attention he has been receiving, I want to bay tribute here today to him as a brave man and a good neighbor.

But the Waukesha Daily Freeman can best tell the story, and so, with your permission, I would like to have reprinted in the Congressional Record, so all my colleagues may read it, this story of Ted Goodman, of Waukesha, Wis.:

charge whatever price they see fit for the LOANED HEART AND LUNGS TO PENNY RAE AND EARNED DEVOTION AND RESPECT

(By Sally Sibbald)

warned, "Loan oft loses both itself and friends."

A Waukesha man who "loaned" his heart and lungs to 7-year-old Penny Rae Raymond has lost nothing, while gaining in the gratitude and love of a family, and respect of a community.

Today, the donor, Ted Goodman, 41, is back at home, 522 North East Avenue, and back at his job running the heat treat department at the Quality Aluminum Cast-The recipient, Penny Rae, of 719 East North Street, is in good condition in a Minneapolis hospital, recuperating from the operation made possible by Goodman's unusual loan.

Only 8 days ago, Goodman lay on an operating table at the University of Minnesota Heart hospital as a team of skilled surgeons linked Penny Rae's bloodstream to his. During this essential cross-circulation process, surgeons were able to seal a hole in the muscular wall of the child's heart.

A 4-inch incision was made in Goodman's upper leg where an artery and vein lie in close proximity, in order to insert the plastic tubes that would divert Penny Rae's blood to his yeins. For a full 11 minutes, his heart and lungs took over the task of pumping and purifying her blood, while her heart was made idle and her lungs collapsed.

Goodman, who suffered no ill effects except for an uncomfortable rash, temporary stiffness and a slight limp, returned home Saturday, evening. He was accompanied by Penny's father, C. E. (Bud) Raymond, who is staying with the Goodmans—close friends for the past 3 years—until his wife and only child return from Minneapolis.

"I told the Raymonds several months ago when I knew about the operation, that if they didn't have anyone in the family that could be a donor that I would. And that's the way it turned out," Goodman said.

Raymond explained that the family didn't learn until 2 days before the operation that Mrs. Raymond—who originally was slated to be donor—would be unable to take part. Raymond, in Minneapolis, quickly checked the blood types of 4 other persons who had volunteered to act as substitutes.

"Ted's was the only one that fit, so I called him immediately," he said. "That was Sunday morning about 11: 30."

"It was 5 minutes to 12," Raymond continued. "I said, 'Ted, are you available?' He said, 'You betcha.' He didn't even think about it. I told him a train was leaving Milwaukee for Minneapolis at 1:20, but I misread the train schedule. It really left

"He told me later all he had was a couple gobbles of pork chops, packed his suitcase, took his coat, and rushed to Milwaukee. About that time, I was at the top of his list."

Goodman arrived at Minneapolis at 7:45 p. m. and went immediately to the hospital where he spent Sunday night undergoing numerous tests. More tests, a cardiogram, a chest X-ray, and checkups by 3 or 4 doctors continued Monday. At noon it was learned that Goodman could act as donor and the operation was scheduled for the next morning.

One of the more vivid recollections emerging from the postoperative haze was seeing Penny as he was wheeled from the recovery room Tuesday afternoon. She was in the oxygen tent, he said, but she turned her head toward him and wiggled her little fingers.

"That really made me happy," he said.

Goodman was obviously happy about a card he received while in the hospital. Signed by a New York Daily News reader, it wished him "Godspeed and quick recovery."

But as he spoke, Goodman looked slightly embarrassed. "I don't like all this publicity," he said. "That's not what I went up there for."

Raymond answered quietly, "We know that, Ted. But when you're unselfish people are going to find out about it."

When asked if he had any feelings before the operation, Goodman answered, people have asked that, but I didn't stop to consider my feelings. It was something I offered to do and the opportunity came along to do it. So I didn't think any more about it."

The Minneapolis hospitalization marked the first time Goodman ever had been a patient in a hospital, he said. Nonetheless, he is an old hand at giving blood donations. Five times he has given blood transfusions to friends. "Four or five times"—he can't recall which—he has donated blood to the Waukesha Blood Donor Club. His Minneapolis commitment forced him to miss a March 16 appointment at the Elks Club mobile unit.

You Asked for High Taxes

EXTENSION OF REMARKS

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include an editorial appearing in the April 1955 issue of Nation's Business entitled "You Asked for High Taxes." Nation's Business is published by the Chamber of Commerce of the United States. It is to be hoped this editorial will be read and digested by not only all members of all chambers of commerce but also by all of our citizens:

YOU ASKED FOR HIGH TAXES

A moaning, previously heard in early

March, swells through the land.

It is the lament of 60 million taxpayers computing the Government's share of history's second greatest national income. After April 15 will come a great silence as the citizens, freed from the tortures of deadline arithmetic, regain their usual complacency about tax matters; a pleasantly comatose state in which cussing those spendthrifts in Washington is an acceptable demonstration of interest in Federal finances.

Meanwhile the Central Government will be spending some \$63,500,000,000 out of a \$305 billion national income.

That is slightly less than 1 dollar out of

5 that everybody has to spend.

To appreciate this proportion, it is helpful to look at 1916, the last year before World War I. That year the Federal Government spent \$783,739,000. In those days the average citizen still regarded the 3-year-old Federal income tax as an amusing fiscal joke on the rich.

Had affairs continued as they were in 1916, the Government would be spending \$6.100,-000,000 today.

Affairs did not continue so. Two world wars and a bloody business in Korea have given us a heritage of costs. A hateful power which purposes to enslave us makes military preparedness mandatory. Thus wars, past and threatened, account for 80 percent of Government's present expenditures.

This fact is frequently regarded as a sufficient answer to the citizen whose interest in taxes goes beyond complaint.

There is another answer:

Demand.

Taxes are high because the public wants them that way.

The anguish of income tax time seems to refute that statement. But the lethargy the rest of the year refutes the refutation.

Government did not grow as it has grown since 1916 merely through its own caprice. It grew because, through the years, citizens have demanded that Government do for them what they did for themselves or left undone in 1916. Unlike the temporary moaning of tax time, the clamor for services is continuous. Some, true enough, is inspired by politicians who foster public wants so that they may win gratitude by satisfying them; but the greater number of services came about because the people petitioned for them.

As a result, in the 2 richest years of our history the Government has been unable to live within its budget—and outside the budget are other commitments so monstrous and complex as to defy tabulation. What would happen in a mediocre year is an unpleasant study in consequences.

This does not have to be, although the

This does not have to be, although the individual is powerless to change it. Groups of individuals can. Many are trying.

It is not rewarding work because, although Budget Bureau documents show logical places to start, every Government service has its defenders. They agree that Government spends too much—but not on their pet project.

So, little is done.

Little can be done until American citizens unite to put national solvency above special interests.

Twice the people have recognized a grave danger. They united—and won two wars.

If they unite again, in the face of a third great danger—they can balance the budget.

Secrets of the Airplane Carrier

EXTENSION OF REMARKS

HON. ROBERT T. ASHMORE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. ASHMORE. Mr. Speaker, before we consider H. R. 4393 we should take note of all available evidence pro and con the carrier.

I was amazed to read recently that— The Navy is using almost as many defensive aircraft to protect its 17 attack carriers as the Air Force has been authorized for defense of half the continental United States.

This statement appeared absurd to me until I began to check it for accuracy. Much to my amazement, I found it to be true.

I found that each carrier needs about 70 planes for purely defensive reasons. Seventy defensive fighters for each of 17 attack carriers makes a total of 1,190. I also found that the Air Force has been authorized 34 air defense wings by 1957. Each of these wings will have 75 fighters assigned. Thus, the Air Force will have only 1,275 fighters to protect half of the United States.

They tell us that carriers are not vulnerable. But these 17 carriers will need as many fighter aircraft for protection as we are allocating for the protection of our great cities such as Boston, New

York, Philadelphia, Pittsburgh, Chicago, St. Louis, Washington, D. C., New Orleans, Birmingham, and Miami.

I think these facts should be brought to the attention of every Member of Congress. Under unanimous consent to extend my remarks, I insert in the RECORD the following article presented by Mr. Drew Pearson, Sunday, March 20:

THE WASHINGTON MERRY-GO-ROUND

NAVY DIFFERENCES

Two discussions have been taking place in Washington, one public, one highly secret. On both depend the safety of the Nation.

Discussion No. 1 was a secret meeting of admirals and high naval officers at which it was admitted the airplane carrier is more vulnerable to enemy attack today than during the last war.

The terrible tragedies that took place on United States carriers, in which men died by the hundreds during Kamikaze attacks, are still fresh in the minds of many. Yet the vital fact that carriers are even more vulnerable to such attacks today than they were 10 years ago was not conveyed to the Congress which must decide whether more carriers are built.

The carrier is more vulnerable now, the conference of naval experts decided, because it no longer can count upon radar to detect approaching enemy attacks. Jet bombers fly faster than World War II planes, and without whirling propeller blades they are harder to detect. Also, higher frequencies have been adopted for search radar, the antennas are too small, and the ships' motion prevents stabilizing the search antenna.

That means, admitted the Navy's top experts at their secret meeting, the chance of warning a carrier against a jet attack is zero. Yet none of this information was transmitted to Congress, which has to decide whether the taxpayers should spend millions on carriers or put their tax dollars in other weapons.

PROTECTING CARRIERS

Best evidence of the carrier's vulnerability is the fact that 70 percent of its planes are held back to defend the task force and only 30 percent can be spared for attacks on the enemy. During the Korean war, for example, the Navy boasted of flying 183,000 sorties. But of those, a staggering total of 128,000 sorties was strictly defensive and didn't drop a single bomb on enemy targets.

The Navy is using almost as many defensive aircraft to protect its 17 attack carriers as the Air Force has been authorized for defense of half the continental United States. Most Congressmen don't know that, not because it's a secret but because they don't have time to read appropriations hearings.

But to defend its 17 carriers, the Navy will use 1,190 fighters. To protect half of the United States, the Air Force has been authorized only 1,275 fighters.

Furthermore, carriers are vulnerable not merely to air attack but to submarines. Of the 36 vessels in a typical task group, 32 are assigned to defense of the group. If the task force sticks together in tight formation to avoid submarines, the whole force can be destroyed by one atomic bomb. But if the ships are spread out to minimize the effect of atomic attack, submarines can slip through the defense. This has got naval strategists in a dilemma.

The Navy's chief argument against Air Force bombers is that they are tied to land bases. Yet the carriers are equally dependent on land bases. In the Mediterranean alone, the Navy maintains more than 40 land-based installations.

What embarrasses the admirals most, however, is that the supercarriers are too big to pass through the Panama Canal. For all practical purposes, this means the supercarriers are limited to one ocean.

Note.—Significantly, Britain, a seafaring nation, has cut its carrier program to the bone, is concentrating on constructing land-based bombers. Russia also is wasting no money on carriers, is feverishly building submarines.

They've Earned the Raise

EXTENSION OF REMARKS

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial, They've Earned the Raise, which appeared in the March 28 issue of the Daytona Beach (Fla.) Evening News:

THEY'VE EARNED THE RAISE

Congress was on sound as well as politically safe ground in ignoring President Eisenhower's threat to veto a postal pay raise of more than 7.6 percent.

The bill passed by both Houses of Congress gives a haif million postal workers a raise of at least 10 percent. In the lower pay brackets of less than \$4,000 a year it would mean at least \$400 a year, which is more than 10 percent for a salary scale that low.

In one of those rare moods in which the legal and traditional role of the law-making branch came to the fore in the minds of most Congressmen, the reaction to the President's threat was just exactly the opposite of what, seemingly, had been expected in the White House.

In vain did Republican Leader Knowland predict in the Senate that the President would veto the 10-percent boost. The bill passed that way just the same. After the veto, if there is a veto, will be the time and the occasion to figure out what to do.

The vote on this bill is a reminder that it's the function of Congress to pass the laws. It's the President's prerogative to recommend legislation, to oppose legislation, to sign or veto bills passed by Congress. The President has a perfect right to warn Congress in advance of action that he will veto legislation of which he disapproves. In its turn the Congress has an equal right to ignore a veto warning and after that to enact legislation over a veto if the necessary two-thirds strength can be mustered.

Sometimes it's just the desire of many Congressmen to show who's boss in the law-making field that leads them to ignore and finally override the President's will, but the signs are that the action of the majority of Congress on the postal pay increase had a different motive.

For many months the postal workers have been presenting their plea for a raise. Not only Members of Congress have heard and studied this plea. Many plain citizens and some influential ones have heard it, too, and they must have been impressed with the simple facts and the weight of public opinion back of them.

The simple facts are that the postal workers have earned the pay raise. They sorely need the increase. The Nation's economy needs it. It is difficult to ignore these basic needs. The 10-percent increase voted by Congress will no more than bring postal workers' buying power even with the higher cost of living now prevailing.

President Eisenhower has said he would view with "grave apprehension" any bill raising the pay above the 7.6 ceiling set by him.

We think everyone should regard with greater apprehension any pay system or custom which would force upon any segment of our society a substandard scale of living. The fact that most postal workers and other Public employees have been fighting desperately against a lowered standard of living brought about by inflation makes any expression of apprehension over setting things right sound somewhat hollow.

Everyone should be aware, of course, that the postal pay boost won't stand alone. Whether the 10-percent increase stands or is cut down to the President's figure, the postal boost is counted on to set the pattern for a million or more Government workers on the civil service classified lists. They, too, need the money.

Winning Essay in American Legion Contest

EXTENSION OF REMARKS

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. ROBERTS. Mr. Speaker, one of the most important activities of the American Legion is the annual essay contest. This activity is an annual affair and receives the active support of the entire American Legion membership.

The winner of the State award in the annual contest is Miss Carolyn Parks, a student at Fayetteville High School, who lives in the Fourth District of Alabama, Which I have the honor and privilege of representing. Miss Parks is the daughter of Mr. and Mrs. Leon Parks, of Route 1, Sylacauga, Ala., formerly Fayetteville, Ala. Her essay was sponsored in the Alabama American Legion essay contest by Sylacauga Post, No. 45, the American Legion, Sylacauga, Ala., whose present commander is W. N. (Spud) Cole. The first recognition which came to this young lady was when she won the sixth district contest, whose vice commander, Mr. Leonard A. Goldberg, is very active and efficient in the Work of the Alabama Department of the American Legion.

The title of the essay is "The Philadelphia Convention." In my opinion it is one of the outstanding literary gems that has been written by a high-school student. Miss Parks shows outstanding promise and it is my information that she recently won one of the Phi Beta Kappa scholarships offered by Birmingham-Southern College, Birmingham, Ala., which entitles her to a 4-year-tuition award.

The essay follows:

THE PHILADELPHIA CONVENTION

It is the morning of May 25, 1787, and the eyes of Philadelphia are focused upon the statehouse and upon America's ablest statesmen who file up its steps and through the doorway into the halls where, 11 years the Second Continental Congress adopted and signed the Declaration of Independence. Entering now is the impressive Virginia delegation. Outstanding in its midst is the tall, strong figure of George Washi. Washington. By his side walk James Madison, the modest little man whose gentle manner veils a scholar's brilliant mind, and Edmund Randolph, tall, handsome Governor of Virginia. Leading the New York delegation is Alexander Hamilton, only 30, yet recognized as one of the ablest men present. In Pennsylvania's delegation are Robert Morris, James Wilson, Gouverneur Morris, and 81-year-old Benjamin Franklin. Little do they realize how important a part this shrunken little philosopher will play in the months to come; how raging conflicts will be calmed by his infinite wisdom; how flaring tempers will be soothed by his infectious Passing now are Roger Sherman and William Johnson, from Connecticut; Rufus King, of Massachusetts; John Dickinson, Delaware; William Paterson, New Jersey; John Rutledge and Charles Pinckney, South Carolina. One by one they file by-mer-chants, planters, lawyers, educators-but statesmen all.

Notably absent are the fiery personalities Samuel Adams and Patrick Henry. Thomas Paine, the stanch liberal, is in London. Theorist Thomas Jefferson is serving as our Minister to France, while extremely conservative John Adams serves in the same capacity in London. It is then a rather moderate group who compose this Convention, a group called by Jefferson an assembly of demigods.

Now the procession is ended. The last man has passed through and the doors are closing behind him.

And so began the convention which we today call the Constitutional Convention, because out of it came the document upon which our great American Government is based. And that statehouse where it was born is the building we know as Independence Hall.

At the first meeting George Washington was unanimously chosen president of the Convention, a position in which he never failed to employ his marvelous reserve of poise and dignity. It was resolved at this first assembly that the work of the Convention should be kept secret and no official record should be maintained. There was good reason for this decision. The delegates—aware that the work of this Convention would decide the fate of American Government-felt that undue pressure from public opinion should not be allowed to influence any man present.

The next decision of the Convention was to put aside instruction to amend the Articles of Confederation. Indeed this had been the whole purpose in calling the Convention, but the delegates believed such an attempt would result only in "a futile patchwork." Swayed by Hamilton's eloquent reasoning, they disregarded the Articles and began work on something entirely new.

Experience with Britain had taught the

Colonies to fear a central government having too much power. Yet the men assembled in this Convention were too broadminded not to comprehend the dangers arising from a central government lacking power to function for the benefit of the Nation. The greatest problem confronting the assembly was the States' fear of central government and their desire to be individually sovereign. While the delegates were discussing what would and would not be acceptable to the people, Washington broke in with a brief but weighty speech including these words: "If, to please the people, we offer what we ourselves disapprove, but how can we afterward defend our work? Let us raise a standard to which the wise and the honest can repair; the event is in the hand of God."

With these words in mind they considered the Virginia plan of government, submitted to the Convention by Governor Randolph. It provided for executive, legislative, and judiciary branches of government, the legislative branch to consist of a bicameral congress with representation based on population or State-tax quotas.

It was only natural that this plan should be supported by the larger States and violently opposed by the smaller ones. For 2 weeks bitter debates raged, until Paterson, supported by the smaller States, presented the New Jersey plan. It provided for a onehouse legislature in which each State would have equal representation.

The delegates favored neither plan, and for a while the Convention seemed doomed. Then at Franklin's suggestion a committee was appointed to work out a compromise, and on July 9 a plan was introduced whereby Congress should consist of a Senate, where each State should have two delegates. and a House of Representatives, where representation would be determined by population. At last the Convention reached a historic agreement—the great compromise.

Again and again during the long hot summer, compromise led the Convention through recurring deadlocks-on representation and taxation of slaves, on commerce, on limiting democracy in the Constitution-until finally, on September 8, a Committee on Detail was appointed to draft the final document. Principal members were Madison, the political expert, Hamilton, and Gouverneur Morris, who was responsible for the beautiful phrasing of the Constitution.

On September 17, 1787, 41 remaining delegates sat in the Convention's last assembly. Many were uncertain about signing the completed document, but, swayed by Franklin's reasoning, all but 3 affixed their signatures to the Constitution and 12 of the 13 States were represented thereon.

As the last delegates were signing, Franklin remarked of the sun painted on Washington's chair, "I have often and often * * looked at that sun behind the President without being able to tell whether it was rising or setting; but now, at length, I have the happiness to know it is a rising and not a setting sun."

Truly the sun was rising on America, for the framing of the Constitution of the United States was the birth of modern American government. It was the birth of a Union that has withstood the perils of civil war and depression. It was the birth of a democracy so reverenced by its people that they have fought and died on foreign soil that it might live and grow and embrace all of the freedom-loving peoples of the world. It was the birth of "one nation under God, indivisible, with liberty and justice for all."

The Late Paul V. McNutt

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Wednesday, March 30, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very moving editorial published in the Fort Wayne Journal-Gazette of Sunday, March 27, 1955, in tribute to the Honorable Paul V. McNutt, who died re-

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PAUL V. MCNUTT

The passing of Paul V. McNutt came as a distinct shock to his host of friends in Indiana, in the United States, and throughout the world.

Mr. McNutt was one of the most gifted men ever born in Indiana.

His powerful intellect, his strength of

character, his magnificent energy, his dis-

tinguished personal appearance, and his moving eloquence all fitted him for the highest roles as a leader of democracy.

He served his State and Nation in many capacities and always with ability and dis-

Except for the peculiar and complex political situation which prevailed in 1940, Paul V. McNutt would almost certainly have been elected President of the United States.

No one who knew him ever questioned his qualifications for that most important of offices.

It is as governor of the State that he will best be remembered by his fellow Hoosiers. It was his brilliant leadership in that office which recommended him to the Nation.

From childhood it was evident that Paul McNutt was marked for an unusual destiny. He prepared himself for the future with care. He wished to engage in the public service.

He was a leader in his college days at Indiana University and his scholarship won him election to Phi Beta Kappa. He was graduated from Harvard Law School.

At the age of 34, Mr. McNutt was the youngest dean Indiana University's School of Law had ever had.

In 1930, he was chosen keynote speaker of the Democratic State convention. When he finished that address everyone who heard him knew that he would be his party's nominee for governor in 1932. He was. And he was elected.

He came to the office of governor in 1933 at the depth of the depression. He attacked the problems of that unfortunate time with such vigor and vision that he inspired the new Democratic leaders in Washington to handle the depression problems on the national front with the same vigor and determination.

McNutt was a strong Governor. He did not evade responsibility or seek to pass State problems on to the Federal Government. He solved them himself with the aid of the State legislature.

As Governor, he set Indiana's fiscal house in order. He piloted through the general assembly a reorganization program to bring State government up to date. He sought and obtained many laws which set Indiana on her future course. These laws with few exceptions still stand as a monument to his knowledge of public affairs.

Before he was Governor, Colonel McNutt, who was an artillery officer during World War I, had served as State and National

commander of the American Legion, After he left the Governor's office he was High Commissioner to the Philippines, and later American Ambassador to the islands. Here he demonstrated that he was an accomplished diplomat as well as a brilliant administrator.

His Federal posts included those of Federal Scourity Administrator, Director of Defense, Health, and Welfare Services, and Chairman of the War Manpower Commission.

The most dramatic portion of the career of Governor McNutt was that which concerned his approach to the presidential nomination.

When the Democratic National Convention met in Chicago in 1932, Paul McNutt had not been elected Governor of Indiana. But already his friends throughout the Nation were mentioning him for the Presidency.

During the convention of 1936 in Philadelphia the Indiana delegation carried its State banner high. Its favorite son had attracted national attention. Whenever he walked through the lobby of the Benjamin Franklin Hotel, where the Hoosier delegation was quartered, every eye followed his magnetic figure. When the late Senator Joseph Robinson, of Arkansas, presented him to the national gathering as "the whiteplumed knight from the banks of the Wabash," the great audience in Convention Hall roared its approval.

The 4 years which followed brought the Indiana stateman to full political stature. He now had an enthusiastic and organized following from coast to coast. He was one of the outstanding candidates for the presidential nomination, and the most colorful of them all. Then, with the war clouds lowering, Franklin D. Roosevelt decided to seek a third term in 1940.

McNutt was the popular favorite for the vice-presidential nomination. But Roosevelt wanted Henry Wallace.

In the interest of party harmony McNutt stepped aside amid one of the most memorable scenes which ever took place in a national convention.

The handsome, distinguished figure took the platform to withdraw his name. The delegates had learned what was up. They cried, "We want McNutt" and "No, no, no" until Chicago Stadium seemed trembling in the grip of an emotional hurricane. This was no planned demonstration. This was the real thing.

At last the masterful orator stilled the tumult and declared that as a good soldier he was obeying the wishes of his Commander in Chief. It was for the talented, ambitious Hoosier the great renunciation.

He proved as gallant as he was able. He uttered no outcry of anguish. He was forever loyal to his party.

His last 8 years were devoted to his extensive law practice and his numerous business interests. His philosophy enabled him to look on life with a screnity which he had not known in the turnultuous years of public service.

Now this Hoosier-born national and world figure will lie in Arlington National Cometery outside Washington where so many of the Nation's great already lie.

To those devoted companions who shared in all his triumphs, his wife, the gracious Kathleen, and his daughter, the lovely Louise, we extended our deepest sympathy.

Farewell to the gentleman from Indiana whose towering presence we shall not see again. But the deeds and scomplishments of his career will keep the memory of Paul V. McNutt alive through the years to come.

Anniversary of Slovakia's Independence

EXTENSION OF REMARKS

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. MADDEN. Mr. Speaker, last week the committee investigating Communist aggression filed a resolution asking the Congress to send the reports and testimony of the committee to the United Na-

Considerable testimony was taken by the committee concerning the subjugation of Slovakia by the Communists. The following is a message of the Slovak National Council Abroad, commemorating the anniversary of Slovakian independence:

Message of the Slovak National Council Aeroad

On the anniversary of Slovakia's Independence, the Slovak National Council Abroad appeals hereby to the suffering nation at home as well as to the Slovaks in the free world.

As representation of the Slovak exile, we find inspiration for our work and struggle in the leading principles of Christian tradition that, for more than 1,100 years, has formed the character of the Slovak nation. This tradition, at the time of their hardest tribulations and persecutions, remained the most secure protective shield for the Slovaks.

The 16th anniversary of the Slovak independence day coincides, alas, with the 16th year of Slovakia's bloody occupation by the Red army and its political helpers. occasion, love for freedom and justice leads us to draw the attention of all nations of the free world to the sufferings of the Slovaks under the present Communist regime and to invoke the understanding of the Western World for Slovakia's right and aspiration to independence. Once more in history and against its will, a political, cultural, and economic slave system has been imposed upon the Slovak nation. It has been deprived of all aspects of self-determination. The helpers of communism, having in 1945 established a totalitarian government in Slovakia, have by their action put themselves on the side of the enemies not only of the Slovak nation, but of the entire Christian culture and the Western World. Spiritually, the Slovak people has always been gravitating towards the West and their Christian tradition is binding them not only to Europe but also to America, where, under God and law, one-third of the Slovaks have found their new and free home. For this western orientation and loyalty to Christian tradition, Slovakia is submitted now to an allthe-stronger persecution from the present Communist regime.

The Slovak National Council makes also an appeal to all democratic nations, imploring them not to close their hearts before the sad realities of the enslaved peoples behind the Iron Curtain and not to let themselves be drugged by the propaganda about the possibility of coexistence between democracy and communism. If the free nations were unable to envisage a final settlement for the worldwide problem of communism on their terms, their passive attitude would have for consequence the enslavement and bloodshed of other nations and an increased menace for the whole western culture and civilization.

While remembering March 14 as a symbol of the State independence of Slovakia, we look toward Central Europe and wish to stress our unshakable loyalty for the resisting Slovak people and render our homage to the martyrs who gave their lives for Slovakia's honor, good name, and Christian tradition. We have to reassure them that our goal is to work and strain for the application of Slovakia's natural right to equality of treatment with other nations. It seems to us that such an equality would be assured only by a free Slovak republic within a federation of democratic nations of Europe.

In spite of many unfavorable conditions in this respect, the Slovak National Council Abroad is indefatigable in informing the free world about the oppressive Communist regime. Thus the truth about Slovakia and her legitimate aspirations for freedom are penetrating into the responsible circles in western countries.

We implore all Slovak exiles to contribute by their work and their sacrifice to speed the day of liberation of the enslaved peoples, including the Slovaks, and to partake in all democratic anti-Communist movements and organizations. One stipulation is, however, to be formulated in such cases, i. e., that the Slovak representation would be recognized as an equal member to the other Central European nations and that its speakers would be able to promote freely the aspirations of the Slovaks toward political independence as the speakers of other nations do.

We avail ourselves of this opportunity to mention the highly valuable work of the Americans of Slovak descent with the Slovak League of America on their front. We do it in firm conviction that they will continue in paying attention to the sufferings and struggles of the Slovak nation and will do their best for the liberation and the establishment democratic government in Slovakia. Greatly appreciating the sacrifices and atrains of the Slovaks in other countries of the free world, we desire to keep in close contact with all of them until, by a common effort, we attain our final goal, a free Slovak republic.

Rev. FERDINAND MONDOK. Acting Vice President. Dr. JOSEPH KIRSCHBAUM, Chairman of the Foreign Affairs Committee.

A National Altar

EXTENSION OF REMARKS OF

HON, JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES Wednesday, March 30, 1955

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A National Altar," written by Dr. Frederick Brown Harris, the distin-Buished Chaplain of the Senate, and Dublished in the column Spires of the Spirit in the Washington Sunday Star of March 27, 1955. Dr. Harris writes on this subject with his usual clarity and great spirituality.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPIRES OF THE SPIRIT

(By Frederick Brown Harris, minister, Foundry Methodist Church; Chaplain, U. S. Senate)

A NATIONAL ALTAR

The idea of a national altar in the Capital of the Nation is not new. George Washington, who laid the cornerstone of the Capitol, desired that in the new city bearing his hame there should be set up by authorization of the new Government a place of prayer and worship. At last there is such an altar under the white dome. No religious event of 1955 is more freighted with meaning. The hature of this shrine of the spiritual is an amrmation not of any union of state and church, but of the union of the state; and religion. That is the very foundation of our Republic, as those testified who prayed around the cradle of the state.

In no uncertain tones, Washington warned that even the pillars of morality would collapse without a religious foundation. The present Chief Executive began his term of office by solemnly declaring: "The basic doctrine to which we must always cling is that our form of government is founded on religion. It has no sense unless it is based on a deeply felt religious faith." The Congress is is only witnessing to that undergirding belief when, by the combined action of the Senate and the House of Representatives, a chapel of prayer and meditation is now officially established where the more than 500 national legislators can be alone with their better selves and with their God. And so, at the very center of the Republic's life is now designated "an upper room," dedicated to quietness and to prayer that is listening, as well as petitioning, and where the commotion of the big, buzzing confusion of the business of government is hushed. Here is provided a cloister of sacramental silence whose constant invitation is: "Be still, and know that I am God."

Through the resounding marble corridors moves a constant stream of eager and fascinated pilgrims of all ages, from all the States, and from all the earth. The imposing structure, plus the Senate and the House Office Buildings, is a complicated world in itself. Interests and causes so vast in their ramifications that they seem beyond comprehension center on that high hill of the Nation. Life under the dome is hectic, full of tension, and often fraught with a sense of frustration.

Certainly every national lawmaker worthy to sit in one of the seats of lofty eminence, confronted by demands which his mind can scarcely catalog, let alone adequately meet, must cry in his inner spirit: "Who is suffi-cient for these things?" The answer is, of clent for these things?" The answer is, of course, no man is fit to serve his generation unless his faulty, fallible faculties become the channel of a power greater than himself. The only thing that makes sense is God.

The practice of the presence of God is not an opiate, as a false philosophy is loudly proclaiming. On the contrary, it is the one constructive dynamic. All history shouts, as Holy Scripture asserts: "The people that do know their God shall be strong and do exploits." It is the undeniable record of the unfolding centuries that in proportion to the power of religion over the national mind has been the greatness of the Nation and the height to which it has attained in the

scale of achievement.

The new shrine dedicated to cultivating the reality of the God who is acknowledged in the oath and on the currency, and now in the Pledge to the Flag, is not just a pleasant, passing compliment to the Maker of heaven and earth. Sometimes, when a statesman, a philosopher, a scientist or a novelist says complimentary things about religion he is quoted as if it were quite a feather in the cap of things unseen and eternal that so great a person in a patronizing way bows in God's direction. That attitude is arrogant nonsense. There is nothing of that in the Prayer Room in the Capitol. That chapel, which in its vital relevancy to today's problems looms as large as any cathedral, is the national symbol of the august fact that gives meaning to every other room, including the two Chambers of legislation—the awesome reality of God. That is the fact behind every thought of the brain and every beat of the heart and every breath of the body. It is the element in which we have our being. It is the final, irreducible, and unescapable denominator of the universe, God.

It is eminently fitting that in that room are none of the distinctive signs of sectarianism. No device that divides adorns this closet of private communion. It is a place to bow in humility and contrition, a place to kneel if one desires; an altar on which is the opened Book of Books, a lamp for the feet to all who will follow its kindly light. Each one who crosses that threshold brings his own religious tradition as he gazes at the kneeling figure of the Father of his Country, that valiant, reverent leader, still first in the hearts of his countrymen, lifting up his soul to the Father of Lights. In the pictured glass is proclaimed his faith, in the words of a psalm he loved: "Preserve me, O Lord, for in Thee do I put my trust."

It is said by those who knew him best that the great English statesman, William E. Gladstone, in all his brilliant, strenuous legislative career in Parliament spent some time each day in a little nearby church, for a season of meditation and prayer. Who can doubt that in such hours, snatched from ruthless demands on time and strength. was nourished the faith which glowed undimmed even when his reform bill was defeated? It was fresh from a prayer room in that crisis that he said to his gloating foes: "The great social forces which move onward in their might and majesty and which the tumult of your debates does not impede or disturb—those great social forces are against you. They are marshaled on our side." time proved that they were.

In that spirit and with that vision splendid, who can doubt that American legislators, coming with their own contemporary problems and gazing at Washington praying when all seemed lost and the dream of American independence a fading hope, will find the strength to struggle on in other

dark hours of today and the tomorrows?

And so, with infinite satisfaction that the altar is there and the prayer room is there, under the Dome, may it set singing in millions of approving and grateful hearts across all the land, as they think of their representatives entering that Chapel with a sense of utter dependence on the God who hath made and preserved us a nation.

"Sweet time of prayer! Sweet time of prayer! That calls us from a world of care And bids us, at our Father's throne, Make all our wants and wishes known; In seasons of distress and grief Our souls have often found relief; And oft escaped the tempter's snare, By thy return, sweet time of prayer."

In the nearby Chambers of legislation, Members may suggest the absence of a quorum. In the Prayer Room, a quorum is oneand God.

Proposal to Name Garrison Reservoir. N. Dak., Lake Sakakawea

EXTENSION OF REMARKS OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Wednesday, March 30, 1955

Mr. YOUNG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine editorial which appeared in the Bis-marck Tribune, of Bismarck, N. Dak., giving well-deserved credit to a great American, Sakakawea.

I am very happy that Mr. John Hjelle, editor of the Bismarck Tribune, has made a substantial contribution to the goal that many of us hope to attain, that of naming Garrison Reservoir in honor of Sakakawea.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S NAME IT LAKE SAKAKAWEA

Senators Langer and Young, of North Dakota, have introduced, according to news story carried in the Tribune Thursday, a bill in Congress which would give Garrison Reservoir the name Lake Sakakawea.

The two Senators are to be commended for this action, and it is to be hoped that the Congress recognizes the sense of what they are proposing and enacts the measure promptly. Certainly there can be no opposition to it.

As the Tribune pointed out earlier in suggesting that Sakakawea's name be given to the big body of water behind Garrison Dam, the designation will have countrywide meaning, inasmuch as the Indian woman has become a legendary character to school children and adults everywhere.

Garrison Dam and the big lake behind it are certain to become major tourist attractions in themselves, the extent of their drawing power upon the travelers of the country depending only upon the effectiveness with which North Dakota promotes them.

By giving the lake the name Sakakawea, the lure to tourists will be multiplied. Here is a name all travelers will recognize and that will stimulate in them a desire to ex-

plore and enjoy.

It was only a short distance south of the southern tip of the lake that Sakakawea joined the Lewis and Clark Expedition, to help it on its way to the Pacific Ocean. Only a few miles south of Garrison Dam the explorers spent the first winter of their expedition.

It would be particularly fitting if the naming of the lake for the Indian girl who played such a historic role in this epic of America were to be consummated on this 150th anniversary year of the expedition, further fixing upon North Dakota and this great water development project the eyes of the traveling public. Appropriate ceremonles might be arranged during the summer at the lakeside.

Tourism is one of the billion-dollar industries of America. North Dakota should get a bigger bite from it. Here's one way to help that purpose along.

The Labor Herald Suspends

EXTENSION OF REMARKS

HON. J. ALLEN FREAR, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES
Wednesday, March 30, 1955

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "The Labor Herald Suspends."

This editorial was written upon the termination of publication of a weekly newspaper known as the Labor Herald. For over 55 years this weekly newspaper has helped to inform a large segment of the population of Wilmington and its suburbs.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE LABOR HERALD SUSPENDS

It is with deep regret that the publishers of the Labor Herald are forced to make an announcement of suspension of publication with this our final issue.

Ever-increasing production costs continue to threaten the existence of many small and some large publications throughout the Nation. These costs can be absorbed for a time, but when they reach a saturation point publishers find that it's no longer profitable to continue their enterprise.

We were gratified by the number of calls received after our suspension of activities was publicized in the News-Journal papers, and to know that at least some of our efforts were recognized and appreciated affords recompense for the years in which we have been actively engaged in the publishing business in Wilmington.

While we were primarily a labor publication, devoted to the interests of the working man and woman, we have always tried to picture the sides of both labor and capital in any argument or controversy, being of the opinion that their problems are synonymous; and when the two enjoy a harmonious relationship, the interests of the Nation and its people are best served.

Capital is merely stored-up labor, and capital, by enabling labor to apply itself in more effective ways, increases the power of

labor to produce wealth and to avail itself of the reproductive forces of nature. When a favorable balance can be maintained, labor receiving its just share for services rendered and capital likewise, prosperity and better living conditions ensue.

living conditions ensue.

Our grandfather, the late A. R. Saylor, founder of the Labor Herald, expressed these same views, and through his conviction that the laborer was worthy of his hire he became interested in the American labor movement and started the Labor Herald.

Through the years the Labor Herald waged many a winning and losing battle for the interests of the working man. Sometimes it received credit and other times it did not; always it lacked the full support of the people whose interests it was representing.

During the past two decades, labor has won for itself recognition unparalleled in the history of this or any other nation. It is our belief that sometimes the privileges gained have been abused by some unthinking elements and we have been as critical of these abuses as we have of those which related to capital, when we believed it to be in the wrong. For the expression of these beliefs we have at times irked both groups and have been referred to in uncomplimentary terms. However, we were not dejected as our conscience was clear and we believed that our type of reasoning was devoted to the best interests of the Nation and its economy.

We have constantly criticized our Nation's fourney down the road to socialism and the ever resulting higher taxes which become necessitated through our social experiments, which in the end, can only succeed in destroying the liberty and freedom which is associated with real democracy. History and economics have proven the falsity of the Marxian doctrine, yet our legislators con-tinue to cater to it because of the popular vote-getting appeal it holds. Many want the Government to relieve them of their God-given privilege of providing for their own welfare don't realize that they are taxing themselves for every benefit derived and in the end the Government gives nothing it can't take away.

The power to tax has always been the power to destroy. Bureaucracy is created by this power and has contributed greatly to the fall of many empires. The exercise of this Government prerogative is a breeder of extravagance and waste, creator of inflation through deficit financing, and finally a harborer of communism, the number one threat which we are nurturing at the same time we are opposing. Prior to the instigation of the Federal income tax, not many of us were affected by taxation and even after its initial inception, few of us were infected by the bite. Wars, threats of wars and our socialistic experiments however saw to it that the bite became deeper. World War II became the instigator of the Federal withholding tax, an easy method for the Government to extract its take from the wage earner before he had seen it. While it's not a hidden tax as are the thousand and one indirect taxes now levied, the average wage earner didn't put up too much kick as he knew it would have to be paid and with-holding was the most practical and painless procedure for easing the burden. Anyway he had never seen the money and had become educated to associte take-home pay as his actual earnings.

The administration of another of our socialistic experiments, "Social Security" is now open to criticism. When this tax started, the employer paid one-half percent and the employee, one-half. Now it has risen to 4 percent and if it's to continue, will necessarily go much higher. True, a limit has been placed on the percentage to which it can go, but like the income tax, there's nothing to stop our legislators from raising the take when more eligibles tap the keg. The worst feature of the "Social Se-

curity" program is that contributions collected are diverted to other governmental obligations and interest-bearing promisory notes are left in the social security till. Chances are that many who become eligible for "Social Security" will never receive it unless changes are made in its administration.

Taxation, while considered a necessary evil, is not popular with even those who are demanding the social gains and many politicos gain office with promises of tax relief. Pennsylvania's present governor was elected to office on his promise of better schools. roads, etc., while at the same time, relieving the populace of the unpopular sales tax. We wondered how his campaign promises were to be kept. Now Pennsylvania motorists are being threatened with an additional cent per gailon gasoline tax and a substantial raise in automobile license fees.

During the 5 years we have spent as editor of this publication we might have opposed some of these so-called social gains to which labor subscribes, but in so doing we have not tried to offend labor or any segment of the population. We have merely expressed our views on what we believe is injurious to the Nation and the general well-being of all.

Even though we're tossing in the sponge we still believe that there's need for an unbiased labor press in Deleware, and we sincerely hope that some other interest, imbued with a spirit that was sometimes lacking in us, can take up the pen in an effort toward cementing a better and more understanding relationship between capital and labor, two of the prime factors in the production of wealth.—The Editor.

Modern Methods of Sugar-Beet Farming

EXTENSION OF REMARKS

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1955

Mr. ANDERSON. Mr. President, one of the big news stories of our day is the rapid extent to which American farmers have adopted modern methods of production in order to reduce their costs, and provide a constantly higher and higher standard of living for all Americans.

Too often we take for granted the great advances made by agriculture, letting the impression grow that it is only American manufacturing which is setting an example to the world.

I was glad to see in the Washington Daily News, a Scripps-Howard newspaper, on Tuesday of this week, a newsstory by James Daniel describing the revolution in the sugar-beet fields created by mechanization of sugar-beet harvesting and also of sugar-beet thinning and cultivation.

While this is but one example of what the major American agricultural industries are doing, it is a particularly glowing example, and I am sure that all farming groups will salute the sugarbeet industry.

Let us always remember that for every newfangled and well-publicized invention in the field of manufacturing there is quite likely some unsung and unreported development of as great or greater significance in the field of agriculture, which is, after all, the basic industry of any civilization. Our people must eat, and have the products of American farms and ranches for their clothing and other needs, and the American farmer is still responding magnificently to their needs, as Mr. Daniel has made clear by his story.

Mr. President, I ask unanimous consent that Mr. Daniel's article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

UNSUNG UNITED STATES REVOLUTION IN A SUGAR BEET FIELD

(By James Daniel)

Some big news stories—as big a story as a revolution, for instance—don't get reported for no other reason than that they fall outside the conventional news time scale.

Some really great news stories happen over a period of years, gradually, so that nobody is every very sharply aware of what is taking place. One day they are completed. But by then it is assumed that everybody knows all about them. They're news no longer.

Such an overlooked revolutionary news story now in progress tells of the tremendous strides being made in this country in eliminating agricultural hand labor—the old back-breaking stoop-and-squat work in such industries, for example, as sugar beet raislag.

Sugar beets are grown in 22 States—from Onlo to California. Until 10 years ago sugar beet cultivation was a prime user of migratory labor.

tory labor.
Underpaid, ill-treated migrants handpulled each sugar beet, hand-topped it with
a machete, hand-piled the beets to await a
wagon or truck, and then hand-shoveled the
beets in for the ride to the refinery.

Today, 90 percent of beets are harvested by a machine with a big rotary spike that moves down the row, dropping the already topped beets into a truck moving alongside. Even spring thinning and hoeing are rapidly yielding to mechanization.

Here there is no outcry that "automation" is destroying jobs—only relief feit by worker and community that an old chapter in American social history is ending.

In the 19 century most thinkers could see no solution for the problem of the masses who earned their living by brute labor, except to rise up against their masters.

The American poet, Edwin Markham, on seeing Millet's painting of The Man With the Hoe, ironically recalled the line in the Book of Genesis that says God made man in His image, and then penned the indictment from which these lines are taken:

Bowed by the weight of centuries he leans Upon his hoe and gazes on the ground, The emptiness of ages in his face,

And on his back the burden of the world.
"Is this the thing the Lord God made and

To have dominion over sea and land;
To trace the stars and search the heavens

To feel the passion of eternity?

"O masters, lords and rulers in all lands, How will the future reckon with this man, How answer his brute question in that hour When whirlwinds of rebellion shake the world?"

Like Karl Marx, who from a different angle, saw the same contrast between the Man with the Hoe and the man made in the image of God. Markham could not see that in a half-century the man with the hoe would be holding down a good 40-hour-a-week truck drivers' job.

Ninety Percent Parity for Wheat

EXTENSION OF REMARKS

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES
Wednesday, March 30, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an illuminating and effective editorial published in the Pendleton East Oregonian of March 24, 1955. It deals with the domestic parity plan for the marketing of wheat.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TWO-PRICE PLAN

The Committee on Agriculture in the House of Representatives has approved legislation that would support wheat at 90 percent of parity. It can be assumed that the same crossing of party lines that prevailed within the committee will result in passage of the legislation by membership of the House and the Senate.

The Eisenhower administration's flexible price supports program for wheat has failed miserably short of its goal to reduce production of that crop that is so greatly in surplus. When it was proposed by the administration it seemed in defiance of a basic law of economics to predict that if a producer were given less per unit of production he would produce less. The contrary thesis that given less per unit he would strive to produce more units has, of course, been proved beyond all doubt. The wheat surplus has not been diminished.

But neither is the 90-percent parity program the answer. By getting more per bushel the wheat grower may be induced to produce less. But it isn't likely. The only certain result will be an increase in the income of producers of wheat.

The answer for wheat, this newspaper has repeatedly said, is in the two-price or domestic parity plan. And it is most encouraging that the House Committee on Agriculture has recommended that there be a referendum by growers on the two-price plan.

The legislation got a boost in recent days when Oregon's Senator RICHARD L. NEUBERGER informed Marion Weatherford of the Oregon Wheat Growers League that he would support the domestic parity program. Mr. Neuberger's decision is significant because prior to his election last November he had made no decision as to the merits of the legislation. He has come to a decision after a very careful study of all phases of the program.

study of all phases of the program.

Under the domestic parity plan the growers would receive 90 percent of parity for that wheat that went into domestic consumption. For that which went to the export market and for feeding of livestock and poultry he would receive whatever those markets would return.

It is a program of tremendous importance here in the Northwest where we contribute so immensely to the surplus if our wheat does not go to the export market. If the wheat produced in this region could be fed to livestock and poultry there would be no surplus. The two-price plan would permit wheat to go to livestock and poultry raisers who now are transporting corn into the region from the Middlewest.

A recent editorial in the Walla Walla Union-Bulletin said this on the subject:

"From the monthly bulletin of Southern Pacific lines a little item chronicles arrival in Los Angeles in January of a 78-car freight train entirely of yellow shelled corn from the Middlewest. Each car contained 2,000 bushels of corn and the 174,000 bushels were delivered to a grain broker there. It is presumed this shipment was made for livestock or poultry feed and it probably moved between 1,600 and 1,800 miles.

"Grain prices and freight rates are such that considerable amounts of corn from the same area move into the Pacific Northwest for sale as poultry and stock feed. At the same time thousands of acres in this region produce wheat which cannot be moved into consumption under market conditions currently existing.

"A great deal of research has been carried on for the purpose of broadening the market for wheat in the feeding of livestock and poultry. In light of the competition presently given by thhe Corn Belt, it would appear that not only is more study desirable, but some adjustments in the economics of the situation may need to be effected.

"The Pacific Northwest is decidedly closer to the California market than is the Middlewest, but as of now the opportunity for selling wheat for feeding there is decidedly limited.

"One of the first items of business Washington's newly-authorized Wheat Growers' Commission might consider is this handicap under which their commodity is marketwise. A sharply broader demand for wheat in the feeding program of this country would be reflected in a heavier marketing of this region's annual yield and be helpful in the matter of storage facilities, which are feeling increased pressure each year."

Postal Pay Increases

EXTENSION OF REMARKS

HON. SAM COON

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. COON. Mr. Speaker, I have here an editorial which appeared in the Washington Post and Times Herald of March 29 and also an excerpt from my Newsletter of this week, commenting on the postal pay raise vote. The sentiments expressed in this editorial are identical with those set forth in my Newsletter in explaining to my constituents my vote on this legislation. The editorial policy of the Washington Post and Times Herald is generally conceded to be extremely "liberal." While on the other hand, I am classified by most socalled liberals as practically a "reactionary." For this and other reasons, I would like to insert this editorial from the Washington Post and Times Herald and the excerpt from my Newsletter in the Congressional Record:

Recently we voted on whether or not to suspend the rules and pass a 71/2 percent postal pay raise bill. In order for this legislation to come up for a vote at all, at this time, it was necessary to suspend the rules, and to vote for the bill exactly as it had come out of committee. The chairman of the Post Office and Civil Service Committee in a letter to me, said:

"The committee held extensive hearings on this proposal and made numerous beneficial changes in the legislation which was introduced originally as H. R. 2987. In my opinion, this new bill is fair and constructive and is in the best interest of the postal service and the employees."

The President had made a statement before this vote was taken, which made it practically certain, that he would veto a bill which provided more than a 7½-percent pay raise. You recall that last year this pay raise was vetoed becaus a lot of polities was brought into the legislation on the floor so that the final bill was financially unworkable and the President had to veto it.

For these reasons, I voted to suspend the rules and pass the bill. Nevertheless, politics again took over, and the bill was defeated, and sent back to committee. Now we will have to wait. I have taken up a good deal of time on this subject which is one that, judging from my mail, is of interert only to the postal workers. But they have shown such concern for this legislation that I feit I wanted to go into detail so that they would know just what is being done.

[From the Washington Post and Times Herald of March 29, 1955]

FORGOTTEN MAN

The forgotten man in the current fight over a pay raise for the 1,600,000 classified and postal employees is the Government worker himself. Politicians of both parties have been trying so busily to garner a few votes for themselves that they have entirely overlooked the realities of the situation and the real interests of the Federal employees. This shabby politicking may well have the same result that it had a year ago—denial of any pay increase at all.

Last week the House Post Office and Civil Service Committee brought to the floor a bill providing a 7.6-percent pay increase for postal workers. The House voted to send this measure back to the committee—in effect, interposing a veto on the maximum increase to which the President has indicated a willingness to grant his indorsement. The Senate, on the other hand, passed a bill giving a 10-percent increase to postal workers-in effect, inviting the veto which the President has promised he would interpose in connection with any pay boost in excess of 7.6 percent. Thus Congress and the White House have reached an apparent stalematewith postal workers holding an empty bag. The classified civil service can expect the same bag to be presented to it-equally empty.

The President clearly has the upper hand in this situation. Those in Congress who favor a 10 percent increase are not numerous enough to override his veto. They are only numerous enough to prevent passage of a bill which the President will sign. The real friends of the postal and civil service employees will move to give them the 7.6 percent which is the best they can get at the present time. The employees would do well to remember that half a loaf is better than no bread.

Textile Business Reported Booming

EXTENSION OF REMARKS

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 29, 1955

Mr. SMITH of Mississippi. Mr. Speaker, as a representative of a great cotton-producing area, I am naturally much concerned about the welfare of the American spinners of the cotton which our farmers produced.

I have been very pleased to note two recent news items which indicate that

the southern textile industry is prospering, despite many loud cries to the contrary.

The Congressional Record of March 23 contains on page A2022 a statement by former Senator Charles E. Daniel, of South Carolina, which says "unheard-of prosperity is predicted" for South Carolina industry, and adds, in part:

Looking at textiles, I see more cause for hope and optimism this year than ever before. Like the other phases of our economy, the textile industry, which is the South's most important industry, has experienced a year of adjustment. With the remarkable expansion of textiles in South Carolina to one of the top areas in this industry in the world, we are working hard to keep our newly won position. We outproduce and outsell any State in this respect.

The New York Times of March 27 contains an Associated Press dispatch which shows that cotton spinning improved in February of 1955, and that production was well above February 1954, when there were few complaints about foreign competition. Under unanimous consent, I include this brief news item in full:

COTTON SPINNING UP-INDUSTRY OPERATED AT 142.5 PERCENT OF CAPACITY IN FEBRUARY

Washington, March 26.—The Census Bureau has reported that the cotton-spinning industry operated during February at 142.5 percent of capacity on a two-shift 80-hour week basis.

This compared with 138 percent during January and with 128.1 percent during February last year.

Spinning spindles in place on February 26 numbered 22,402,000, of which 19,429,000 were active, compared with 22,495,000 and 19,822,000 on January 29 and with 22,897,000 and 19,656,000 on the last working day of February 1954.

Active spindle hours for spindles consuming cotton in February totaled 9,299,000,000, compared with 9.184.000,000 for January and with 8,697,000,000 for February last year.

The Right Honorable Mario Scelba, Prime Minister of Italy

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, like most of the European countries at the close of World War II. Italy faced a gigantic task of national reconstruction. When the fighting ended, there seemed to be insurmountable difficulties to be overcome if Italy were to survive as an independent nation. Resolutely facing this tremendous task of reconstruction, the proud and cheerful Italian people, through their leadership, performed miracles. During these fleeting 10 years, a nation bent with the burdens and tragedy of war has risen again to command world respect. From dictatorship domination, the Italian people have gained democracy and freedom. From chaos they have progressed on the way to orderly, honorable, and

dependable government. From the dark ness of tragedy, the Italian people have moved into the warm sunlight and cheerful life and living to which they have been accustomed for centuries.

This remarkable progress has required leadership and statesmanship of the highest ability. It has required determination, energy, and patience. It has required physical and mental courage. It has required honesty and a fearless comprehension of the problems to be solved. Today we are to meet and to see and to hear from a great Italian statesman who possesses all of these remarkable qualities of leadership.

As our guest here in the Congress to-day, we are honored to have a statesman from Italy who, perhaps more than any other person, is responsible for the reconstruction of the great Italian nation. Our honored guest this afternoon is the Right Honorable Mario Scelba, Prime Minister of Italy. When he arrives, I know that every Member will want to be here to extend to him heartfelt greetings and the warm hospitality of the American people through their Members of this Congress. He is deserving, not only of our praise but of our appreciation.

During her long and glorious history Italy has provided many brilliant and able statesmen. In their time, they served their country so well and with such great ability that they gained the respect of the leaders of nations all over the world. None of these noted Italian statesmen, however, has done more for their country than has our guest today Prime Minister Scelba. In the course of his administration of the Italian Government, he has prevented revolution blocked the progress of communism in his country, and has developed the cause of democracy and freedom in Italy to the extent that communism no longer 15 a threat. While steering this course which has meant so much not only to Italy but to the free way of life, the Prime Minister has reconstructed his country, torn by the chaos of war, 50 that today the Italian people once again are able to see the light of prosperity and happiness. Without his genius of lead ership, Italy could well be, at this hour, under the domination of communism-Having saved his noble country from this tragic fate and having saved the Italian nation for the free world and the free way of life, Prime Minister Scelba has engraved his name forever on the glory pages of history.

Prime Minister Scelba is a humble man, who, like Abraham Lincoln, is responsible for his own education. He worked his way through school and university. He is a lawyer holding a doctor's degree in jurisprudence. He has held many offices in the Italian Govern ment. In 1945, under Prime Minister de Gasperi, he was Minister of Posts and Telecommunications. In 1947, he was promoted to Minister of Interior, an influential position of prestige. After the fall of the De Gasperi government, Premier Scelba formed a government which was approved by the Italian Senate in February of 1954. In the short time he has had control of the Italian Govern ment, he has performed such miracles as the defeat of communism and has saved the Italian people their freedom and

Throughout the United States of America there are many Americans of Italian descent. These citizens have helped to make America the great Nation it is today. They occupy high positions in the learned professions, in Government, in science, in research and educa-They have made great contributions to American art and culture. In my own Commonwealth of Massachusetts, there are many of our citizens of Italian descent. As elsewhere in the country, here in my home State they also occupy important positions of responsibility. Because of their Italian descent, I know these thousands of American citizens are proud of the country of their origin. They are proud of the accomplishments of Prime Minister Scelba. They join with all other Americans regardless of their national descent in welcoming this great Italian statesman to America and extend to him complete and unreserved hospitality. It is their hope just as it is the hope of every American regardless of his origin that from henceforth on Italy and America Will stand shoulder to shoulder in the cause of freedom, the free way of life, justice, and peace. America today is both pleased and proud of its association and cooperation with the great people of Italy in the cause of freedom and peace.

Great Falls, Mont., High School Band

EXTENSION OF REMARKS

HON. ORVIN B. FJARE

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. FJARE. Mr. Speaker, under leave to extend my remarks in the Ap-Dendix of the RECORD, I include the fol-

lowing article on the Great Falls, Mont., High School Band:

The Great Falls, Mont., High School Band recognized to be one of the finest in the State both on the marching field and the concert stage. Since its beginning 20 years ago as an extracurricular boys' band under direction of Charles Richards, a long-time Montana resident, the band has gained

steadily in popularity and number. Paul Shull, the present director, came to Great Falls in 1951, and under his tutelage the program has grown from 1 band of 85 to 3 bands with a total student enrollment of 140. These groups and special units from within them make approximately 75 appearances at home and throughout the State

Marching band regularly numbers 95 members, including Drum Major Jerry Polich lich and 6 twirlers. Head majorette is Miss Rosalind Raddle, who has held the Montana State State twirling championship for the last 4 won the Pacific Northwest baton championship in 1953, and ranked in the top 10 at the national twirling festival in 1953. Allas Lynn Hemsing, our 6-year-old mascot twirler, constantly amazes audiences with her spectacular twirling ability, and is a real crowd pleaser.

As a marching unit, the band has several distinctive achievements to its credit. In

1953 the group was invited to make a guest appearance at Montana State University's homecoming celebration, a rare honor for high school bands. The band marched in the annual parade and gave a special performance before the homecoming Last fall marching season was highlighted by a guest appearance with the band of Lt. Dick Smith, former drum major with the famed University of Michigan Band. Lieutenant Smith praised the group for its outstanding musicianship and marching ability. All football half-time shows are pre-pared and arranged by the director and a committee of students so that each show has individuality and originality. Night games permit the use of headlights and colored spotlights for unique effects.

During the concert season the band comes in for its share of laurels, too. It has been a consistent winner of superior and excellent ratings at music festivals under the baton of Mr. Shull. Last year, performing Wagner's Rienzi Overture, the organization received such compliments from adjudicators as "a very fine high-school band, sounding better than many college bands,' and "an excellent, mature sounding band."

An outstanding event in the Great Falls area this past year was the guest appearance with the band of Sigurd Rascher, internationally famous saxophone soloist, who has appeared with such professional groups as the New York Philharmonic and Boston Symphony Orchestras. It was a singularly high honor since it was Mr. Rascher's first appearance with a high-school band, as well as his first performance in Montana. Mr. Rascher praised the band for its musical maturity and versatility.

This February members of the band were thrilled to receive an invitation to participate in the Lions International Convention in Atlantic City, N. J., this coming June. The invitation was extended by the governors of district 37 (Montana-Alberta), who also generously offered \$4,000 from the district to help defray expenses. The Great Falls Band is the first from the Northwest to be so honored.

Plans are being made to make this trip most memorable one for the students. An approximate budget of \$16,000 has been set up to finance a 2-week trip, to include sightseeing in Washington, D. C., Philadelphia, New York City, and Niagara Falls, in addition to Atlantic City. Most of the required funds are being raised through the efforts of the Band Booster Club, an organization made up of band parents. All money is to be raised through various projects and no donations are to be solicited.

Paul Shull is a graduate of the University of Colorado, with both bachelor's and master's degrees from there. He was named out-standing senior in the College of Music by the faculty upon his graduation in 1950.

Burlington, N. J., Celebrates the American Jewish Tercentenary

EXTENSION OF REMARKS OF

HON, FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, on February 23, 1955, I had the great honor and privilege of delivering the following address on the occasion of a dinner in celebration of the Burlington, N. J., American Jewish tercentenary:

It must have been a prophetic vision which led a small band of Jews to a tiny Dutch colony in the New World some 300 years ago. They were seeking what all of us want most at our deepest cores-that sense of human dignity that can only come from freedom. The route to New Amsterdam had been tortuous and, once settled there, this small group of Jewish settlers learned the lesson that history repeats over and over againthe right of freedom is never won handily and outright but must be continually earned by renewal of efforts. That this was done by these few Jews as they fought for the improvement of their status among strangers is only one measure of the contribution that they made in the New World. For the rest. they reintroduced to our hemisphere the ancient tradition upon which our civilization had originally been based, for they brought with them the culture of a people whose remarkable cohesiveness had persisted through centuries of exile and dispersion.

This is, indeed, the hallmark of the subsequent 300 years of the history of the Jews in America. These first Jews, few in number, were the forerunners of sizable groups of Jewish immigrants during the great period of our expansion in the 19th and early 20th centuries, who were to establish their mark indelibly in the fabric of American life. Always, the impelling force that led them onward, as it was also for other newcomers, was the search for opportunity and freedom. The meaning of what America stands for and the meaning of what these 300 years of Jewish life stand for, are thus linked in-

separably.

Escape from intolerable religious, political, or economic pressures and search for conditions of freedom brought most of our ancestors to the New World. Pioneers in a largely unsettled country, they had to struggle to establish the conditions they sought. When the colonists finally claimed the independence of the country in which they lived, they then set about make permanent the conditions under which freedom and democracy can flourish. Our country was fortunate to have among its citizens the gifted men who wrought out the Constitution which established as rights the freedoms they had sought. Even then, of course, the struggle for freedom was un-even, for there are always those who seek its deprivation.

As the Nation spread across the continent in the years that followed, always there were new waves of incomers from across the seas to help develop its possibilities and build its life. Always there were groups of Jews among them. And as the country and its life expanded, new problems arose and new institutions grew to keep pace with their solution. At the same time, as the pioneer country started to mature, it developed a rich culture, always infused with the qualities of geographic or ethnic heterogeneity. The Jews have contributed signally to this culture.

It was partly the group cohesiveness of the Jews that enabled them to make a positive contribution to American life. course, as individual Americans, they have made their own contributions to business and the professions, to science and art. These contributions are indeed vast. though it is as a group that I mainly wish to discuss tonight the contribution of the Jews to the life of America, I want to emphasize that it is almost impossible to separate the contributions of individual and group. For just as there are interactions between groups, so there are interactions between individual and group. To attempt to understand all the multiple interactions that occur is to appreciate the value of democratic life. Moreover, in a country where everyone is an immigrant or a descendant of immigrants and whose people are as heterogeneous as are ours, there is no one pattern of culture. There are, rather, patterns of culture, and we should be proud of our cultural pluralism, for it has contributed to the richness and the variety of American life. For anyone to have imagined that he wanted to assimilate in such a country—lose his identity as a member of his original group—was sheer nonsense, for the reason that this is actually impossible in a country based upon multiple cultures. Assimilate to what? To the dead center of all the cultures that went to make America what it is? If this were at all possible, it would indeed be the kind of uniformity and conformity that we do not want in a democracy.

There was a time when many in America did feel that this kind of assimilation was possible. They tended to disregard or to minimize the cultural contributions of our immigrant groups. Our depreciation of these contributions was due not only to our ignorance but also to our growing pains, which gave us an excessive zeal to prove our Americanism as if it could only be something altogether native and uniform. We are rectifying this error today.

By an unfortunate terminology, we used the expression "Americanization" as de-

scriptive of the process of adjustment to American life. This lent itself to the connotation of assimilation. Now we know that what Americanization really means in a positive way is the interaction of the values

of the various cultures within American life and the contributions that this makes to the

growth of our democracy.

The great waves of Jewish immigration into this country occurred in the 19th century and the early part of the 20th century, as indeed did all sizable immigration to the United States. By 1924, when we began to close the doors on immigration by adopting restrictive immigration policies, the country had benefited by a great influx of peoples and cultures, largely from Europe. The early part of the 19th century brought Jews mostly from Western Europe; the latter part and the early part of the 20th century brought Jews largely from Eastern Europe. In Europe, from which they had come, there had been periods when the ghettoes and the forced segregation had eased, and consequently the culture they brought with them was not only what had been preserved from their ancient homeland but had taken on something as well of the country of residence. Indeed, in our own country, the early Jewish immigrants had been thought of as Germans, or whatever, rather than as Jews.

Settled largely in the great urban centers. these immigrants proceeded to build their own institutions for their adjustment to the life in America. Yiddish literature, press, and threater flourished. Religious schools for children, schools for adult education, hospitals, snyagogues—all these burgeoned throughout the land. Yet these were no mere centers of cultural isolation, despite the fact that they originally arose to meet the needs of those who were unacquainted with American life. As they grew, many of the institutions began to serve people from other groups as well as Jews. Their contributions lay, moreover, in those intangible values which offered nourishment human communion, and thus permitted their members to carry on their workaday lives with greater zest, and in those values which irrevocably made their way into the stream of American culture. We tend to re-gard as unique, for example, the genius of Charlie Chaplin or of Saul Steinberg for their gentle tragi-comic irony. But this characteristic, I understand, is one of the distinguishing features of a whole body of Yiddish literature. These two merely expanded their horizons to take in larger areas of life than that which the writer in Yiddish knew. The fact that we do appreciate these two men of genius in the arts is a

reflection of something in the rest of us which we cannot articulate because we have been influenced by other cultural sources but which we can respond to because it is part of our universal human heritage.

We are able to assess somewhat more tangibly such contributions made by the Jews in public welfare work, for example. Here Jews have been in the vanguard in establishing modern facilities with high standards. Hospitals, clinics, sanitariums, originally set up to take care of Jews, are now among the best in the country and are operated on a nondiscriminatory admissions policy. Orphanages, homes for the aged other community services-were among the varied welfare establishments created. One of the significant achievements was the early federation of various local charities for purposes of fund-raising—a development later taken over in many communities in the United States by other groups of public welfare agencies.

In other areas of public life there have been significant contributions by the Jews. The American labor movement is indebted to many Jews for their leadership. But I especially want to mention a contribution in keeping with the democratic tradition upon which this country was founded—the defense of civil rights. This, unfortunately, arose as a necessity toward the end of the 19th century, when incidents of antisemitism began to appear. As incidents began to spread, particularly when influential men accepted the slanders of the Protocals of the Elders of Zion, leading Jewish organizations arose to combat anti-semitism. Although the original motivation was the defense of their own people, Jewish groups have ever since been among the greatest champions of the rights of all minority groups and of freedom for the individual. There have been exceptions of note in recent months, but they are isolated individual cases.

Meanwhile, in Europe too, the Jews had been making gains. They were coming out of the ghettoes; they were contributing to the cultural and economic life of the countries where they were settled. Before 1939, Europe had the largest number of Jews in the world, some 10 million. The Americas were next, with some 5½ million. In both Europe and America, in the 1920's, a strange kind of madness settled over the people which prevented us from being prepared for the profound disturbances that were even then in the making and which later shook the western world.

The ugly resurgence of racism as a political dogma became entrenched in two once-proud countries of Europe while we were trying to cope with our own problems of economic depression, and soon this dogma had been translated into a policy terrifying in its implications. The racist slaughter directed against the Jews was probably one of the most obscene acts of barbarity in all history. When the holocaust was finally over, we knew that some 6 million Jews had been annihilated, 60 percent of the total Jewish population of Europe, over a third of the total Jewish population of the world. Under such terrible circumstances did America succeed Europe as the largest center of the world Jewish community.

It seemed then in 1946 that America was to be the principal repository and the main standard-bearer of Jewish culture in the world. Many of the remaining Jews of Europe were uprooted and homeless; tagged with the initials "D. P." they were destitute and desperate. This did indeed impose a double task upon American Jewry, which responded with a sense of responsibility that matched the urgency of the times. The task of rehabilitation was undertaken immediately, And American Jewish instituents felt their own sense of responsibility.

Meanwhile, the most momentous development in the modern history of the Jews was taking place. The events in Hitler's Germany had given a new impetus to the Zionist movement, in America as well as elsewhere wherever Jews resided. From the beginning, Zionism had won the support of American Jewish leaders who had sciousness of Jewish history. In the early and formative years of the movement, it did not attract large numbers, but it did have the keen enthusiasm of great Jewish figures whose names made their mark both on American history and Jewish history. Men who were great Zionists were also great Americans. For Zionism itself was an eloquent expression of an American ideal-the right of all people to self-determination.

All through the years of the Hitler terror, the Jewish people of this country helplessly watched the destruction of their fathers and mothers, their brothers and sisters, powerless to stop it. But when the time came and they were able to make a decisive contribution to the rehabilitation and to the resettlement of the scattered and suffering survivors, they became a powerful and vital force, strong enough to influence the course of history. They wrote a glowing chapter in Jewish history, for in 1948, after some two thousand years of dispersion and wandering. the Jewish people restored their ancient homeland. This was made possible by the heroism of the Jews of Israel, who were ready to fight and sacrifice life for freedom. But it would not have been possible had it not been for the dedication, the zeal, the determination of the American Jewish community, mature enough to meet its obligations and to keep faith with the summons of history.

Having won its objective, the American Jewish community did not relax its efforts, and year after year since Israel was established, it has made unprecedented contributions to enable Israel to meet the gigantic tasks it has set itself.

Yet, throughout this period there has been a tiny minority within the American Jewish community which resisted Israel's reestablishment and which has never quite reconciled itself to the existence of a Jewish State. We in Congress are aware of the activities of this small minority. They write us letters. They send us pamphlets. But they will not arouse much sympathy in Congress, or any where else, for they do an injustice to both themselves and to their Christian neighbors. There was never a basis for the fear that the establishment of Israel would in any way affect the status and security of the Jewish people of America. Any such suggestion is an unworthy reflection on the understanding and integrity of the American people themselves. Indeed, the restoration Israel raised the prestige and increased the security of the Jewish community in this country, for the achievement reflected credit and honor on them and enhanced their position in the eyes and minds of all liberty loving Americans. We would like to share with the American Jewish community the credit for Israel's restoration. All of us in America have reason to be proud that we helped bring this state into being. For its establishment has significance not alone for the Jews but for all of us.

The modern world of the West received its values from varied sources—from the Judaic-Christian religious tradition; from Roman law; from Greek philosophy; from the French enlightenment; from English parliamentary democracy. Basic to all of these is the Mosaic code, a humanitarian document upon which our entire civilization rests. We had thought for a long time, moreover, that we were remote in spirit from the Orient; but we are beginning to learn otherwise. The cradle of our civilization was the Mediterranean area—the crossroad of the Orient and the Occident—and

as we are beginning to decry the stress on the materialistic values of the age of technology, we are rediscovering the perennially

human values of the Orient.

When modern Israel was established, it took advantage of what was a unique historical opportunity. It built its institutions upon the basis of its ancient cultural heritage. Symbolic of this is the revival of Hebrew in modern form-a language that it had been thought was useful only to scholars studying ancient civilizations. more symbolic is the fact that classical Hebrew turned out to be adaptable to modern life. Some of the words are used as they were in th classic Hebrew; some have taken on new meanings; and new words have been introduced from the various languages brought in by the immigrants and by other groups living within the area. At the same time, Israel fashioned its political institutions on the political forms of the West-it set up a parliamentary democracy that is a model for that area of the world.

To interpret ourselves to one another is to add to the richness and the significance of our living together. The cultural heritage of the Mediterranean and the democratic tradition of the West-these have meaning for one another because they are both essentially humanitarian in spirit. Because the Jews in America are particularly able to act as interpreters for the rest of us, you have a special responsibility of enlightenment. That for 300 years American Jews have prospered and grown in the responsibilities they have set for themselves is a happy portent. I am confident that you Will continue to work for the enhancement of freedom and democracy everywhere. The tasks that we build for ourselves for the ennoblement of human dignity are among the finest goals that mankind can pursue.

Address by A. J. Hayes

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Wednesday, March 30, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid address delivered before the Minnesota House of Representatives on February 17, 1955, by the distinguished labor leader, Mr. A. J. Hayes, international president of the International Association of Machinists.

There being no objection, the address was ordered to be printed in the RECORD,

as follows:

REMARKS OF A. J. HAVES, INTERNATIONAL PRESIDENT, INTERNATIONAL ASSOCIATION OF MACHINISTS, BEFORE THE MINNESOTA HOUSE OF REPRESENTATIVES, FEBRUARY 17, 1955

Mr. Speaker, distinguished members of the Minnesota Legislature, this is indeed a rare honor you confer upon me today in affording me this opportunity to appear before a branch of the legislature of one of our great States.

In the entire history of the labor movement there have been few labor representatives who have had this privilege.

Unfortunately there is much misunderstanding and many false beliefs regarding the organized labor movement and its leadership, misunderstandings, and beliefs which have developed out of the frequently exaggerated misdeeds of some in the labor movement and the incomplete and inaccurate reporting of some of organized labor's activities

I neither approve, defend, or condone the wrongs which have been committed by individuals or organizations within the labor movement. I do say with emphasis and from personal knowledge and experience that the great good that organized labor has accomplished far outweighs its publicized and exaggerated mistakes, faults, and weak-

Organized labor like many other institutions in our society, has been a great and militant force for good; not only for its members, not only for workers, but for every segment in our society.

The many things it has accomplished over the years of its history have benefited the

whole United States.

The higher wage rates and periodical wage increases for which unions are responsible have increased and extended purchasing power and have stimulated business by the resultant increased demand for services and products.

Shorter hours, vacations, paid holidays have reduced unemployment and have contributed to advanced education and culture and have thus permitted more and more of our people to find the tranquillity and the happiness proclaimed as our goal in the preamble of our Constitution.

Health and welfare plans, pension plans, paid sick leave, have contributed to the improvement of our general health and the minimization of epidemic and catastrophic

The legislation which organized labor has sponsored or supported, such as workmen's compensation laws, unemployment compensation laws, minimum wage laws, social se-curity, and many, many others, have all contributed to the general welfare and constitute one of the mainstays in our bulwark against communism.

Organized labor's participation in the fight for free public schools deserves

lasting recognition in itself.

In addition to all of this, the pressure which organized labor exerts for higher wages and other cost items has kept our industrialists and business interests alert to seek new inventions, shortcuts, improved machinery, in order to maintain desired levels of profit. In this way the labor movement has indirectly contributed to our overall technological progress.

It must be recognized by anyone with proper knowledge and objectivity that organized labor is not only a force for good, but a necessary and essential institution in any free democratic society. However, I do not intend to use this great privilege for any special pleading. Instead, I should like briefly to discuss 2 important matters of general interest and concern to the large majority of the people of our country-actually 2 problems, with which we are confronted at all levels-that is, local, State, and Federal, and which have an important bearing in the world situation. I refer to education and health—two of the major ingredients which go into the quality of our people—our human resources.

I speak about these subjects out of a deep and sincere concern for the general welfare, and I am prompted by the conviction that in the material world the preservation of freedom and democracy is paramount to

everything else. Parenthetically, I am happy and proud to report to you that this view is shared by the overwhelming majority of the officers and members of the organized labor movement in the United States.

In any consideration of the educational and health problems of our country we must, of necessity, take into consideration a very important aspect in addition to our normal concerns. In today's world, we in the United States and our allies which together constitute the free world, must be concerned with the very imminent danger that the communistic world imposes upon our free forms of government and our free institutions. In taking stock of the relative positions of the free world and the communistic world, we come to the stark realization that there is little difference between these two worlds when we compare resources, developed and potential. We also learn that in sheer numbers the communistic world has a tremendous advantage over the free world. In the comparison of this phase alone we come to realize that the people who make up the free world are not expendable. We also come to the realization that the only immediate advantages which we in the United States have are: (1) Our technological know-how, and (2) quality of our people, our human resources.

In order to win any prolonged contest with communism, be it through the medium of a cold war or a hot war, we in the United States and our allies must not only preserve our present advantages but must do everything possible to further develop these ad-The health and the education of vantages. the American people are two of the most important material ingredients in the quality of our people; therefore, it becomes incumbent upon us as a nation to take such actions as may be necessary to improve the general health and to increase the opportunities for better health for more, and more, and more of our people and to improve our standards of education. While it is conceded that this should be done out of our humanitarian instincts, we should realize that it must be done to assure the preservation of our free institutions and a free democratic society.

Certainly, we cannot afford to rest on present standards while the Communists are feverishly at work attempting to minimize and ultimately wipe out our margin of advantage-our margin of safety.

Permit me first to invite your attention to a few of the troublesome problems relating to education. A score of investigations have supplied us with substantial reports of overcrowded schools, inadequately staffed by underpaid and sometimes poorly trained teachers. Here are a few of the important facts.

Almost 9 million children are attending schools in America on a shift basis or are using obsolete or unsafe classrooms. Some are taught in barracks, basements, and rented garages. There are children now finishing the eighth grade who have never attended school on anything but a part-time basis. Five years from now the number of children in our schools is expected to increase by another 7 million pupils.

Last year, we trained 95,000 new school teachers. We needed 203,000. And, because of the low salary scale for most teachers, more than one-fifth of those who graduated and received teaching certificates last year did not enter the teaching profession.

The fact is that of the total tax dollar-Federal, State, and local-only 8 cents goes to the schools now, as compared with 16 cents before World War II.

The consequence of this deterioration of our public school system, of course, is a steady decline in the training of our young people and a corresponding deterioration in the overall quality of our manpower.

Some States are making efforts to cope with this crisis. Others are either unwilling or financially unable to meet the problems of their schools.

We, of labor, believe that the States ought to do all they can to solve these problems. However, we also feel that the Federal Government has the responsibility to assist where the States cannot or will not solve their own problems.

There is a popular illusion that the Federal Government traditionally leaves the school problem to the States and localities. The fact is, the history of Federal action in the field of education goes back to the Continental Congress and includes at least 50 major congressional acts. The Federal Government now finances over 200 educational activities, the largest being the annual threequarter-billion-dollar program for veterans.

We, of labor, are convinced that neither the States nor the Federal Government can afford to ignore the problems of our public schools. It is no longer merely a humanitarian desire to fulfill our obligations to our children, it is now a challenge to the survival

of our American way of life.

If we have the essential education and training, we can continue to outproduce the Communist world-if we at the same time effectively deal with the equally important factor involved in the quality of our human resources. And that is the health of our

Obviously, outnumbered as we are, we cannot for long afford to waste American energy, productive energy in illnesses which could be prevented if adequate medical facilities were available to all of our people and more and more of our people learned to understand the value of good health. Let's take a quick look at our overall health problem:

In 1950—in just 52 weeks—we in the United States lost 540 million man-days of production because of ill health. To workers and their families this represented a loss in wages amounting to \$4,200,000,000. And, there were, of course, corresponding losses of

profits.

But loss of production and profit were not the only cost of our lack of adequate medical care. Millions of Americans are suffering unnecessarily from sickness and disease and hundreds of thousands are dying prematurely every year because the miracles of modern medicine and surgery are not avail-able to them. In the face of our world problem, we cannot afford this waste of American manpower.

The evidence and effects of our health problems can be found in every section and community in our country. The report of the President's Commission on the Health Needs of the Nation spells out that fact.

I have no pat answer to the problem. But I am sure of this—that neither our Nation's needs in this troubled world, nor our basic concept of the value of the individual human being—will permit us much longer to tolerate the present situation. And I can see no solution which does not involve more Federal participation.

Mr. Speaker, Members of the Legislature, I have been frank with you today. From what I have said, I believe you can draw a pretty accurate picture of some of labor's major concerns for our country. Despite the efforts of some to keep this country divided into tight little groups, it is becoming more and more apparent to me as I travel back and forth visiting with our members, talking with every kind of American, that there is a surprising and heartening unity among us. I find very few fundamental differences in our goals.

What labor wants is not prosperity for labor alone, not peace for labor alone, but peace and prosperity for every group in our great Nation, for the farmers and store-keepers, for doctors and lawyers and busi-

nessmen and industrialists.

While it is true we have not always agreed on the immediate methods for achieving these goals, I find that the more we visit together the less important our differences

Our strength as a nation is derived from all of us. Because of this combined strength we now occupy the enviable but responsible position as the leading country of the world.

The peoples of many countries-some free

and some who yearn to be free-look to us for leadership and example.

We must continue to prove by our acts as well as our words that the greatest material power in a democracy is not the machine-not the atom-not an ideology-but human beings with souls, human beings who

are not expendable.

Address by the Honorable George Leader, Governor, to the General Assembly of the Commonwealth of Pennsylvania

EXTENSION OF REMARKS

OF

HON. JAMES M. GUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1955

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks. I include the text of an address delivered to the General Assembly of the Commonwealth of Pennsylvania by the Honorable George Leader, Governor, and a resident of the 19th Congressional District. The address was delivered on Monday, March 28:

To the Honorable the Members of the General Assembly of the Commonwealth of

Pennsylvania:

Today, I come before the general assembly to discuss with you the fundamental basis of our life together in Pennsylvaniathe economic processes which support our 101/2 millions of people, and which alone give us the promise of material security and a rising living standard against the future.

My theme is the Commonwealth's part in

those economic processes.

Our objective is to use every reasonable power of the State itself, every resource of our dynamic people, every ounce of leadership which we possess in our national councils, to the purpose that our economy in Pennsylvania gear itself once more to an economy of full employment.

We are today declaring war against the shameful waste of human energy and human ability and human capacity to produce, which comes about when men and women find no work when they seek work; when marvelous energy sources like our Pennsylvania coals lie unmined in the ground; when whole communities and regions are scemingly condemned to chronic unemployment, deterioration, and hopelessly prolonged dis-

We are not proposing a magic formula-

single panacea-a cure-all.

We are proposing a new sense of dedica-tion, a new flow of purpose, that will be applied throughout Pennsylvania to give us expanded industries, new industries, more job opportunities, better and happier communities.

This administration, this legislature, are properly concerned with improving our standards of public health, public welfare, public education. We want a good State government, efficient, economical, useful to our people. We want recreation as a part of life—parks, hunting, fishing, clean waters, unspoiled landscapes.

For all these things, our people rightly look to their Commonwealth.

And we-governor and legislature-recognize our responsibilities.

But all such things, desirable as they are, can only come as the return we gather from a productive society. They are the good fruit born by a functioning economy. They fruit born by a functioning economy. are the payment we make mutually to our community from the proceeds of our indi-

vidual initiative and labor.

Our basic job, our most pressing pob, therefore, is to protect the economy of Pennsylvania. We must maintain it where it is strong; shore it up where it is weakened; protect it. build it, strengthen it, expand it.

I regard that effort as the primary task

Today, I will outline to you the things which we believe the State may properly do to meet its task, and some of the things that we must be ready to call upon others to do in partnership with us.

The State government, of course, does not dominate—nor will it ever dominate, I trust—our economy. The National Government has a far greater impact; local governments have an impact equal to our own; but all government is subordinate in our system of economic freedom to the work of our citizens, each striving to improve himself.

But our economy has become so complex that public action, even in the restricted area of State operations, has a vital part, a key position. We can loose and we can bind. We can stolidly accept stagnation, or we can add our contribution, a critical contribution, to a dynamic course of action.

If I know this legislature, if I know this administration, if I know the people of Pennsylvania, I am certain of the choice.

We will act.

This is a very great State, traditionally the heartland of American industry, the keystone of our Nation's economy in the machine age as it was the keystone of our national independence. With so much to be proud of, we are very sensitive indeed if we do not now admit, classify, and correct our short-comings. The quickest way to community disaster is to pretend that all is for the best in the best of all possible States.

Currently, according to the latest classification list of the United States Department of Labor, not one single area in Pennsylvania is an area of balanced labor supply. In plain language, we have some measurable unemployment everywhere. Five areas in Pennsylvania are recorded as areas of moderate labor surplus. Eight Pennsylvania areas are areas of substantial labor surplus. which means that from 6 to 11.9 percent of their labor force is out of work. Twelve Pennsylvania areas are classified as areas of very substantial labor surplus, which means that 12 percent or more of their working men and women sceking employment cannot secure tobs.

The areas of moderate labor surplus (I hate that designation of human beings as surplus, like a commodity) the only such were Allentown-Bethlehem-Easton. Harrisburg, Lancaster, Sharon-Farrell, and York. Every other classified center of population in the State has 6 percent or more

of its people out of work. We know that our coal districts and rail-

road towns have been particularly hard hit. In all the Nation, there are only 9 large areas where more than 12 percent of the working force is unemployed. Four of those nine areas are in Pennsylvania. There are 45 smaller areas of very substantial unemploy-ment in the Nation. Eight of those fortyfive areas are in Pennsylvania.

We know that while we have had substantial industrial growth in Pennsylvania. we have not kept our old lead over the rest of the Nation.

We know that throughout the Nation, communities, States, and regions are in fierce competition for industrial expansion.

We know that energy sources are changing rapidly in our technology; that there great pressure to close obsolescent plants and integrate operations in modern and efficient structures; that an old town, grimy and unattractive, has less chance to attract a new industry than a community which understands and exhibits the art of pleasant living

None of these facts, I scarcely need to tell you, acts automatically in Pennsylvania's favor.

We know, too, while industrial production in the Nation is up 5 percent from a year ago, the number of workers in manufacturing plants is down 4 percent. We are constantly able to produce more goods with fewer man-hours.

This, then, is the face of the problem.
What is our obligation, mine as Governor,
yours as legislators, as we confront it?

Our worst error has been our failure to plan against this day; to understand and thus meet our potential troubles before they

have us in their grasp.

I recommend to the legislature that we create a State planning agency that is capable, in structure and in personnel, of interpreting our future, and recommending to us the steps we should take for our protection and our growth as we move into that future.

Some subjects for their study should be: the effect on Pennsylvania of the St. Lawrence seaway; the effect on Pennsylvania of atomic energy for peacetime use; the effect on Pennsylvania of changes in iron ore supply; coal's future place in the Nation's energy pattern.

The multipurpose development of our principal river valleys—Delaware, Susquehanna-Juniata, the Allegheny, Monongahela, and Ohio.

A functioning State planning agency will, of course, review and make estimates of the State's capital improvements, analyzing their effect on the general economy, their value in relation to population trends, and their proper scheduling in relation to the State's available finances.

If the general assembly will pass the reorganization bill (House bill 1) in workable and useful form, I will promptly submit a reorganization plan which will establish a State planning board that is free to function. Substantially, that means a board that is independent of departmental control, reporting directly to the Governor; free of political control, being nonpartisan in board membership and staff; and relieved of minor administrative burdens that can do nothing except distract it from its high purpose. If the reorganization bill is not to be passed, separate legislation on State planning will be submitted.

Our immediate operating agency in the State's economic program—our line outfit—will be the department of commerce which we conceive to be in fact a department of economic development. As we all know, the potential value of such a department has for many years been lost in the morass of a third-rate publicity operation. That is being changed. The secretary is submitting a reorganization plan to the executive board which will give a sense of direction to the department's work. It will have four divisions; Industrial development; community development; travel and vacation development; and reference and research. It will have five field offices—in Philadelphia, Scranton, Erie, Pittsburgh, and Washington, D. C.

The department of commerce and the State planning board will be able to carry out their duties, as revamped and revitalized, without increasing their combined budget over the amount given them for an ineffective program in the 1953-55 biennium.

We are able to do this because we are discarding frivolities in favor of the essential. No State-paid advertising will be bought,

no clipping services maintained, no lavish State expenditures for self-congratulations will be made.

With a sense of direction, it is our hope that the Department will have, and will communicate, a sense of mission. This is dedicated work for dedicated people.

We expect to awaken and to maintain a sense of civic responsibility and enlightened self-interest which will buy for the State and its areas a promotional advertising program, privately financed, which will be far more effective than anything the State could do itself.

To aid the work of the Department of Commerce in the special field of industrial development we will introduce legislation officially creating an economic development advisory board. It is our hope that the membership of this board will be men who are themselves preeminent in industry and finance, and whose counsel and support will be invaluable to our program and its acceptance across the Nation. This board will require no appropriation. Its expenses will be met from the departmental budget.

An economic program for Pennsylvania obviously must go far beyond the departmental responsibilities of one agency of the State. The work of the Commerce Department must be supported by an inventory of the State's resources; by a program of enabling legislation; by a concentration—in our communities, here in Harrisburg, and in the National Capital at Washington—of all the ingenuity, high purpose, and dogged, everlasting persistence of which we are capable.

As to resources, our best resource is people—the skilled, ambitious, progressive people of Pennsylvania. I find them keenly aware of our common problems, anxious for leadership, ready to participate, already banded together in community organizations of great strength and vigor.

The people themselves, working in their own areas, can do far more than any conceivable staff of State employees.

Consequently, I am recommending to the General Assembly legislation which will strengthen the citizens' organizations all-ready concerned with our economic and community problems, and encourage the formation of such citizens' group in every county in Pennsylvania. In brief, our proposal will call for State aid to citizens' organizations working for industrial expansion and commutity development—the funds to be paid on a matching basis up to 50 percent of operational costs.

Our estimate of the cost of this program to the State is \$1 million a biennium.

It will be seed money in the truest sense, bringing a rich harvest in economic and community return for every dollar spent.

Among the physical resources of Pennsylvania water is perhaps our finest gift. We have taken it for granted, and all to often we have misused it. We know that water is as essential to our lives as air itself; we find now that it is an essential raw material of industry.

This administration will permit no weak-

This administration will permit no weakening, no slowdown, in our State's program to purify its streams. Indeed, we must do more than prevent pollution; we must act positively to develop and augment our water supplies.

I urge the legislature to approve the bill before you that will aline us with New Jersey in a mutual usage of the Delaware, and I urge that we promptly agree upon a dam and reservoir project at Wallpack on the Delaware which will maintain a proper all-year flow of water in that vital river.

I urge the legislature to bring Pennsylvania into a mutual pact with our sister States and the provinces of Canada which border the Greak Lakes. We should adhere to the Great Lakes compact, an instrument drawn to protect the waters which will make our Lake Erie shoreline a seaport with its windows on the oceans of the world.

I urge the legislature to join with me in pressing upon Congress the need for a dam and reservoir on the upper Allegheny, at Warren, as a flood-control and low-flow augmentation structure.

Water is not alone a raw material; it is a highway.

It is vital to the economy of western Pennsylvania that the Ohio be maintained and improved as a great artery for the transportation of coal and steel; it is vital to the economy of the Delaware Valley and its newly established steel industry that the channel of that river be deepened to 40 feet; it is vital to a great section of the electrical industry that the small stream of Turtle Creek be made proof against destructive floods.

This administration will speak for Pennsylvania in these matters—speak vigorously and proudly. We do not come as beggars to the Federal establishment; Pennsylvania pays into the Federal Treasury far more than it receives. We will not accept the withdrawal of the Federal Government's responsibility for our inland waterways; that issue was threshed out a century ago.

The State will do its share, perhaps more than its share, to develop the ports of the Philadelphia area, of Erie, and of Pittsburgh.

The economy of Pennsylvania historically has found its chief support in our mineral resources—first among them, coal.

Here again, we took a great resource for granted.

We have taken more than 13 billion tons of coal out of the Pennsylvania earth. In the last 62 years, we have marketed \$31 billion worth of Pennsylvania coal. No wonder we all are hurt when coal is hurt.

Our error was the common human one when all was well and times were piping times, we did not plan for a future in which the coal industry could no longer support the jobs of hundreds of thousands of Pennsylvanians. We did not diversify our economic base in time.

Now, the problem is upon us in full force. It does not mean that we should write off coal, or the coal areas. It is altogether likely that the slump in coal is temporary; that the future will demand, greedily demand, the energy that is in our many billions of tons of remaining coal reserves and find economical ways, competitive ways, of utilizing that energy.

ing that energy.

Meanwhile, we must guard our anthracite mining operations against the flooding danger that imperlis the employment that remains in them. I strongly urge the legislature to approve the expenditure by Pennsylvanic of \$8,500,000, matching dollar for dollar a Federal contribution, for the control of flooding in the hard-coal mines.

With equal urgency, I suggest that it is time that Pennsylvania support a program of rescarch in the technology and economics of Pennsylvania coal. As a State, we have been most neglectful of the natural resource which was so generously given us.

We will submit legislation creating a non-political expert coal research board, which will receive applications for research projects in Pennsylvania coal to be carried on in Pennsylvania laboratories. Again, we will apply the seed money principle. We believe that an appropriation of \$500,000 for coal research by the State will develop research projects that will expend several times that amount, with the additional funds coming from industry, foundations, and educational institutions.

I shall have more to say, in a few minutes, about developing new industry and additional employment opportunities in the coal areas.

Continuing in the economics of our mineral resource, I urge, as did your joint State government commission, that we go out as prospectors to make a new reconnaissance of the minerals of Pennsylvania. Only one-third of Pennsylvania has been geologically mapped. We may have the potential for new industries, new wealth, new employment, under our feet and not know it. Therefore, I request the legislature to give sympathetic consideration to the preparation of a mineral deposit inventory, and I suggest that the

department of Internal affairs be granted sufficient additional funds, estimated at

\$700,000, for this purpose.

Further, the administration will consider sympathetically any proper changes in our pattern of law regulating the exploitation of oil and gas deposits which will prevent waste and increase production in Pennsylvania.

Pennsylvania, which has been fortunate in its mineral deposits, has also been fortunate in the forests which covered so much of our The secretary of forests and terrain. waters advises me that our recovery of timber resources on our State forest lands alone is now sufficient to permit us to market, on a sustained yield basis, 100 million boardfeet of timber each year. We are going to do our part in reviving the forest industries in Pennsylvania. While the timber industry can never be such a massive employer as steel, it can provide many job opportunities-vital job opportunities-in sparsely settled regions where every job counts.

In its highway system, Pennsylvania has a

great resource that men created.

Under this administration the economic effects of this resource, as represented by new highway construction, will be an important consideration. Limited-access highways-expressways, parkways, or turnpikes, as they are variously called-are a very important location factor for industry,

I urge that the turnpike commission expand its network of express highways just as quickly as its revenue prospects permit. Specifically, I urge a prompt decision as to the route of the turnpike from the Pittsburgh district to Erie, with due consideration for the Pennsylvania economics involved. I urge a decision to build, if engineering studies will support a revenue prospectus, the so-called Shortway from Sharon to Stroudsburg, and an extension of the turnpike south through the bituminous coal area, to the West Virginia border.

I fully agree with the basic philosophy that is embodied in the report of the Clay commission which stated that the Nation could not wait much longer for the completion of its interstate highway system; that we need the highways now, before traffic stops in its

tracks.

In my judgment, neither Pennsylvania nor the Nation can afford to let our construction program for major highways fall behind the pressure of traffic and of population. Here in Pennsylvania, no matter what the rest of the Nation does, we must make ourselves competent to carry forward an accelerated program of highway building. We need free-flowing traffic on roads engineered for the demands of the present and the still greater pressure of the future.

We need the highways and the economic

growth they induce.

An extensive State and national highway building program will be a direct economic benefit to Pennsylvania.

It is our cement, our steel, and our labor which will build much of the highway system; it is Pennsylvania steel which goes into the bodies of America's cars and Pennsylvania fabrics which go into their interiors.

The State's highway system also plays a part in maintaining and developing its travel and vacation industry. While the State may justifiably take some part in tourist travel promotion campaigns, in my judgment it can best serve our economic interests in travel by doing the things that are its own direct obligation, rather than talking generalities and printing pretty pictures. By that I mean that we need strong highway zoning legislation to protect our highways and beautiful countryside from the squalid ugliness that mars so many of our roads. We need to construct pleasant roadside stopping places and picinc grounds, and should act at once to lift the ridiculous restriction that limits such roadside parks to one to a county.

We should understand, take pride in, and preserve the historic points, the regional ways of life, the good traditions of Pennsylvania.

The beauty of this State, where man has not despoiled it, is one of the great assets of Pennsylvania. We are not being unduly materialistic when we count it with our potential economic assets

Industrial locations today are not determined by strict dollars and cents balances alone. The community with good housing, good public services, recreational opportunities, good schools, fine churches, starts off with a lead in the competition for industrial expansion.

To aid our communities in the work of redevelopment I will recommend that the legislature appropriate \$5 million for the next biennium to be distributed as grants-in-aid for redevelopment projects. This again will be seed money. Each dollar of the State can be used to match \$2 provided by the Federal Government in its urban renewal pro-With equal contributions by the pargram. ticipating municipalities, it means that \$30 million will be available for public aid to redevelopment projects in the next 2 years.

The housing assistance law of 1949 should be revised, so as to permit State grants-inaid to redevelopment to be used for broadened purposes. The redevelopment process can be used-should be used-to modernize our communities, provide new areas for public use, new commercial districts, new and well-planned industrial sites. The restriction to residential use should be eliminated.

We must also be vigorous in our support of the increased authorization of \$500 million in Federal urban renewal aid which has been recommended to the Congress. this increase is adopted, or a limiting clause in the existing Federal Act is removed, Pennsylvania cities will soon be deprived of an opportunity to share in the national program.

Finally, we must recognize the tragic problem of the areas in Pennsylvania which have become victims of chronic unemployment-recognize it with a new bold series of actions which admittedly contain a calculated risk.

Each of us in Pennsylvania, no matter where we live, has a material interest in such areas.

They drain our unemployment compensation fund.

They draw upon millions of dollars from our public-assistance appropriations.

They cannot pay their way in the public economics or the private industrial enterprise of this State.

More important still, we have an interest as the fellow citizens of the people in the areas affected. We owe it to them, we owe it to our belief in this society, that we not stand by unmoved and unconcerned while hardship is visited upon several hundred thousand Pennsylvania homes, while whole communities deteriorate and decay, while we develop "ghost areas" in whole counties and regions of our State.

Consequently, we will present legislation to the general assembly which, in our be-lief, will make it possible to attract more than \$150 million in new industrial development to our areas of economic distress-and this to begin this year and carry forward through a 5-year period.

We will ask you to create a State Industrial Development Authority, and appropriate to it \$20 million in State funds this biennium.

We would schedule similar appropriations for 1957-59.

The authority will make a finding of public purpose and necessity as to chronic economic distress in those regions of the State which are suffering from continued and severe unemployment. Its operations will be restricted to those areas where such a finding can be factually supported.

It will purchase or receive in gift industrial sites in such areas, develop them for use, and construct industrial buildings. It will lease these buildings on a long-term to companies of good credit standing and high employment potential, on terms that will provide an incentive for the companies to locate in the designated areas.

This is in no sense a giveaway program. Over a period of time the State will get all its money back, plus interest. The dustrial development authority will be able to augment the funds voted to it by borrowing against the security of its properties and leases. Lease payments will begin to flow back in several years, again putting more money in the pot. Local contributions will be encouraged. There will be no local tax exemption sought.

Once again, we use the seed money principle.

With the value of equipment to be installed by the manufacturing lessees, the State's \$60 million investment will predictably double and nearly triple itself.

Such a program is a new approach in Pennsylvania, although other States-competitive States-have used various methods

akin to it.

Its justification lies in necessity.

Its termination will come forthwith if normal economic processes show that they are doing the job.

Gradually, slowly, painfully, the Nation is beginning to realize that these areas of economic decline in a period of national pros-perity are a national problem too.

have properly been concerned with shoring up the economy of such far places as West Berlin, Japan, the Arab countries, South Vietnam.

But we seem all too unconcerned with the economy and the employment potential of Pennsylvania's coalfields.

The current Federal program for American areas of economic distress is sadly feeble. It has no impetus, no drive, no spokesman in the National Government.

I suggest that we need a point 4 program within the United States-a program with punch, a program with vigor, a program that will complement what we are prepared to do in Pennsylvania. We have heard a good deal lately about the "partnership concept" as between the Federal Government and the States. We in Pennsylvania are waiting for the senior partner, the Government of the United States, to put in his chips.

There are some signs of an awakening.

On March 14, 2 weeks ago, the Joint Congressional Committee on the Economic Report had this to say:

"We are very concerned with distressed conditions which persist in certain industries and regions, even in an expanding economy. We believe that action is required now and that much can be done through public works to assist these communities. The Federal Government should recognize its responsibility to those areas and industries by promoting research to discover new products and new processes. Consideration should be given to the possibility of modifying the employment compensation programs to meet the special problems of retraining and readjusting facing those areas. Loans, technical assistance, and, as the President recommends an expanded area development program should be provided those to help them adapt to changed economic conditions."

Those are the words of a joint committee of Congress.

They are good words, to which we can subscribe.

But the National Government, the Congress, can do more.

We suggest that in the national interest the Federal Government use the enormous leverage of its tax system to restore the economy of our areas of chronic unemploy-

When the national interest requires new investment for defense purposes, the Federal Government will grant a certificate of national necessity to the company that is prepared to undertake the investment. Such a certificate permits an accelerated rate of amortization for tax purposes; the enter-Prise can, if it prospers, pay for its new plant

out of profits in 5 years.

We believe the national interest is now vitally involved in finding a new economic base for many areas in our Commonwealth and elsewhere in this country. We, therefore, suggest that the same certificate of national necessity, the same privilege of rapid depreciation for tax purposes, be granted to every new industrial investment made in areas of substantial unemployment, regardless of whether the industry has a connection With defense or not.

Such a provision in the tax laws might well bring a stream of new investment into our areas of depressed economy that would be more effective than any other thing that we

can do.

I urge the legislature to adopt a resolution

so memorializing Congress.

As Governor, I will press it to the fullest

strength of my office.

It is entirely justifiable on the basis of compensation for the reciprocal trade policy; It is justifiable on the basis of the national interest in maintaining a labor force in the coal areas in the event of national emergency; it is justified because these same areas were denied, during the war, an opportunity to expand their economic base because they Were then considered areas of labor scarcity.

Our whole effort is to utilize the full value of our public processes so that we can all gain a greater return from our economic system of individual enterprise. We are creating a climate, furnishing some tools, meeting some common responsibilities, removing some road blocks, developing new channels.

Our success will come only if we are able to mobilize the full strength of the people

of Pennsylvania.

That necessarily means the cooperation of

It means the cooperation of management. It means cooperation between the parties; the good will of every person in authority.
That is what I ask today.

This Commonwealth of Pennsylvania has no reason to be laggard. We are far to the front in technical skills, in industrial research, in the number and depth of our educational institutions, in the home offices of great corporations, in the tradition of productivity. We have huge reserves of capital; We are not owned by absentees.

If we have faltered, it is because we did

not see the obstacles in time.

Now that we see them, we can surmount them and resume our forward march.

I am not asking this legislature, our people, to support a Leader plan or a Democratic plan.

I am asking you to support fullheartedly a Pennsylvania plan.

As Governor of Pennsylvania, I seek the help of the general assembly for a community agreement that will correct the present and protect the future of Pennsylvania and it: people.

Federal Regulation of Natural Gas Prices

EXTENSION OF REMARKS

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

* Wednesday, March 30, 1955

Mr. MACDONALD. Mr. Speaker, I have today introduced a bill in order to protect the consumers of my district and other consumer districts against further exploitation by natural-gas companies. We all know that the Natural Gas Act of 1938 was adopted after extensive hearings held in the interests of finding whether it was necessary, in the public interest, to regulate the transportation and sale of natural gas to prevent further consumer exploitation. The answer in 1938 was yes, and I submit after 13 years that the answer still is "Yes." The consuming public needs protection now more than ever.

Since the adoption of the act the gas industry has expanded tremendously, until today natural gas is one of the great fuels by which America lives. Since its inception there have been repeated attempts by selfish interests here in Congress to amend this law in order to have independent producers and gatherers escape its terms and control. Efforts have also been made in the courts of the land by the gas interests to secure decisions which would hold that the regulation of prices charged by producers and gatherers not to be within the jurisdiction of the Federal Power Commission. But now in the latest of this series, the now famous Phillips Petroleum Co. against State of Wisconsin decision, the United States Supreme Court has held that the regulation of sales of natural gas in interstate commerce for resale by independent natural-gas producers to be within the jurisdiction of the Federal Power Commission. A concerted effort by the powerful gas interest to nullify the decision of the Supreme Court of the United States followed and is currently in full bloom.

We will soon be concerned here on the floor of the House with the Harris bill (H. R. 4560), which is one of the bills currently being considered by the House Committee on Interstate and Foreign Commerce of which I am privileged to be a member. That bill is not only designed to exempt producers and gatherers of natural gas from rate control by the Federal Power Commission but would go further and require the Federal Power Commission to allow transmission companies to charge a "fair field price" for gas at rates which have no relation whatsoever to cost. Obviously, since no one can determine exactly what is a "fair field price," the measure, if enacted, will cost consumers millions of dollars over and above rates now permitted by rea-

sonable regulation.

The oil and gas company proponents of the Harris bill claim that there is competition among the independent producers and gatherers and this competition will set a "fair field price." However, a close look at the factual situation of the process of gathering and sale of this commodity shows this not to be the case. The large percentage of the natural gas coming from our Southwestern States, is produced by a relatively few very large corporations who because of their monopolistic control of gas reserves, have almost uncontrolled power to fix the price of gas entering our interstate transmission lines. The Federal Power Commission report figures show that 3 percent of all these producers control 80 percent of all natural gas sold by these so-called independent producers

to natural-gas companies. It follows naturally by the natural law of supply and demand that if we are to have effective regulation of gas rates, we must have regulation from the point of production to the point where the ultimate consumer purchases it.

Supporters of the Harris bill have also sought to buttress their position by drawing an analogy between the price of coal and oil, and that of gas, claiming that competition regulates the price of each. This in my opinion is just not applicable to the situation before us. The analogy falls, when, for example, we consider the differences in the method of transportation between coal and oil and that of natural gas. Coal and oil may be transported by rail, truck or water, enabling the middleman dealer to shop around and give the ultimate consumer the benefit of the cheapest available methods of transportation. Natural gas, however, can be transported by pipeline only. Once established, it is clear beyond comment that these lines cannot be removed from place to place to take advantage of favorable prices. This means that the ultimate consumer has no alternative but to accept whatever grade of natural gas is transported by the sole, monopoly, pipeline company to his area. One is simply not permitted to go shopping elsewhere for cheaper or more economical gas. He buys from a single seller or he does not buy. Since the competitive economic forces in the consumer purchase of natural gas are nonexistent or at best, weak, Federal Government regulation of exorbitant rates is necessary. Furthermore, it is clear that the present regulation of pipeline companies would be completely emasculated unless regulation of producers and gatherers at the wellhead were also present. This was made especially clear to me at the hearings on the Harris bill now in progress before the Interstate and Foreign Commerce Committee of which I am privileged to be a member. Under existing law, pipeline companies and producers have continued to expand and have had no trouble in getting financial and other aid in such expansion. The Harris bill, as well as other proposed bills which seek to exempt producers and gatherers of natural gas from rate regulation by the Federal Power Commission, would exempt a large segment of the gas industry from proper regulation and thereby benefits primarily only a few large corporations. Enactment of such legislation gives a new lease on life to the very practices the Natural Gas Act was designed to prevent.

The need for such an amendment is made clear by the mental attitude displayed by the oil interests. This publicbe-damned attitude was summed up by Lt. Gen. Ernest Thompson, representing Texas natural gas interests, who stated at these hearings that if the price for natural gas went beyond the ability of the consumer in our New England section of the country to pay, he could switch back to coal and oil. Mr. Thompson stated:

They could always go back to coal any time they think gas is too high. There still would be a free choice to using coal, oil, or In answer to a question of mine as to: "What happens to the local public utility such as the Mystic Valley Gas Co. in my own district which has invested millions of dollars in laying a pipeline to meet the monopoly's main pipeline in order to service our communities, when the price gets so high for the consumer that the consumer no longer could pay the price asked for natural gas?" General Thompson stated:

They would have to find some other line of business, more profitable.

What, too, of the small investor who has bought shares of stock in this company and has submitted to public utility regulations on the heretofore solid ground that he was assured of a small but steady profit on his investment? Should we do away with the interests of the consumer, the local public utility, and the small invester, by sacrificing him to the greed of the all-powerful oil interest? My answer is no.

It is from this type of attitude expressed by Mr. Thompson, as 1 of 3 members composing the commission which has jurisdiction over oil and natural gas in Texas, that the public-be-damned attitude is most clearly seen and fills me with fear in the years to come for the consumers of our great country. To point out that our consumers need protection from this state of mind is unnec-

essary.

There is no doubt, that over the years, enactment of the Harris bill, whose main ideas were formerly incorporated in the presidentially vetoed Kerr bill, would increase the cost of gas to the ultimate consumer by many millions of dollars. It is likewise indisputable that the objective of the proponents of this kind of legislation is to seek higher prices from the consumer. Natural gas is a wonder-ful resource of nature which has come into great demand since World War II. It was given to us by our Creator for the benefit of all of our citizens. We must not permit its great value, created in large measure by the demand of the people themselves, to be appropriated by monopolies through inflated profits. Reason and justice require that the sales of natural gas to interstate pipelines for ultimate public consumption be subject to Federal regulation in order to assure that independent producers and gatherers receive no more than reasonable prices to meet their legitimate costs, including the market rate of interest upon the capital prudently invested in plant and equipment. In the supplying of natural gas to a utility market these producers and gatherers are not entitled to exact "what the traffic will bear," for the consuming public is itself entitled to the benefits which this great natural resource offers after paying the reasonable costs of labor and capital required to make it available for use.

It is my hope that the House Interstate and Foreign Commerce Committee and the Congress will adopt the amendment proposed in my bill. The bill which is proposed by me on behalf of consumers everywhere limits the proposed exemption to small producers and gatherers as defined therein. The statutory minimum below which regulation would not apply will be fixed at not more than 2 billion cubic feet per year. The amendment I have proposed thereby would exempt from regulation approximately 97 percent of the producers and gatherers of natural gas making sales to interstate pipeline companies and yet would leave subject to regulation more than 80 percent of the gas sold by socalled independent producers to natural-gas companies. It is obvious that the few major oil companies of the Nation are a close-knit organization, monopolizing the industry and holding, if permitted, a dictatorship over the consumer.

There are 20 million gas consumers in this country, whose interest in the gas rate is only aroused when their individual rates are increased. The average consumer doesn't know why he must pay more for less and if he inquires, such a deluge of exhibits, figures, and charts are showered upon him that he wishes he had not asked in the first place. Rate structures for natural gas have become highly involved for it is to the advantage of the monopoly to make them this way. The individual consumer usually gives up his investigation by saving that he can't understand the graphs, charts, and technical terminology and that perhaps he shouldn't protest because his individual investment is so small in the overall picture drawn for him. He does not stop to think of the huge collective investment made by him and other gas consumers. The 20 million consumers have presently over \$3 billion invested in gas-burning equipment. The gas producing, carrying, and supplying com-panies—in fact, the entire industry have little more than half of that amount as a total investment. In our democracy it would seem that the interest of the greatest number of people, with the greatest amount of money invested, should be protected first. The history of the gas industry does not bear this out. The monopoly is trying to bring about conditions whereby they are protected and the consumer must pay and pay to satisfy the industry greed which, history shows, never will be quite satisfied.

And what is the relationship of the protection of the consumer against the producer? The consumer's investment is strictly an out-of-the-pocket expense. for which he is guaranteed nothing. He pays for it with his own money and many continue to pay for long periods of time. The producer, on the other hand, is allowed a 27.5 percent depletion charge annually. This means that out of each million dollars collected, there is \$275,000 free of any taxation. While it is quite true that a well will not indefinitely produce large quantities of gas or oil, and perhaps, a depletion allowance is fair, if only to give an owner the opportunity to lay a nest egg aside. But it need not be an ostrich egg. If a well yields a million dollars a year for 5 to 10 years, the owners will have over a quarter of a million dollars tax free for each year and the remainder subject to no more than normal taxation. The allowance, as it stands, practically says that each company or individual who owns an oil or gas well should by some unaccountable reasoning receive preferential treatment given no other industry in these amounts because the life of his income from this source is a limited one. The productive earning period of our American athletes, our writers, our artists—their productive lives are also commercially limited, but they are given no such depletion allowance. My bill would make certain that dominant producing interests, primarily the major oil companies of the Nation, would not be able to assert their monopolistic position in the control of gas reserves to the detriment of the public interest. At the same time it would relieve from the burdens of regulation the small-well owners.

Recognizing the fact that the book-keeping and other administrating procedures of the Federal Power Commission are a burden on a small company it is pointed out that the amendment proposed by me would exempt from regulation by the Federal Power Commission approximately 97 percent of all independent producers and gatherers of natural gas making sales to interstate pipeline companies and yet leaves controlled by fair regulation more than 80 percent of all natural gas sold by these so-called independent producers to natural-gas companies.

The smaller well owners deserve this protection, in my opinion, as nothing would be accomplished by the regulation of them in any event. Such producers do not control sufficient supplies of gas to place them in a position to affect materially the interstate movement or prices of natural gas. Likewise, the regulation of a multitude of small producers would involve time and expense out of proportion to the benefits obtainable therefrom. By enacting my bill the Congress can dispose of the differences that now exist and at the same time assure the consumers of natural-gas protection against unreasonable rates in conformance with the principles of the Natural Gas Act.

The Christian and Debt: A Moral Principle

EXTENSION OF REMARKS

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES
Wednesday, March 30, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very able article entitled "The Christian and Debt: A Moral Principle," written by Dr. L. Nelson Bell, associate editor of the Southern Presbyterian Journal and published in the March 16, 1955, issue of that magazine.

There being no objection, the article was ordered to be printed in the Recorp, as follows:

THE CHRISTIAN AND DEBT: A MORAL PRINCIPLE

Is there a moral principle involved in willful spending and in contracting debts where there is no reasonable hope of paying off? We believe the answer is an equivocal "Yes."

The second question is, Can a Government find justification for a fiscal policy which would be morally wrong for the individual? We believe that this must be answered in the negative. Also, it is morally wrong for an individual to use bribery—to try to buy votes for any purpose. It is equally wrong for politicians to try to buy votes by making financial concessions to individuals or groups of individuals.

During recent weeks there has been a hot debate in Washington over extending to tax-payers a reduction of \$20 per individual. At the same time, one of the "economic experts," called in to testify, not only advocates this tax reduction, but at the same time advocates more Government spending.

One can but wonder at those legislators who have been willing to vote for a reduction in taxes which would cost the Government over \$4 billion a year while, at the same time they know that each year finds our budget unbalanced and the national debt increasing to astronomical proportions. This may be "good politics," designed to win the votes of the unthinking, but it is neither moral, nor is it patriotic.

Walter Lippmann, in his new book, The Public Philosophy, writes of the "necessary and natural duties of Government" and specifies these to include order, security, and solvency. From the nature of their implications the loss of any 1 of these 3 can imperil the other 2.

And yet, beginning 24 years ago our Nation was sold a philosophy of national finance and spending which, if renewed, is as sure to bring about our ruin as the wanton squandering of a spendthrift insures his ultimate bankruptcy.

We are not speaking of the inevitable indebtedness caused by modern warfare. Nor are we objecting to reasonable amounts spent for justified foreign aid. But, there has been a willingness to blindly spend for spending sake, a philosophy which teaches that the willful and prodigal increase of the national debt for the sake of placating voters, or "priming the pump," is a justified economic procedure. To this writer such a philosophy comes from minds either unwilling to admit basic economic laws, or from some (and there may be both kinds represented here), who would willfully lead our Nation to fiscal chaos.

True statesmanship demands that our citizens be faced with the facts. The Government does not make the money it spends—it comes from the taxpayers. For those in government to manipulate such funds for Political purposes, or refuse to acquaint the Public with the cold hard facts of debt and solvency, is tragically short-sighted. Social gains are desirable, and some in our country were long past due, but these are gains only when based on sound economic principles.

In some quarters the church has seen fit to foster and further certain economic policies. Never, as far as we know, has a responsible church court warned the Government against the moral and spiritual implications of an ever-increasing national debt. If such a warning is out of place, then the economic policies which have been advocated in some church circles are even more uncalled for.

The recent increase in salaries for the Members of Congress and the judiciary are, we believe, long over due. We, as Christians, could well express our approval of these measures while, at the same time, telling our elected representatives in Washington that the time has come when we should balance the budget and start paying off our national indebtedness.

This we believe to be both basically Christian and also sound economics.

L. N. B.

The Effect of Mechanization on Sugar-Beet Production in Colorado

EXTENSION OF REMARKS

HON. GORDON ALLOTT

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30, 1955

Mr. ALLOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article recently printed in the Rocky Mountain News, a Scripps-Howard newspaper printed in Denver and circulated widely in Colorado and Wyoming. This excellent article was written by Mr. James Daniel, the Washington correspondent of the paper, who has had a most distinguished journalistic career.

I should like to call the attention of my colleagues to the fact that although much has been spent by various bureaus of the Government to study industrial development and progress, it seems that even many people here in Washington are not aware of the tremendous strides being made by the beet-sugar producers, who are active in 20 or more of our States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

No Figures—Nobody in Washington Knows How Mechanization Is Affecting Sugar-Beet Production in Colorado

(By James Daniel)

Washington, March 24.—A serious gap in the Government's knowledge of the sugar industry which could lead to another "trap" for the Colorado and western sugar-beet industry cropped up here Thursday. A Rocky Mountain News check of the La-

A Rocky Mountain News check of the Labor Department, the Bureau of Labor Statistics, and the Agriculture Department Sugar Branch showed:

Nobody is keeping any figures on the mechanization of the sugar-beet industry.

MACHINE LABOR

Now, standing alone, that may not sound very earth shaking. Everybody in Colorado certainly knows that the sugar-beet industry is rapidly getting rid of "stoop labor." Better than 90 percent of the harvesting,

Better than 90 percent of the harvesting, and possibly 30 or so percent of the spring thinning is now done by machines.

For the hand work that remains, labor is paid better than before, thus sharing in the economies of automation.

With this decrease in toil has come a new community freedom from many of the social problems of migratory labor. There are still migrant workers in the beet industry. But they're fewer and fewer every year and the folks who used to do this hard, backbreaking work are moving up in the social and economic scale.

In fact, the sugar-beet industry is one place where there has been no outcry by labor unions that men were being replaced by machines. The men wanted to be replaced.

NO FIGURES

All this ties in very closely with the Rocky Mountain News' discovery here Thursday.

Seeking national statistics on the extent and speed of beet-sugar mechanization, the News called the usual Government sources. At every turn the answer was:

"Sorry, we're not keeping figures on that."

Washington is a place where if you know where to look, you can get figures on the number of anopheles mosquitos in Central Park, the detailed love life of the rhesus monkey of southeast Asia, or the life cycle of spotted apple blight in the Appalachians.

But about the greatest social revolution going on in a major agricultural industry pursued in 22 States the Government had nothing.

SUGAR QUOTA

Significance of this neglect is this:

In 1947 the beet-sugar industry was gulled, or maybe the word was bumbled, into accepting a quota on its production, on the excuse that if it didn't take the quota—then believed far above its ability to produce—it would be swamped by cheap foreign production.

The industry took the quota and quickly found that it was a ceiling.

Now, the sugar-beet companies find they can only compete with each other, because the entire increase in United States sugar consumption is reserved for foreigners. In fact, 96 percent of the additional new American babies born this year are automatically sugar customers of Cuba.

POOR POSITION

And it is the unmechanized Cubans who are now afraid their costs are out of line, and yelling that somebody has to stop some of the other little Latin American Republics from underselling.

Unless there's some fast official statistics gathering, the United States Government will be in no better position to make up its mind in the next few months how fairly to draw up an extension of the Sugar Production and Marketing Act of 1947 than it was, to Colorado's regret, in 1947.

Disturbed congressional heads are considering whether to take steps to make sure the Government does get together the essential information of the mechanization and cost-cutting in the sugar-beet industry.

Why an Oil Import Quota?

EXTENSION OF REMARKS

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1955

Mr. REES of Kansas. Mr. Speaker, I am including in the Record today an article entitled "Why an Oil Import Quota?" It is prepared by the Independent Petroleum Association of America and is in the form of answers to 10 basic questions dealing with this problem. I believe Members of the House will be interested in the information outlined in this brief statement:

Rising oil imports present a critical and growing problem. In the first 5 months of 1955, total oil imports are scheduled at 1,240,000 barrels daily, 16 percent higher than last year, about double the 1949 rate, and three times the 1946 volume of imports. This trend, unless corrected, can only mean discouragement of domestic oil activities and inadequate oil supplies for our Nation's future needs.

The effects on the domestic producer, while critical, are only secondary. The primary consideration is the ultimate effect on our national security and defense. To avoid increasing dependency on foreign oil and to preserve a strong domestic industry, a solu-

tion to the oil import problem must no

longer be postponed.

Therefore, 21 associations of oil and gas producers have joined in supporting a proposed amendment to the Trade Agreements Act which would (1) direct the President to restrict imports of any commodity whenever they threaten necessary domestic supplies of a natural resource or other material essential to national security; (2) limit oil imports to 10 percent of United States oil demands to assure an expanding domestic industry capable of providing future supplies.

The following basic questions and answers explore Why an Oil Import Quota is the most effective, practical, and acceptable method to combat the ever-increasing rise in im-

Question. How would the proposed oil

import quota work?

Answer. It would hold total petroleum imports to 10 percent of total United States oil consumption, and restrict residual fueloil imports to 10 percent of United States consumption of that product. Quotas would be established quarterly, based on United States Bureau of Mines figures for the same quarter of the previous year.

Question. What would be the net effect of

such quotas?

Answer. Total petroleum imports would be reduced about 300,000 barrels daily from 1954 levels. Unnecessary Middle and Far East imports alone add up to about this amount

Question. What is the basis for the 10-

percent limitation?

Answer. Experience. During the 6-year period 1946 through 1951 total petroleum imports averaged 10 percent of United States consumption, and residual imports were also 10 percent of residual consumption.

Question. How about the quota on re-

sidual fuel oil?

Answer. The domestic industry has always supplied most of the 1,500,000-barrel daily demand for residual fuel oil, and can continue to do so. The 10-percent residual import quota would be much more realistic and practical than the 5-percent limitation in the 1953 Simpson bill. The quota would not only be doubled, but fuel-oil imports for vessels would be permitted in addition.

Question. Is there a precedent for the

quota system?

Answer. Yes. Import quotas are now being used by our Government on a number of commodities such as cotton, sugar, cattle, fish, wheat, cigars, etc. In fact, quotas on oil imports were in effect from December 1939, to January 1943, and again in 1951-52,

Question. Would quotas conflict with our

trade agreements program?

Answer. No. The escape clause provisions of the Trade Agreements Act specifically provides that quotas may be established to prevent injury to domestic industries. oil-import quota would merely implement this principle.

Question. Would such a quota mean Federal control of the domestic oil industry?

Answer, Absolutely not. The Federal Government has always controlled foreign trade by quotas and tariffs. This has never involved or led to Federal control of do-mestic industries. The law would merely limit imports, just like Texas and other States set allowables on domestic supply but with much less difficulty.

Question. Is the quota preferable to other

types of import legislation?

Answer. Yes, for several reasons:

Quotas would not disrupt the present trade agreements program.

Oil import quotas, unlike tariffs, would allow both oil importers and domestic producers to share in future domestic market growth.

Flexible import quotas would permit our Government to recognize Western Hemisphere solidarity, trade with other nations, and defense considerations.

Question. Are other industries supporting the proposed quota?

Answer. Yes. Coal, railroads, and others have already done so. Also, the amendment contains language which will attract support from other basic defense industries. In addition to specific oil import quotas, it would direct the President "* * * to take such action as is necessary to restrict imports of commodities whenever such imports threaten to retard the domestic development and expansion of natural resource industries and such other industries as he may determine to be essential to the national security. * * *

Question. Why should the quota be adopted as an amendment to the Trade Agreements Act?

Answer. Because, as the Trade Agreements Act itself recognizes, essential defense materials should be treated separately in foreign trade policies. This principle was estab-lished in section 2 of the 1954 extension of the act. The quota amendment would make effective this congressional policy.

Also, because all other means of solving the problem of excessive oil imports have proven unsuccessful. Continuing efforts have been made over a long period to find a solution within the industry. Despite these efforts, imports have taken a larger and larger share of the United States market. The executive branch of government has studied the problem and urged restraint necessary to the health and security of Nation. Imports have not been restrained and it is now clear that only the Congress can provide an assured solution in the interests of national welfare and security.

Yalta Release-What Purpose?

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of the Congress the following column by Mr. Stewart Alsop, which appeared in the Washington Post and Times Herald of March 25, and the column by Mr. Drew Middleton, which appeared in the New York Times of March 23:

MATTER OF FACT-SENATOR GEORGE AND YALTA (By Stewart Alsop)

It is clear by now that the way the Yalta papers were released amounts to the biggest bit of plain boobery committed in Washing-

ton for a very long time.

Consider the results. This country's best friend abroad, Sir Winston Churchill, has been angered. Opinion throughout world, especially in Britain, France, and Germany, has been alienated at a most critical moment. The Soviets have been presented with fine grist for their propaganda mill.

It might still be argued that this trouble abroad is not too high a price to pay for a useful object lesson from the past. reaction at home is really more significant than the reaction abroad. Almost to a man the Democrats in the Senate deeply resent not so much the fact that the papers were released, as the way they were released. And if we are to have any foreign policy at all, after all, the State Department has got to work with the Democratic majority.

Among those who feel most strongly in the matter is Senator Walter George, of Georgia, chairman of the Foreign Relations Committee. George is the dominant figure in the present Congress and the kingpin of the bipartisan foreign policy. There is no doubt about the way George feels.

His own public comments have been relatively mild. But he was consulted in detail by Senate Majority Leader Lyndon Johnson before Johnson made his brief but angry speech last Tuesday, attacking the way the documents were released. Johnson was undoubtedly speaking George's mind, as well as that of most Democrats, North and South.

It is also significant that George made his proposal for a meeting of the heads of state without consulting Secretary of State John Foster Dulles in advance. George's proposal springs from genuine conviction. But it is also his way of serving notice that he is quite capable of taking a completely independent line on matters of high policy. The Democrats who have been clamoring for an "independent, democratic foreign policy" are thus now much more likely to get what they want, to the discomfiture of Secretary Dulles and the administration.

This is not to say that George or the other responsible Democratic leaders are going to act like spoiled children where foreign policy is concerned. But the close, intimate, and mutually confident relationship which a bipartisan foreign policy demands has been badly eroded. And it is not hard to see why.

Within the last few weeks, GEORGE has saved the administration's bacon, on the only two really important isues to come before this session of Congress. One was the \$20 tax cut—George's opposition to the compromise Senate bill killed the issue. The other was the Formosa resolution, which GEORGE saved by a single, moving speech, when the administration was heading into really bad trouble on the issue.

Consider the way George was rewarded for all this bacon-saving. He was not consulted before the Yalta documents, ostensibly classified, were sent to his committee. GEORGE has been around Washington for a long time, and he was quite aware that this was a cute way of making public the juicier portions of the documents. He therefore curtly refused to receive them. After this setback, the State Department passed the documents under the counter to one newspaper, and this was then used as an excuse for a general

If this was not a sleazy, sleight-of-hand performance, it certainly managed to look like one. Meanwhile, a third important issue is about to come before the Senate-the administration's reciprocal trade program. Opposition to this program is ferocious, and the administration's bacon can probably only be saved this time if GEORGE is willing to fight, bleed, and die for it. Since the business of the Yalta papers, he is naturally much less likely to do so.

But the worst aspect of the incredible blooper on the Yalta papers is the timingway or another, the Formosa crisis. which has the most dangerous domestic political implications, looks like it is coming to a head very soon. And this is the moment chosen for the State Department to play what the Democrats unanimously regard as a sleazy political trick, thus inviting them to play politics with foreign policy in their turn.

Finally, it is generally agreed that the Yalta papers will not be of any real political benefit to the Republicans, even though they do occasionally show the late President Roosevelt in an unlovely light. This is the irony of the whole sorry business. But the mystery remains-how Secretary Dulles, who has wisely gone to great lengths to establish good relations with Senator George, and who courageously withstood fierce political pressure to release the Yalta papers for the 1954 campaign, allowed this messy business to

CHURCHILL CHIDES UNITED STATES ON YALTA CASE-SAYS PUBLICATION OF PAPERS WAS "UNTIMELY"-VANDALS SMEAR ROOSEVELT STATUE

(By Drew Middleton)

LONDON, March 22.-The United States Government changed its mind over the "untimely" publication of the Yalta conference documents, Prime Minister Churchill told the House of Commons today.

The British Government was informed March 11 that the administration in Washington had decided not to publish its record of the three-power meeting, Sir Winston said. Four days later "we were told publication could not be resisted any longer," he added.

The concern of both the Conservative and Labor Members of Parliament over the publication of the Yalta papers was emphasized by the cries of astonishment and dismay that greeted Sir Winston's statement.

In the view of Government and opposition spokesmen the release of the papers may prevent a meeting between the Soviet Union and the Western powers. By giving the Russians a pretext to make the proposed meeting a platform for their propaganda, publication of the Yalta documents may impede any real progress toward a relaxation of the tension between the East and West, these sources say.

BRITISH PUBLICATION OPPOSED

British opinion in the highest circles is opopsed to the publication by this country of its record of the Yalta meeting. These sources are critical of the United States plans to release the minutes of the Potsdam and Teheran conferences.

"Where will publication end?" a senior

British official inquired today.

Won't the Republicans now ask for the minutes of the secret sessions of the Council of Foreign Ministers since the war and, if these provide no ammunition, for the minutes of all other meetings we have held with the Russians or even among ourselves?

Do they really believe in Washington that the United States can negotiate with any country successfully if everything said in private meetings is to be thrown open to Public?" the source added.

The British policy, as put forward by one of the Nation's most respected statesmen is:

Open covenants secretly arrived at.

Sir Winston's distaste for the whole affair, obvious to anyone in the Commons, was heightened by news that the words, "traitor of Yalta," had been scrawled across the base of the statue of President Roosevelt in Grosvenor Square.

The writing was in red oxide paint and, according to an official of the Ministry of Works it may do "irreparable" harm.

The statue was erected as a memorial to Roosevelt "as a great war leader, a great man of peace, and a great citizen of the world."
It was unveiled by Mrs. Roosevelt in April 1948 in the presence of King George VI and Queen Elizabeth, the present Queen mother.

At the time of the Yalta Conference Churchill doubted the wisdom of Roosevelt's policies and he does today. But these doubts do not outweigh in his mind the debt of gratitude owed to Roosevelt for his help in 1940 and 1941.

Although there is much criticism of the issuance of the Yalta documents there is little of Roosevelt in this country. The defacing of the statue introduced a not of blind hatred that is allen to public opinion here.

The Prime Minister gave the Commons a detailed account of the exchanges between government and the administration in Washington about the Yalta documents.

These began last summer when the British were informed of the administration's "wish" to publish papers relating to the big power conferences at Yalta and Potsdam and the United States-British meeting at Malta that preceded the Yalta conference.

GALLEY PROOFS SENT TO BRITISH

The British received galley proofs of the Yalta documents in December. But Sir Winston said sharply it was not the duty of the British Prime Minister or his Foreign Secretary to read through such a "vast amount of material about the past."

"I was consulted on a few points of detail."

Sir Winston conceded.

Sir Anthony Eden, the foreign secretary, with the Prime Minister's agreement sent a message to Washington "deprecating on general grounds detailed record of important international documents being published so soon after the event."

The foreign secretary told Secretary of State Dulles January 12 that while he did not suggest the abandonment of publication he thought it "most undesirable at present,"

the Prime Minister added.

"On March 11 the United States Government informed us they had decided not to publish," Sir Winston continued. "But on March 15 we were told publication could not be resisted any longer. Twenty-four hours later it occurred."

The British Government has not decided whether to publish its own reports of plenary meetings and the foreign ministers conferences at Yalta, Sir Winston declared. These reports are being carefully examined to see whether publication is necessary, he added.

The Prime Minister said that, although in his opinion the British representatives that is he and Sir Anthony-came out of the Yalta report "very well," this did not alter his

conviction that publication was untimely.

Taxed by a Laborite member about a remark attributed to him in the documents to the effect that he did not like the Poles, Sir Winston said he did not rfemember having made any such remark and "if so, it must have been completely out of context."

Anyone who cares to read the documents can see "how again and again I fought for the interests and rights of Poland at Yalta and Potsdam," Sir Winston asserted.

Clement R. Attlee, Opposition leader, asked Sir Winston to negotiate an agreement with the United States to prevent the release of documents on future international meetings.

Sir Winston replied that the Yalta documents might have been influenced by "ac-cidental circumstances" and their release should not be judged as definite United

States policy.

Other ministers and senior civil servants fear the United States Government, at the request of the Republican right-wing Senators, will continue to issue documents on international conferences. They believe that, as a result, the prospects of talks with the Soviet Union or any sort of serious diplomatic negotiation will be reduced.

The Honorable Herbert H. Lehman

EXTENSION OF REMARKS OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mrs. KELLY of New York. Mr. Speaker, I want to join in the many good wishes and tributes to the junior Senator from New York, HERBERT H. LEHMAN, in the celebration of his 77th birthday. I mention this with particular pride be-

cause Senator LEHMAN and I came to Washington in the second session of the 81st Congress to serve the people of New York. We took our oath of office on the same day.

Senator LEHMAN is one of the most active Members of the Senate, and he has brought to that honorable body his vast experiences and the many accomplishments he achieved as Governor of the State of New York. The people of the 10th Congressional District of New York join me in paying him this tribute and in wishing him God's blessings in the years ahead.

I include a tribute to Senator LEHMAN which appeared in an editorial in the New York Times of March 28, 1955:

OUR OWN JUNIOR SENATOR

New York State's junior Senator, as in strict accuracy he has to be styled, reaches his 77th birthday today. In view of his continued energy after so many years of service to the public, the adjective does not seem out of place. HERBERT H. LEHMAN WAS earning a Distinguished Service Medal as far back as the First World War, when he had charge of procurement for the American Expeditionary Forces; he was twice Lieutenant Governor of this State and 10 years Governor; he carried on the vast transactions of the United Nations Relief and Rehabilitation Administration during and after the Second World War; he has been a Senator since 1950, always to be counted on when a good cause or a good principle needed defense; he has been a successful businessman whose use of his success has been to help the community.

Senator LEHMAN would be long remembered if he had only a half or a quarter of his career on the record. But it is a satisfaction to believe, as well as to hope, that at 77 his work is not nearly done. We give power and credit to youth in this country, as perhaps no other nation has ever done. But we need the mature mind too, which often goes on growing after the body has begun to weaken and slow down. elder statesmen, and we are lucky that we have an outstanding one in our own junior Senator.

Keenotes

EXTENSION OF REMARKS

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 28, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include my newspaper column, Keenotes, for March 24, 1955. on the subject of the establishment of a Department of Peace in the Federal Government:

KEENOTES

(By Representative ELIZABETH KEE)

Washington is beginning to refer to Harold Stassen's new job in the White House as Secretary of Peace, which represents a big step forward for an idea long proposed by West Virginians in the Congress.

In fact, the idea for a Cabinet-rank official whose main concern is the achievement of disarmament throughout the world and thus the improvement of the chances of world peace is being called in some quarters here the West Virginia plan because of its active promotion by people from our State, notably Mr. R. M. Davis, of Morgantown, W. Va.

The Stassen appointment does not go all the way toward achieving the West Virginia plan, which provides for the establishment of a Department of Peace coequal with the other departments of the Federal Government. Legislation would be necessary to accomplish that. However, bills to do that have been introduced in each session for a number of years, and the Stassen appointment has inspired the introduction of additional bills of this nature from Members outside of West Virginia.

In doing so, they usually pay tribute to the West Virginia background of the idea.

Mr. Stassen, whose Foreign Operations Administration (FOA) is supposed to go out of business June 30 of this year, has been named by the President to one of the Special Assistant posts in the White House with a broad assignment to work with the National Security Council, the State Department, and other agencies in the development of broad policies which could lead to world disarmament.

In establishing the plan, the President pointed out that, despite the huge drain on the economies of all the nations of the world as a result of the cold-war arms race, neither we nor our allies could consider disarming as long as the Communist countries, with their aggressive tendencies, continue to build up strength. So it is a question of trying to find a basis on which we and they can stop the race to atomic obliteration of mankind.

There is no reason to think that we are very close to such a goal. In fact, all the evidence points in the other direction. But that is all the more reason why every effort should be made-and no effort should be spared-to try to bring about a climate in which world peace can exist.

The job set up by the President and given to Mr. Stassen is a good step in a hopeful direction. We wish him the best of luck, for the very obvious reason that if he accomplishes even a tiny part of the goal set out for the job, we all will be a mite safer.

There is no greater goal for mankind than the achievement of an enduring peace. Like all great goals, it is extremely difficult to reach. Nevertheless, with God's help, we can, and, furthermore, we must.

State Soldiers' Homes

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication:

COMMONWEALTH OF MASSACHUSETTS. SOLDIERS' HOME, CHELSEA 50. OFFICE OF THE CHAIRMAN, March 28, 1955.

Hon. EDITH NOURSE ROCERS, House Office Building,

Washington, D. C.

DEAR CONGRESSWOMAN ROGERS: As you no doubt are aware, certain States are contemplating the establishment of soldiers' homes by segregating veterans within the confines of already existing institutions and denoting those sections as State soldiers' homes. The National Association of State Veterans' Homes is strongly opposed to such efforts, which suggest the implication that such action is predicated on desire and intention for collection of Federal reimbursement of \$700 per annum grant per veteran.

There follow excerpts from communications from various directors of State veterans' homes regarding the matter:

Stordock, Wisconsin: "Veterans and de-pendents should be preferred, not classified with the general public. Separate institution for veterans for qualification to obtain Federal allotment."

Soderling, Minnesota: "Veterans' homes should not be confused with any other State activity, and Federal regulations should be set up to limit Federal funds unless soldiers'

home is a separate entity."

Jones, Kansas: "Not in favor of using part of a hospital or home to receive Federal

Cole, North Dakota: "Preferred veteran status must be maintained."

Watt, Connecticut: "Veterans and dependents should always be preferred and not integrated with other activities."
Schmitz, Indiana: "Such a plan should

not be put into operation."

Arnold, Vermont: "Opposes establishment of soldlers' home by segregating certain parts of other State institutions to enable them to be eligible for Federal funds."

Williams, Rhode Island: "Veterans' homes should be separate and apart from any other State owned and operated institution or establishment."

Lange, South Dakota: "Opposes any effort designed to consolidate mental-health homes with State soldiers' homes; they should be distinctly separate institutions.

Berry, Holyoke, Mass.: "Does not favor consolidation with mental health; in favor of committee's stand."

Crowell, New Hampshire: "In favor of

stand taken by legislative committee."

Quigley, Chelsea, Mass.: "In favor of legislative committee stand."

Lindell, Oklahoma: "Against health department or other ruling body having administrative authority over proposed setup. Veteran patients should be kept to-gether insofar as reasonable or possible."

Miner, Nebraska: "Believe legislation should be introduced to prevent this aclegislation

Dunmire, California: "Intent of Federal statutes granting Federal aid to State and Territorial homes would be violated if Federal-aid payments were made under such circumstances."

Reeves, Orting, Wash .: "I think it would be a dishonest stretch of the imagination to apply the name of veterans' homes to isolated wings of mental institutions."

McCrosson, New Jersey: "So long as the veteran is taken care of, it doesn't matter where; and Federal allotment should be ex-

As you will note from the above, with the exception of the last, all directors are uniformly in agreement that payments should be restricted to those States which have complied with the law in establishing separate institutions for the care of veterans who have had wartime service with the United States Armed Forces.

I would appreciate the opportunity to discuss this matter further with you at your convenience, as we feel that a very serious problem is posed which may jeopardize the rights of those States which have already established State soldiers' homes for the care of their veteran population.

Yours very truly, Gen. WILLIAM J. KEVILLE, Chairman, Board of Trustees, Sol-diers' Home in Massachusetts (Chelsea), Chairman, Legislative Committee, National Association of State Veterans' Homes.

Realistic Social Security

EXTENSION OF REMARKS

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mr. ROOSEVELT. Mr. Speaker, I have today introduced an omnibus social security bill, which would eliminate many of the inequities which now exist under the law.

Specifically it would provide a means whereby the States could combat the adverse effect which our increased cost of living has had upon the recipients of public assistance—the aged, the blind, dependent children, and the physically handicapped. It would allow all States to raise the maximum amount of assistance now paid to persons on public assistance to \$100 per month per qualified recipient. This would be accomplished by means of a change in the present Federal matching formula, by providing for larger Federal payments to the States with low per capita incomes, and smaller payments to the higher income States. It would not decrease the amounts which the States now receive.

This bill also embodies the provisions of H. R. 2993 and H. R. 2994, the 2 bills which I introduced earlier in this session, and combines them together with the above provisions in 1 bill. This omnibus bill also includes provisions which reduce the retirement age for women from 65 to 60 and eliminates the loss of benefits by parents and widows due to remarriage, under the old-age and survivors insurance benefits portion of the act. It provides for benefits for widowed mothers of minor children prior to the age of retirement. Finally, it provides a means whereby a widow who, by reason of the fact that she has had to take care of her minor children and has, consequently, become so separated from the labor market that she could not seek gainful employment, may now receive aid prior to attainment of the retirement age

This omnibus bill also gives more realistic and practical assistance to the recipients of public assistance.

It would give the aged, needy, and physically handicapped the right to earn up to \$50 per month, the same amount which the blind are now permitted to earn. It would also allow the needy and dependent children who are receiving aid to earn up to \$30 per month. Under the present law they can earn nothing. I feel such a change would encourage these children to learn the values of our free-enterprise system, learn the value of money, and help to teach them to become useful members of society.

It provides that the recipient of such aid may own a home with a valuation of up to \$5,000. That there may be no imposition of a lien upon such home, or any other recovery provision, as a condition to receiving aid. It would eliminate practices whereby the public assistance laws of certain States are used to enforce collections from recipients' relatives. Prohibit the States from making Public the names of those persons receiving assistance, and provide that the value of any United States surplus food made available to such persons would not be deducted from the aid for which the recipient would otherwise be eligible.

Because of the uneven residence requirements of the different States, and Without interfering with the rights of the States, this bill provides for the direct payment of the Federal portion of such aid to those individuals who meet all the requirements for State aid except for the residence requirements.

Cinerama Scores Diplomatic Victories in Near East

EXTENSION OF REMARKS OF

HON, FRANCES P. BOLTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, the cooperation of several Government agencies and a public-spirited American motion-picture corporation have recently made notable contributions to United States foreign policy in the Near East. This story should be of particular interest to the Congress because it illustrates how this Government's representatives overseas can make a direct appeal to people—rather than just to their Government-in many parts of the world.

Last year the Communists planned a major propaganda effort for the International Trade Fair at Damascus, Syria. They poured millions of rubles into an elaborate exhibit and shipped in trainloads of the best products of the Soviet Union. It was estimated that they spent the equivalent of \$500,000.

For the full story of our participation in the Damascus fair, I quote a letter from the then Assistant Secretary of State, Henry A. Byroade:

DEPARTMENT OF STATE.

Washington, January 10, 1955. DEAR MRS. BOLTON: This letter is written in response to your request for details concerning effectiveness of the United States Government's exhibit at the recent International Trade Fair at Damascus, Syria. Our exhibit, you recall, was the production "This Is Cinerama" which had previously been shown only in a few theaters in the United States, and whose first overseas demonstration was made possible by Mr. S. H. Fabian, president of the Cinerama Corp. I am glad to be able to report that Cinerama was an outstanding success at the Damascus Fair despite the overwhelming efforts of the Soviet Union and the Communist bloc to dominate the fair with its massive displays of promises, both cultural and economic.

The United States Government has not frequently in the past taken an active part in trade fairs, and at the outset last winter there seemed little likelihood that we would be able to participate as a government, due to severe budgetary limitations. Our Embassy reported to us last February, however,

that United States participation might well prove to be the single most justifiable public relations investment the United States could make in Syria in 1954, and that failure to participate would be interpreted as evidence of American indifference toward Syria and the entire Arab world.

We knew that the Communist bloc would

attempt a costly and impressive array of exhibits and that the fair would be a propaganda battle between East and West. Therefore when the use of Cinerama was made available to us, along with its equipment and technicians, the necessary funds were somehow found by pooling the resources of several Government departments. Particular thanks are also due to Maj. Gen. Arthur G. Trudeau and the Air Force for their splendid cooperation in getting the Cinerama equipment out to Damascus in time for its installation for the opening of the fair on September 3.

The hard work and devotion to duty of the United States Information Service staff at Damascus have already been cited in commendation for their part in insuring the success of Cinerama. I should like to cite a few illustrative examples of the impact which this revolutionary technique made in its first overseas showing. By September 10 the following report had been received:

"Success of Cinerama greatly beyond

original expectations.

USIS has been under state of siege for over week with thousands attempting obtain tickets. To preserve building it became necessary shift ticket booths to regular cinemas. Demands of government officials and private organizations have made it difficult to hold even 750 out of daily 4,000 for theater distribution. Crowds of 2,000 or more line up at each theater in hopes obtaining 1 of 100 tickets given there.

"Pressure of crowds even greater at Cinerama theater, despite continued publicity that admission is by ticket only. Squad of 30 policemen proved wholly unable control crowds attempting to swarm in. USIS finally arranged for squad of military police-men who now maintaining order despite fact up to 2,000 persons stand outside walls and hang from eucalyptus trees to see upper half of screen only. One-inch steel guardrails around entrances bent like solder wire and are being replaced by heavier rails.

"Some tickets are being scalped for as much as 10 Syrian pounds, more than New York price.

"Newspapers continually reporting arrival personnages from all over Arab world and Europe who came primarily to see Cinerama.

"Embassy and USIS officers and their wives continually beseeched for tickets whenever and wherever they appear in public.

"Syrian Prime Minister who missed official opening attending tonight's show with famiy. Delegation of 100 newspapermen from Lebanon attended last night. Aleppo Bank has chartered 3 buses to bring all employees for Cinerama showing. Advertisements in cities of Northern Syria inviting citizens there to send self-stamped envelope for Cinerama tickets has resulted in deluge of mail-up to 1,000 letters a day.

"Streets rife with rumor that Communists will attempt to stop Cinerama by sabotage. "Communists only line thus far is that

Cinerama is 'unfair competition.' From a small Arab principality some 1,000 miles away came the report that local mer-chants who visited the fair had this to say referring to the Communist efforts: "In Syria the Americans with a small display were nevertheless able to show the superiority of

American industry and technical know-how." An Associated Press dispatch, was picked up by the New Times of Burma on October 4. It read as follows:

"The special Damascus Fair showing of Cinerama, a wide-screen wonder to the Arab

world, was due to close on Sunday, ending a mad scramble for free tickets to the smash

"The United States Information Service (USIS) showed new movie technique in an outdoor theatre, and it outdrew by far Russia's elaborate pavillion at the 4-week International Fair.
"Only the Communists seemed relieved

that Cinerama was ending its run. Arabs from all over Syria and from Lebanon and Jordan joined in a last panicky rush for

"During Cinerama's run, the USIS office in Damascus had to lock its doors to keep crowds out, even though no tickets were passed out there. Crowds screaming for tickets tore down booths outside the USIS office.

"Local movie houses were then enlisted to handle the distribution. Once 2,000 persons, trying to get 100 tickets, ripped down the marble facade of a theatre box-office.

"Black market scalpers peddled Cinerama tickets for 10 Syrian pounds (\$3.50) each, and a gang was caught printing counterfeits. "The big USIS theatre at the fair seated 4,000. but as the closing date neared, more and more people stormed the gate. Thousands climbed trees and perched on buildings to glimpse the new type movies.

"Many people assumed that Americans in town had an inside track on getting tickets and tried every form of persuasion from bribery to threats to pry some loose.

"Except for Cinerama, the Damascus Trade Pair was dominated by vast exhibits from the Soviet Union, Red China, and other Iron Curtain countries. The Soviet added a free showing of Russian films to their exhibit to compete with Cinerama. But their screen was flat. There were no tricky sounds. People stayed away in droves.

**NYET

"Meanwhile, 2 statues, 1 of Stalin and the other of Lenin, which were to have graced the Soviet pavilion at the Damascus International Fair, were sent home today-unused.

"Fair authorities said it was because of a

money dispute.
"Syrian architects asked 2,000 Syrian pounds to erect the 2 20-feet high statues. The Soviet Embassy here said 'nyet.'

"There the matter-and the statuesrested until the fair closed at midnight on Friday.

"But Soviet officials said Russia is willing to attend next year's fair. So did the other 25 participating countries."

Finally, I am sure you will be interested to know that the United States is participating in a second International Trade Fair in Asia this year. Cinerama was selected for exhibition in the United States pavilion at the fair in Bangkok, Thailand, which opened on December 7. Our Ambassador has reported that tremendous interest is being shown by the people of Thailand. Requests for tickets have been much greater than the 1,700-showing capacity, and consideration is being given to extending the showing after the fair's closing date.

This account will, I think, give you an idea of the great potential value attaching to American representation at international The President's Emergency Fund for International Affairs (Public Law 663), which the Congress established last summer, will help to insure the effectiveness of additional United States exhibits throughout the world. I hope that sufficient funds will continue to be made available in the future for this program which seeks not only to promote American overseas trade but also to demonstrate the dynamism of America's inventive and industrial genius.

Sincerely yours,

HENRY A. BYROADE.

Later, in December, the United States Information Agency presented Cinerama again, this time at the fair in Bangkok, Thailand. The Communists were so infuriated they withdrew their own exhibit. The repeat performance was again a standing-room-only attraction. According to Life magazine:

The big show-stopper was Cinerama, which packed the 2,000-seat open-air theater twice nightly, scaring and delighting the audiences.

The Agency had to hold Cinerama over 2 weeks in Bangkok to satisfy the important customers who could not attend the showings originally scheduled.

Bangkok newspapers began receiving letters, obviously Communist-inspired, condemning the show as a "tedious event" and claiming that the film was only "an inferior imitation of a 15-year-old Soviet cine invention." Further, said these letters, "this pirated device was tried out unsuccessfully at the Damascus Fair where the reactionary local government forced the masses to attend."

That statement drew nothing but laughter from the Thais.

The people of this country owe a real debt to the men and women of vision in the Department of State, the United States Information Agency, the Defense Department, and to S. H. Fabian, president of the Cinerama Corp., for making the story of America live in the minds of our friends in the Near East. These people in the Near East saw the truthful account of the fruits of freedom and the truth overwhelmed the lies of international communism.

Our Military Preparedness

EXTENSION OF REMARKS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1955

Mr. TEAGUE of Texas. Mr. Speaker, this body will soon be called upon to make appropriations for the Defense Department, which is charged with the defense and security of our Nation. It is now 14 years since the outbreak of World War II and 5 years since the initiation of the Korean hostilities, and we are still faced with the problem of defending ourselves from outside aggressors as well as endeavoring to maintain peace throughout the world.

In many ways today, security is largely a matter of comparative military preparedness. Our opponents, it is apparent, plan to maintain a tyrannical military garrison for years to come and accordingly we too should have in readiness a larger and stronger military force in spite of the fact that such a situation runs strictly against the current of normal American life and traditions.

Based on the present abilities of aircraft, the distance between the United States and Europe is only 5 hours flying time; and between the United States and Asia about 8 hours. In reality, the dis-

tances of 3,000 and 5,000 miles of ocean respectively have materially changed and with this alteration, our security. We are playing for the highest stakes ever in the history of our country; the security of our own Nation and protection from outside aggression. The concept of security includes not only the strength to enforce peace, but readiness for war if necessary. The degree of this security depends upon our state of milisecurity depends upon our state of miliary preparedness. We need to be ready in hours, instead of months, with millions of men, the world around.

Shortly after the present administration took office and the first appropriation bills were presented to this body following the submission of a new budget, we began to hear much of the New Look so far as the defense of our country was concerned. We were told that with the advent of the atomic age and with new and more horrible weapons, we would be able to buy more defense and security for less money. We were asked to believe that through some mysterious formula recently devised, this country depending primarily on airpower and atomic and nuclear weapons, could deal successfully with an enemy which also possessed the same type weapons, but with a numerically superior air force with tremendous numbers of ground troops. The cuts made in the budget for the Air Force for fiscal year 1954 were restored for the fiscal year 1955; but not so with the Army. The funds provided for the Department of the Army have not been adequate in spite of the fact that we may have to deal with a massive enemy army well equipped and well supplied with manpower from satellite countries.

In order that the Members of this body will have first-hand knowledge of the effect of the cuts made by the present administration in the budget for the Department of Army, I wish to insert at this point a quote from a letter I have just received from a young man who was commanding a rifle company in the infantry battalion I commanded during World War II. This individual holds the Silver Star and the French Croix de Guerre with palm for gallantry in action. He was one of the finest and brightest men I have had the pleasure of knowing. At the moment he is a civilian employee of our Government and is assigned to a post located on one of our Pacific Island outposts. He writes as follows:

I took my first break since coming over here when I took 2 weeks' active duty with the * * * regimental combat team. I have a long story to tell. At the present they are the only combat troops on this island other than the Air Force. I worked with the S-3 and was told by the commanding officer to check any and everything. So I did. Boy, am I glad I did not stay in the Army. It is rough. Under present conditions, they are virtually running a cadre operation. The officers and NCO's are good, but the turnover of EM is so rapid that it is more like a replacement training center than unit training. The effect of the Army manpower cuts are quite apparent here and the regimental combat team was recently placed on a reduced strength T/O.

Mind you now, this is supposedly an advance outpost of the United States and the only combat troops here are ordered to op-

erate on a reduced strength T/O. If any funny business starts again, you will have the same situation that the Army had originally when the Korean fracas started when the * * Division was in Fort Lewis with phantom battalions and had to practice firing off the fantail of the ship on the way over.

In addition, administrative requirements have more than trebled in the money saving drive. Such reports as mess report, fuel conservation, etc., must be made out and all of this is being done on the officers and NCO's own time.

Mr. Speaker, this is the situation as it exists today on one little island in the Pacific which is supposed to be an outpost of our defense efforts. I sincerely hope that when appropriations for fiscal year 1956 for the Department of Defense and more in particular for the Department of the Army are considered by this body in the near future, that each and every Member of this body will remember what this young man has written to me.

The Champions

EXTENSION OF REMARKS

HON. VERA BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1955

Mrs. BUCHANAN. Mr. Speaker, under leave to extend my remarks I wish to include in the Record an editorial entitled, "The Champions!" from the McKeesport Daily News in recognition of the great achievement of the McKeesport High School basketball team in winning the Pennsylvania State championship at Philadelphia last Saturday night.

The splendid play of the Tigers brought the first Pennsylvania Interscholastic Athletic Association Class A championship to McKeesport in 34 years. I think it will be of interest to some of the members to know that the only other McKeesport team to win this State championship—the team of 1921—was captained by my late husband, Congressman Frank Buchanan.

The editorial follows:

THE CHAMPIONS

Gene Danko is a young man, 6 feet 1 inch in height, who ranks 20th in his class of approximately 700 seniors at McKeesport High School and who scored 8 points against Chester Saturday night. His father teaches at vocational school and Gene has ambitious to become an engineer.

Tom Markovich, who tops Gene in height by 2 inches, and serves as cocaptain with him of the McKeesport Tigers, had some trouble Saturday night, although he did get 15 points for his team. He had 4 fouls called on him when he was taken out in the second quarter. With 4 minutes and 11 seconds to go, he returned and got the 3-pointer (a field goal and foul shot) which turned the game into victory.

Stu Heller is the tallest Tiger, measuring 6 feet and 5 inches. He was the high-point man with 19 Saturday. He's the happy-goucky type and he's relatively new to McKeesport, having come here with his parents

from Ligonier. Playing center, he's been up in the totals all season.

Dave Rankin plays at a guard position, his 6-feet-and-1-inch height enabling him to break up opposition plays with regularity. He's a good student and has hopes of enrolling next year at the University of West Virginia.

Glenn Shample, measuring 5 feet 11 inches, is the shortest of the Tigers in a game of giants. And he's the only junior who performed Saturday night. He's been the playmaker, the fellow who begins the Scoring patterns. He got four points for himself against Chester and he'll be back, the pivot around which next year's team Will be built.

George Krajack, 6 feet 2 inches, is the utility man—the one who goes in at any position and holds things firm. He went in for Markovich Saturday night and played

his heart out.
Cornelius P. "Neenie" Campbell, the coach, said, when it was all over Saturday night, that he couldn't take another game like that. He's an old hand at the basketball business, having been an all-American performer in his high-school days at Homestead. He played at Pitt and Slippery Rock and he's been Pointing to the State title since taking over the McKeesport assignment 12 years ago.

There were nine other young men in the squad who went to Philadelphia, all adept at the game and they share in the glory. Many of them will be seen on the team next

year.

So there they are—the championship Tigers-the best high-school basketball team in Pennsylvania and, perhaps, in all the World. What more can we say to them than

You've given us our biggest thrill in years. We're so proud we're almost bursting. This city, Tigers, is yours.

Salary Increase for Postal Employees

EXTENSION OF REMARKS OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, March 10, 1955

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I enclose a resolution adopted unanimously by the commissioners of the city of Passaic, N. J., urging the enactment of legislation providing for a 10-percent salary increase for our postal employees. I concur in these sentiments and urge that the Congress provide an adequate wage increase to all of our Federal employees

RESOLUTION

Without delay:

Whereas there is now pending before Congress consideration of a pay increase for the employees of the Post Office Department; and

Whereas, in the opinion of the members of this board the rank and file employees of the Department are deserving of the increase of 10 percent which is proposed for them:

Resolved by the Board of Commissioners of the City of Passaic, That we urge the Members of Congress of the United States to adopt legislation granting to the Postal Department employees a 10-percent increase in salary, which they richly deserve; further

Resolved, That a certified copy of this resolution be sent to the United States Senators from the State of New Jersey and to each member of the congressional delegation of the State of New Jersey.

MORRIS PASHMAN, WILLIAM B. CRUISE, BERNARD J. MANNEY, NICHOLAS MARTINI JULIUS J. CINAMON, Commissioners.

MARCH 22, 1955.

American Culture Abroad

EXTENSION OF REMARKS

HON, EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 30, 1955
